A. On the basis of that section we should have received a reduction. That is the way we understood it. This is the kind of reduction that he promised us in the presence of council in the city of Wilkes-Barre. They published a full page advertisement asking the people in the city of Wilkes-Barre to be present at a certain council meeting in June, 1928, at which Isaac B. Walker, who was president, was going to explain to the public in the city of Wilkes-Barre and suburbs how they could receive their water for much less money than they paid heretofore for the same. Of course, I was inquisitive myself, and I was there in the Council Chamber, there was a crowd of probably 75 to 100 people or more, in there, and Mr. Walker was invited to address Council as well as the public there. So he said they did not contemplate making any increase whatsoever when they purchased this property, but they were compelled to make an increase because certain citizens of the city of Wilkes-Barre had seen fit to file a protest against an increase which was not to take any effect whatsoever, it was not contemplated, but he said since they had filed this protest, they are compelled to employ attorneys, and the result is they have got to pay these attorneys, and that means that they have got to spend more money, consequently they have to get an increase in rates. That was his explanation. When he made that explanation I got up and I showed him this schedule. Now, I said, this does not verify your statement. You said that you did not contemplate any increase in rates whatsoever.

BY MR. EVANS:

Q. Now, when you say this schedule, you mean—

A. I mean the one that was destroyed.

Q. The notice to the consumers which was never issued?

A. It was never issued. When he saw that, he got as red as a beet, he didn't know what to say, because he had figured that every one of these had been burned up, that was the understanding, that everyone was destroyed, and none of them were out in the hands of the public, but this one here escaped the burning. So when he saw that, then his excuse was that the old company did not make more than 4% on their investment, and consequently they were compelled to increase the rates. Well, I and several men there testified that they received 7½% on their investment. In addition to the watered stock that was issued by the old company. When he could not get away with that, he said the reason they had to raise the rates in the Wyoming Valley was on account of the enormous mine cave-ins. He said, "We have had 8,000 mine caves." I looked at him and said, "My God, how long have you owned this company?" "Eight months." "And you have had 8,000 mine caves in the last eight months?" and he said, "Yes." I said, "You are the best natured liar that ever came to the Wyoming Valley." You can contemplate it for yourself, if we had 8,000 mine caves, that would be 1,000 a month, and there would not be a house left in the Wyoming Valley on the surface. Well, he got real mad, and he said, "We are going to raise these rates, and we are going to get this money, and we don't give a damn how we get it." That was his expression. During this discussion he also tried to show the people how to get their water rates for less money. "Now," he said, "according to our schedule, you people, all you have to do is to allow us to meterize your homes, and you use 3,000 gallons of water a month, and our rate being 30 cents a thousand, that is 90 cents a month, and our ready-to-serve charge being 97 cents a month, that will be \$1.57 a month, and that is less than you are paying now." So I disputed that, I said, "That is more than I am paying now, because I am paying now \$18 for an ordinary home—"

BY MR. EVANS:

Q. Per year?

A. And according to the way you figure it, it would be \$18.84, and then if I take your advice, that would enable me to take about one bath a year, and if I took more, I would have to pay considerably more. Well, that didn't go down his craw. I met Mr. Walker in the Hotel Sterling about three weeks after he took charge of the Spring Brook System in the Wyoming Valley, I was introduced to him there, and he didn't know me at that time, nor did I know him, but we had several drinks together, and some people when they get a drink of anything outside of water, they become very talkative, and others shut up. So we got to talking about this water proposition, and in the conversation that we had in this hotel this evening he told me how they had put it over on the people of Chester, Pennsylvania. He said, "We went into the city of Chester and we purchased the waterworks, and we went around to show the people how they could get their water for less money by putting meters in there." Then he said they were successful, they all put in meters, and, "After we had Chester meterized, we went to the Public Service Commission and doubled our rates." "Now," he said, "we have got them right by the throat, they have to pay for their water or they don't drink." That is what he contemplated doing in the Wyoming Valley. Of course, when he talked to me, I think he talked to the wrong chap.

WILLIAM H. GILLESPIE sworn.

BY MR. EVANS

Q. Mr. Gillespie, you are a member of the bar of Luzerne county?

A. Of Luzerne county, I am.

Q. And you are chairman of the Law Committee of the Water League Association?

A. Of Luzerne county, yes.

Q. You have been familiar with this water situation in the vicinity up there?

A. To a certain extent, yes.

Q. Have you anything to add to the testimony that has already been given here in regard to that situation.

A. Nothing in particular. No. I am only familiar with the legal aspect of it. We had charge of the preparation of the case, which was presented at the Public Service Commission, by way of appeal for the complainants, the united municipalities of Luzerne county, in conjunction with the municipalities of Lackawanna county.

Q. Did you take any legal steps in this case to try to protect the interests of the consumers.

A. Yes, through this organization, through this executive committee, or law committee as you might call it of Luzerne county, and as I said in connection with, or conjunction with those of Lackawanna county, we prepared appeals in the various municipalities, with the assistance of the solicitors of the various municipalities and school districts, townships, boroughs, and cities, and those appeals are now pending before the Superior Court.

Q. You were formerly the mayor of Pittston.

A. I was from January, 1926, to January, 1930. I am now city solicitor of the city of Pittston.

Q. And I understand you also helped raise funds to make this fight for the consumers.

A. Yes, that was part of my work, yes. Mr. Loveland, attorney Loveland, is treasurer of the committee.

Q. Have you anything to say as to your own experience with the increase in rates.

A. No, only in a general way, knowledge I obtained, general knowledge.

Q. I mean, what for instance has been the increase in the rates in your own bills, have you got them.

A. No, I am not rich enough to own a home, I rent. The landlord pays our rent. I know in Pittston city they raised the rates as testified to here, \$20.00 for fire plugs to \$30.00—or \$55.00 I am not sure which.

Q. It was \$55.00.

A. Yes.

BY MR. EVANS:

Q. Would the members of the committee like to ask Mr. Gillespie any questions?

Are there any other ladies and gentlemen who have come down to this hearing who care to be heard briefly, just to state what your own experience with the increased water bills has been. We don't want to cut anybody off, and we don't have the names of a number of people who may perhaps want to be heard.

THE CHAIRMAN: Mr. Evans, Mr. Hagmaier would like to recall Mr. Geiser.

JOSEPH GEISER recalled.

BY MR. HAGMAIER:

Q. Mr. Geiser, you have been in the water business for sometime, have you not?

A. No, I have not been in it since 1900.

Q. You have had some experience.

A. Oh, yes.

Q. Then would it be your idea that the consolidation of all of these companies would be to put the company to less expense for operation of office work, and all the various things, that the rates should really have been decreased rather than increased?

A. Absolutely.

Q. And in this petition here of merger they state plainly that they were taking over all the companies and all this work would be consolidated, and therefore their operation would be less expensive, and therefore the general public in that vicinity should reap a benefit by this consolidation.

A. Yes.

Q. You have not received that benefit?

A. We have received it the other way.

BY MR. TURNER:

Q. Would that opinion be sound legally?

A. That was for the purpose of consolidating the companies.

Q. I understood you to say that in the operation cost they could not determine whether the rates could be reduced or not?

A. Well, if you consolidate—we consolidated the two companies in 1896. The Springbrook Water Supply Company was formed first to take possession of the Wilkes-Barre company, and take possession of the Crystal Spring Water Company, and Kingston, and Plymouth and several others. The Wilkes-Barre company charged \$6.00 a year for the first faucet and \$4.00 a year for a toilet, but we used to have water six months out of the year. The other six months, in the winter time, we would have to melt snow or procure our water elsewhere. The result was that the Lehigh and Wilkes-Barre Coal Company

laid their mains throughout the southern section and the heights section in the City of Wilkes-Barre, and furnished the people with water there, and we all left the old Wilkes-Barre company and tapped onto the Crystal Spring. We got water at \$6.00, the same as the old company and \$4.00 for a toilet, and then, through one of our councilmen, the company was compelled to put in a meter plant at Huntville, which cost them \$68,000. That broke the old company, because they lost all their consumers through the Crystal Spring Company coming in, and the result was they went on the rocks, and the Spring Brook was a small company furnishing water in the upper end of Luzerne county and a portion of Lackawanna county, and they came in and merged the Wilkes-Barre, and the Crystal, and Plymouth, and Kingston, and several others; built a dam at Mill Creek; put up a pumping station on the Susquehanna River to give us a supply of water at once, and two years later they raised the water rate from six to eight dollars. We added \$2 to the original spigot. It was contemplated raising it to ten, but I being in the directors' meeting when the discussion was taking place, I fought that very vehemently, and told them if they raised it from six to ten dollars the people would refuse to pay this increase, and the result would be that they would have a fight on their hands. Tom Watkins, one of the directors, said, "if they won't pay, we will simply shut off their water," and the argument became very vehement, and finally President L. A. Watres, he got up in this directors' meeting, and he said, "now, listen, Tom, don't get up on your ear. If we raise this water rent from six to ten and the people become united, we are not going to collect that \$4. An individual fighting a company like us hasn't got a leg to stand on." He said, "We will shut off the water, but—" he said, "if they become united," he said, "you aren't going to shut off their water." He says, "Do you realize, Tom, that they pay us \$4.50 for the corporation cock that is attached to their main and the lead, and that is their property, and we have no right to touch their property. You can't shut off their water." Now, he says, "if they become united, we can't shut it off," and he says, "I won't stand for anything except \$2." That's the reason we got the \$2 rate, and they did become united and had a committee of people in Wilkes-Barre and vicinity looking up the territory and trying to find ways and means to take this property, but finally we got rid of the committee. There is one man from Wilkes-Barre here to-day who stuck to that committee all along, but that's the reason we didn't get a four dollar increase in 1898.

BY FATHER COX:

Q. Do you find many bills through the error of the company? Do you find them by chance?

A. No; they were brought to me at my home. When the bills were first sent out, they couldn't understand them and they came to me knowing I was a former employe of the company, and asked me if those bills were correct.

Q. I thought that possibly they have taken thousands from those who haven't noticed it.

A. There is no doubt in my mind that they have taken it, because every receipted bill I have found so far is more than the rate calls for.

Q. It might be well to make an organized effort at this time. You need the money up there.

A. You bet we need it.

MR. EVANS: If the Committee please, I think this finishes the testimony that we had in mind in regard to the rates, and if the Committee is willing, to-morrow we propose to take up more fully the question of valuation, and I think Mr. Loveland, who was referred to here to-day, is expected to be down to-morrow, and we could take up other matters.

MR. TURNER: It seems to me Mr. Chairman, that the Committee ought to get together and first see what Mr. Evans has to say, and then we can determine what we have to do. We have a few minutes.

MR. RICHARDS: How many witnesses will there be on the rate proposition tomorrow?

MR. EVANS: Tomorrow I don't expect to take up very much in regard to rates. It was more a question of the valuation and the financial set-up of the company.

MR. RICHARDS: Is there anybody here in that connection?

MR. EVANS: I think not. Nobody is here now.

Adjourned to meet at the call of the Chair.

COMMITTEE OF INVESTIGATION ON RESOLUTION  
No. 10.

Pursuant to the call of the Honorable D. Glenn Moore, the Committee met in the House Caucus Room on Friday, March 6th, 1931, at 10.30 o'clock a. m.

There were present:

Messrs. D. Glenn Moore, Chairman,

Louis W. Hagmaier

in Memoriam

Crawford

Esq. R. Cox

Esq.

Esq.

CHARLES N. LOVELAND, sworn.

BY MR. EVANS.

Q. Where do you live?

A. Wilkes-Barre, Pennsylvania.

Q. And what is your occupation?

A. Lawyer by profession.

Q. I think you have served as one of the city commissioners of Wilkes-Barre?

A. One of the original commission in 1913, and then again in 1918 and 1919, a second term.

Q. You are also, I believe, a member of various boards and so on in Wilkes-Barre, are you not?

A. I have been devoting quite a considerable amount of time recently to that work.

Q. What are some of the boards you are connected with?

A. The General Hospital, on the executive committee; the United Charities, first vice-president; the Welfare Federation; and I have had official connection with that since it was started.

Q. And you have interests in Wilkes-Barre.

A. Yes, largely real estate matters.

Q. Are you at the present time active in a political way at all?

A. I gave up, after three campaigns for mayor, I am not in politics any longer—unsuccessful I might say.

Q. Now, will you be good enough to tell the Committee a little bit of the physical situation, describing the territory served by the Scranton Water Company and the territory served by the Scranton Gas and Electric Company, so that we can get a little picture of that?

A. The northern coal field map gives a fair idea of this whole territory. It extends from Forest City south to Nanticoke, a distance of about fifty miles. The line of the two districts is in the southern part of Scranton. The Spring Brook territory extends from the lower part of Scranton including a part of it, south to the end of the coal measures, practically. That territory in the Wyoming Valley is very thickly settled, and it is only about four miles wide; has mountain ranges on both sides and streams from the mountains running down into the valley emptying into the Susquehanna, all along this narrow valley. In this Spring Brook territory is a population of 400,000 people; it is very thickly settled. There are about forty municipalities in that district.

The reason for the number of municipalities is that the communities grew up around the collieries, and then many communities merged together; forming in this territory, counting Scranton, four cities. Of these forty municipalities, thirty-five of them are in Luzerne County, and five or six of them are in Lackawanna County. The upper district is what is called the Scranton District, and was covered by three water companies, the Scranton Gas and Water Company, the Olyphant Water Company and the Consolidated Water Company. These three had been merged and were operating together before this merger took place, which was about three years ago. The upper district of Scranton is rolling country, is not a narrow valley, and the population is very much smaller, something over 200,000. To show that these figures are right, the number of domestic consumers in the Spring Brook District is 81,000, and the number of consumers in the Scranton District, including the three water companies is 41,000. The height or elevation of the Scranton territory is several hundred feet higher. It is not the same situation with regard to the furnishing of water and it was developed absolutely differently from the development of the Spring Brook section. The

Spring Brook Water Supply Company was a very efficiently developed and handled business. The Scranton, Olyphant and Consolidated had not the same efficiency of construction or handling. The values of the two plants, according to the testimony of both the respondents's witnesses, all of their different groups of engineers, engineering companies that valued it, and also of the complainant's witnesses is almost identical. According to the respondents, each of the two plants were worth about \$27,000,000; according to the complainants, each of the two plants is worth about \$11,000,000. We therefore have two territories, one of them with 400,000 population and 80,000 domestic users, with an economically constructed plant, with natural resources furnishing those plants, furnishing a compact population in every item, making it a very valuable asset to any public utility, having a location in every way excellent for the public service of water. Not a gallon of this water is pumped. The elevation is so great that it runs down in the mountain streams all along the whole distance of 30 miles—35 miles, and the reservoirs were therefore built very economically in those gorges of the streams of this territory. The upper district, the Scranton Gas and Water Company was a pet of Colonel Scranton, who expended money lavishly in wonderful granite,—not granite, but stone reservoirs, parking, roadways, more extravagantly constructed, heavier pipes, deeper trenches, did not attempt to save money in his management in any way. It was also metered, so that the cost of maintaining the meters and the cost of reading those meters, their maintenance expense was several hundred thousand dollars a year more than the Spring Brook territory, although the Spring Brook served a much larger clientele.

Q. Mr. Loveland, then if I understand you correctly, the engineers were agreed that about 50 per cent. of the value of the consolidated companies was in the Scranton District, and 50 per cent. in the Spring Brook District?

A. Yes.

Q. And there also is no question that the population of the Spring Brook District is twice that, or approximately—

A. Practically twice.

Q. Practically twice that of the Scranton District?

A. Yes.

Q. And the ratio of domestic consumers in the two districts is about 2 to 1?

A. Yes.

Q. Now, was there anything more that you wanted to say on that particular question of the layout of the systems?

A. No.

Q. In September of 1927 I understand a complaint was filed against the rates of the Spring Brook Water Supply Company, is that correct?

A. Yes.

Q. Who were the complainants in that case.

A. A Dr. Tobias and a man named Gillis. Then, following the purchase of the Springbrook Water Supply Company on the 15th of September, that plant was turned over to the new owners represented by the Pennsylvania Water Service Company, I think it was.

Q. Now, the Pennsylvania Water Service Company is a subsidiary of the—

A. The Federal.

Q. The Federal Water Company?

A. Yes.

Q. And it acquired this system on September 15, 1927?

A. Yes.

Q. And shortly after that these complaints were filed?

A. Yes.

Q. What action did you take in regard to that complaint?

A. In the latter part of October I became an intervenor. I had been in charge of streets under the first commission form of government and was acquainted with the public utilities of the city and of the use of the street, and then, at a later time, I was in charge of the fire department and understood the connection and the use of water for fire protection. I had realized that the rates—I had also for years been—had known of the Springbrook Water as an investment proposition. We had held originally bonds in our family and the bonus stock, which cost us nothing, and I disposed of this stock when I became a commissioner of the City of Wilkes-Barre, so as to be absolutely free in dealing with public utilities. I, therefore, felt that it was wise to become an intervenor in this case.

Q. And you were allowed to intervene as a complainant in the case before the Public Service Commission?

A. Yes. Shall I describe the form that it took?

Q. Yes; if you please.

A. We were called upon to come to Harrisburg and appear before Mr. Ainey about the 6th of December and there we met the attorneys for Dr. Tobias and Mr. Gillis, and my attorney, and myself, and Mr. Ainey suggested—ordered the calling of an engineering conference, and turned us over to Dr. Snow, and we went—let me see; before we were turned over to Dr. Snow in the hearing before Mr. Ainey the Downs report was submitted as a basis for finding the value.

Q. Now, may I first ask you what the Downs report was?

A. The Downs report was the report made by Mr. Downs, who is now the head of Day & Zimmerman. He was then an employe of the Commission, and as a young man, made in about 1917 or '18 this report, and that was entirely an ex parte valuation; the public took no part; no objection being made to any of the valuations, and that was introduced as a basis for the values to be put, and the values, which had been expended by the company, were to be added to that. Our attorney, Mr. Geyer, entered his objection to that, as it was an ex parte valuation and was not evidence in such cases.

Q. The Downs report was made for the purpose of a certificate of valuation to be issued by the Commission in connection with the securities of the Springbrook Company?

A. Yes; that's right.

Q. Was this meeting, to which you have referred, with Mr. Ainey a public hearing of the Commission or was it a conference in his office?

A. It was in his private office, and a conference—we were sent from there to Dr. Snow's office with the idea of calling an engineering conference. That engineering conference was set up with Mr. John Lance, as my attorney, a representative of Mr. Parry—

Q. You mean engineer when you refer to Mr. John Lance as your attorney?

A. Yes; and a representative of the Commission and a representative of the water company.

Q. This Mr. Parry, that you referred to, was an engineer of the Commission, was he not?

A. No. A strange situation arose there. Mr. Parry was not known to the attorneys of Mr. Tobias and Mr. Gillis, and was not of record for them, although he was placed as their attorney. I then first heard him called as attorney for the Federal Water Company at that time. He was well known to those gentlemen but not to us.

Q. When you spoke of him as the attorney of Tobias and Gillis you meant engineer?

A. Engineer; that is right. I thank you.

Q. Do you remember what Mr. Parry's first name was?

A. I don't remember. Following that Dr. Snow insisted on rushing matters, and we had two days inspection of the reservoirs, going over the plant.

Q. Now, Dr. Snow is the chief of the bureau of engineering of the Public Service Commission?

A. Yes; and he insisted that the thing must be hurried very much, very much indeed. They met, and went over the plant for two days, and then the engineers were to gather and decide on unit costs. The engineers met, and did some little work, and then matters were slowed up, very definitely slowed up; a very noticeable slowing up, after a tremendous rush, there was no hurry. On the 5th of January I was called to the office of Chairman Ainey, and there I was requested to withdraw my complaint. Chairman Ainey stated that this—the figures that we were objecting to—the rates that we were objecting to were rates that had been in force for a number of years, and that we had the burden of proof in such a case; that we were at a disadvantage, and that it would be wise for us to withdraw, and he gave us the impression although he may not have definitely stated, that there was no question but that this company would increase their rates. I agreed to withdraw my complaint, and on the 7th I took it back to my attorney in Wilkes-Barre, and we signed the withdrawal; sent it—these dates are quite important; we sent it back to the Commission, and on the 9th it was presented to the Commission.

Q. That is, the 9th day of January, 1928?

A. The 9th day of January, 1928. On that very day the Federal Water Company purchased the Scranton district plants; the three companies. We were not aware—

Q. When you say the "three companies," were they not already consolidated into the Scranton Gas and Water Company?

A. Yes, but they are called by the three company names in all our evidence.

Q. Yes?

A. On the 21st of February the two companies, the Springbrook and the Scranton district companies, were merged. There was no information to any municipality or to any of the complainants, although that was given to us—I read from the order of the—I can read it, showing that we were supposed to have the opportunity to file complaints again.

When I withdrew it was reserving the right to file complaints against this company's rates. When the company's rates—by that merger it was made impossible for me to file complaint against any rates of the Springbrook Water Supply Company which went out of existence without notice to me and without notice to any of the municipalities interested.

BY MR. EVANS:

Q. May I interrupt a moment? Mr. Loveland, was this conference in Chairman Ainey's office on January 5th, and who else was present?

A. Mr. John Lance and Mr. John Geyer, my attorney.

Q. This was not a public hearing?

A. No, it was supposed to be confidential. Mr. Ainey took the position of doing a great favor in helping us out. I believe I should have been, if I had remained a complainant, I should have been notified of what was going on in the purchase of the Scranton-Springbrook Water Company, and of the proposed merger, but having withdrawn I was not notified and had not the right of being notified.

Q. May I ask when you say the Scranton Gas and Water Company was purchased by the Federal Water Company on January 9th I suppose you mean that the stock of that company or the controlling interest was purchased?

A. I understand that was a fact.

Q. Now, at the very time that you met with Chairman Ainey on January 5, 1928, the Spring Brook Water Supply Company had in contemplation an increase in rates, had it not?

A. I believe so.

Q. There was yesterday reference to a notice to the consumers of the Spring Brook Water Supply Company covering an increase in rates which was never issued and the notice destroyed. I show you a photostatic copy of that and ask if that is familiar to you?

A. Yes sir, I have seen it.

BY MR. HAGMAIER.

Q. What is the date?

A. It shows that it was to become effective on January 1, 1928.

Q. What was the date again of the withdrawal of your complaint?

A. The seventh it was, the date of my withdrawal petition, and the 9th of January, 1928,—

Q. You withdrew on the 7th?

A. The 7th day of January, 1928, and it was presented to the Commission on the 9th day of January, 1928.

Q. Now Mr. Loveland, I think it would be well for you to read into the record the letter that you received from the Commission in regard to the action of the Commission?

A. This is addressed to my attorney, John H. Dando, Esq., and is dated January 10, 1928. "In Re: Gilles and Tobias versus the Spring Brook Water Supply Company."

BY MR. EVANS:

Q. Does it give the docket number?

A. 71329. "Dear Sir: The Commission had before it at its executive session on January 9, 1928, the petition of the part of the complainant in the above entitled proceedings joined in by the intervenor praying for the privilege of withdrawing the complaint without prejudice should the respondent later file a new schedule of rates increasing the charges now made for services rendered. The Commission granted the prayer of the petition and directed that the record be marked closed." closed."

BY MR. EVANS.

Q. That is signed by whom?

A. Signed by John E. Hopwood, Secretary.

Q. Now, the Commission permitted the merger of the Spring Brook Water Supply Company and the Scranton Gas and Electric Company under date of January 21. What was the next development in this situation?

A. On the 30th or 31st of May new schedules were filed covering the Scranton-Spring Brook Water Supply Company to become effective July 1, 1928.

Q. Did these new rates provide for a considerable increase?

A. In many particulars, yes. It provided for an increase to the domestic consumers of 37½%. It provided for an increase to the meter users, we will say the medium size meter users, running from 100% to 300%. It provided a 300% increase for sprinkler system users. It provided for 175% increase on all fire plugs in the Wilkes-Barre district. I think that was a little more than in the Scranton district because of the fact that Scranton owned its fire plugs. It provided for a decrease of three cents a thousand gallons for the water users using beyond a certain amount a month. That meant, from expressions that I was able to obtain from some factories who were able to get over the line, that the dividing line was 9,000,000 gallons a month. The excuse given for that was that of the expense, that in large amounts it was a great deal less. In water it is very different from electricity because where a greater amount in mass is used the tremendous increase in the consumption of water required a greater storage capacity, it requires them to go further back with longer lines of pipe, it means a greater expense for the construction of this storage capacity. This does not work in the same manner that it does in electricity. The greater expense except for one thing, in the collection of bills, which is a minor detail.

Q. That is, the large consumer, in your opinion, in the water case is not entitled to the reduction of rates as he is in the electric case?

A. Yes sir.

Q. The rates that were to have been effective on the part of the Spring Brook Water Supply Company on January 1, 1928, provided for a rate of eight cents per thousand gallons for over two and one-half million gallons per month?

A. Yes. The other rate provided for a five cent rate for anything over two and one-half million gallons a month.

Q. That is, the rates were to be effective on January 1, 1928?

A. Yes sir.

Q. And there was in these later rates a corresponding increase to the small consumer?

A. Yes sir. The manufacturing interests of our community were most tremendously penalized.

Q. Do you know approximately what difference in the total rate would have been caused by the new schedule; first, in the Spring Brook district, and then in the Scranton district, revenue to the company I am speaking about, in round figures?

A. They testified to the fact that the increase in the Spring Brook territory under the new rates would amount to nine hundred and fifteen or nine hundred and seventeen thousand dollars per year. That the increase in the Scranton territory would be approximately five hundred thousand dollars per year.

BY MR. EVANS:

Q. Now, you are treasurer, I believe, of a citizens committee in Wilkes-Barre that has been interested in this situation, are you not?

A. Yes. I would like to bring out just one more point on this \$915,000 of increase. It developed in the trial of the case that a flat rate is prevalent in all domestic consumption in the Spring Brook territory, and inspectors were sent about and there was an addition to the income through this inspection of \$150,000 per year over the amount that was, by finding new taps in the houses which the old company had never added.

It was also testified to that there was \$91,000 due to the company for certain previously favored corporations, corporations which had sold out reservoirs and companies to the Spring Brook in their organization and had entered into contract that they should not be charged anything, or a very small amount, for their water. The company's witness testified that this amounted to \$91,000, which under the rules is a collectible amount.

That would make the Spring Brook territory increase from this addition to the schedule of rates, from the finding of new taps, from the collection which they were entitled to receive from these companies, about \$1,150,000.

Q. As compared with an addition of something like \$500,000 in the Scranton district?

A. \$500,000 in the Scranton district.

Q. Now, will you tell us a little bit about this citizens committee and what it is and what interests are backing it and so on?

A. During the month in which the complaints had to be filed, there were a number of gatherings of protestants, a number of organizations that took the matter over, business men who realized what they were facing. The group of the Pennsylvania Manufacturers Association met. I am very well acquainted with the president. I met with this group. We told them the situation. I was called upon to do it. And they agreed with me that they would stand back of me in a fight, retaining Mr. John Lance as the engineer and Mr. John R. Geyer as our counsel.

There was then a group of prominent business men that met at the Hotel Sterling and formed a committee of which the chamber of commerce head was the president, and an executive committee of that was formed, of which the then Mayor Gillespie of Pittston, who I understand testified yesterday, was the chairman of the executive committee. Mr. Joseph G. Schuler was chairman of a finance committee.

There were a number of business men and prominent people of the whole region on these committees. There developed at the courthouse another group, the solicitors of the 35 municipalities who were interested, and those solicitors developed a meeting and had several meetings at the court house. Finally I was asked to appear before that meeting, and I was made a sort of liaison officer between the two or three groups that were working together, and it was agreed that I should act as treasurer.

The solicitors said that they were willing to back me up in every way in this fight, and the business men also did, and added me to their committee, especially on the finance committee, as treasurer.

Q. And then I understand after the filing of these rates and before their effective date, a number of complaints were filed by the municipalities and individuals affected by the increase?

A. Yes.

Q. Were Messrs. Gillis and Tobias among those complainants?

A. They were not.

Q. Have they shown any interest in the proceedings since their original complaint was withdrawn?

A. They haven't. Their attorneys haven't taken an active part in the case either.

Q. Have you attended most of the hearings before the Public Service Commission in these cases?

A. Practically all of the hearings, extending from July, 1928 up to December 1929, held in Scranton, Wilkes-Barre, and the balance in Harrisburg. There was one or sometimes two hearings a month. Very few months were skipped. Those which I did not attend I read carefully the evidence, except the last few hundred pages. 7,000 pages of evidence were taken in the matter.

Q. When were the hearings concluded, if you happen to remember?

A. It was early in December, 1929.

Q. Do you happen to know when the briefs were filed in the case before the Public Service Commission?

A. I don't remember the date exactly, but they were filed sometime in February, I think.

Q. In the spring of 1930, that would be?

A. Of 1930, yes. February or March, 1930; and the oral argument was held in April, 1930.

Q. Before the Public Service Commission?

A. Before the Public Service Commission.

Q. When was the case decided by the Public Service Commission?

A. December 4th, I think it was,—I have it here—1930.

Q. December 9th?

A. December 9th, yes. I will correct that. December 9, 1930.

Q. Did you in the course of your attendance at the hearings get any impression as to the attitude of the sitting commissioners in regard to the case?

A. Numerous objections were made by both sides, as is customary in a matter of this sort. One that especially comes to my mind was an objection made by the—in regard to real

estate, in the hearing in Scranton. The Commission ruled a certain way and against the complainants, and the law was definitely in favor of the complainants, and they withdrew that decision on the following morning, having been shown that they were incorrect, and they ruled in favor of the complainants.

I should say that three-fourths or more of the decisions were in favor of the respondents. Generally—the impression was so great that it was commented on in the newspapers.

As the trial of the case grew—I would like to go into this—as the trial of the case grew, the confidence of the public in Wilkes-Barre, which had filed these complaints, began to wane. In January, 1929, a large number of—or the bills went out for the new rates, and an accumulation of the difference between the new rates and the old rates,—

Q. Back to July?

A. Back to July, which made the bills very large indeed, and at that time there developed the group who came here yesterday, who objected to the payment of those rates and were very greatly stirred up by them. They had not taken an active interest in this fight up to that time. Their attitude was one of absolute resistance. They believed they should not pay those rates, and they refused to pay the rates, until the company started to turn off water, and then they resisted that, riots occurred, almost occurred. This was entirely a different attitude from that group which had commenced their case before the Public Service Commission. They believed that was the right thing to do. The law had been laid down—the law had laid down that method to obtain redress, and that method was being followed out in the very best way that we knew. We were backed with funds, we were backed with ability, both as to attorneys and engineers, we knew that fact, and we presented the best case we knew how. We believed we would get redress for our case was so absolutely plain that we were betting on it. However, as the decisions were rendered, or were made in the hearing time and again, the remarks that developed among the conservative business people showed the change of confidence, until before the end of the time I would say that hardly one man out of ten believed that the Public Service Commission in the State of Pennsylvania is honest. Lawyers, business men, conservative men who have always been conservative, men like the treasurers of the hospital. The figures given to the Senate were not quite correct in that respect. The hospital paid in 1927, \$1,500 and they were called upon to pay in 1929 \$5,900.00 for water served to a charity. The figures I believe were correct, but the irritation and anger grew. Then it grew from one thing into almost discouragement. It was a question of correcting the funds to meet the expenses, that was the struggle which we had to make. These thirty-five municipalities had not all of them joined in the complaints, but of those thirty-five municipalities, I am speaking for Luzerne County, as it was agreed that Lackawanna County should collect for themselves, of those thirty-five municipalities twenty-eight contributed towards this fund, although not nearly that many appear as complainants in the paper book. There did come a time when the expenses amounted up, especially at the presentation of the complainants exhibits in May of 1929, and when our engineer Mr. John Lantz, was called for cross examination, following that, I believe there are fifteen hundred pages, of John Lantz's cross examination, and we were required to furnish at the request of Mr. Berne Evans, attorney for the respondents a tremendous amount of material. He had a force of men working night and day to gather this material, to bring it in the shape that was required by the company. It was at this time that the question of funds, when the amount of the cost of this hearing grew, when Mr. Lantz was required to hire men to do the work which he and his brother were unable to do, and they were working there all summer long of 1929, gathering this material for the cross examination. It was at that same time that by decision of the Supreme Court of this State, that \$60,000 was cut from the appraised valuation of the municipalities which were maintaining this fight. It meant a rearrangement of their whole financial position, and they were absolutely stranded, many of them, some of them practically bankrupt, because the valuation of coal under the surface is a very great part of their taxable value. At this time I understand Mr. John Fox Weiss, attorney for the Commission, stated that there were delays due to the fact that there were not payments made. I want to say that absolutely. There was never any delay in any way ~~due to the fact that there was not payment made. They were~~

gone, the Lantz Brothers, and our attorneys. I want at this time to bring onto the record the attitude of mind of Mr. John R. Geyer, who was our counsel, and who charged an insignificant retainer at the origin of the case, and refused to set any figure which he would finally charge. I have never been able to obtain from him what his charges would be. He had received during those two years and a half, or three years, very little, that if he had not been more or less independent, he could not have given his time, and the tremendous amount of time that he did give to this case. I will have to bring out again that he stated that he was interested in this case mainly from the fact of giving justice to the people, and that he would fight that case through if he never got a cent, and he fought it through to the end, and it was this matter that killed him, absolutely.

Q. How much money, Mr. Loveland, did your committee raise, or has it raised so far?

A. This Luzerne County Committee, we raised from the municipalities and the county of Luzerne about \$60,000. We raised from the manufacturers, who are also, remember, taxpayers, about \$9,000. We raised from sprinkler users about \$1,000, who were also parties paying money, and they had paid under the manufacturers account. We raised from business people in the city of Wilkes-Barre, stores, laundries, hotels, office buildings, and practically all the prominent business people in the city of Wilkes-Barre are contributors to our fund, and those are the funds which I account for as treasurer of this concern, that totalled practically \$71,000. Outside of that we raised probably \$4,000, which was spent, not under this treasurership, but the Municipal League has raised, as I understand it, between 18 and 20 thousand dollars, which has been spent entirely outside of this water fight, on this water rate.

BY MR. HAGMAIER:

Q. Is this League in Luzerne County too?

A. The Municipal League is entirely in Luzerne County, it does not extend into the Scranton area.

BY MR. EVANS:

Q. Do you have any idea at all, Mr. Loveland, what the total expenses to the complainants and consumers in connection with this rate case will be, taking everything altogether?

A. I could give an estimate. I have it pretty well figured out. I would say—before that I want to say that the Scranton municipalities—the Lackawanna County municipalities, which cover some of the Springbrook municipalities, have expended practically \$60,000 in their fight. There are—the amount of the unpaid bills is problematical. There are some charges, which were made to us, which our finance committee have not approved. We are uncertain as to what should be the compensation for Mr. Geyer. Possibly our total expenditures, if that was figured, would go about \$280,000 in the two districts, but I doubt, possibly not that much; between 250 and 280.

Q. And of that somewhere between \$135,000 and \$140,000 has been raised in the two districts, as I understand it?

A. Yes. I would like to bring this out: I was present when it was testified that up to October 1, 1920, the company had expended \$48,000 in their side of the fight. I would like to say this, this is one of the things that we wondered at the commission: Our attorney requested that the way in which this was spent should be detailed to us, as we were willing to detail every expenditure of ours, and they refused to do so, and the commission didn't press the matter. We should have been very much interested to know in what way this money had been spent. There are no expenditures for six months after that date.

Q. I understand that as the complaints were filed before the effective date of the raise, the burden of proof was put on the respondents to establish the fairness of the new rates, and, therefore, they presented their case first; is that correct?

A. Yes; that's right.

Q. And then, after they presented their case, the complainants presented their evidence, and you have referred to the testimony of the Messrs. Lantz.

A. Yes.

Q. After the complainants had finished their case, was the company allowed to introduce evidence in rebuttal?

A. The company was naturally allowed to introduce evidence in rebuttal, which, of course, should be confined to rebuttal of the evidence which we had presented in chief, on our side of the case; confined to rebuttal of that evidence. That was not done by the Commission. An entirely new valuation was placed upon it, on this total property, by Winston and

Company, which was introduced in late October, 1929, at the very end of the hearing. That report of those engineers was made in January, in the winter of 1928-29, and the report was in the hands of the respondents before they had closed their evidence in chief. They held it back, although it was practically not in any respect rebuttal; it couldn't be rebuttal of our evidence, because they didn't know our evidence at the time it was made. It was permitted by the Commission, that this be introduced, which is against all rules of evidence, of trial procedure in any court. The effect of this, as Mr. Geyer told me one month ago, just before he died—he said that that was what broke me down. The Commission required that he should go at once upon introduction of this evidence, with a lot of new material, possibly go in, and demanded that he go in and cross-examine within two or three days. They were trying to rush this case tremendously at this time. I know that he fainted in the trial of the case before the Commission. He revived and went on that same day. He says that it was that attitude of the Commission, rushing him on cross-examination, which was the thing that broke him. He did a most wonderful job, working night and day, and he was able to cross-examine, and we were able practically to throw out the value of this Winston Company's evidence, as we felt, by this teamwork of Mr. John Lantz and Mr. Geyer, working night and day, and the Commission had their final hearing in December.

Q. Who were the commissioners who heard the evidence in this case?

A. Commissioner Brown and Commissioner Young. I should like to speak about Mr. Geyer's preparation of this brief. He was then ill. He was—did a great part of the work of the preparation of this in bed. He worked night and day. He had this great pile of evidence in his library at home, and he worked into the night. He worked on Christmas day. He carried on, and he finished this, getting some help, but the burden was on him, and he prepared this, and he also prepared, which I wish to call attention to, a small brief before the Public Service Commission, that separate brief in behalf of the City of Wilkes-Barre et al and consumers in the old Spring Brook Water Supply Company. That brief was presented to the Commission with the other briefs, but it was not argued, because of the irritation which the Scranton district attorney felt before its introduction. It sets forth the facts, on which there should absolutely have been a different schedule of rates for the two territories. It sets forth the facts that—what I wish to bring out, and I didn't bring out, when the merger was consummated on February 21, 1928, it made it possible for this new company to get \$500,000 more from the Springbrook territory than could have ever been gotten if the Springbrook territory had had a rate base, and the figuring of the rate base in a separate organization, and these two great systems are only connected by two six-inch pipes, which can not influence two per cent of either of the districts in supplying water back one to the other, but that merger made possible the infliction upon the Springbrook consumers of \$500,000 a year, which couldn't otherwise have been inflicted upon them if that merger had not taken effect.

Q. This was the merger that was approved by the Commission in February of 1928?

A. Yes, sir. The Commission in their decision makes absolutely no mention of this paper book which was prepared and introduced and which is incontrovertible.

BY MR. EVANS:

Q. Mr. Loveland, was there any intimation in the community as to what the decision of the Commission was going to be prior to the time its decision was rendered in 1930?

A. Gossip only. But there was sufficient gossip to make it advisable for your body to go into every detail of this set-up of your agents. You as members of the Legislature have as agents this Public Service Commission—go into every detail of the way in which this thing was handled and I believe—and I have it from several sources, but they are such sources that I cannot testify to them, and it is more or less gossip, but I am convinced it is true, and if you will go into this you will find a mare's nest, you will find things which will astonish you and which will show that your agency, the Public Service Commission of Pennsylvania, is not a servant of the people of the State of Pennsylvania.

Q. How early were these reports current as to what the decision would be?

A. I have the dates in my mind of July, 1930. I was fully—practically fully—informed of the amount which would be found by the Commission. It varies only in the amount of the overhead which they charge, the overheads which I understand they were to charge were forty-five per cent. The decision showed thirty per cent the rate basis practically the same in every case.

Q. Is there anything else that you want to add before the committee, Mr. Loveland?

A. I would be very glad to answer any questions at all. I have been thoroughly interested in this whole thing from a public standpoint. I would like to say that the attitude of mind which was expressed here before the Commission is the attitude of mind of the whole group of people, of these four hundred thousand; it is an attitude of mind of more people than you would expect and I would say this, and when we talked to manufacturers and big business men in the City of Wilkes-Barre, many of them say, "I thought we were throwing our money away when we tried the case before the Public Service Commission." Although they paid us, they stated that they thought it would do no good, and they were right. It is a question of despair today as to whether any justice can be obtained or will be obtained.

BY FATHER COX:

Q. What is the name of that booklet that you say has not been introduced? Why would it not be a good thing to introduce it into the records of this committee?

A. It is a booklet showing the difference between the Spring Brook conditions and the Scranton district conditions.

Q. Don't you think it would be good to introduce here?

A. That is for you to say.

Q. What is your idea of the best manner in which things in this connection can be adjusted? You have had so much experience with this Public Service Commission that possibly you might be able to make the suggestion?

A. I appeared before the original Public Service Commission, the board that was formed soon after 1913. I was then a Commissioner in charge of streets and public improvements in the City of Wilkes-Barre. I appeared before them to obtain a right to construct an aqueduct at Butler Street in the City of Wilkes-Barre, an outlet to the east of the city. That Commission gave us justice and our petition was handled in the proper way and they awarded three-fourths of the expenditure of the construction of that bridge to the railroad company where one man a year had been killed for a period of fifteen years previously. I also was before the Commission one or two other times during my time as Commissioner and this early Commission seemed to do justice. I believe a change has come about.

Q. Do you feel from your experience that you could get justice from a Commission appointed as this Commission is appointed?

A. That is a matter of conjecture. I don't know whether my opinion is very valuable, I would be glad to give it, but personally I would prefer the appointed Commission.

BY MR. HAGMAIER:

Q. In the district which you represent they are paying their bills at the advanced rate?

A. I would say this; in the district they are not paying the bills at the advanced rate, very few are. The dockets are filled with cases against the municipalities by the Spring Brook Water Company. The municipalities have the excuse, many of them that they do not have the funds. I know for a fact the company made bargains with certain users. In order to pay the old rate the company has set up a fund to meet the new rate when the time comes. They do this but there was no direction to do it. Knowing of that fact I advised the public who had been paying the new rate—I personally paid the new rate because I was a complainant and I was obeying the law and order of the Commission. I paid the new rate up to the point where the information came that they were giving this right to others to pay the old rate. I then paid the old rate and notified inquirers that they could not distinguish and that they were entitled to the same terms as any others. So I have since been paying the old rate, and I have advised others to do so, and I might say I have a considerable number of houses myself, and I represent in one charitable trust a large number of other houses, which is the same thing.

BY MR. HAGMAIER:

Q. In your observation of the bills under the new rate have you found any discrepancies in their charges or anything such as was brought out yesterday?

A. Their bookkeeping arrangements were a mess. They had to readjust and re-change, and the adding of penalties which by the way is the most unjust thing to have going on during this contest—the penalties pile up and are cumulative all of this time, ten per cent added each time, while the thing is in contest. And I wish to call your attention to one more thing. Did I answer that?

Mr. HAGMAIER. Yes, thank you. We had considerable complaint yesterday about bills going out that were two or three dollars higher than they should be?

A. I think there were many mistakes. I would like to call your attention to one matter before the Commission which Mr. Geyer told me within two weeks. He called attention to the fact that the water company refused to accede to the order of the Public Service Commission by reduction of their rates saying that they were not getting as much as the Commission said they were entitled to get, and the Commission handed down a decision fixing a sufficient rate. The way they handed it down was not in accordance with the schedule as filed—the ruling was not the same and it is left uncertain whether the consumer shall pay nine dollars for his sink for hot and cold water, or fourteen dollars. No one knows today what they ought to pay. The bills which went out on January first were on a rate which since has been changed by the Commission. Nobody knows what they ought to pay and the company doesn't either. That is the way in which the Public Service Commission has handled this job.

BY MR. EVANS:

Q. As I understand it, both the complainants and respondents have appealed from the decision of the Commission of December 9, 1930?

A. Yes sir.

BY MR. EVANS:

Q. And that case is now pending before the Superior Court?

A. Yes.

BY FATHER COX:

Q. Monsignor Curran suggested yesterday stubborn resistance and defiance to present laws and conditions. Now, to my mind that is not necessary, there is another way of getting around it. Do you feel that things are so bad before the Public Service Commission that there is absolutely no chance of obtaining justice?

A. As it has been constituted, I do not think we will ever obtain justice, where we have reason to expect justice. The people who would a few years ago, have laughed at the idea of municipal ownership, are today saying that it is possibly our only salvation, because we could probably, with the rates that are charged in the—were charged beforehand in the Spring Brook district, and at the value which is set forth in the Public Service Commission's own report of the value, if we should buy that property at that value, or practically that value, we could probably collect enough money from the old rates to pay for the whole matter, because we could borrow on our water district and could set up a sinking fund which would probably pay off the cost of this in a number of years. The rates would be reduced to approximately what other cities with municipally owned water plants are paying today, such as Harrisburg and Allentown and many others which you people are probably acquainted with.

Q. Well, is there any system which you can suggest with a public service commission, either elected or appointed, that would make it possible to obtain justice? You have had the experience, that is the reason I am insisting on that point.

A. I would say that if your body was really active, such a body as this, was really active in checking up from time to time, that is the wisest thing to do. They are your agents, and you are responsible for them, and if something was done of that sort from time to time, with watchfulness of an executive also, we would have a better possible opportunity for obtaining what we should.

BY MR. CRAWFORD:

Q. It was brought out yesterday in some of the testimony that upon change of hands or change of ownership of the

properties they found a lot of connections that were not on the books of the old company?

A. Yes.

Q. Now, is it possible that the addition of those newly found connections to the bills as rendered by the new company might not cause a part of this—

A. Oh, that does explain it. That does explain it, and they are justified in adding that in this census, because the old company had been anxious to sell out for many years, as I forgot to bring out—I forgot to bring this thing out—in 1920 I was asked by John Lantz, who was then our engineer, who had then just left the water company, who came into my office and told me the fact that there was about to be an increase of water rates, he was quite confident; in fact, to tell the truth, that is the reason that he resigned from the company, about the time of the Downs report completion. He resigned at that time. A friend of mine who was connected with the water company said that after that, and I would like Mr. Evans to hear this, after his father's death, he was offered the management of the company, sometimes after his resignation.

Now, Mr. Lantz came to me and stated that fact with regard to the Downs report, that it was constructed with that idea in view. The company was going out to try and sell. They were a local concern, and they could not jump rates. They wanted to pass it over to an out-of-town concern, who could jump rates and get an excuse for jumping rates and stand the gaff, and they did so, and they did not carefully collect, and they gave reductions to charities, and they played to the public, because the owners were members of the public, lived in the community. Some of the large contributors to this fight are people who sold their stock and who realized the enormity of what has happened since.

BY MR. EVANS:

Q. Now, Mr. Loveland, just in that connection, as I understand it, Colonel Watres was the controlling stockholder of the old company?

A. Yes.

Q. And he is a resident of this Springbrook district, is he not?

A. No, he lived in Scranton, but he spent a large part of his time in Wilkes-Barre, and members of his family live in Wilkes-Barre, his nephew.

Q. The Pennsylvania Water Service Company and the Federal Water Company are controlled in New York, are they not?

A. They are entirely controlled by New York capitalists, as I understand it, and their securities were distributed by New York bankers.

BY MR. MEMOLO:

Q. Mr. Loveland, notwithstanding the owners of the Springbrook Company were very philanthropic, you might say, in dealing with the people up there, they made a lot of money, didn't they?

A. I would just say this with respect to my own experience in the matter. My father was a stockholder in the old Wilkes-Barre Water Company, which was merged into the Springbrook in 1896. He received bonds at 90 for his stock, and he received a 20 per cent stock dividend. The stock which was issued at that time was not worth one single cent. It was entirely velvet. It had no value. In fact, the bonds, according to the testimony in this case, were only worth about 60. The value in this plant was only at 60. The stock received dividends after a few years steadily and it received a 50 per cent stock dividend, increasing the five million of stock to seven million and a half, and then a further dividend of 33 1/3 per cent, increasing it to ten million, and then it was sold at 150, so that represented fifteen million, which in that time had been—which in 1896 had been worth nothing.

So, there is no question but what the original rates were high, under which we were existing, because there is a very unusual situation for providing water cheaply in this locality, and I will give Colonel Watres the credit of being a very unusually good business man, an efficient man, and that John Lantz, as the engineer, in designing these reservoirs, saved money for John Watres, and he knows the reservoirs from the bottom up, and the Commission says that it pays very little attention to his testimony.

BY THE CHAIRMAN:

Q. They have a gravity system?

A. Gravity system entirely.

BY MR. MEMOLO:

Q. No pumping?

A. No pumping, not at all, in the Springbrook. There may be some pumping in the north end of the Scranton. My memory is not correct about pumping from the Lackawanna River for Carbondale. I am not sure about that.

Q. No, there is no pumping.

A. I am not sure about that.

Q. In other words, coming back to the Public Service Commission, the ink was hardly dry on the permit for a merger before they filed a schedule for new rates?

A. They have found—let me explain how I read this, what happened,—they had these rates all fixed for the Springbrook Water Supply Company—

Q. That was before the merger?

A. Before the merger—they had been working on an appraisal, and they found that they could buy the Scranton district companies and then by the merger they could increase the rates very materially,—could justify these rates better than they could with a separate company. That was withdrawn when they found that was impossible, and when they found I want to say that my withdrawal as a complainant, the whole facts which they had, and which I am convinced Mr. Ainey had in his possession when he made that decision and I was requested to withdraw, because I could have, if I had had that information of the first year and the values and size of the two properties, which I have since acquired through the trial of this case, I think we could have made a very decided fight and carried it out objecting to such a merger, because some properties are distant and the conditions are absolutely different,—the conditions of handling it. The cost of maintenance in the Springbrook territory is about, an average for five years, \$320,000.

Q. That includes depreciation?

A. Not including taxes or depreciation, exclusive of depreciation. The Scranton territory cost something like \$600,000 a year. They have meters to install and they have to read the meters. We have so much water that we didn't have in the Springbrook's territory, and just by a little inspection and a little care we still have plenty of water there in spite of the fact of this long, prolonged drought, I won't say any excess of water, but it has not been necessary for them in any way to enforce regulations, or cut down in the use of water.

BY MR. EVANS:

Q. Mr. Loveland, this stock that you spoke of, which you or your father received as a bonus—

A. In 1896.

Q. In 1896, were dividends paid on that stock.

A. They were. Only a few years afterwards, the dividends commenced, then the stock dividends and the dividends on that additional stock.

Q. And they were paid continuously up to the time that you sold your stock?

A. Right up to the time of the taking over by this new company.

Q. Right up to that time?

A. Yes.

Mr. EVANS. Are there any other questions?

Thank you very much, Mr. Loveland.

ROY HUSSELMAN sworn.

BY MR. EVANS:

Q. Mr. Husselman, where do you live?

A. Lakewood, Ohio.

Q. And what is your occupation?

A. I am a consulting engineer.

Q. Will you give the Committee briefly your experience as an engineer?

A. I have been engaged in the practice of consulting engineering in the city of Cleveland, Ohio, since 1915. During the past ten years, or since 1920, I have had my own office. Prior to that time I was a member of the firm of F. W. Ballard and Company, also consulting engineers.

Q. What did their work consist of largely?

A. The work consisted of analysis of public utility properties, the valuation of public utility properties; the prepara-

tion and presentation of rate cases to commissions and courts. During the past few years in my practice I have been retained by the Public Service Commission of Indiana in a merger case involving the merging of 14 or 15 different utility companies in the State of Indiana, with six or eight other large public utility concerns. These properties involved water properties, gas properties, electricity, steam heat, ice, interurban and urban street railway properties. That was the so-called Insul Merger Case, in which that organization asked for authority of the Commission to merge various properties and issue securities to the extent of about \$83,000,000. More recently I have appeared for the city of Martinsville, Indiana, which was an intervenor in the case of the Wabash Valley Electric Company against the Public Service Commission of Indiana in the Federal Court of the Southern District of Indiana, as engineer for the city. In 1928 I was retained by the Department of Public Utilities of the State of Massachusetts in the Cambridge Electric Light Case, which was another case in the Federal Court of the District of Massachusetts.

Q. Does the Department of Public Utilities of the State of Massachusetts correspond in general to our Public Service Commission?

A. Yes. This was a case involving the valuation of the properties and studies of the accounting and operating expenses of the Cambridge Electric Light Company, and assistant to counsel in testifying in the case. Prior to that I was retained by the same Commission in the Worcester Electric Light Case, also in the Federal Court. I have appeared before a great many Commissions in various cases involving rates for electricity, water, gas, street railway service. I have been before the Pennsylvania Commission, back in 1916, in 1919, 1920, up to 1923. Before the Indiana Commission, before the Ohio Commission, and the Massachusetts Commission. I have made a number of appraisals of various sorts of public utility properties for cities for use in service at cost franchises in street railway properties and for other purposes.

Q. You were at one time retained by Elwood City?

A. I was retained by the borough of Elwood City, Pennsylvania, in 1929, in connection with the municipal light plant. I was retained by the city of Richmond, Indiana, in 1930, to make a survey and report of their municipal light plant. I have been retained by various municipalities in connection with the construction of various utility properties, and have designed and constructed filtration plants, water plants, electric light plants, and have engaged in the general practice of engineering. I might say that from 1912 to 1916 I was in the employ of the Division of Light and Heat in the city of Cleveland, Ohio, and under the chief engineer had charge of the designing and construction of the Cleveland Municipal Electric Light Plant, which is quite a large property. Prior to that time I was engineer in the office of the chief engineer of maintenance of way of the Pennsylvania Lines west of Pittsburgh for six years. Back in 1906 and prior to that time I was with Coates and Burchant, public appraisers and accountants, of Chicago, Illinois. For two years I was engaged in the appraisal of various industrial properties throughout the United States. I am a member of the American Civil Engineers and the Cleveland Engineering Society.

Q. Were you involved in any way in the Luzerne County Gas and Electric Case before the Public Service Commission of Pennsylvania?

A. I was the engineer for the complainants in the so-called Luzerne County Gas and Electric Case, which ran from some time in 1918 to 1923.

Q. Have you ever been employed by investment bankers to make investigations and reports on utility properties?

A. I have. I have made a number of reports—surveys of properties and reports for various investment bankers to be used as the basis of purchasing the property or for the issuing of securities. Those properties involved a number of water properties, and gas properties, and electric and street railway properties.

I might say that I was associated with some bankers in the formation of a holding company and in the purchase of some electric operating properties, the financing of such properties, and was a director and officer in the companies that were organized at that time and were later sold. I am not now connected with any public utility properties at all.

Q. Mr. Husselman, have you made a study of the record in the case of the Scranton-Springbrook Water Service Company, recently decided by the Pennsylvania Commission?

A. I have, sir.

Q. Will you tell us, briefly, what the record shows in regard to the increase of rates; not going too much into detail but giving us a general summary of it?

A. The record and the decisions of the commission show that this Scranton-Springbrook Water Service Company, in filing its rates, which were to become effective as of July 1, 1928, requested a rate which would return a revenue of \$1,750,000 per year, and it shows that the rates, which were in effect at that time, had produced revenues of \$2,295,000 per year.

Q. \$2,999,000?

A. \$2,999,000. I think that is what I said.

Q. I thought you said \$2,295,000.

A. In this increase, there was provided for in the schedule filed, a percentage over the whole range of customers which amounted to something over 60 per cent. This increase was asked prior to any definite information being furnished by the respondent company as to the value of the property used and useful in rendering this service, and immediately the rate increased—the new schedule was filed, the various communities protested and filed complaints against such rates becoming effective, and some of the municipalities set up the claim that their budgets for the year had been made up prior to that time and they were not in a position to increase their revenues from taxation, and, as a result of this and a conference with the Public Service Commission, and in which the Public Service Commission, as such, could not take any part, an agreement was reached between the counsel for the municipalities and the company to suspend the effective date of those rates to January 1, 1929, the understanding being that the bills would be rendered at the new rates, and show the old rates, that the company would accept payment at the old rates and ask for—to recoup any difference between the old rates and the rates finally fixed by the commission.

Now, the rate case proceeded, and the respondent, having the burden of proof, put in its valuations of its property and its other evidence, and in December, it being obvious to everyone that the case could not be concluded and the commission reach a decision by January 1, 1929, the commission issued an interim order at the request of the company, in which it required the company to file a new schedule of rates, which reduced the estimate of the company's revenues under the rates which were to become effective as of July 1, 1928, in an amount of \$245,000. That is what the interim order of the commission states. How that figure was arrived at, I do not know. In compliance with that order of the commission, a new schedule was filed and became effective as of January 1, 1928.

Q. 1929?

A. 1929, and thereafter the bills were rendered at that rate, and that rate, of course, under the law of Pennsylvania became the legal and effective rate.

Now, the complainants then proceeded to present their evidence in this case, and the usual procedure was followed in conducting this case, in which evidence was taken at great length from engineers and accountants, particularly engineers, as to the value of the property involved.

Q. When were the hearings closed?

A. The hearings were closed on December 6, 1929. The briefs were filed in March of 1930. I think the case was argued in April of 1930, and the decision of the Public Service Commission, fixing and establishing the value of the property at \$43,560,000 and fixing and prescribing the rates came down on December 9, 1930, and I understand that has been appealed by the—or the company has taken an appeal to the Superior Court of Pennsylvania.

Q. Now, what did the commission estimate that the new schedule of rates, which it ordered effective as of January 1, 1931, would produce in the way of gross revenue?

A. \$4,219,000 per annum.

Q. And this was a reduction of about \$530,000 from the rates originally filed by the company, as estimated?

A. Yes. In other words, the interim order reduced the company's demand by about \$245,000, and this increased the reduction in the rates, as requested by the company as of July 1, 1928, by an amount of about 530.

Q. How much of an increase was it over the old rate?

A. It was \$1,224,000 of an increase or about 41% over the old rate.

Q. That is taking it over the entire Scranton-Spring Brook system?

A. Yes sir, over the whole range of the property involved in this case.

Q. Now then, does the record disclose the price at which the property was set up on the books of the Federal Water Service Corporation when it purchased the stock of the new company?

A. Yes sir, \$54,770,000 in round figures.

Q. Now what was the original capital invested in these properties as shown by the record?

A. \$6,856,000.

Q. And the property was built up by plowing back the earnings into it from that original investment?

A. Yes sir. I would like to say that this capital originally invested in these properties of \$6,856,000 was increased from earnings. That is the earnings derived from the sale of water in these communities were used for various purposes, to pay interest on funded debt and to pay dividend on stock and to create a surplus and to construct additional new properties. (At this point a chart was brought in and set up for the information of the Committee). This chart shows in the first column what the city claims in March 1928 is the capital that was actually invested in the property, \$6,856,000.

Q. That is the white portion of the column at the bottom?

A. That is, yes. Now the complainants employed a Mr. Heinbockel, an accountant, of Scranton, in this case before the Commission to ascertain from the books and records of the various underlying companies, the amount of fixed capital, that means the money expended and carried on the books of the company for the property in use, and after a diligent search through the records and books of this company he arrived at the figure of \$24,286,000 which he found as representing what is called the money expended for plant and property.

Q. Was there any serious contest in regard to that figure shown by the record?

A. No. The respondent claimed that by reason of the great number of companies that were involved and that had been assembled into this final Scranton-Spring Brook Water Company, that they could not ascertain the original cost. However, Mr. Heinbockel went on the stand as a complainant's witness and stated that he arrived at this figure of \$24,286,000 as being the money invested in this property both out of contributions and bondholders and money reinvested out of the earnings.

Q. And what did the amount earned amount to?

A. \$17,430,000. That is the title of the charge, reinvested capital.

Q. What was the value added to that by the complainants making the total fair valuation of the property?

A. That figure is \$1,164,000. Now that explanation is not the proper explanation. The complainants in this case also employed engineers to make an inventory and appraisal of this property on the basis of cost of reproduction new less depreciation. The work of making that inventory and appraisal for the complainants was under the direction and done by Mr. J. H. Lantz, who was an engineer, the chief engineer of the Spring Brook Water Supply Company for a great many years, and under whose direction as an engineer a great many of the structures on that property were built. Mr. Lantz and his brother, Mr. William L. Lantz, who is also an engineer in the employ of the Spring Brook Water Company for a number of years, were as I say in charge of making this inventory and appraisal of all these properties on the basis of the cost of reproducing them new and estimating the depreciation to arrive at the depreciated figure for these properties. The testimony shows that they with a great many assistants made a complete inventory of the property and a complete appraisal of it, and they arrived at a figure of \$25,450,245, which included not only the physical properties but also such working capital, materials and supplies or so-called overheads that are usually allowed in making an appraisal of this kind, to the extent as I recall of thirteen per cent or thirteen and a half per cent of what they found to be the total cost of reproducing the physical property and they therefore arrived at a cost of reproduction new of this property as of March, 1928, in the amount of \$25,450,250, which was the figure presented by them to the Public Service Commission and argued as the proper figure for the consideration of the Commission in arriving at a fair value of the property to be used as a basis for fixing and determining rates of the Scranton-Spring Brook Water Company.

The two figures, as shown on the chart, have no real relation, in that one was made by an accountant from an examination

of the books and records of the various companies going to make up this Scranton-Spring Brook Water Company, and was an attempt on his part to determine the actual cost or the actual investment in the property, which, in the theory of rate making as it has come down to us, is one of the elements for consideration by a rate making body when it determines the fair value of a property.

BY MR. EVANS:

Q. And that was \$25,450,245, including the \$17,430,000 of invested profits?

A. That's right.

Q. Now, if you have finished with that column, Mr. Husselman, what did the company claim as the value of the property as of March, 1928?

A. The company claimed \$58,000,000 as the cost of reproducing that property new.

Q. And how is that made up as shown on your chart?

A. I don't want to have any questions about this thing. The company never of course made any claims of the \$6,856,000 of reinvested profits, because it claimed that it was impossible to ascertain the original cost or investment in these properties. That was shown that way on the chart merely to carry those various items across in the right proportion, to show the make-up of what the city claimed goes to make up the company's claim of \$58,000,000.

Q. In other words, if Mr. Heinbockel's analysis was correct, \$24,000,000 roughly of the \$58,000,000 comprised actual investment in the property?

A. That is right.

Q. And will you explain what the rest consists of?

A. Well, the company retained various engineers, chief of whom was a Mr. Harrop, chief engineer of one of the subsidiary companies of the Federal Water Service Company.

Q. Well, what company is he connected with? Let us have the actual name of the concern, if you have it. Public Works Engineering Corporation, is it not?

A. Yes, the Public Works Engineering Corporation. They had an appraisal of this property made by Mr. Harrop and introduced and testified to by him.

Q. Had he ever had any connection with the property prior to this time, that you know of?

A. Not according to the record. He testified, I believe, that his first knowledge of this property was in March, 1927. The respondents also had an appraisal made by Day and Zimmerman, in charge of Mr. Ehlers, Henry E. Ehlers, who was formerly assistant engineer of the Public Service Commission of Pennsylvania.

They called other witnesses to substantiate or attempt to substantiate various other items going to make up this appraisal. The total of the appraisal claimed by the company for these water properties was \$58,000,000, in round figures, which included their figures of cost of reproducing the properties new, the physical properties new, and various allowances for water rights, for omissions and contingencies, for promotion expenses, for organization and administration, for cost of financing, and for going concern value. Their claim for going concern value was in an amount of \$4,000,000, which is included in the total of \$58,000,000.

Now, in the second column of that chart, there is an item marked promotion expenses. When this property was purchased, I should say when the stock of this property was purchased, from the holders of the stock of the underlying companies, the price paid for the stock of the Scranton Gas and Water Company by the purchasers was \$24,780,000. The price paid for the stock of the Spring Brook Water Company was \$14,997,000 and the company assumed the then outstanding bonds of the companies in an amount of \$11,505,000, which made a total purchase price of \$51,282,000, and this figure included the Hyde Park Gas Company, which is eliminated from the figures shown on the chart.

Now, they said this—they made other expenditures for various items in connection with the acquisition of these stocks, in the way of commissions paid to agents, in the sum of \$674,000. They had considerable expense for legal fees, for auditing, and for engineering fees, which go to make up that item referred to on the chart as promotion expenses, in the amount of \$3,485,310.

Q. Now, just to get this clear, Mr. Husselman, as I understand this, the Federal Water Service Company or its subsidiary, the Pennsylvania Water Service Company, in acquiring

the stocks of these two systems paid roughly \$51,000,000 for property which had a fixed capital value of something a little over \$24,000,000?

A. Yes, sir, that is right.

Q. And then the promotion expenses,—what are some of the large items that are included under that heading? Those commissions and fees and things of that sort?

A. Yes. I gave some of those.

Q. Did you? Well, pardon me

A. Commissions,	\$674,000,
and legal fees,	135,000,
and appraisals,	82,000,
auditing,	17,000.

Q. These were just on the Scranton property that you are reading now?

A. Those were, yes, but I have been adding them together.

Q. I see. Then they opened up their books with an entry of how much for the property? I suppose the sum of the \$51,000,000, and the \$3,000,000 roughly, didn't they?

A. Yes, they opened up the books of the Scranton Springbrook Water Company with an entry of \$54,770,000.

Q. On which they had to try to earn a return?

A. Exactly. That, as said before, included the gas property, and this figure of \$47,855,057, as the figure of that amount that is applicable to the water department.

Q. Now, Mr. Husselman, you have testified that you have been familiar with the methods used in financing and promoting these companies. From that experience, what is your judgment as to how this transaction actually was carried through, as far as you can see from the record?

A. Well, I can not say of course the exact thing that happened in this transaction, or in this particular transaction.

Q. Well, just give the committee the benefit of your experience in similar transactions.

A. My experience in a similar transaction is especially in the years 1923 till the middle of September of 1929. Bankers and brokers were very desirous of securing public utility deals to finance. Bankers and brokers legitimately live by being able to sell the bonds and securities of utility concerns and other securities, and it was difficult at times to get securities that were attractive to the public, to enable a good presentation, and out of which the bankers could make their living. A great many bankers and brokers engaged in the search for a utility property in this period, and of course, that search directed itself towards the properties, the stock of which was owned locally, stock which could be acquired, and which would enable the promoters to assemble various properties under one company. This was done largely through the medium of the holding companies, and agents were sent throughout the country to locate these properties which could be purchased, or the stock of which could be purchased, and assembled into large holding company proposition. I personally know of a great many instances where these agents of the holding companies went to the principal stockholders of a utility company and offered them terrific prices for that stock. From the fact that in this case, of the Scranton-Springbrook Water Company, commissions were paid, it is obvious that there were agents in the employ of the Federal Water Service Company, looking for properties of this kind, and the fact that a commission was paid to such agents indicates that this deal, as it was called, was brought into the Federal Water Service Company by such agents.

Q. In gathering these properties for the purpose of merger, are the promoters primarily interested in the value of the property, or its earning capacity, in its past earning record, and in what the possibilities of the future may be made to show?

A. I have personally been employed by investment bankers in connection with these matters, and I know that they have very little interest in the so-called value of the property for rate-making purposes. They don't care what the cost of reproducing new is, or what its actual cost was. They are interested in knowing, "What price can we acquire that stock for, and if acquired how much can we increase the rates to enable us to pay the interest and the dividends on that cost price." Now, there is a point beyond which, of course, they could not go in paying a price for these properties, and that point was limited by their conception of what they could charge in the way of rates, and limited by that only. In other words, if they could buy the stock of the company and assume its outstanding bonded indebtedness and show a return on the

present rates of say seven or eight per cent on that price that they would have to pay they felt justified in purchasing that property—seven or eight per cent or better.

Q. They could sell the securities to the public on such a basis?

A. Yes, on such a basis and that was regardless of the amount of the stock, or the value of the stock that was outstanding at the time, but, of course, if the price asked by the owner of the stock was such that under the basis of rates which could be economically charged would not return them up to 6% on the price that they had to pay, of course, they could not afford to purchase the property. In other words, it came to just a matter of how much will the traffic bear, and how much can we get out of the Public Service Commission in the way of rates to justify the amount that we can pay for the stock.

Q. Mr. Husselman, to justify the rates of any given amount, they realize that they will at some time have to have the property valued for rate making purposes, do they not?

A. Well, they realize that, but they don't fear it very much.

Q. Why is that?

A. Because by the employment of experienced counsel and experienced engineers and accountants, they have been able to present evidence to Commissions and Courts, in the way of fictitious values, which have influenced the Commissions to fix values on the property somewhere near the amount desired by the companies.

Q. In other words, built up a reproduction cost estimate of the property, I assume you mean?

A. Exactly. That is one of the reasons behind the reproduction cost theory, and by the making of an inventory on a property, and by engineering estimates which are after all only estimates, they have been able to build up sums as to value of property very much in excess of the original or actual cost, or of the money invested in it, either from money contributed by the original stockholders and bondholders in reinvested earnings. These costs of reproduction now, which are wholly theoretical, and are made as the basis of estimates by engineers, can be made to show very greatly in excess of the real investment, or real value of the property.

Q. Now, in turning to this particular case, what did the company's engineers use as the basis for their appraisal of the value of the property.

A. The record shows that all of the appraisals made by the respondents in this case were based upon a so-called appraisal of the Springbrook property made by Mr. Downs in 1918, Mr. Downs then being an engineer in the employ of the Public Service Commission of Pennsylvania.

Q. And that was an appraisal made of the valuation for security purposes, was it not?

A. That was an appraisal made—

Q. For a certificate of valuation, as it is called?

A. As the basis for a certificate of valuation.

BY MR. MEMOLO:

Q. That was just the Springbrook property; not the Scranton Gas and Water Company?

A. No; not the Scranton Gas and Water Company. However, there was another appraisal made of the Scranton properties different from the Downs appraisal, which was also used by the respondents' engineers in making this present appraisal. However, the Downs report, as it was called throughout the testimony, was the basis not only of the unit prices applied by the respondents, but also of the quantities of pipe and concrete and so forth finally carried into this appraisal. Now, this Downs appraisal was made for the purpose of fixing capitalization, and in its order the commission sets forth that it was not to be used in the future or at any future time for the basis of rate making. That is required in the law of Pennsylvania, and it was so covered in that order, but nevertheless this Downs report was used by the respondents, or the company, as the basis of their inventory and of their unit prices, those unit prices used way back in 1918, which were then made up on the basis of the five year average prices, were trended down to get at the cost of reproduction new as of the date of this particular appraisal.

BY MR. EVANS:

Q. That is to say, when you say "trended" you mean to take the indexes of commodity prices and so on and either increase them or decrease them accordingly?

A. Yes; especially the labor prices.

Q. Was that the Scranton Gas and Water appraisal made before the Downs appraisal was made?

A. Yes.

Q. Sometime before?

A. Quite a while. As I recall it, they refer to that as an appraisal made by Mr. Fuller of Pittsburgh in 1912.

I might say this, from my examination of the record in this case, it is quite certain that this so-called Downs report, being made for the purpose for which it was made, was not made with the care and the precision that would ordinarily be followed in making an appraisal for a rate case.

Q. It was an uncontested proceeding? There was no contest in connection with it?

A. There was no contest. The public, of course, were not represented. In view of the fact that the law provides that those capitalization appraisals are not to be used in future rate making proceedings, the public is not very much interested, and that was made in an uncontested case without any examination on the part of the public into the figures set up in the appraisal.

BY MR. MEMOLO:

Q. You say that in this rate making case they had there they used the Downs report figures all the way through; did you say?

A. No; I want to get this straight. They used the quantities of material—

Q. Yes.

A. —and then took the unit prices that were shown in the Downs appraisal and trended them by applying factors for labor costs in 1918 as compared with 1928, and trended those unit prices down and used them. Now, that is not as good, in my opinion, as to go out in 1928 and built up new prices and apply them to the quantities of material, because you bring in a questionable factor when you try to take an old price that you don't know very much about the basis of anyway; except somebody else's prices made years before, and then try to factor them down to the present day. I never do it, and I don't believe that it is an accurate way to do it.

BY MR. EVANS:

Q. If there was an error, for instance, in the unit prices of any material in the Downs appraisal, if it was too high, it would be greatly increased by trending that finding from the 1918 prices up to the 1928 prices, would it not?

A. Well, that wouldn't necessarily follow.

Q. Wouldn't it?

A. No, sir.

Q. I thought that system of trending prices always ran the risk of magnifying the errors.

A. It might magnify errors or it might not, but the fact of the matter is, it not a proper way to make a reproduction in an appraisal.

Q. Now, in turning back to the chart for a moment, and looking at the second column, you have in the red portion a figure of \$11,367,967. What does that represent?

A. That simply represents the inflation due to a write-up, you might say, of the value of this property by reason of the acquisition and refinancing.

Q. In other words, the original property—the valuations of the original property were raised to something around \$35,000,000 from the \$24,000,000 that is shown as the investment in the property?

A. Yes, sir.

Q. Then, what does the next figure above that represent, the \$6,919,380?

A. That represents the write-up due to the intangibles and overheads.

Q. Well, now, you mean all sorts of engineering overheads?

A. And going concern value.

Q. And going concern value and things of that sort?

A. And cost of financing and things of the sort; costs which are not certain to have been incurred, but they are entered on the books as an item of value in the opinion of somebody presenting the case for the respondent.

Q. Now, the next item I think you already have explained, of \$3,488,310?

A. Yes, sir.

Q. And above that is a figure of \$1,793,408 marked "Non-utility property." What does that represent?

A. That is property owned by the company but not used and useful in rendering service to the consumer, and, therefore, not to be included in the rate basis.

Q. Now, the total up to that point seems to amount to \$47,855,057. What does that difference between that and the fifty-eight seem to represent; it seems to be blank.

A. Well, those two figures, again I should say, should not be in the same column, because one of them represents the cost of the stock; that is, the \$47,855,000, represents the cost of this property to the utility company—to the Federal Water Service Company.

Q. I thought you said that was about \$51,000,000?

A. No; I said that that 51 million included the Hyde Park Gas Company.

Q. I see. That is just what I wanted to get straight, and this excludes the Hyde Park Gas Company?

A. This excludes the Hyde Park Gas Company, because the gas rates were not in question in this case so that eliminating that Hyde Park Company gain, the cost of the stock and the bonds assumed by those new purchasers for this property amounted to \$47,855,000. Whereas they then go before the Public Service Commission, disregarding figures and amounts paid for the stocks, bonds assumed and the capitalization or anything of that kind and come in and attempt to justify the figure of \$58,000,000 as the right basis for the water company for which they request the Public Service Commission of Pennsylvania to allow them rates. In other words the \$58,000,000 is their claim for a rate basis or a rate based on the cost of reproducing this company, including a water right and going concern valuation and every other valuation they could find.

Q. Do you know whether, Mr. Husselman, in regard to these reinvested profits, these profits were expended in the payment of reasonable dividends to the stockholders?

A. No sir. The records show that for the period up to 1928 cash dividends in the amount of \$12,671,000 were paid to the stockholders of these various companies and that stock dividends in the amount \$11,543,000 were paid. So that at no time were the stockholders denied a return on the investment and the rate must have been fixed throughout all those years that enabled the company not only to pay interest on its funded debt but dividends on its outstanding stock and also to plow back into the company in the way of extension and betterments out of these earnings of \$33,477,000.

Q. Take briefly this third column and explain what it represents.

A. The fair valuation as fixed by the Commission on June 30, 1929.

Q. That figure was?

A. \$43,650,000. However I want to get that straight. This amount of \$43,650,000 was not arrived at by the Commission in consideration of the capital actually invested or reinvested profits and certainly not on the basis of revaluation of the property by experts, but was arrived at by the Commission, I presume, on a consideration of the evidence presented by the respondent and some little evidence presented by the complainants on the cost of reproducing this property including some overheads and intangibles.

Q. You have read the report of the Commission; does it indicate the basis on which it did find the valuation?

A. It does not.

Q. It is quite a long report?

A. It is a twenty-eight page typewritten report, more than one-half of which is used in describing the property and not deciding facts and figures as between the parties. So it is impossible to report how they arrived at their valuation. May I just read—I cannot find it. I wanted to read the statement by the Commission in this order setting forth that there was great dissension between the engineers of the complainant and the respondent over the unit cost applied and there was great controversy over that, and no good purpose would be served by the Commission setting forth how it arrived at this figure. It simply shows in the decision the column in which it sets up the figure claimed by the company, another column the figures claimed by the complainant, and then sets down the figures used by the Commission for the several classes of property allowed by the Commission in the figure of \$43,650,000, which it finally finds is a fair valuation of that property for rate-making purposes.

Q. Well now, taking this third column on the chart, what does it carry?

A. It carries the Heinboeckel estimate as to the investment in the property, \$24,280,000.

Q. Will you explain the portion of the column above that?

A. Yes sir. The first \$1,344,388, was for additions, that was to bring the value of the property down to the one the appraisers made in March, 1928, and June 30, 1929. That is the money expended by the company in the improvement and betterment of the property, and a perfectly proper figure. The next item represents the cost allowed by the Public Service Commission over and above the amount invested in the property up to March 31, 1928, by the original owners and out of reinvested profits, in the tangible property, that is the \$9,360,000 was put into this and shows the final determination of the value issued for just a write-up of that additional initial fixed capital account, due to the use in the case of reproduction valuation. The next item of \$8,663,000 is the amount that shows the overheads and intangibles allowed by the Public Service Commission which is also a write-up of the original investment in the property.

Q. Well now, I want to be perfectly clear. You said that it is impossible to tell from the Commission's report how it arrived at this total valuation. Does the report show a figure, for instance, of \$8,663,000?

A. Yes, it is possible to pick out the separate items going to make that up, and they consist of what are commonly known as overheads and intangible values. The Commission allowed \$2,600,000 for going concern value and it allowed \$1,900,000 for cost of financing, and it allowed interest during construction in the amount of \$1,342,000, and it allowed insurance and taxes during construction of \$313,000, administration and legal expenses of \$485,000, promotion and organization of \$627,000, engineering and superintendence of \$1,396,000, and omissions and contingencies of \$960,000. These items go to make up that total of \$8,663,000 shown on the chart.

Q. Representing about 20 per cent of the total value?

A. Yes, sir. I might say that in its appraisal the Commission allowed overheads and intangibles in addition to the physical property to the extent of about 29 per cent, which in my opinion is an excessive and unwarranted allowance.

BY FATHER COX:

Q. Real values never enter into the consideration in these mergers, do they?

A. They do not.

Q. It seems to me that the public then simply guarantees, by the necessity of having a water supply, that it will always pay a handsome dividend on the inflated stock of these mergers; the public is not considered at all, as to whether they are able to pay or whether they should pay, but they simply must pay in order to keep up the inflated value of a merger.

A. Exactly. In other words, this company would be in—having issued these securities and having—the new company now has \$33,780,000 in four and a half and five per cent bonds outstanding, whereas prior to the merger the funded debt was \$11,505,000. Now, that is pretty near three times as many bonds out after the merger as there were before, and it has \$1,207,000 of five per cent no par preferred and \$5,792,000 of six per cent preferred outstanding, and a declared common stock outstanding of \$5,000,000, or a total of \$45,780,000.

You will notice how close to that figure the securities, let us call them securities, outstanding, the \$43,650,000 are.

Now, with those securities outstanding, what you say, that the public must pay, in order that those companies may have the money with which to pay their interest and their dividends regardless of the real value of that property, the public has to pay it or somebody has to lose interest or dividends on its money that it has paid and that somebody is again the public.

Q. And the necessity of having guarantees that they are always going to get the dividends, no matter what inflation it is?

A. I can not see how it can be guaranteed, because I don't believe that a public service commission has the right to guarantee any public utility a return on whatever stock it may issue. Now, this is one of the things that is wrong with regulation, that these companies come to the commission and must come, under the law, and get their amount of securities that they may issue approved by the commission before they can be sold.

Q. Is that right in Pennsylvania?

MR. EVANS: No, they do not have to get the approval of the commission in Pennsylvania before they issue securities.

They have to file certificates of notification after, or at the time they issue the securities, and if the securities are issued illegally, it is the commission's duty to certify the matter to the attorney general for his action, after they are issued.

**THE WITNESS:** Well, in practicing before the Public Service Commissions of Indiana and Ohio and New York, where no company can issue,—I mean no operating utility company can issue any securities unless they are authorized by the commission, the commission approves those authorities rather perfunctorily; in other words, there is no contest about it. But the commission having once approved them and the securities are issued and sold to the public, then of course, regardless of the fact that the amount of those securities outstanding is not presumed to have any effect upon the determination of fair value for rate-making purposes, the companies come back and say, well, this stock or these bonds are owned by widows and orphans, and we have got to have enough money from rates to pay for it, or those poor people are going to lose their money.

**BY MR. EVANS:**

**Q.** Now, Mr. Husselman, what is the total of the bond interest and preferred stock dividends out of this system now? What do they amount to annually?

**A.** The figure is \$2,094,913.54.

**Q.** And on the basis of the commission's estimate of the revenues of the company under these rates which they have fixed, how much will there be available for common stock dividends? Have you got that figure?

**A.** Yes, sir. \$960,587.

**Q.** This is no par value common stock, I understand?

**A.** Yes, sir.

**Q.** What is the stated value of that no par value stock?

**A.** \$5,000,000.

**Q.** And what then will be the percentage of return on this common stock?

**A.** 19 per cent.

**Q.** 19 per cent?

**A.** Yes, sir. May I say that in setting up its table of allowable earnings, the commission allowed a seven per cent return on this \$43,650,000, or \$3,055,500 per annum, and of course, after bond interest on \$33,780,000 of bonds and on the preferred stock there is left \$960,000 for dividends on the common stock, which is at the rate of 19 per cent.

**Q.** Now, Mr. Husselman, after reviewing the record in this case, and as an engineer, would you say that the company was entitled to any increase in the old rates or not?

**A.** It is my opinion that, with all reasonableness and fairness, that that company would have been entitled to a slight increase in the old rates which were in effect prior to July 1, 1928. Forming my judgment on the record in the case, I should say that that increase would not have been more than ten per cent, giving full effect to cost of reproducing the property new and to every element of value that could possibly exist in it.

**BY MR. MEMOLO:**

**Q.** I think, Mr. Husselman, that with some of the consumers that we have down there, they all seem to agree that the old company was a little lax in checking up on all of the fixtures in the properties, and I believe that if all the fixtures were checked up and the people had to pay on all the fixtures they had in their homes, that the ten per cent would more than have made up,—under the old company I am about talking now.

**A.** Yes. Well, I think probably you are right. In going over this testimony, and going over this record, I didn't find any mention of that thing that was stated by Mr. Loveland this morning.

**Q.** There is no question about it, because I know. I have fixtures right in my house under the old company, and they omitted several fixtures—

**A.** Yes.

**Q.** Now, with 25% increase, or 30% increase in my rates, my water rates, they would have been increased to \$44, but that is because they found several fixtures that were not paid for?

**A.** Yes.

**Q.** Now, I think that is probably true in the whole valley of the Spring Brook Company, not in the Scranton System, because they are metered. Under the Spring Brook Company

there were people who had several fixtures that were not charged for by the old company, and I think they went into the matter very thoroughly and checked up on the fixtures that the people had in their homes, that 10%, insofar as the Spring Brook Water Company was concerned, could have been made up very easily?

**A.** It could certainly have been made up on that basis you have mentioned, in going through and re-surveying all the consumers, and getting them charged properly on their bills for the new fixtures, and if they would put in a very small, probably reasonable increase on fire hydrant service.

**BY MR. EVANS:**

**Q.** When you spoke of 10% increase in rates, I assume, you were dealing primarily with the revenue of the company, not how it was increased, whether it was increased in fixtures or increased in the actual rate?

**A.** Their revenues of the year before this merger were \$2,995,000. Now, the thought that I have in mind, and want to convey, is that I believe they were entitled to 10% increase in this revenue, and that they could get it out of a re-survey and proper listing of the fixtures in the territory and the proper billing for those fixtures, and another slight increase, and I don't believe there would have been any complaints filed—a reasonable increase of 10% in that revenue, because it would not have affected the rates. However, I tried to figure out what my bill would be in my house from the rate schedule prescribed by the Public Service Commission, and regardless of the fact that I am more or less familiar with the rates for all kinds of utility service, I could not tell just how much my bill would be if I had that house in the valley up there. It is a great deal more, however, than where I live, and I am glad of that, because the water in my house costs about \$16 a year, and I got up as high as \$70, if I got up in that territory, so that is the comparison.

**Q.** Something to be thankful for?

**A.** Yes.

**MR. EVANS.** Are there other questions the members of the Committee want to ask this witness?

If not, Mr. Chairman, that is all we have for today.

**THE CHAIRMAN:** We will adjourn then until Wednesday, March 11, at 2 o'clock.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10

Pursuant to the call of the Honorable D. Glenn Moore, the committee met in the Hall of the House on Wednesday, March 11, 1931, at 2:00 o'clock P. M.

There was present:

Messrs. D. Glenn Moore, Chairman,  
Chester H. Rhodes,  
Louis W. Hagmaier,  
Ellwood J. Turner,  
Bart Richards,  
Harry J. Crawford,  
Harold Evans, Esq.,  
John M. Walker, Esq.

**THE CHAIRMAN:** The hearing will now come to order. Before we begin, the committee would like to have the names of the boroughs that are represented here and who is to speak for them. We have a partial list, but we feel certain there are some here whose names have not been turned over to us. May I suggest that you will just name the municipality and the person who is to represent you so that we can get a complete list.

#### BOROUGHS REPRESENTED

Borough	Represented by
Brackenridge	Messrs. George H. Dickey
South Greensburg	William Rollason
West Lawn	William F. Burns
Ligonier, Bolivar and New Florence	W. B. Evans
Columbia	D. K. Lockard
West Wyoming	Stephen J. Chainey, and M. P. Gagoline
Aspinwall	H. E. Lee
Quakertown	Victor Smith
Mount Holly Springs	J. Harvey Line

Conshohocken  
Corona and Oakmont  
Danville

Hanover  
East Stroudsburg  
Northumberland  
Lewistown  
Farrell  
Freeport  
Beech Creek  
Latrobe  
Meyersdale

Homer City  
Tarentum  
Kutztown  
Larksville  
Sharpsburg  
Tower City  
Scottdale  
Exeter  
Hughestown  
Portage

Lykens  
Brookville  
Stoneboro  
Greenville  
Swoyersville

Al. J. Kane  
O. C. Foster  
J. R. Lilley  
F. P. Adams  
Daniel Leffler  
John R. Riap  
Joseph McElhatten  
D. B. Martino

Mr. HULL. Before you proceed taking testimony today, I desire to present the reply of the Commission, to the letter of the Committee of March 4, 1931, wherein all the data requested, so far as it has been possible to assemble it to date, is transmitted. I will say there are additional copies of all of this, and if the Committee desires additional copies, if you will make such requests known to me we will give you such additional copies as you may require.

In response to your letter of March 5th, I am handing you the information that is requested there, with the exception of the second request, the Scranton Springbrook Water Company. These engineering sheets, if the Committee please, consist of approximately large volumes of loose leaves. They are the only copies that are in the possession of the Commission, and they are in the opinion of the engineering department very valuable, particularly in view of the fact that that case is now on appeal, and in the event of a reversal these engineering sheets would be absolutely necessary to a reconsideration of the case. We will present them and ask the suggestion of the Committee as to how these forty volumes shall be handled, where they shall be kept, so that they will be available for return to the Commission in the form in which they are presented. I don't have them physically in the room, but they are assembled and can be brought in at any minute. I am asking the Committee to consider how they can receive them and keep them for return in the order in which they were presented to you. The rest of the information is here.

MR. MOORE: We appreciate your promptness and courtesy, and we appreciate also the valuable documents, and we will take the proper care of them.

MR. HULL: That is the purpose of calling them particularly to your attention.

MR. EVANS: The first witness we desire to call for examination is Mr. Thomas Chrostwaite, who is President of the Pennsylvania State Association of Boroughs.

THOMAS T. CHROSTWAITE sworn.

BY MR. EVANS:

Q. Mr. Chrostwaite, you are president of the Pennsylvania State Association of Boroughs, are you not?

A. I am.

Q. How long have you been president?

A. Since its organization in 1909.

Q. Where was it formed, and can you give us a little of the history of it.

A. The association was formed in 1909, and in 1915 there was an Act of Assembly authorizing the formation of an association of the character which had previously been formed. It is the only association in the State, that is, the only association of boroughs. There are a number of county units of this association, six or eight. The association holds an annual meeting. It held its 21st annual meeting at Harrisburg about two weeks ago. There are approximately 950 boroughs in the State, and a population of about 3,000,000. At the Harrisburg Convention there were representatives to the number of 886. Some of these representatives represented two or more borough, and some sent more than one delegate. We feel that in the association there is approximately 80% of the total population of the boroughs. The association issues an annual bulletin, or a monthly bulletin, and an annual report. I have with me the annual report for 1930, and copies that will be submitted to the members of the Committee and anyone else who cares for them.

Q. Has the association ever considered the question of public service companies, and the problems of public utility regulation?

A. During the past ten years at all our conventions the matter of public utilities and the operation of the public service company law has been one of the dominant features. It becomes so important as to almost obscure all the rest of the legislation we have been proposing from time to time. The association has passed resolutions asking for the abolition of the Public Service—for the repeal of the public service company law, and we have presented from time to time bills on that subject, none of which, of course, passed. The question of rates has come before the association, particularly the question of postponing the effective date of rates, and on several occasions during the past ten years we have presented to the Legislature on that subject. We have been able to get those bills through the house, but we never have been able to get them through the Senate. I think every Legislature during the past ten years has had bills of that character presented.

Q. What was the reason for the Association suggesting the repeal of the public service company law, if you can state.

A. The sentiment of the association—the delegates coming from all parts of the State, without any apparent co-operation or any apparent agreement among themselves—this subject has sprung up on the floor of the convention, and as soon as it did pendemonium existed, you might say, from all over the hall, and one could hear the cry of "Repeal the Public Service Company Law!" We tried to control it. We tried to show at times that it didn't need repeal, but revision, but apparently the delegates from back home were of the opinion they didn't get fair treatment, that in the rate cases that have been heard they were not given due consideration, and they felt that the only recourse would be to repeal the law, and go back to the status that existed prior to 1913.

BY MR. TURNER:

Q. Now, Mr. Evans, might I ask Mr. Chrostwaite whether he is stating an opinion as to what they said about it or whether that was what was said by them?

A. That is what they said. That is the result of motions we passed, and I don't think there was a single motion passed that was not voted upon unanimously by everybody present. It is not my own personal opinion.

BY MR. EVANS:

Q. What action, if any, was taken at the convention of the Association in 1930?

A. In 1930, there were two actions taken, one was for the repeal of the Public Service Company Law, and on the following day that was modified by a resolution asking for certain amendments to the Public Service Company Law and the appointment of a committee. The appointment of that committee was left in my hands, and I appointed a committee of five, two or more—Mr. Walker is one, and Mr. Conrad is another, and Mr. Rockenstein, the Burgess of Freilom, another Mr. Hagmaier, and Mr. Mawson of Scottdale, and that committee has met during the period from early in 1930 down to the present time, and have framed an act, which they presented, known as House Bills Nos. 20 and 22.

Q. They are now before the House?

A. They are now before the House, but a number of amendments are being made to House Bill No. 22, which will be embodied in the bill.

Q. Have those bills ever been acted on by the Association?

A. House bill—I am afraid you will have to call upon the persons who were present at the last convention. I was unable to attend the last convention owing to illness.

Q. Now, Mr. Chrostwaite, can you give the Committee any particular instances within the last say, four or five years in which the Association has had before it cases involving utilities and their relations to the boroughs?

I do not want to get into great detail, but if you could just give us a few examples of what has caused this feeling that you have spoken of in the Association?

A. I have in this bulletin (indicating) made out a report which will contain some of those matters. As a specific instance, we will note in this report that we have recommended that boroughs be freed from paying any portion of the cost of eliminating railroad crossings. A specific instance of that character is the borough of Exeter, in which the Commission required or allocated to that borough a sum for the elimination of a railroad crossing—a sum greater than the total possible municipal indebtedness that the borough could incur under the constitution. Another instance, where the Commission has permitted—I am not quite sure of the name of the borough, but I can supply it to the Committee later; I have it in some other data—where the Commission permitted certain street railway companies to abandon tracks in boroughs without requiring the removal of the tracks and ties, causing in this particular borough a nuisance to exist which will entail the expenditure of several thousand dollars without requiring the utility to remove the nuisance, and without notifying the borough that the condition would exist. There is a complaint among the boroughs on the question of reparations, that if a utility charges excessive rates, and this has been so determined by the Commission and the courts, that it is almost impossible for the consumer to get back the excess rates paid. It is necessary for him to go through several processes before the Commission and in the courts in order to get back any excess rates. They feel that the wheels are greased for the increase of rates—

MR. TURNER: Now, Mr. Evans, don't you think that we ought to have Mr. Chrostwaite—being a member of the bar, I realize that this is not a court, and we can not confine this to the rules of evidence, but on the other hand—I should say, Mr. Chairman, that I do feel that we ought not to have opinions that are purely personal opinions or suppositions that are not based on experience, knowledge, and so forth.

MR. EVANS: Mr. Chairman, that is, of course, a matter for the Committee to decide, what evidence it wants to hear. It has been my understanding that the purpose of this Committee in these open hearings was, first, to get a picture of the attitude of the public and the consumers toward regulation as it exists in Pennsylvania today, and later get a picture from the Commission and the utilities, and finally try to work out some remedy for the situation, and I think that Mr. Chrostwaite can speak for the Association of Boroughs, of which he has been president for twenty odd years, and give the Committee the benefit of the attitude of that Association far better than we can if we go out and try to call in eight hundred boroughs throughout the State to appear before this Committee, which would mean that we would never get through. We, of course, realize much of what will be said will be opinionative, and is subject to answer by others, but it does seem to me that the Committee needs to hear the opinion of qualified witnesses as to these matters; but, of course, it is entirely for the Committee to say how far they wish to go.

MR. MOORE: This matter will be taken up later in executive session, but for the present we will continue the way we started last week and are continuing now, with this admonition, that the witness should not go too far afield.

BY MR. RHODES:

Q. The specific instances you have mentioned can all be substantiated by the testimony from the boroughs affected, can they not?

A. They can. We can ask them to be present.

Q. In each instance you know of, the witnesses could be called before this committee to testify in detail concerning that which you have mentioned to us today.

A. Yes sir. I was saying that the Association feels that the wheels are greased for the increase of rates. That is, you can

increase the rates by filing your schedule but to decrease the rates is more difficult; in order to get excess revenue all you have to do is to file a schedule, but in order to get back the excess you have to go through four different processes before the Commission and before the courts and each individual must carry his own case through these individual processes.

BY MR. EVANS:

Q. As I understand you, you mean that a utility filing a schedule of increase of rates with the Commission, these rates become effective within thirty days or at the expiration of thirty days. If complaint is filed, these rates are collected during the hearing of the complaint?

A. Yes sir, and if they are later found to be excessive the individual consumer has to take his personal proceedings in order to recover the excess that he has paid.

BY MR. TURNER:

Q. Is that not the fault of the law?

A. That is one of the changes that I suggested.

Q. Mr. Chairman, I don't want to suggest too much, and I want everything possible to be brought out and want to help the witness all I can. I happen to have a very close connection with the gentleman on the stand through the association of boroughs. I do think there is a limit to which personal opinions ought to go and I think Mr. Chrostwaite understands that perfectly well.

MR. CHROSTWAITE. Another specific instance, another matter which will devolve itself around a specific instance, is the fact that the Commission will allow the cost of litigation to be placed on what is practically, what is known as the rate base, so that the consumer must pay the cost of the litigation to the public utility, even though the public utility loses the case. For instance, the borough of Hanover, of which I am solicitor, had a case against the Conewago Gas Company. The Company asked permission of the Commission to permit them to put in \$20,000 worth of costs, amortizing over a period of five years, making \$4,000 a year. The Company lost the case, you understand, but they asked the consumer to pay \$20,000 of their costs. While the Commission did not allow the \$20,000, they did allow \$10,500, amortizing three years, making the consumer pay to the company \$3500 a year for losing the case. Now, the amortization over the three year period was practically the same as amortization of the \$20,000 over a five year period. The worst effect of that is, after the \$3500 was paid on the rate basis and paid by the consumer back about 1918, that they have this \$3500 still in there and the consumers are now paying a penalty of \$3500 a year because they won a case against the utility, and they will continue to pay that forever or until they go in and fight another rate case.

BY MR. EVANS:

Q. Now Mr. Chrostwaite, in order to clarify that, I understand you first to say that costs to the extent of \$10,500 were amortized over a period of three years, by which I understand you to mean it was charged as an operating expense over these three years, is that correct?

A. I don't know how they entered it on their books, but that is what it means.

Q. If it was handled as an operating expense over three years, then it would not have gone into the rate base?

A. No it would not. That would be a matter of bookkeeping. The money is still in there and we are still paying it. There is no change in their rates. Our recommendation for the Committee, if you please, is that at the end of the amortization period the company should be required to forthwith withdraw that sum without the necessary contest, withdraw that sum from the amount of money they collect annually.

Q. Do you mean to say the company in this instance has kept on including \$3500 a year in the operating expenses after the three year period?

A. We never examined the books and don't know what they have done, but we do know they have not changed their rates from that time on. Whether that has been consumed in additional salaries or how they fixed it on the books we don't know, but we do know that \$3500 was allowed for three years and after that it continued on as before.

BY MR. TURNER:

Q. Did you give the name of that company?

A. Yes sir, Conewago Gas Company.

BY MR. RHODES:

Q. Mr. Chrostwaite, could they raise the rate in order to include that \$3500 charge?

A. No, the company lost the case and were obliged to reduce the rate, but they were allowed \$3500 as an item in that reduction so that the rate was not to be reduced below that.

BY MR. RHODES:

Q. At that time the rates took into consideration the necessity for this \$3500 a year income?

A. Yes sir.

Q. The rate has remained the same since that time?

A. Yes sir.

Q. How many years?

A. I would say about twelve. During the War.

Q. Did you have any examination made of the reports which this company has filed with the Commission each year to see whether or not this item has been included?

A. No sir.

BY MR. EVANS:

Q. Are there any other types of cases you wish to call to the Committee's attention?

A. Well, there is the Borough of Hanover which has a case that will be brought before the Committee I believe on the proper occasion. The people feel that the company has not provided for any impounding dam or any filtration sufficient to meet the local conditions and we feel that they have been charging excessive rates so that they should have prudently provided for this emergency out of the excessive rates which they charge, but these excessive rates instead of being prudently placed aside to meet the emergencies, have been distributed to the owners of the company, so that now when we are asking them to rehabilitate their plant they will charge against us on the cost of this rehabilitation the regular cost, whereas they should have provided for that out of the excess moneys which they collected and which they distributed to their owners. There will be something further come before the Commission on that subject in that specific instance, that has come to our attention this year.

Q. Is that a matter which has been brought to the attention of the Public Service Commission?

A. It has.

Q. Have you taken any action in regard to it?

A. The Commission sent an engineer down there, but this engineer did not seem to know what the requirements are in a community, and did not seem to be able to meet the situation.

Q. About when was that?

A. That was last fall.

BY MR. TURNER:

Q. Is this the same company?

A. That is the Hanover and McSherrystown Water Company.

BY MR. RHODES:

Q. Speaking about the filtration plant, Mr. Chrostwaite, that they didn't set aside money to take care of the proper filtration plant, do you mean that now the supply of water is not what it should be, that there should be a new filtration plant?

A. Yes, the supply of water ceased in July, and up to the present time the local Health Board does not recommend the use of water. At this time nearly all the inhabitants of the borough of Hanover, for a period of nine months are buying their water or going to springs and wells in the vicinity, a community of 20,000 people.

Q. Has that been brought to the attention of the State Health Department?

A. Yes.

Q. Do you know the rate of dividend that this company is paying?

A. The company does not pay any dividend on its stock, we consider it has twice as many bonds against it as its fair value.

BY MR. TURNER:

Q. Mr. Chrostwaite, the rate that the people in that community were paying was based on the valuation of the plant, wasn't it?

A. No valuation ever made.

Q. No valuation made for the old rate?

A. No valuation ever made by the Public Service Commission.

Q. How did they arrive at the old rate?

A. They just filed it; no complaints filed, and they filed an increase, and no complaints filed.

BY MR. RHODES:

Q. What was the complaint, can you give us some of the base rates, flat rate or meter rate?

A. I would say that a house that has a bath, with all conveniences, will pay about \$28 a year—28 to 30 dollars a year.

BY MR. EVANS:

Q. Mr. Chrostwaite, do you have any information you could give the Committee in regard to the approximate cost, the average cost to the members of your association in fighting rate cases before the Public Service Commission?

A. I would say the average cost to the municipality, or the community, is approximately \$10,000, taking it through. Some would run \$50,000, some may only be a couple thousand, but to fight them they must employ experts, in order to put an adequate case, and on an average it will run \$10,000, I would say. I have been asked time and again by different boroughs how much it costs them to fight their case, and I will tell them, "Don't start it under \$10,000."

BY MR. CRAWFORD:

Q. Where does the company get its supply of water within the vicinity of Hanover?

A. Within a radius of a couple miles—well four miles.

Q. In the vicinity, from the creeks?

A. They have one small creek, and then they have a basin in the hills, and they have two or three wells. I would not like to take up your time on that, we have our health officer and engineer here, and I would be afraid of taking up too much time to enter that.

BY MR. EVANS:

Q. Is there anything else, Mr. Chrostwaite, that you wish to add to what you have stated to the Committee?

A. We had a great deal of complaint from the boroughs where free service has been given to the boroughs by the utilities under their franchise agreements. Now, the objection is not so much that they withdraw that free service from the municipality, or from the schools and the churches, but the reason they want to withdraw that is because they say that it does an injustice to the consumer, but the point is that they withdraw that from the municipality, requiring the municipality to pay for their fire plugs, and so forth, without requiring the utility to take that off, take an equal sum out of the rate base, and give the benefit of it to the consumer. In other words, the utility gets that benefit rather than the consumer. There is no requirement in a new scale to take that out on the rate basis, which is paid by the municipality, and we think that is unfair.

MR. EVANS: I think the members of the Committee have been furnished perhaps with copies, of the Borough Bulletin of March, 1931, which on pages 23 to 26 contains twelve recommendations of the Borough Association in regard to the changes in the law.

BOROUGH OF LATROBE.

J. EDGAR SMITH sworn.

BY MR. EVANS:

Q. What position do you hold in the Borough of Latrobe?

A. President of council.

Q. Have you any statement you wish to make to the Committee in regard to the attitude of the Borough of Latrobe on the subject of regulation of public utilities?

A. None, except the water rates, and the service that is given.

Q. You have prepared a written statement here?

A. Yes, that was prepared by our solicitor.

Q. This is a complaint in regard to the service rendered by the Latrobe Water Company, and the matter of rates is involved also?

A. Yes.

Q. Does the Committee wish this witness to read the statement?

MR. MOORE: No; I think we will just put it in the record.

BY MR. EVANS:

Q. You may submit this statement on behalf of the borough of Latrobe covering your situation?

A. Yes sir.

A copy of the statements read as follows:

TO THE HOUSE OF REPRESENTATIVES COMMITTEE  
AT HARRISBURG, PA., INVESTIGATING CORPORATIONS  
ENGAGED IN RENDERING PUBLIC SERVICE, OR TO  
WHOM IT MAY CONCERN:

The Borough of Latrobe, Pennsylvania, through its Council, has the following general complaint to make against the service of the Latrobe Water Company:

Although the Borough has paid for a number of years the price asked per plug for fire protection, upon repeated investigation and examination by the Fire Marshal and members of Council, the pressure on many plugs in the First Ward especially on the North Side of the First Ward, in the Sixth Ward, on the East end of the Second and Third Wards, and in a number of places in the Fourth and Fifth Wards, is much below the pressure necessary in case of fire. If a severe fire were to occur in these localities, almost incalculable damage would be done before the pressure could be increased so as to render anything like adequate fire protection.

There are many places in the Borough where it is almost impossible to draw water in anything like a satisfactory manner for domestic use. There is a bitter complaint coming from the eastern part of town, where most of the best residences are located, that they are unable to draw water upstairs when water is being drawn downstairs at all, and that they suffer many inconveniences in this line. The Latrobe Water Company, months ago, purchased a location for a stand pipe in this locality, which the residents believed would remedy most of their difficulty, but, up to this time, the company has persistently refused to place the stand pipe, even though the company does own the ground.

Complaint has been made directly to the company setting forth at length the location of the fire plugs complained of and all the other things indicated but has taken no steps whatever to remedy the difficulty.

Of course, the Borough feels and has felt for years that the rates are excessive and ought to be inquired into anew.

Respectfully submitted,

J. EDGAR SMITH,

President Latrobe Borough Council.

TO THE HOUSE OF REPRESENTATIVES COMMITTEE  
AT HARRISBURG, PA., INVESTIGATING CORPORATIONS  
ENGAGED IN RENDERING PUBLIC SERVICE, OR TO  
WHOM IT MAY CONCERN:

As a fairly typical case of one branch of the complaints in the Borough of Latrobe, Westmoreland County, Pennsylvania, the following is a description of the situation at the Main Street residence of a prominent citizen of this Borough:

Prior to the 1st of July, 1922, this citizen appeared at the office of the Latrobe Water Company, asking for the price for water to be used through a meter, and was told that the minimum rate would be \$2.00 per month, with 30 cents additional for each thousand gallons in excess of 1,000 gallons. After considerable delay, the meter was installed; but when the first bill came it was charged \$4.00 minimum rate per month, and when complaint was made it was explained that the \$2.00 rate had been given by mistake. The total amount of water used from the 1st of July, 1922 to the 1st of July, 1925 (3 years) was

197,010 gallons	
Average water used per year (3-year period)	65,670 gallons
Average water used per month (3-year period)	5,456 gallons
Average water used per day (3-year period)	180 gallons
Average water used per capita per day	53 gallons

The average cost per gallon used in the three-year period from July 1st, 1922, to July 1st, 1925, was 73 cents per thousand gallons, as the total paid for the 197,000 gallons was \$141.00.

The first year, with a family of three, 57,540 gallons were used; the second year, with a family of three, 66,330 gallons were used; the third year, with a family of four, 73,140 gallons were used; and, of course, the \$4.00 charge per month was collected during the entire period.

On the 17th day of July, 1925, a well known employe of the company came to this residence and said to the people in the house, "I want to do some work on your water meter and will have to turn the water off a little while." He took the meter out that day without notice and it was never re-installed, although the actual price paid for water since that time was substantially the same as before.

Respectfully submitted,

J. EDGAR SMITH,

President Latrobe Borough Council.

#### BOROUGH OF CONSHOHOCKEN

HARVEY D. HERBERT sworn.

BY MR. EVANS:

Q. You are the borough manager of the borough of Conshohocken, are you?

A. Yes sir.

Q. How large a borough is Conshohocken?

A. Eleven thousand.

Q. You have a statement to make to the Committee in regard to the matter before it?

A. Yes sir.

Q. What do you have particularly to say?

A. We complain on the excessive rental rate on fire plugs.

Q. By what company is the borough serviced?

A. The Philadelphia Suburban Water Company.

Q. And what is the rate on fire plugs in the borough?

A. \$60 per year per plug.

Q. How many fire hydrants are there?

A. Seventy.

Q. Is there sufficient water in the lines at times of fire?

A. No sir.

Q. Have you brought this matter to the attention of the Public Service Commission?

A. Not recently.

Q. Why not?

A. Well, Council thought it was useless to spend public funds to take it to a body that didn't know just what authority they had; in other words, a party that dealt with the public utilities.

Q. In other words, they thought it a waste of money?

A. Yes.

Q. What other matter, if any, have you to lay before the Committee?

A. Well, on the so-called high pressure hydrants or steamer hydrants hooked up to a sixteen-inch high pressure main, there is a charge of \$60 a year and a two-way plug hooked on a four-inch main, that has been in the ground fifty or sixty years, with a certain amount of sedimentary waste in the pipe, which has decreased the volume, and still we pay \$60 a year for that particular plug.

Q. Any other utilities that serve your community, that you have any complaints of?

A. That is the only one in the borough.

Q. Is there anything else that you want to answer?

A. That is all.

Q. Have you any other data as to the fire hydrant rate paid in other municipalities throughout the Commonwealth comparable to Conshohocken?

A. Bolivar, Pa., pays \$1.30 a year, and Hanover pays \$1.25 a year.

BY MR. HAGMAIER:

Q. What size of main do they have?

A. Well, I don't know what size of main.

#### BOROUGH OF BRACKENRIDGE

GEORGE H. DICKEY sworn.

BY MR. EVANS:

Q. What position do you hold in the borough of Brackenridge?

A. Secretary.

Q. How large a borough is this; what is the population?

A. I don't just recall the figures of this last census. There were five thousand nine hundred and eighty-seven in a former census—about sixty-two hundred and something.

Q. You have a statement which you wish to make to the Committee, in regard to the situation in Brackenridge?

A. Yes sir. In 1909 the borough council granted to the P. W. Phillips Gas Company and a similar franchise to the Philadelphia Company, which have since been succeeded by the Equitable Gas Company, valuable franchises for piping the town and supplying individual consumers, as well as the manufacturing interest, with gas. There was no money consideration for those valuable franchises, but in lieu of that they agreed to furnish the borough with eight thousand cubic feet of gas per year. They agreed in these ordinances that the rate would be twenty-seven cents a thousand cubic feet.

Q. When was this?

A. In 1909. You have copies of the ordinances (indicating). That consideration at that time amount to \$200 a year. There was a discount of two cents a thousand on the gas which made it a flat twenty-five cent rate, and by the provisions of these ordinances, each company would have paid an equivalent of \$200 a year for these franchises. In 1919 the Commission nullified our ordinances in so far as enjoying free gas was concerned, and immediately upon the expiration of the five year time in this contract the gas company from time to time advanced the rates until about 1925 or 1926, they advanced to sixty-three cents against the twenty-seven which was provided for in this ordinance. That today would mean \$480, would be the value of the franchise were we allowed that gas. The gas was given to the school districts for heat and light of the buildings. I went over the books of the Secretary of the School Board, and the average cost of heating and lighting their buildings per year during the last three years was \$759.11. That is what the borough is deprived of by reason of the Public Service Commission nullifying this ordinance. When the last rate was applied, the city of Pittsburgh protested against the rate and invited the adjoining municipalities to join with them in the fight and contribute on the basis of ten cents per population; at that time our population was four thousand nine hundred eighty-seven. I believe I stated fifty before, but forty-nine was what it was, in 1920; forty-nine hundred eighty-seven was the population in 1920; it is about sixty-two hundred now. We joined with the city of Pittsburgh and protested this increase before the Public Service Commission but it didn't get us anything at all. Another complaint we have, after the creation of the Public Service Commission; the Allegheny Valley Water Company was supplying water to residents of our district but they had an old dilapidated plant that was not capable of supplying the demand and had innumerable leaks all over the line, and in order to keep up the supply they would shut the water off at six o'clock in the evening and not turn it on again until about seven o'clock in the morning. The town is supplied by gravity, the water being pumped to a reservoir on an elevation great enough to supply all the residents in town, but we lost a \$500,000 manufacturing plant by reason of there being no water in the reservoir it took fire at night and burned. We appealed at two different times to the Public Service Commission for relief but didn't get anywhere. We employed a consulting engineer, Leo Hudson, of Pittsburgh, to conduct our case. We were put to the expense of \$750 for witness fees and attorneys, besides \$200 we paid to Leo Hudson, and the Commission handed down a decision against the water company, requiring them to supply us with sufficient water but they would not enforce it. We appealed to them to give us some relief but they never made any effort to enforce this ruling. The water company changed hands and was taken over by the Tri-Borough Water Company, a bunch of Scranton people. I was present on the day of the sale and read the decree of the Public Service Commission to them so that they had knowledge of it. We appealed again to the Commission to make the new owners live up to this decree but we didn't get anywhere, and we were compelled in 1921 to take over the plant to relieve ourselves.

BY MR. EVANS:

Q. Did this affect your fire ratings at all in the borough?

A. Yes sir. When we lost the Tarentum Glass Company the Board of Underwriters took us out of the protected class and our insurance rates were practically doubled. The water

company, however, continued to charge us a plug rate for fire protection when the underwriters ruled we didn't have any.

Q. When was the water shut off?

A. Six o'clock in the evening.

Q. When was it turned on again?

A. About seven o'clock in the morning when the men came out to work.

Q. What industries does the community have?

A. At that time we had three large glass plants and a brewery and they were the only industries that were directly in the borough.

Q. Is there any steel—

A. The Allegheny Steel is just over the line. We furnish fire protection to the Allegheny Steel. We have plugs along their frontage and furnish them with fire protection.

Q. Since 1922, since the borough took over the plant, what was the situation?

A. We have had our credit restored and we furnish a twenty-four hour service.

Q. What price did you have to pay in order to take over the plant?

A. \$46,500.

Q. Is there anything else you think of to add?

A. They also reduced the pole tax on our Bell Telephone poles and on the Pittsburgh Plate Glass telephone poles. They cut them down from one dollar, which was provided in the ordinance, to twenty-five cents, and practically stripped away all of our income except that from taxation.

Q. Do you mean the Public Service Commission reduced them?

A. Yes sir.

Q. Under what provision of the law?

A. That it was an unusual charge and as it was an inspection charge twenty-five cents was ample for the service rendered.

Q. Can you state approximately the date when they entered that order?

A. It was ten years or more ago.

BY MR. HAGMAIER:

Q. Do we understand you right, they reduced it from one dollar to twenty-five cents?

BY MR. EVANS:

That is what he says on the pole tax.

## BOROUGH OF SOUTH GREENSBURG

WILLIAM ROLLASON sworn

BY MR. EVANS:

Q. What position do you hold in South Greensburg?

A. Borough Clerk.

Q. What is the population of the borough?

A. About 2300.

Q. And what have you to say to the Committee in regard to your situation as to the utilities?

A. We are all of the impression that the proposed increase of water rates are very excessive and unwarranted at this time.

Q. What company is serving you?

A. The Westmoreland Water Company.

Q. Have they filed a schedule of their increased rates?

A. They have.

Q. When is it to become effective?

A. April first.

Q. Do you happen to know whether the Westmoreland Water Company is controlled by any other corporation?

A. I cannot say positively, but we are told that they are controlled by a New York corporation.

Q. Do you happen to know the name of that corporation?

A. I do not. I endeavored to get it before I left home but was unable to.

Q. In what boroughs are the new rates to be effective?

A. There are eight known as South Greensburg Borough, Southwest Greensburg, Greensburg, Jeannette, Penn, Manor and Irwin.

Q. What did the increase in rates amount to in brief?

A. Increase in what we call the private consumer or house amount to fifty-five per cent?

Q. What is the present rate on the first 100,000 gallons?  
 A. The present rate per one thousand gallons is eighteen cents, and the proposed rate is twenty-eight cents.

Q. An increase of ten cents per thousand?

A. Yes sir.

Q. What is the present rate to the consumer of over 100,000 gallons?

A. The present rate per month is twelve cents per thousand gallons, the increase as proposed is to be sixteen cents a thousand gallons over 100,000.

Q. Has any official action been taken by the borough council in regard to this matter?

A. The South Greensburg Borough Council I believe is the first borough to get a notice of the increased rates. We received these on the last day of February, and on the second day of March our council met. The entire community was up in arms about it. Later the adjoining boroughs met at various intervals and they also protested against it and they have now organized an organization jointly of these eight boroughs to protest and fight the rates.

Q. Have you filed a complaint with the Public Service Commission?

A. It had not been filed when I left home but it evidently will be filed this week.

Q. What are your fire-plug rates in South Greensburg?

A. At the present time they are nine dollars per plug per year rental. We are charged by the Westmoreland Water Company a service charge of \$485 for each and every mile of 4-inch pipe that is in the borough.

Q. How many miles of 4-inch pipe are there in the borough?

A. Why, I think our bill calls for 4.3 miles.

Q. 4.3 miles?

A. Yes.

Q. At \$485 a mile?

A. Yes.

Q. Is there any increase in those rates proposed in the new schedule?

A. None proposed at the present time.

Q. Is there anything else you wish to add for the information of the Committee?

A. The only thing I might say is with reference to our water. The reason that we think the rates are excessive, is that prior to the establishing of the present rate, filed before the Public Service Service Commission in 1914, I believe we paid for the water, as we used it per meter, with the exception that there was a flat rate of \$1 per month. If you didn't use \$1 worth of water, we paid it, and if we used over a dollar's worth of water, why, we paid by the meter rate. After the new rate went into effect, the water we used stood at 18 cents a thousand gallons for the first 10,000 gallons of water served each consumer, and as I understand it, on the number of outlets that you had in your home, it makes a service charge of \$2.25, \$2.50 and \$2.75. My service charge is \$2.50, and I think I am just about a normal user.

Q. In other words, in addition to the regular charge there is also a service charge?

A. A service charge.

Q. Is there any increase proposed in the service charge in the new rates?

A. No sir.

Q. Just in the consumption?

A. Just the consumption. I believe that is all. The boroughs that I have mentioned have said that they are going to send representatives here, but I failed to meet them, but I went to make it known that we are jointly operating against the proposed rates.

#### BOROUGH OF COLUMBIA

D. K. LOCKHART sworn

BY MR. EVANS:

Q. You are burgess of the borough of Columbia?

A. Yes.

Q. What is the population of the borough?

A. About 12,000.

Q. Have you a written statement which you wish to submit for the Committee?

A. Yes.

MR. EVANS: Is the Committee willing to have this written statement go into the record without taking the time of the witness to read it?

THE CHAIRMAN: Yes.

"The agreement with the borough of Columbia and the Water Company was that the borough was to have free water for fire service. It did have that from the time of its existence up to the new rate, in 1927 when on October 1 the consumers and the borough protested the raise with the Public Service Commission and spent considerable amount of money, namely \$3,200.

"When the smoke cleared away we found that the borough after granting the Water Company the use of the streets some 75 years or more ago for free water now will have to pay \$56.70 per plug per year, for fire service, while as a matter of fact we do not use \$100 worth of water a year. This gives the 100 fire plugs a clean profit of \$5,570 for what they call a ready-to-serve. Now let us see what they have to serve during the last year. We had several fires and for the first fifteen minutes we had to pump out mud, sand, and gravel that presumably came in from the reservoir. The cement top had all disintegrated and fallen down into the water. We have five gas engine pumpers, any two of which on most of the lines will take away the water. As a matter of fact we have had to move away from some plugs because of no water.

"There are quite a few four and six-inch water pipes in the town. They are corroded with rust and whatever else may happen to get in the pipes that we do not have a proper flow or pressure. This happens especially on dead ends. On Friday, October 3, 1930, Professor Kennedy of the Columbia schools complained to me about the water at the Manor Street school that there was not a drop of water in the basement of the school, much less on the first and second floors. There was no water for drinking purposes for the children for they—some 400 of them—have nothing to say about fire service. Yet the schools have to pay a meter charge or ready-to-serve charge with nothing to serve.

"This same conditions occurs in the higher elevations of the town. When water was tapped for the first time in the upper end of the borough we did not get one quart of water in five minutes. I could drink it that fast, yet the consumers have to pay a meter ready-to-serve charge.

"When the new rate went into effect in 1927 the meter charge was 75 cents a month. That went on for a year or two, then the commission ordered the water company to change the meter rate to 50 cents a month, after a protest from the people. But they never got the 25 cents back. Even at 50 cents a month each consumer pays for a meter each year. You can buy them for \$6.75 in car lots, hence you see the profit in meters alone. But when the Water company changed the meter rate to 50 cents it raised the water rate from 30 cents per thousand to 40 cents. So that if you used 5,000 the water company would still be ahead.

During the past year the mains have broken in several places after serving some 75 years. In two instances, one in particular, the pipe broke at Lancaster avenue and Cherry street and ran over and under the street for five days before the water company was able to shut it off. They tried it at thirteen different places before they shut it off and it took five days for that. I don't think they have any kind of an accurate plan as to where any stops are. All this negligence and expense no doubt the Public Service Commission will allow as necessary expense and the public will have to pay the bill. We would probably have been better off to keep the money we spent in protesting before the Commission.

"The Columbia Water company had a capital stock of \$200,000 and has been in operation for 75 years. It certainly has depreciated at least half of that. Yet the Commission allows them a value of \$410,000 for a rate base.

"It is my impression that the value arrived at was from the revenue received or expected to be received and not from a physical appraisal of the property. It appears to me that the construction put upon the law by the Public Service Commission or in other words their interpretation of the law is entirely favorable to the public service utilities.

"The Public Service Commission it seems can and does scrap any franchise or obligation made with any municipalities. No matter of how long standing. That seems to be a German method, certainly not an American method. It seems very strange that whenever there is any doubt in the mind of the Public Service Commission the decision is against the public,

It is my opinion that whatever the law is, unless you have men who will deal fairly both with the public and the utilities, there is no hope for the masses. The law seems to me to be a foundation to build upon and not to hide behind. These holes in the law should be properly plugged up so that there will be no hiding place. I would like to see a law enacted to give boroughs the opportunity to putting in their own water plants especially without first having to drag along through the courts the Commission and a multitude of other authorities before you have a right to talk about it.

"I have made a comparison of 80 water companies taken throughout the State of Pennsylvania, 40 of them owned and operated by private concerns, the average rate per year per family being \$37.69; the 40 other plants are owned and operated by municipalities in which the average rate per year per family being \$22.35, making a difference in favor of the municipal owned of \$15.34. This is notwithstanding the fact that the municipal plants are probably run by politics and whatever else you may charge against them. Nevertheless there is the saving of \$15.34 per family per year. This would indicate in itself that there is some monkey business going on in rate fixing values.

"The company frankly tells its customers that no connections for water will be made between December 1 and April 1. Now to show you the sympathetic feeling between the water company and its customs during this winter's unprecedented hard times it found it convenient to shut off the water of a poor family, a widow and six children, while every person in town was straining every nerve to assist and some even sacrificing to alleviate the suffering. Now just how and where the utilities hope to gather any sympathy from the public conditions I do not know. They will have to get it some other place.

"In 1923 the Public Service Commission superceded this act by their own decision, thereby annulling it. I claim the P. S. C. has not the right to annul an act of the Legislature. This act was passed April 9, 1867. It reads:

"Section 3. That it shall be the duty of the said water company to supply water for extinguishing fires in Columbia, free of expense, to such hydrants, or plugs only, as shall be erected by the borough of Columbia; and the said borough is hereby required to erect such hydrants and plugs as may be necessary to supply water in time of fire."

Title of act: "A supplement of the act, entitled 'An Act authorizing the Columbia Water Company to hold real estate, and so forth' approved February 10, 1865."

"The water company's valuation for State taxes is \$268,512.09. For rate-making purposes it is \$410,000.00 Allowed by the Commission.

D. K. LOCKHARD,  
Burgess,  
Columbia, Pa."

Q. Have you anything that you wish to add to that?

A. I don't have anything to add. I would just like to say that in 1867, the Special Act passed, which I referred to in there, Columbia was to get free water service as I mention in there, and it appeared that the Public Service Commission agreed to that.

Q. That is covered in your statement?

A. Yes.

MR. EVANS: Very good, Mr. Lockhart, thank you.

#### BOROUGH OF ROSETO.

D. B. MARTINO Sworn.

BY MR. EVANS:

Q. What position do you hold in the borough of Roseto?

A. Borough secretary.

Q. What is the population of the borough?

A. 17—between 17 and 18 hundred.

Q. You are in Northampton County?

A. Yes.

Q. You have a complaint against the water company?

A. Yes.

Q. Have you prepared a written statement covering your complaint which you wish to submit to the Committee?

A. I have.

MR. EVANS: The Committee is willing to have this statement go into the record?

THE CHAIRMAN: Yes.

#### "BOROUGH OF ROSETO

County of Northampton

Pennsylvania

"Bangor and Roseto Water Company

vs:

Borough of Roseto

"June 16th, 1924, Bangor Water Co., was notified for the last time to remedy the water shortage in the Borough of Roseto.

"August, 1924. A suit was brought before a Justice of the Peace in order to bring the Water Co. to terms so the town would be supplied with water, but at that hearing no amicable agreement could be reached therefore the company waived the hearing and the case was brought before the Northampton County Court.

"At this time the Borough of Roseto also had a claim for money due to them for the reason that the said Water Co. had excavated several hundred feet of trenches in the said Borough without any permit from the Town Council and Chief Burgess, and for these reasons the Borough of Roseto had to retain Attorneys Kent & Rockwell to represent the Borough in the case.

"September 1924. A committee composed of members of the Law Com. was instructed by Town Council to confer with the said above mentioned Attorney's and find out what had been done in regards of the Water Co. and the report was that no agreement had been reached. Therefore the Council ordered that the Water Co., make the necessary repairs on the said streets which the Water Co., had excavated without permission.

"March, 1925. A delegation of Town Council attended a Convention of the Borough Association at Harrisburg in the previous month and took the opportunity to confer the matter before the Public Service Commission in regards of the said water shortage in the Borough of Roseto (for which two-fifths of the town was without water at this time) and they were told that the matter would be taken up immediately.

"At this March meeting of Town Council a petition was received by numerous citizens and tax payers protesting to Council and asking the said Town Council to impose on the Public Service Commission to see that the situation be remedied so there will be sufficient water supply and at this same meeting a letter of the Water Co. addressed to the Public Service Commission asking the said Commission to dismiss the complaint of the Borough of Roseto for water shortage and that the costs be placed on the complainant. Therefore a motion was made by Mr. Michael Ninno and seconded by Mr. Michael Ronco that secretary be instructed to notify the borough solicitor, Mr. Everett Kent to further notify the said Public Service Commission asking for a hearing in this case of water shortage and complaint, in re: Roseto Borough vs. the Bangor and Roseto Water Co.

"March 17, 1925. Special meeting of Town Council, the president and secretary were authorized (by motion of Mr. Farace and Ninno and approved by council) to appear before the Public Service Commission sitting at Easton, Northampton County, Court House, for the purpose of the hearing in the complaint of Borough of Roseto and the Roseto Water Co., in regards of water shortage, said hearing to take place in the main court room on the 20th day of March, A. D. 1925, at 10.00 A. M.

"After this hearing the said Commission notified the water company, to improve their water lines so the Borough of Roseto would be supplied with sufficient water, and they did improve their lines to a certain extent at that time, but as the town is growing and the said water company, also supplies Bangor and suburbs which they also are improving and growing the water is not enough.

"At a meeting of October 18th, 1927 many property owners citizens and tax payers again appeared before the town council complaining about the water shortage and asked the said council to remedy this question once more so they are properly supplied with water, and they were promised that the matter be taken up with the water company and if not remedied the Commission would be notified.

"December 1930 the said water company again failed to give enough water supply for a couple of weeks.

"Now it did cost several hundreds of dollars for the Borough of Roseto to keep on going and fight the water company and

the Public Service to so justice would be made to the people of Roseto.

"In the beginning of the year 1929 the Borough of Roseto discovered that the said water company was overcharging \$5.00 per month per fire plug, and a committee referred this matter to the Public Service Commission for which it was found to be true and the said Commission directed the water company, to refund the money overcharged but the said water company failed to pay the same which amounted to over \$300.00 and held the matter up until the Borough of Roseto asked them to supply with water a certain district in town and therefore they said that the said district would not be supplied with water until the Borough of Roseto would release them from paying the said amount of money. And therefor the said borough had to give up for the purpose of benefitting the said district of water supply.

"We the Borough of Roseto have two of our main roads namely Garibaldi Street and Columbus Avenue, and both of the said streets are crossed by the Lehigh and New England R. R. Co., and there is no protection at all for motor vehicles, therefore we would like to know if we can force the said railroad company, to install some kind of safety device by placing a bell on the said crossing.

Some time ago the said Borough of Roseto petitioned to the said company and the answer was that there was not enough traffic there to install any such device. They refused to give us another grade crossing.

"To inquire in regards of the rates for electric service per K. W. hr. we are paying at the present time nine (9) cents per K. W. and we know that the same company is charging less in other places.

"Imagine why we had to pay for expenses if we justified to lower the pipes at Dewey Street when the said pipes were laid before the incorporation of said borough."

Q. Is there anything else you wish to add to that?

A. In addition to that, we have another complaint, just received lately, by our borough, by a man by the name of Michael P. Runk. He is building three homes, on a street called Liberty Street, and the water is piped in a certain way on Liberty Street, and does not reach all the way down, to where this man is building those three homes. On the other side of the street is a water pipe to the school, and the water company has subsequently refused to install pipes, so this man can get water from the main in front of the residence which he is building. He also intended to build more homes. This man according to our plans, there is a street away back behind his property, and in order to get water to these three homes, he had to go out there, all the way back to the other street and run the pipe line, which amounts to one hundred more feet to this house, and therefore, that small, little pipe is not sufficient, and the water company is willing to place water there on that street running parallel with the homes, but asks \$40.00 more in addition to what the man should really pay, now for whatever he gets. He has been writing to the different places, he has applied to the Public Service Commission, and the Public Service Commission has said that he must pay exactly what the Public Service Commission says, that is pay the bills. Of course, those letters I would not like to let remain here, because they were given to me by the man who made the complaint, but probably you could look over them and if they are really needed, as long as they are sent back to the man, they are all right to be left.

BY MR. RHODES:

Q. You mean that the pipe line is laid down in the middle of the street to the front of this school, and those homes are directly across the street?

A. According to the plans, this is Liberty Street, (indicating on plan), he is building one—two—three—, homes and water gets as far as here (indicating) with a six inch pipe. The water extends down there. The water comes down another street called Dandy Street, right here somewhere is a school building and the water comes down to there, but he is supposed to go around on this other street where there are no homes there at all in order to get water. He has to go away back to the other street, across other land, instead of continuing this here (indicating). If he wants water here he is compelled to pay \$40.00 more in addition to what he is paying now for the regular rates.

Q. There are no homes on this other street between this one service line and the schoolhouse, Liberty Street, at the end of the next block.

A. There are not. They stop right here (indicating on map). There is another main in on the other street, which is not on the plan, and instead of that they have to put a pipe from there and have to lay all over this land here (indicating on map), and therefore he has to get water from there and go all over this land, and that is private land.

Q. This is an extension of a main service pipe?

A. It requires an extension because there are other people desiring to build homes there.

Q. How many homes would be served by a new line if it were built?

A. Well, there is one home right down here (indicating on map); three homes. He is on this line here (indicating on map), and he intended to build more homes, but beings he cannot get any water without costing a lot of money he won't build any more, and he is applying for water. The only thing we can do, we applied to the Public Service Commission, and the Public Service Commission tells us exactly what the water company tells us.

Q. Does that \$40.00 mean a year per house?

A. He has to pay \$40.00 in addition to the regular rate he is paying.

Q. \$40.00 a year more for each house?

A. I don't have that right, I don't think so.

BY MR. EVANS:

It will be clear from the Commission's letter that the company, is willing to extend the necessary two hundred and sixty feet of six inch line on New Liberty Street, if you will guarantee an annual rental of \$40.00 in addition to that now received by the company.

The WITNESS: I think the other matters are all stated in there. Now, I want to call the attention of the committee here that, according to my written statement here, we have been complaining right along to the Public Service Commission. The Public Service Commission to a certain extent told the water company to supply us with water, and every year we have been out of water, one-third of the town is completely out of water, and here is a bill showing,—one of the bills showing that they had a rebate, after we litigated, that they had no water,—we never refused to pay any bills, we always paid promptly, but they had no sufficient supply, and they won't do anything to supply the town with water.

BY MR. TURNER:

Q. Where do they get their supply of water?

A. They get the supply of water right in the Blue Mountains, only a few miles from the town.

BY MR. RHODES:

Q. Does your company supply the Borough of Bangor too?

A. They do.

Q. Pen Argyle?

A. No. They were supplying this Borough of Bangor when there was only a few hundred inhabitants. Now more or less they have the same thing. They haven't made much improvement, and the town of Roseto has been growing, but the lines are: identically the same as they were 20 years ago. They only made a little bit of improvement. When we litigated to get the Public Service Commission, then we had a meeting at the court house, and they made it a little better, but still we are without water a certain length of time.

Q. Where do they get their water?

A. In the Blue Mountains, I think it is, in Northampton County, part of it anyhow.

Q. And they only supply water to Roseto and Bangor?

A. And Bangor. I think they extended their line down to Fleckwood, which they had no water up there, so that they have been improving and giving more water to different people and factories and things like that, but they haven't made any development in the line to get more water together.

Q. Bangor has not complained, has it?

A. The reason Bangor don't complain, because they have some superintendent there, that he does something, we don't know what,—you see, the water runs right through our town, but we get short, we are shut off somehow or other, that the water goes direct down there, and we are out of water. We don't know how they do it. The water company belonged to some people from Bangor, then it was turned over to some

people from Boston, and they are going to turn it, I understand, over to some Bangor people again. Of course, as long as we have the water, what do we complain for? But we are the people that suffer, because we have no water, and I personally myself went to the extent of telling them even that if we had to pay more, because we had no water, because it is very bad if we have no water, if we have to pay a few dollars more a year, and have water, it is better.

BY MR. TURNER:

Q. Has the drought condition this year had anything to do with that, or is it a condition that existed before?

A. This has existed years ago. We were before the Public Service Commission four or five years, six years ago. So, this drought concern here does not bother them at all. In fact, we have better water service now than we had at that time, but still we haven't got what we want. We are still lacking water maybe sometimes three or four weeks, two or three weeks.

BY MR. CRAWFORD:

Q. When does this shortage occur generally in the winter or summer time?

A. It occurs in winter and summer. This last year, 1930, it occurred October and December, sometime around the end of October.

BY MR. RHODES:

Q. Isn't it true, that you had to come over to Monroe County and pump the water out of Cherry Creek in order to supply Bangor and Roseto?

A. I haven't heard anything about that. What I have heard about is the superintendent said that he ought to have some more pumps installed, and the water company said they would not put any more pumps in, and finally they got together and put another pump in, and then we had water after that. So, we don't want to be litigating every time and go before the Public Service Commission, and get people to witness and bring them down before the Public Service Commission, and have hearings, and that means a lot of money, and our borough is composed of working people, we have no money to spend.

Q. Why do you complain about spending \$40 for the extension of a line 250 feet? Wouldn't the water company have to pay for that extension at least \$40?

A. That has not been paid.

Q. That is no basis for complaint, is it?

A. We are not complaining about that. We are just showing that this man is in a position so that he can not pay it, and he is building homes and he ought to be served some way or other. We are not complaining about all the business that they make. We know that by some source which we can not exactly prove that they double the amount which they claim they should have made.

BY MR. EVANS:

Q. Would not the charge from the water company from three houses ordinarily be as much as \$40 a year?

A. I think it would.

Q. Then that is all that they require?

A. In ordinary houses it is from \$3.75 up for three months.

BY MR. TURNER:

Q. That would be a little short of \$40 on that basis.

A. But they asked this man to pay \$40 more in addition.

BY MR. EVANS:

Q. I don't think they meant in addition to the regular rates. I think they mean in addition to the revenue which the company now has, which would be when these three houses are connected.

A. We have not taken this matter up with the Public Service Commission, but the other matter we have. I just brought this up for illustration.

Q. Have you any information as to the cost of the case before the Public Service Commission?

A. I have no definite cost here now.

MR. RHODES: Wouldn't that mean that the 250 feet of additional line would have to bring in \$40 of additional revenue, no matter how many houses are on it?

MR. EVANS: Yes.

MR. RHODES: And that revenue could be divided among those houses?

MR. EVANS: Yes, as I understand it. Of course, I don't know whether these houses are already being served from the rear, as mentioned.

MR. RHODES: It would only mean \$40 between these several house along there.

MR. EVANS: Yes, that is as I understand it.

## BOROUGH OF LIGONIER

W. B. EVANS sworn.

BY MR. EVANS:

Q. What position do you hold in the Borough of Ligonier?

A. Member of council.

Q. And are you speaking just for the Borough of Ligonier or also for the boroughs of Bolivar and New Florence?

A. We held a joint meeting of the three boroughs. At that joint meeting there was a representative named from each borough council, to act as a committee, to get into this matter and make proper representation. I happened to be selected chairman of the committee and was asked to report today here, to represent it here.

Q. What is your complaint, if any?

A. We have a gas rate. It is set forth in that statement, Mr. Evans, I believe, as fairly,—if you wish, I will read that and enlarge on it where you want me to. It is brief.

Q. Suppose you just read that into the record please.

A. This is dated Harrisburg, Pennsylvania, February 18, 1931. A copy of this representation was given to Judge Woodruff at his request. The statement is this:

"Ligonier, Bolivar, and New Florence Boroughs, all in Westmoreland County, are served with natural gas by Peoples Natural Gas Company, whose offices are in Pittsburgh, Pa.

"Our rate is 63c per thousand cubic feet. That is the gross rate. There is three cents a thousand feet off for prompt payment, making a net of 60 cents a thousand. There is no minimum charge but a customer charge of 60 cents per month which is not absorbable. We wish to have this customer charge removed and a minimum charge of not more than \$1.00 substituted therefor as the arrangement with our neighbor towns to the west. We feel there is discrimination against the above named three boroughs and other towns to the east of us served by Peoples Natural Gas Company as compared with all cities and boroughs west of us served by the same gas company.

"It is estimated that this discrimination in rates amounts to between \$7500 and \$8500 annually for the above mentioned boroughs of Ligonier, Bolivar, and New Florence."

Q. Have you filed any complaint with the Public Service Commission in regard to this matter?

A. Yes, sir, in 1926 there was a complaint, and this is the reply to the complaint, a copy of it.

Q. That is, this was a formal complaint, I take it?

A. It was presented by our solicitors, Gregg and Gregg, of Greensburg, and the reply is by P. E. Fickenschur, the chief of a bureau, he doesn't say what bureau but in the Public Service Commission.

Q. He is the chief of the bureau of rates and tariffs.

A. Rates, I suppose. He mentions the number, it is P. S. C. Pa. No. 10 filed with the Commission August 16, 1924. I might say that prior to that time we had a dollar minimum charge, and at the time they asked for this change they also asked for an increase of from 57 to 63; they asked for an increase of six cents a thousand, and a change from the minimum charge to a customer's charge at that time, and they were granted both.

Q. How long has it been that you have felt dissatisfied with these rates? They seem to have been in effect for some years.

A. Yes, sir. We have always been dissatisfied, but as far as I know there wasn't any complaint made until 1924.

Q. To the Public Service Commission?

A. To the Public Service Commission, and we were turned down in that way, and I guess there has been discouragement. I haven't been in the council for a little over a year, and I don't know the exact history of it, but I was given to understand that we had gotten very little encouragement.

Q. Is there anything else you want to add?

A. No; I think not. This correspondence—oh, there was something mentioned about the amounts spent. Bolivar and Ligonier both spent some money going into this matter. Bolivar totals over—at approximately \$300, and Ligonier at \$150.

Q. That was not a complaint before the Commission, however, was it?

A. The clerk asked me into his office before I left, and showed me Mr. Chrowsaite's statement; his letter to the boroughs that belong to the association; and stated that we should be prepared to give costs of any litigation or any costs of any efforts to have the rate changed. About 450 these three boroughs have spent, and they have been charged 75 to 80 dollars annually; I would like to emphasize that. If it would be absorbable, we would be in just that much money, and the minimum charge justifiable. Latrobe and Greensburg and all our neighbors have this readiness to serve charge. We recognize that as just, but we can't recognize that instead of paying 60 cents as they advertise in their tariff, a man has to pay 12 cents additional, making it 72 cents.

BY MR. TURNER:

Q. Are there any peculiar conditions that bring about the difference in rates between the boroughs that you have mentioned?

A. Yes; as a construction engineer, and that happens to be my business, I would have to admit that the extension of the line is an extenuating circumstance there.

Q. What do you mean by that?

A. Well, the supply is all to the west of us; they are piping eastward, and it seems that under the revision of 1927 to these rates that all boroughs and cities supplied by the Peoples Gas Company to the east of Ligonier, and including Ligonier got this same rating, while all to the west have a flat charge. That might be taken as an extenuating circumstance; I don't know.

Q. In other words, you think it costs more to deliver it to the communities you have mentioned?

A. I don't have the service costs with me. The cost of installation is greater.

Q. Well, perhaps, that would have a relation to the charges, would it not?

A. Yes; but should that be made a permanent institution? If it was necessary to count that in, why didn't we get the rate which was assigned?

Q. That is a question of knowing the exact facts in the case.

A. It is a matter of investigation of the costs, I suppose, but we feel that it is unjust. We have between 600 and 700 subscribers right there in our little town of 2000 or 2100. Those other towns don't have as many subscribers.

Q. Do you have wells in Ligonier?

A. We had the deepest well in the world until California beat us, which was our source of supply.

Q. And they drilled one or two dry wells there, didn't they?

A. Yes.

Q. That may have something to do with it.

A. I am in business for myself. If I make a bad guess, I have to pass it off, I can't pass it off on my clients and customers. We all do that; make those bad guesses. It is a matter of whether the service they are rendering is worth that much more east of Ligonier than it is west of it.

Q. It hinges on the question of cost, doesn't it?

A. I am only giving this as my opinion. I think those costs are pro rated. I think those costs go to the districts.

BY MR. EVANS:

Q. Can you give any explanation why you have not taken the matter up with the Commission?

A. Yes; for the same reason that other things are neglected. It isn't costing very much. They made this representation in 1906. I think, as a matter of accuracy, that the town was asleep at the switch when the rates were filed, and they didn't know about it until after they were in effect. There was a little notice posted in one of the banks there, in very fine print, and I saw that the notice had been torn down and laid aside by one of the bank employees. That was sometime ago. They immediately got busy at that time when this rate went into effect in 1926, or in 1925, and I think they made those representations in 1926, and since that time it has been quiescent, because our appearance before the Commission—the effect of it was not very encouraging.

## BOROUGH OF WEST LAWN

W. F. BURNS sworn.

BY MR. EVANS:

Q. You are a member of the borough council?

A. Yes.

Q. What is the population of the borough of West Lawn?

A. 2,056.

Q. Have you a statement that you wish to submit?

A. A part of it, and I would like to read some of it.

Q. All right. Very good. Proceed.

A. We feel that the Public Service Commission has allowed favors to the Sinking Spring Water Company for many years and increasing the rates without being required to enlarge or improve their distribution system over a number of years. We also feel that the Public Service Commission has allowed the Sinking Spring Water Company to supply that community with a lot of inferior quality of water. We are now drinking water that is doped with chemicals, and we are drinking nothing but corpses. We have proof along that line. I don't want to go into all the details; I just want to hit the high spots. In 1923, at an expense of a thousand dollars, the Public Service Commission caused the citizens of that community to lodge a complaint against the Sinking Spring Water Company, otherwise we would not have been heard or nothing would have been done. At that time they increased their plant by putting in two standpipes, which didn't do any good, because they didn't have the water to pump into them. They were only getting water from three springs. To cite an instance of what we feel the Public Service Commission allows a public utility like the Sinking Spring Water Company to get away with, the Springs school board built a beautiful school on an elevation, and in that school there are about 450 pupils. When it came down to the part where they were ready to put the water into the buildings, they found out that the water company refused to put a pipe line into the building. They wanted them after the buildings was up to run a pipe line down to their standpipe which is over a mile away. We refused because that would cost \$15,000. This we took up with the Public Service Commission, who decided that where no pipe line had been laid by a public utility the consumer is required to lay a line to the nearest water main which was three blocks away. But after we got everything connected up and ready to turn the water into the school we found we did not have enough water, not even to flush the toilets, and they had to let the students out a couple afternoons because of the awful stench. We then turned around and put in a pump to get the thing in shape at an expense of \$8500 which has to be in turn paid by the taxpayers, and we feel that the Public Service Commission could have checked up closer than they did on that water company. Another thing is that their line is so out of date, that they only have four 6-inch water mains through the place, and right now we have a protest going on which we have been waiting for a date since last July, but the Public Service Commission didn't feel it was an urgent thing for them to hold a hearing. We didn't have enough of water in the water pipes in the higher elevations for people to have water on their second floor. This school house is unprotected because it is not a fireproof building. Sometimes there is not water enough in the plugs. Sometimes there is a five pound pressure instead of a twenty-five pound pressure. Another thing, this company was not even compelled to have a consulting engineer. They allowed their plant to go down, but when we were protesting this summer they hired an engineer and he found that there was a leakage of 85,000 gallons a day. But what does the company care? The Public Service Commission under the law allows them to make seven per cent. on their valuation, they get their money anyway. Another thing we feel unjust is that the Public Service Commission allows the public utility to take, for instance, a man builds a garage in back of his home and he has the space in there for about five cars and expects to get a little revenue from it. It costs him eight dollars a year in water rent and he has no spigot in that garage but he has an outside spigot which he pays three dollars for a year. Then along comes the dry spell which has been occurring fully as long as I am in the borough, so that we have a water shortage every time the sun shines a couple of days. As the result we cannot wash our cars. People live in that community, they go there with the idea of having a garden

and a lawn, and shrubbery, but what is the result? They must let it go to ruin or replace it at added cost to us.

Q. Have you filed a complaint recently with the Public Service Commission?

A. We have now. There are about eight communities supplied by this water company now combining in a complaint before the Commission.

Q. The matter is now pending before the Commission?

A. Yes sir, since last July.

Q. Have you had no hearing?

A. None, except the engineers have gotten together. What we are afraid of is, that we understand that there is going to be a recommendation of improvements that will amount to \$235,000 to \$300,000 in this plant that we think its present condition was due to the gross negligence on the part of the water company to let it get down that way, but what will happen, it will come off of our taxpayers because our rates will be based—

BY MR. RHODES:

Q. When they cut off your water on account of drought, did they reduce your bill accordingly?

A. I must say this, one year after they had the place torn upside down, they got together and gave us a reduction of twenty-two cents on a year's bill of twenty-two dollars. Another thing, they always gave us notice when there was not enough water, but they never gave us a notice when we could get water again.

BY MR. HAGMAIER:

Q. Did you take up with the Health Department the condition of the water you complain of?

A. We did, and they sent down an inspector, but we got no report from him, and the only thing we found out was from Mr. Keiser, manager of this water company, that his water was O. K., but we had others up there and found there was dead animals of all nature in the water pipes, that the water pipes were clogged up with vegetable matter, and they got frogs out of it, and in order to drink that water you pretty nearly have to put a clothes pin on our noses to drink it.

BY MR. EVANS:

Q. Is this company held locally or elsewhere?

A. That is what we cannot find out. There was a rumor it was sold to a New York concern. Mr. Keiser has lately been made General Manager. That is the only information I can tell you on that.

MR. EVANS: We will now take WEST WYOMING BOROUGH.

MR. CHAINEY: We have no formal complaint to make.

MR. EVANS: We will then take on the BOROUGH OF QUAKERTOWN.

MR. VICTOR SMITH: We have no testimony to offer.

MR. EVANS: Then we will taken next SCOTTDALÉ BOROUGH.

THOMAS B. GIBSON sworn.

BY MR. EVANS:

Q. What position do you hold in the borough?

A. Manager.

Q. What is the population of the borough?

A. About 6800.

Q. You had a rate case before the Public Service Commission against the water company?

A. Yes sir.

Q. What water company serves you?

A. Citizens Water Company of Scottdale.

Q. Can you tell the Committee roughly what was the cost of that case to the borough?

A. About \$6,000.

Q. What was involved in the complaint? Rates of the company, or service?

A. It started with the quality and service of the water, and ended in the rates.

Q. Did the borough obtain relief from the Commission?

A. No, they did not.

Q. The borough lost the case?

A. The borough lost the case.

Q. Did you have any question up with the local gas company there?

A. Yes, in 1928 I believe it was they increased the rate on gas from possibly I believe 35 cents a thousand to about 57 cents a thousand.

Q. Was this case fought out before the Commission?

A. No sir. It was compromised on account of the rate that they proposed to take before the Commission. This rate was the same rate as Queensborough Gas Company had in that same district. They have lost their case so we felt there was no use taking our case to the Commission.

Q. Has there been any recent consolidation of the water companies in the district?

A. Yes sir, the Citizens Water Company of Scottdale purchased the Mount Pleasant Water Company, which is owned by the United States Steel Corporation and another one of their plants known as Cotter Steam Plant which adjoins our town.

Q. Did the borough take any part in the proceedings?

A. They appeared twice in the hearings here in Harrisburg. The main question was in the consolidation of these plants, which was the valuation that the company was trying to establish at these plants in comparison to the price that they paid. They paid for the Mount Pleasant \$350,000, and the Trotter B plant \$50,000, and they set up \$23,000 for legal and engineering service. They immediately proposed establishing, they claimed for financing purposes, but apparently for rate making purposes for Mount Pleasant, a valuation of \$907,000, and the plant at Scottdale, just prior to this consolidation had been sold by the previous owner, the Pennsylvania Railroad Company to Benning and Company, apparently brokers in Philadelphia, which in turn, after they purchased the Mount Pleasant plant, was again sold to the National Water Works Company, and naturally the price pyramided in each of these transactions, and in the rate case that we had that was finished in 1920, the conference of the engineers which made the compromise on the valuation, that is, the reproduction new less depreciation of \$580,000 for the plant at that time. That came up to the time of that hearing to apparently \$900,000. The water company just previous to the sale by the Pennsylvania Railroad Company to Benning and Company, had increased the rates in the Borough of Scottdale, and there was a petition filed with the Commission at that time by the engineer employed by the borough, consulting engineer, of Jay and Chester, of Pittsburgh, who recommended to the borough that they did not believe it was possible to get any relief from the Commission in the rates, that the after-war prices when applied to the valuation set up in 1920 would not give the borough any relief, that through the borough of Scottdale's proceedings in these matters, their confidence was very poor in taking anything before the Commission, they feeling that it was no use to go before the Commission with any matters pertaining to rates or service or violation of rules. We have our usual complaints from our citizens, concerning as has been brought out here this afternoon, extensions of several hundred feet by citizens for service, and naturally on the meter service charges, as they called them, they call them meter charges, but they are service, or customer charges, and our officials believe that there should be a department set up to regulate the expenditure by utilities for extension of their lines; in the conflicting costs between one service company and the other it pyramids operating costs with each utility.

Q. You mean such things as managerial contracts, things of that sort, is that what you are referring to?

A. I am referring particularly to the electric railways, conditions of electrolysis of lines corroded, disintegrated in short periods of time. In many cases of the company making extension of lines, the size, particularly in water cases, they are not adequate in size, and the underwriters penalize the citizens in their insurance rates. In our town our biggest penalty in insurance rates are to customers through inadequate size of the water mains. We had charged a penalty on all hydrants that are located on 4-inch lines, and there are very many of them.

Q. What rates do you pay for hydrants?

A. We only pay per year for hydrants, \$10.00 and \$450.00 per year per mile of pipe, for each of the above. It cost us on practically, I believe, ninety-four hydrants about \$6,800.00 per year.

BY MR. TURNER:

Q. The larger pipes would increase the cost? wouldn't it?

A. You would think that would be true, but they don't do it. They make it up on so many miles of pipe, of four-inch pipe. We have very few above six inch.

Q. You say that they ought to put in larger pipe, and if they put in larger pipes that means more cost, doesn't it?

A. It wouldn't apply the same as the Health Department regulated boroughs, regardless of the size of the sewers.

Q. But you would have to pay it in the end, would you not, the other rate?

A. Yes, but the difference would not be in any ways in comparison with the penalty we pay in insurance rates.

Q. You would rather pay the increased water rates?

A. Yes, there would be very little difference between the cost of four-inch water mains, that is, placed in the ground, than there is in a six-inch water main.

Q. Do I understand you to say that in the pyramiding of these companies the valuation had increased, that is, the price had increased.

A. The price has increased, and apparently from all we can learn—

Q. Did that enter into your case in the valuation?

A. We have had no case since that time. Mt. Pleasant, I believe had the case, that is being investigated at the present time.

Q. So that the question of the increase in price in the pyramiding has nothing to do with the rates.

A. It has not affected us to date, they raised Mt. Pleasant first.

BY MR. EVANS:

Q. Mr. Gibson in taking over the Trotter B. Plant was there any property taken over into the system that was not used or useful in the public service?

A. There were none of the lines or the reservoir, that is of any use at all to the borough of Scottsdale. They have possibly four miles and a half of twelve-inch water mains, and a small pumping station on Youghiogheny River, one small reservoir that would possibly hold three million gallons. On this whole four mile and a half of line they have four domestic consumers, and I believe three industrial consumers, and one of the industrial consumers has been offended, leaving at that time and at the present time two. Both these industrial plants had already lines in from the present main and at that time the Citizens Water Company lines, but there was nothing to be gained so far as the Borough of Scottsdale's plant was concerned, by the addition of the Potter Plant B. The only effect that it would have would be the revenue derived from those two additional consumers, and the reason that the both lines were in these industrial plants was the quality of the water from the Youghiogheny River was as contaminated by mine water that it was not useful practically for even boiler purposes, for the greater part of the year, especially in the dry season. After this transaction was completed, I am unable to say at this time as to just how much of that they applied to the additional valuation of the Scottsdale plant.

MR. EVANS: I think that is all.

#### BOROUGH OF EAST STROUDSBURG

STERLING CRAMER sworn.

BY MR. EVANS:

Q. What position do you hold in East Stroudsburg Borough?

A. Borough secretary.

Q. What have you to say to the committee with regard to your utility situation?

A. Well, we have a statement to Mr. Walker, which we would like to submit, if that would be acceptable to the committee.

Q. Is this the statement which you refer to?

A. Yes, it is.

Q. Your complaint involves the charges of the Pennsylvania Power and Light Company for electricity for your borough pumps, as I understand it?

A. Yes.

Q. And also the charge of the Associated Gas and Electric Company, which furnishes power for a fire siren motor, is that correct?

A. Yes, that is correct.

Q. Are you served by both companies in East Stroudsburg?

A. Served by both companies.

MR. EVANS: Is it satisfactory to the committee to have this—

BY MR. RICHARDS:

Q. I would like to ask one question. If you are served by one company, like the Pennsylvania Power and Light Company, and you want to change over to the Associated Gas and Electric Company, can you do it?

A. We have had several instances where we have tried to do that, but the one company won't accept the service.

Q. Although you have two companies in East Stroudsburg, still one company will not take the business of another, although that customer may be dissatisfied with the service he is receiving?

A. Yes.

MR. EVANS: Is the committee willing to have this letter—

MR. TURNER: My only suggestion would be that in each instance you look through these statements so that if there is any question you want to ask, you can ask it while the witnesses are here.

MR. EVANS: In the matter of rates, Mr. Turner, I am not sure—

MR. TURNER: I mean if there are any questions that ought to be asked.

MR. EVANS: I think that the letter with the accompanying bills will speak for themselves. You can leave the bills too, can't you?

THE WITNESS: Yes.

#### "BOROUGH OF EAST STROUDSBURG

East Stroudsburg, Pa.

March 7, 1931.

"Mr. John W. Walker,

Attorney at Law,

c/o Penn Harris Hotel,

Harrisburg, Pa.

"Dear Mr. Walker:

"In accordance with the suggestion of Thomas F. Chrostwaite, President of the Borough Association, we are herewith enclosing bills of the Pennsylvania Power & Light Company, Associated Gas and Electric Company and Citizens Gas Company for current used in the Borough of East Stroudsburg.

"Those bills practically speak for themselves. We feel that they are entirely too high.

"You will note that in accordance with the Pennsylvania Power & Light Company bill, the demand charge is two hundred sixty-four dollars (\$264.00) which must be paid whether or not current is used. The Borough uses a 100 horse power motor and a 50 horse power motor for pumping purposes. However, the two motors are never used at one and the same time. During the month of February, the Borough used only a small 50 horse power motor. We feel this is placing an undue burden upon the municipal water plant and should be adjusted.

"The Associated Gas and Electric Company furnish power for a 5 horse power motor which runs the compressor furnishing compressed air for the fire siren. We have used as low as 2 K. W. per month and as high as 18 K. W. per month, yet a charge of four dollars (\$4.00) is made each month.

"The Citizens Gas Company makes a ready to serve charge of fifty cents (\$.50) per month. A great many of the citizens of the Borough complain about this and feel it is unjust, and therefore, we call it to your attention.

"Extending best wishes for success in your efforts, I remain,

"Very truly yours,

Fred W. Davis,  
Solicitor."

BOROUGH OF NORTHUMBERLAND

FRANK J. KEILY sworn.

BY MR. EVANS:

Q. What is your position in the Borough of Northumber-  
land?

A. Borough councilman.

Q. What is the population of the borough?

A. About 4500.

Q. What have you to say to the committee with regard to your utility service in the borough?

A. We filed, or mailed our complaints to Mr. Walker at the Penn Harris Building, but the mister there tells me that they didn't get them. I am not prepared to give you the details like they are in those complaints, but I will do the best I can.

Q. In the first place, are they in regard to water or electricity, or which of the services?

A. Electricity, all of them, I think.

Q. What company serves you in the borough?

A. Pennsylvania Power and Light Company. The merchants council of Northumberland complained against the Pennsylvania Power and Light Company for excessive rates for electricity over the house rate in their business places. They see no reason why they should pay more than the house. They think like this, that if they can furnish the electricity in the houses for a certain rate and make a profit, that they can to the merchants of the town, and they think that they are being charged too much, and then, for the individual who is using electricity in the town, they put a penalty after 15 days, they give you a limit of 15 days, and then they put a penalty on it if that bill is not paid, which works a hardship on to each individual. They usually work it so that it comes just before pay day, and a good many of the men who are working for the railroad company and the different concerns there, when their pay comes, they don't have the money to pay their bill, and then they have to pay that penalty.

BY THE CHAIRMAN:

Q. What is the penalty?

A. 10 per cent, and it is added in 15 days, and I have never known of a case where they got out of it or the company was lenient enough to give it all.

BY MR. TURNER:

Q. Don't the bills go out on a regular day?

A. Yes, I believe they do, but yet I am not so sure about that. It seems to me that they don't always go out on the same date. Now, I think they base the time to send them out when the month ends. It is apt to be on the 18th, the 19th, or the 20th, or 21st, according to how the month ends, and they bring it so that it comes due,—now, the railroad company usually pays about the 7th, and a good many,—this very last pay day they got their bills, the time limit was up on the 6th, and then they drew their check on the 7th, and they had to pay the penalty, and then one of the complaints is the penalty is too much, 10 per cent is too much.

Now the Borough of Northumberland includes some farm land which is up on the hill back of Northumberland, and here are three farmers up there that want the electricity, and the company refuses to put a line up there unless they pay them \$11.65 of a flat rate and then they charge them 17 per cent on the line until the line is paid for, to get that line.

BY MR. RHODES:

Q. Let me understand this. This is probably under General Order No. 28, I imagine. How far from the present pole line are the farmers? How much of a line would they have to run?

A. Why, perhaps four blocks, I would think, but it goes up over the hill, and I don't know how many poles they would have to set or anything about it, but they want this electricity and they would be glad to have it and pay the regular rate that Northumberland Borough residents do.

BY MR. EVANS:

Q. Is this charge of eleven dollars and some odd cents that you speak of a monthly or an annual charge?

A. A monthly charge.

MR. RHODES. Mr. Evans, let me ask you, am I correct in understanding that the rate established by the commission of one and three-quarter per cent per month installation charge, divided by the number of consumers, is under General Order No. 28?

MR. EVANS: I think that is the usual basis.

THE WITNESS: These fellows don't understand why they can't have it at the ordinary rate. There is only one party in this instance who got a pole line laid to his place, and he wasn't charged anything.

BY MR. EVANS:

Q. How far was it from the—

A. About the same distance.

Q. Have these matters been taken up with the Public Service Commission?

A. No; I don't believe they have. They never have that I know of.

Q. Why not?

A. Well, they couldn't get themselves sufficiently interested in the borough council, I suppose. They have not been filed with the Public Service Commission.

There was another question asked in that communication that we received from the borough association, that we were to tell about what amount of money we had spent fighting public utilities. As near as I can get at the data, it is about three to five thousand dollars against the water company there, which resulted in a standpipe being placed there to give us more pressure. That is the only thing against the water company that we have had.

Q. That was a complaint of the borough filed against the water company?

A. Yes, sir.

Q. And they got a standpipe?

A. They got a standpipe; yes.

Q. And the cost of the proceeding was somewhere between three and five thousand dollars?

A. Yes; somewhere like that.

Q. Is there anything else you want to add?

A. No, sir.

#### BOROUGH OF LEWISTOWN

H. E. FETTEROLF, sworn.

H. E. FETTEROLF sworn.

Q. Mr. Fetterolf, what position do you hold in the Borough of Lewistown?

A. Borough secretary.

Q. And what is the population of the borough, approximately?

A. About 13,000.

Q. You had a case up with the Reedsville Water Company, did you not?

A. Yes, sir.

Q. What was the question involved in this case before the commission?

A. That was an increase of rates generally, and particularly, as far as the borough was concerned proper, was the increase of the rental of fire plugs from \$6 a year; according to a contract entered into between the Borough of Lewistown and the water company; \$44 a year.

Q. In other words, the borough had a contract with the Lewistown Water Company made in 1907, providing for the rates that were to be charged by the water company to the borough?

A. Yes, sir.

Q. And they subsequently increased these rates and the borough complained to the Public Service Commission?

A. Yes, sir.

Q. What was the result?

A. The borough had to pay the bill.

Q. The increased rates were allowed?

A. Yes, sir.

Q. What was the approximate cost to the borough of the proceeding?

A. Approximately \$7,000. \$6,995.88 I think was the exact amount it cost the borough.

Q. That was in 1920, was it?

A. 1920, yes, sir. I might also state that one of the worst features was the fact that in the original contract the borough of Lewistown was allowed to use these fire plugs for work necessary on the streets, such as flushing of sewers and flushing of streets. When the rate increase was made, of course, the rental was for fire purposes only, and of course every time we attempt to use a plug now we are reminded that the Public Service Commission doesn't allow us to use it, and it is necessary that they be used at times, and that is one of the things in particular that the borough protested against.

Q. Is there anything else you wish to add in regard to your utility situation in Lewistown?

A. Nothing more than that the only trouble we have in particular in Lewistown is in reference to the light bills, that

they are not in such a shape that anybody can check ... up.

Q. You are speaking now of your electric light bills?

A. I am speaking of the electric light bills; yes.

Q. What company serves you with electricity?

A. The Penn Central Light and Power.

Q. The Penn Central Light and Power Company?

A. Yes, sir. There is no way of determining whether your bill is right or whether it is not right. You even go to the company and endeavor to figure it out, and nobody can explain it to you.

Q. The bill does not show the amount; the number of hours consumed?

A. No; it doesn't show the number of hours consumed. It shows the amount of kilowatt hours, but not the rate per hour, and nobody can figure what the rate per hours is.

Q. You do not know what the rate per hours is?

A. No.

Q. Has the borough had any cases before the Public Service Commission since it lost this case in 1920?

A. No, sir.

Q. Is there anything further you wish to add?

A. No; I don't think so.

#### BOROUGH OF FARRELL

CLYDE B. SCOWDEN sworn.

BY MR. EVANS:

Q. Mr. Scowden, what position do you hold in the Borough of Farrell?

A. Burgess.

Q. What is the population of the borough?

A. About 16,000.

Q. It is in Mercer County, isn't it?

A. Yes, sir.

Q. What have you to say to the committee in regard to your utility situation?

A. May I ask, does it include the express companies.

Q. Yes; it includes the express companies.

A. I might say that had we known just what you expected, there are a lot of things I would like to have put in writing, but I didn't do it. We have numerous complaints, and I don't wish to take up your time particularly; but the express company, the gas company, the water company, the electric company and the telephone company not one of them maintains an office in our borough, and we must take up all business with them in an adjoining town. The only thing you can do, they made arrangements with the bank whereby our bills may be paid there, and that's all; no complaints that you might have about the installation of meters or other complaints; to take those up, you have to go to the adjoining town.

Q. First, taking up your water situation, what water company serves you?

A. The Chenango Valley Water Company.

Q. Is that a complaint you have in regard to the rates or service or what?

A. Service.

Q. Will you briefly state that to the committee?

A. Sometime ago I believe during the war time, a service charge of \$1.75 was added and never removed. There was considerable complaint from that; also, the insurance rates in our town, which adjoins three other towns, has been raised or, in fact, it is higher than the adjoining towns, said to be due, or the underwriters tell us is due, to the fact of a low water pressure. About two years ago they erected two standpipes, which remedied it to some extent, but still the insurance rate remains the same. There is no change in that.

Q. Is this company locally owned?

A. I believe not. It was owned in Pittsburgh at one time and I think it is now.

Q. You also referred to the gas situation, I think?

A. Yes, sir.

Q. What have you to say as to that—what company serves you?

A. The United Natural Gas Company. During the war period when there was frequently a shortage of gas, a committee of officials appeared in our borough and met our citizens and officials, and requested that we would not oppose a raise in rates, and this was agreed to, a gentleman's agreement was entered into at that time that if in the future

any controversy arose they would take up the matter with the proper officials previous to any change as to rates or change in houses. Our town is a new town and we have new streets and new developments, and we thought it would be necessary to lay lines. We have not had any trouble on that score, but during the last year they have installed a new system of reading meters. Previous to that the bills were paid on the tenth of the month. Under that system we knew just when bills had to be paid, but now they send you a bill any time during the month, and then you have until ten days later to pay the bill which works a great inconvenience to many people. If a man lives in one part and has a store in another or possibly a couple of stores, there is no set time for his bills to be paid. That is our principal grievance against the gas company.

Q. Did you say what the previous rates were?

A. Sixty-eight cents is the present rate; previous to that twenty-seven cents, with a discount for cash payment.

Q. Then you mention something about the express company. What express company serves you?

A. There is only one, the American Railway Express. They operate through our town with two deliveries a day. They have our town penalized in this way: They, beyond a street called Beechwood Avenue, will make no deliveries. They have the town divided into two parts. A customer may order a package sent to him but, if this man lives beyond this street in this other district, they refuse to make deliveries. They will call him and tell him that there is a package for him, and if he gives them instructions they may leave it at a store where he may call for it, but in that way he either has to carry it home or pay for having it taken home himself. We also have to go to Sharon to do any business with them and after three o'clock in the afternoon you cannot send any packages.

Q. How far is Sharon?

A. Two miles.

Q. Have you taken that up with the Public Service Commission?

A. Not for some time.

Q. Why not?

A. It was our understanding it was useless. It was tried out one time and it has now become a legend with us that it was useless at that time, but that the time would come when it might not be as it is now.

MR. TURNER: I did not hear what the gentleman said.

BY MR. SCOWDEN:

A. I think it was taken up previous to the time I was connected with the borough government. I think there were some letters written in. Unfortunately our secretaries are both dead that we had previous to the one that we have now, but there are some records which show that letters were written in on two occasions, but we cannot find those letters.

Q. How long have you been burgess?

A. Two years last August.

Q. During that term nothing has been taken up?

A. Nothing directly, no sir.

BY MR. CRAWFORD:

Q. I would like to ask if the Borough of Farrell and the Borough of Sharon do not come together?

A. Yes sir.

Q. Do you know the difference when you go out of one borough into the other?

A. We have signs located.

BY MR. TURNER:

Q. How far would it be from the average place in your borough to where these officers were located?

A. It is two miles from our borough buildings to the borough buildings in Sharon. Then the electric and gas and telephone are still a little bit beyond that.

BY MR. EVANS:

Q. I think that is all now, Mr. Scowden.

A. I might add, we have a rate of eighteen dollars, and \$270 a mile, and 143 hydrants at ten dollars a year.

Q. That is a 4-inch main?

A. Not all of them. Whenever council orders a main put in, we pay that mileage; there is no difference in the size of the main.

## BOROUGH OF FREEPORT.

BY MR. EVANS:

We will now take the borough of Freeport.

C. M. MCLAUGHLIN sworn.

BY MR. EVANS:

Q. You are burgess of the borough of Freeport.

A. Yes sir.

Q. That is in Armstrong County?

A. Yes sir.

Q. What complaint, if any, have you in regard to your public utility situation?

A. Our main complaint there is on the water question.

Q. What water company serves you?

A. The Freeport Water Company. It is not locally owned. It is one of a syndicate. I don't know who does own it now. They have served water there for many years and during the period just following the war they reconstructed their plant and built a plant that was practically about three times their needs. Following the completion of this plant of course they increased their rates. We feel that we are paying an excessive rate. A part of the town is on meter and a part on flat rate. The flat rate for homes is \$1.35 a single spigot and \$2.35 for a spigot in the bath room. The meter rates on services charged on meters varies from \$2.00 to \$60. per quarter, that is for service charge and it all depends on the size of the meter, we run from one-half inch to six inches in size.

Q. Is that a monthly or quarterly rate?

A. That is a quarterly charge.

Q. Then you have a meter reading charge in addition to that?

A. No, that is included in this, they call it their service charge. If you notice on their bills, in the monthly bill, they divide this up. Here is a meter with a one dollar service charge and up here it is on the charge, meter three dollars quarterly, twelve dollars a year, service charge plus the rate for water.

Q. What is the rate for water by domestic consumers?

A. The first twelve thousand five hundred at forty-five cents per thousand. Under fifty thousand it is fifty-two cents per thousand, and the next three million is eighteen cents and all over three million, seven hundred thousand is at ten cents.

Q. But it is principally the service charge that you are dissatisfied with?

A. Yes sir, and the flat rate that we feel is excessive; we pay more than any other community in that valley.

Q. How about your gas service?

A. The P. W. Phillips Gas people have served the community with gas for over thirty years and prior to 1918 they charged us for just what gas we consumed, but at that time they put on a service charge of twenty-five cents a month that is still in existence, that is over and above what gas is consumed.

Q. Is there anything else that you wish to add?

A. No, I guess not.

MR. EVANS: All right, thank you, sir.

## BOROUGH OF MYERSDALE.

J. E. LECKEMBY sworn.

BY MR. EVANS:

Q. What position do you hold in the borough of Myersdale?

A. Counsel.

Q. You have something to say to the Committee in regard to your electric light service?

A. Yes.

Q. Will you say what you have to say briefly?

A. Six years ago the light company changed hands. We have a franchise with the Myersdale Electric Heat and Power Company, and when this company came in, they came before the council with a franchise. On that franchise, I at that time was president of the council, I seen that in the franchise the rate for the Myersdale street lighting would be increased \$750.00 and I refused to sign that, and also the burgess, Mr. Wise, the representative of the light company, stated in front of council, and also to the burgess that the reduction in the light rates would overcome that trouble. I told him that

if that was the case I had no objection to signing the franchise, and we signed that franchise, and the first month there was \$62.50 added to our bill, and it has been on ever since. Mr. Rule, who was our attorney, we went to Mr. Rule because we could not get anything done, and I told Mr. Wise 30 days afterward I was very sorry that the Myersdale borough had not taken Mr. Rule's advice that night when we had him there for instructions. He made a statement before that Committee that we had there—

MR. RULE: That is immaterial.

THE WITNESS: It don't make any difference, I want to tell it anyhow.

MR. EVANS: Perhaps you had better stick to facts, and not what Mr. Rule told you.

THE WITNESS: That is about all that is there.

BY MR. EVANS:

Q. I didn't quite catch what company it was that serves the borough?

A. The Associated Gas and Electric Company.

Q. Have you taken this matter up with the Public Service Commission?

A. No, not lately. We had a hearing before the Public Service Commission before it changed hands, and they increased our rate that time two cents a kilowatt. There was nothing to do, we had a hearing once before on the Myersdale Light and Heat Company, and we had a hearing before the Public Service Commission with these people at that time, and we didn't get any satisfaction from them, they increased our rates at that time.

BY MR. TURNER:

Q. You say your rate was increased \$62.50, or your bill was increased \$62.50?

MR. RULE: Perhaps I might state it another way to your Committee. Under the franchise granted to the Myersdale Electric Light, Heat and Power Company, the company paid to the borough \$750 a year for the franchise for the care of their poles, and when the new franchise was granted, that was eliminated with the assurance that the light, or the rates for the light would be decreased, in that the lights were to continue at the former rate, and as a result the borough is losing \$750 a year upon its street lighting.

BY MR. EVANS:

Q. Why had you not taken it up with the Commission?

A. We didn't think it would be any use to go into it, it costs too much money, it cost us \$4,000 the other time we had a hearing before them.

Q. Anything else you want to add?

A. I just want to state about the water company. A few years ago they had that up before the Commission—

Q. What water company serves you?

A. The Sand Spring Water Company. Now, the Commission decided that question in this way, that the consumers, the water company would have to install meters, they didn't have any flat rate, but the borough had 36 plugs in Myersdale which was costing them at that time \$11 a plug a year; and now it is costing \$33 1-3 a year for each plug.

Q. Has the borough taken any action before the Commission in regard to that?

A. It was taken up at the time it was done, yes.

Q. What did the Commission hold?

A. They just allowed the increase in the borough plugs, just doubled the amount, double.

Q. Your present rate is 33 1-3 dollars?

A. We pay \$120.00 a month for thirty-five plugs.

Q. Unless there is something more, we are obliged to you.

## BOROUGH OF PORTAGE.

EDWARD MILES sworn.

BY MR. EVANS:

Q. Mr. Miles, what position do you hold in the borough of Portage?

A. I am a member of council.

Q. You are a member of borough council, what is the population of the borough?

A. The borough is about 2800, somewhere along there, don't know exactly.

Q. Keep your voice up so the Committee can hear.

A. It was 5,000, but I think it has dropped off considerably.  
Q. Have you some statement you want to make to the Committee in regard to your utilities in Portage?

A. Yes, we have statements that we want to make. We cannot tell, because we do not have access to the books—

Q. What utility company for instance?

A. First take the light company.

Q. What light company is it?

A. Well, it is the Portage Light Company.

Q. The Portage Light Company?

A. Yes.

Q. What rates are they that you are complaining about?

A. Well, the whole system.

Q. For instance, take your domestic rates, what are they in Portage?

A. Ten cents a kilowatt.

Q. A flat rate of ten cents per kilowatt hour?

A. Ten cents a kilowatt hour down to so much, and then it drops to six.

Q. You don't know what the first block is?

A. It is based on the number of lights you have.

Q. So many hours use of the lights?

A. Yes.

Q. What are your street lighting rates?

A. The street lighting rate is \$3.25 a month for one globe, I think it is two hundred and fifty candle power and the voltage, I believe, is two hundred and fifty, I am not sure about the size of that. The others, smaller globes, is \$2.00 a month, and they raised it then—they allowed us five per cent discount if paid within a certain time, and the five per cent has been taken off, and they raised us virtually five per cent, to the Portage borough council.

Q. Is there anything else in regard to the light company that you want to state?

A. The light company was originally a plant built there by the citizens, who run mines, and they bought their power then cheaper than they could make it, and it has no equipment to amount to anything in the town, and it was sold for \$275,000, and it can be replaced, all that they have in the borough, for from 35 to 60 thousand at the present time.

Q. Well now, does the company have a generating plant?

A. No, sir.

Q. From whom does it buy its current?

A. It buys its current off the Penn Public.

Q. From Penn Public Service?

A. Yes.

Q. Do you know what it pays for its energy?

A. Well, it is all one concern. I don't know anything about that.

Q. It is controlled by the Penn Public Service?

A. Yes, I do know what they are selling power for in the borough to large consumers, in the borough limits.

Q. What is that rate?

A. One cent a kilowatt.

Q. One cent a kilowatt hour?

A. Yes.

Q. And the domestic consumer pays 10 in the first block?

A. Yes.

Q. And then drops to six?

A. Yes, sir.

Q. Is there anything else in regard to the light situation you want to add?

A. Well, not particularly that, only in the way of filing complaints, when anything is wrong, it takes a long time to remedy it, with any of the utility companies.

Q. Well now, what other utility companies have you any complaint about?

A. Well, the next is the gas. They formerly put it in there—

Q. What gas company serves you?

A. Well, I guess it is called the Peoples Natural Gas Company.

Q. Go ahead.

A. They put it in there and sold it at 35 cents a thousand cubic feet and put the plant in free. That is, put the pipes in and everything free, and for some cause or other they are now charging us 60 cents for the meter, whether we use any or not, and also 60 cents for every thousand feet we use.

Q. Well now, is this 60 cent meter charge a monthly charge or—?

A. Yes, monthly, which I believe there are between seven and eight hundred meters.

Q. And then 60 cents per thousand cubic feet over the meter rate for the gas consumed?

A. Yes.

Q. When did that new rate go into effect?

A. Why, I can't tell you exactly.

Q. Several years ago?

A. No, not so many. When it was first put in it was two or three years, something like that, and then raised the rates.

Q. Have these rates ever been before the Public Service Commission, that you know of?

A. I don't know. I didn't know anything about that.

Q. What else have you to say?

A. Well, the next thing we are kicking about is on the water company.

Q. The water company?

A. Yes.

Q. What water company is it serves you?

A. Well, I don't know, but I believe it is called the Portage Water Company.

Q. Is that owned locally, do you know, or is it part of a larger system?

A. No, sir, it formerly was owned locally, and has passed beyond.

Q. What have you to complain about with the water, the rates or the quality of the service?

A. Why, one of the things we complain about is, they charge us \$235 per mile per year, and there is a fraction in there, I don't know just the exact fraction, for all the service they have got in town, and instead of them improving our streets with their water lines, why when they dig them up they destroy them and yet we have to pay them for the service. Besides we pay \$15 a year for 39 plugs for water for the fire company.

Q. This is what they charge the borough for fire service?

A. Yes.

Q. And does the \$235 per mile charge apply to four inch pipe or all pipe?

A. All the service that they furnish with water for the fire company.

Q. For the fires?

A. Yes, that they got their plugs on. There is 6.71 miles, as near as I can tell you.

Q. The plug charge is \$15 dollars a year for each plug?

A. Yes.

Q. And you feel that those rates are too high?

A. Well, in the present condition, the pipes have been in for a long time, and what we are objecting to is the mileage rate; \$15 for the plugs we would not object.

Q. But the \$235?

A. The \$235 a mile for the privilege of destroying the streets is out of reason.

Q. Is the supply of water adequate and of good quality?

A. Why, the supply of water in their dam of course in dry weather like we has this year, was not, but there is plenty of water around there, at a price of 20 cents,—I understand they paid that, and we pay them .52.

Q. 52 cents per what?

A. 1,000 gallons.

Q. That is for domestic service?

A. Yes.

Q. And is there a service charge there?

A. A minimum charge.

Q. What is the minimum charge?

A. Why, it varies from \$3 a quarter to \$4, to \$5.25.

Q. \$3 to \$5 a quarter?

A. \$5.25, and so much a thousand gallons over.

Q. Is there anything else you want to say to the committee?

A. Well, at the present time we think the borough is in very bad circumstances over the expenditures, and another thing, we had to pay for all connections from the sewer pipe in to a house, then after the lines were all down and the connections all made, then it was turned over, part of the property of the water company, I understand.

Q. Now, was there a separate sewerage company serving you?

A. No. Laying the mains in. Our mains originally were all corroded,—

Q. This is the water service you are speaking of?

A. Yes, and we all had to pay to put them in and pay to replace them, which at the present time is knocked out, and they base their income on that service.

Q. When you say you had to pay to lay the lines and replace them, do you mean the line from the main to the curb line or from the curb line to the house?

A. Yes, sir, all the way in. I had a half inch line put in, it corroded tight, and when I had them put in a lead line, they charged me \$52.

Q. And that was from the main to your house?

A. Yes, in to the house.

Q. Not from the curb line to the house?

A. No, and also on Main Street.

Q. And you say that none of these things have been taken up with the Public Service Commission, as far as you know?

A. Well, the only thing I took up with the Public Service Commission was, they charged me one time 86,000 gallons, or something along there, and then 57 and 46, in the building, and I had my line run over, I was away from home, and when I got back and had my line gone over by a plumber and reduced it down to 9,000 they would not take the reading, and shut the water off on February 20th.—I can't tell you the year. They had looked at the meter on December 20th, and found it—they claimed—not working, but put a new meter in and let it run to February 20th, and because I would not pay the 46,000 they shut it off. Then we had to write to the Public Service Commission, of which you have a copy.

Q. But I mean these various matters of the electric light and the gas and the water in the borough, you have never filed any complaint with the commission?

A. Except that one I am telling you.

Q. But that was an individual complaint?

A. That is individual, yes. Oh, the other complaint, we had that up before the commission, and it has even went to court, I believe, against the water company. You have a record,—I have some records here,—I can't tell you the particulars of them,—and it has been up into the courts. I don't know what year. Our attorneys here could tell you what year that was, but they lost out.

MR. TURNER. Mr. Evans, it seems to me that where we have these cases, as long as we have taken up this question of the prices which they are paying for fire plugs, we will say, if they are paying \$10, and then paying so much per mile, it seems to me that we ought to have the further question answered as to how much per plug that makes. In some places they are paying \$30, and in some places \$40, and sometimes as high as \$55.

BY MR. EVANS:

Q. Mr. Miles, can you tell us what it costs per plug, including the mileage and the plug charge?

A. It runs \$54 a quarter and some odd cents. In the mileage they pay \$4 a year for the fire protection expense.

BY MR. TURNER:

Q. How many plugs have you?

A. 39.

MR. EVANS: If my arithmetic is correct, that is \$2,169 per year for 39 plugs.

THE WITNESS: I have the borough audit here, if you want it.

MR. TURNER: That answers the question.

MR. RHODES: \$60, is it not, Mr. Evans?

MR. EVANS: Not quite that much; \$55, perhaps.

BY MR. EVANS:

Q. Anything else, Mr. Miles?

A. No, sir.

#### BOROUGH OF MOUNT HOLLY SPRINGS

J. HARVEY LINE sworn.

BY MR. EVANS:

Q. What position do you hold in the borough?

A. Solicitor.

Q. Borough solicitor?

A. May I ask whether this inquiry is directed as to complaints against the commission or against the utilities, or both?

Q. I think it is both. It is a matter of the borough's attitude toward regulation as it exists in Pennsylvania today

A. As solicitor, I would hardly be able to give you direct testimony as to the conditions, but I will read to you the complaint that has been lodged by the borough:

"The undersigned citizens of the said Borough of Mt. Holly Springs, respectfully request the attention of your Honorable Committee to the following matters in connection with the service of the said Mt. Holly Water Company.

"FIRST. Complaint is hereby made as to charges by the said Water Company for making connection from the water pipes of said company, in the various streets of the said borough, to the properties of users of water in the said borough. It has been the practice of the said water company to compel all proposed users of water to bear the expense of making connection, excavation, etc., from the water pipes of the said company in the street to the property where the water is proposed to be used. Your petitioners believe that the said water company should bear the expense of laying water pipes, in all cases, to the curb line along said properties.

"SECOND. Your petitioners respectfully complain that the said water company does not charge uniform rates in said borough.

"THIRD. Your petitioners respectfully complain that the rates charged by said water company in said borough are excessive and do not conform with the agreement between the said water company and the said borough entered into at the time of the granting of the original franchise to said water company.

"FOURTH. That the service and water supply furnished by said company is inadequate in portions of the said borough, particularly along Hill street in said borough."

Q. Can you give us any information as to what the rates are for fire protection in Mount Holly Springs?

A. I think that that rate is \$600 a year for 20 plugs. It had formerly been \$400; \$20 a plug, and had been raised.

Q. And is that on four inch mains, or do you know the size of the mains?

A. I am not able to give you the size of the mains.

Q. Have you filed any complaint against the water company with the Public Service Commission?

A. We have not. That is the reason I asked you that question in the beginning.

Q. Why haven't you taken it up with the Public Service

A. Well, I am not prepared to answer why the borough has not taken it up. My answer would be simply conjecture. It may have been too much trouble.

Q. You have not had any experience with the expense of such proceedings?

A. Not the borough; no.

Q. Is there anything else that you wish to add?

A. Nothing except what is contained in the formal complaint lodged, and if this committee should desire further testimony of the allegations made in the complaint, I believe we would be able to furnish it to you.

#### BOROUGH OF PORTAGE.

EDWARD MILES recalled.

BY MR. EVANS:

Q. You have something you want to add to your testimony to the committee?

A. The light company, I understand, that each stockholder was made a director and received a salary to consume the income, which was \$50 a month.

BY MR. TURNER:

Q. How many stockholders?

A. They received it each month, \$50, each stockholder.

Q. How many directors were there?

A. There was only four or five stockholders and directors.

MR. TURNER: Mr. Evans, that wouldn't have anything to do with the question of rates, would it?

BY MR. EVANS:

Q. I think you are referring to the time before the present owners took over the property?

A. Before the present owners, and they sold it for five times their income.

BY MR. TURNER:

Q. What is that?

A. That is, five times on the cost of the property was their dividend.

BY MR. EVANS:

Q. They sold it to the new owners for five times its cost; is that what you mean?

A. Their dividend was five times the cost of the property per year; instead of being seven per cent, it was 500 per cent.

Q. 500 per cent dividend?

A. Dividend; and the Public Service Commission approved all the sales. Whether it was investigated by them, I don't know, and there was another thing—I believe that is all.

#### BOROUGH OF HOMER CITY.

W. E. GUTHRIE sworn.

BY MR. EVANS:

Q. You are a member of the borough council, are you?

A. Yes, sir.

Q. What is the population of the borough?

A. 2200.

Q. And what is the service that you are complaining about, if any?

A. Our light service.

Q. Your electric light service?

A. Yes, sir.

Q. What company serves the borough?

A. The Associated Gas and Electric Company. They submitted their contract, our contract last September; the contract for ten years.

Q. This is street lighting, to which you are now referring?

A. Yes, sir; and we had on our old contract, here in 1930, 3800 candlepower lights and six 250 candlepower lights, which they claimed burned an average of 400 hours per year, at a cost of \$11,043.95. That is the total cost for the year, or 7.27 cents per kilowatt hour. They submitted the contract for 1931, which we have not signed at the present time, for 81-4800 candlepower lights and two 250 candlepower lights, decreasing our candlepower lights 750 candlepower, and their total cost is \$1299.48, or a cost per kilowatt hour of 9.03 cents on their contract submitted.

Q. Were these rates filed with the Commission?

A. Yes sir they are.

Q. In other words this is a special rate which they filed with the Commission for the borough of Homer City?

A. Yes sir.

Q. Has the borough filed any complaint with the Commission?

A. No we have not, simply because it is too expensive for our borough to do it. But we cannot understand why they cut our lighting efficiency at a cost of \$155.53.

Q. When did this become effective?

A. That should have become effective last October, it we had signed the contract. They are billing on the old contract.

Q. Is there anything else you wish to add in regard to the light situation.

A. No sir.

R. B. KUNKOAD called and sworn.

BY MR. EVANS:

Q. You are a member of the borough council?

A. Yes sir.

Q. What have you to say in regard to the utility situation in your borough?

A. The old contract that run out cost us about seven cents a kilowatt. The new contract, the council was informed, we had a meeting with the light officials, and the light officials assured the council that in order to get us to sign the new contract that the new rate per kilowatt hour was a little over five cents. Well they changed around and raised the wattage and we didn't know where we were at, but we refused to sign it and when we got at it and figured it out, it runs us very nearly ten cents per kilowatt hour an increase of very nearly two cents per kilowatt hour. We have not signed the new contract and it is a question in my mind, it is up to the citizens, and I do not believe that they will ever sign it; it is a question of increase taxation or increasing taxation to such an extent that I as one of the council representing the people I could not sign it at all because I know the sentiment among the taxpayers. We have also on this a fire siren. They have charged us \$2.50 as a minimum a month. We use

possibly two kilowatts per hour or at the very highest rate about twenty cents worth of current, and the sentiment is that the power company has between ten and twelve thousand dollars worth of real estate in the borough and absolutely pays no taxes and this fire siren put in by the taxpayers and the fire company which we have spent between ten and fifteen thousand dollars on, this fire company including the fire siren is two to one more benefit to the power company than it is to the average citizen. Yet when we put on a fire siren they charge us approximately seventy-five cents a kilowatt hour to run that fire siren. At this meeting we had I brought it up and I think I shamed them out of it. If I did not shame them out of it, we didn't get any bill for it this month anyhow. They say the Public Service Commission don't allow them to give us a special rate and don't allow them to give us anything, and if they don't allow them to who is going to pay for this fire siren this month.

Q. Mr. Guthrie, I think stated, that the street lights were burned about four thousand hours?

A. I would say four thousand, although about thirty-six hundred hours would give us all the light we need. We are giving the company the benefit of every figure at that rate. We have just given them the benefit of two per cent which we earned on discounting the bills.

BY MR. HAGMAIER:

Q. Did you say the company had twelve to fourteen thousand dollars of property at Homer City?

A. They do.

Q. And they pay no taxes?

A. That is poles, wires, transformers and so forth. In order to try to make us equal we tried assessing the poles but I understand the Public Service Commission said you cannot tax them. In other words the taxpayers are the goats.

#### BOROUGH OF UNION CITY.

F. T. HATCH sworn.

BY MR. EVANS:

Q. You are a member of the borough council?

A. Yes sir.

Q. What is the population of your city?

A. Over four thousand.

Q. What complaint have you to tell the Committee about?

A. It is not very extended. We think we are paying too much for street lights.

Q. You are also served by the Associated Gas and Electric System?

A. Yes sir.

Q. And what rates are you paying for street lights?

A. We have one hundred candlepower at twenty-six dollars and one two hundred and fifty candlepower at thirty-nine dollars and a four hundred candlepower at fifty-three dollars. It costs us four hundred dollars a month for street lights or approximately that.

Q. Have these rates been in effect for some time?

A. We are entering upon our second five years I think. After we had five years we gave a new contract, the first of the year I think it was.

Q. What does this come to per kilowatt hour do you know?

A. About eight cents.

Q. And do any municipalities in your vicinity pay lower rates that you know of?

A. Sixteen miles from Union City they are just putting in electric light at four cents.

Q. What company is that?

A. Niagara Power Company.

Q. That is just across the line in New York?

A. That is just across the line in New York.

Q. You have a pumping station also?

A. Yes, sir.

Q. What rate do you pay for the pumping station?

A. They charge us \$50, with a discount, making it \$47.50 a month, and then charge us for energy, if we have power.

Q. What rate do they charge you for the energy?

A. That is I think the same as electric light.

Q. The question with you is primarily one of your electric light situation?

A. Yes sir.

Q. Have you taken this matter up with the Public Service Commission?

A. No sir.

## APPENDIX TO THE

Q. You have not filed any complaint?  
 A. Oh, no, we have not filed any complaint.  
 Q. You intend to file a complaint before the Commission?  
 A. We don't.  
 Q. Why not?  
 A. We don't think there is any use.  
 MR. EVANS: Is there anything else you want to bring out?  
 THE WITNESS: No sir.

## BOROUGH OF GREENVILLE.

J. M. HITTLE sworn.

BY MR. EVANS:

Q. What position do you hold in the borough of Greenville?  
 A. Solicitor and secretary both.  
 Q. What is the population of the borough?  
 A. 8,600.  
 Q. What have you to say in regard to your utility situation there?  
 A. The principal trouble we have, we have a case before the Public Service Commission now, an increase in rates.  
 Q. Of what company?  
 A. The water company.  
 Q. What water company serves you?  
 A. The Greenville Water Company.  
 Q. Is that a local company?  
 A. It is associated with the National Water Works Association.  
 Q. What have you to say in regard to the rates?  
 A. The original rates was \$6.60 a year, and it is now \$12.64 a year.  
 Q. That is the minimum?  
 A. Service charge, a minimum charge, and the water charge is \$33, and one is \$30, that gives 1,500 gallons without any charge, that goes in with the minimum service charge, but the rate almost doubled, the rates as to the water used, it is doubled, \$6.60—almost, not quite.  
 Q. \$6.60 to \$12.64?  
 A. Yes. We have a case before the Commission now.  
 Q. That is pending?  
 A. That is pending now.  
 Q. What else have you to say?  
 A. Well, I think nothing but what has been brought out this afternoon, that I care to say.  
 MR. EVANS. We thank you.

## BOROUGH OF LARKSVILLE.

MICHAEL FENDER sworn.

BY MR. EVANS:

Q. Mr. Fender, you are burgess of Larksville, are you?  
 A. Yes.  
 Q. What is the population of the borough?  
 A. 9,400.  
 Q. And what complaint have you got as to your utility situation?  
 A. The increase of the Scranton Spring Brook Water Service Company. No doubt the Commission here knows that last week we were down here in a body, but the rates, I just want to show the rates—  
 Q. We already have some of the rates, I think in the record of the Committee, so I don't think it is worth going over that again, unless you have something particular as to your borough?  
 A. Well, I just want to show what the old rate was and the new rate.  
 Q. I see, all right.  
 A. The fire hydrants alone, the old rate was \$23.25, and now the rate is \$55. We have 37 fire hydrants in the borough, and the old bill a year was \$820, and the new bill is \$2,035, which is an increase of \$150. Now, the water bill and the service meter has been stated here before, and I don't have to state that.  
 And the water bill to the property owners in the household has been stated here by Father Curran, so I don't have to state that.  
 MR. EVANS: You are in the old territory of the Spring Brook Water Company, are you not?  
 THE WITNESS: Yes, sir.  
 MR. EVANS: All right, sir, thank you very much, Mr. Fender.

## BOROUGH OF TOWER CITY.

W. F. JONES sworn.

BY MR. EVANS:

Q. What position do you hold in the borough?  
 A. Councilman at present.  
 Q. How many inhabitants does the borough have?  
 A. The borough proper has about 27 or 28 hundred.  
 Q. What have you to say in regard to your utility situation there?  
 A. Well, do you want me to go into a brief history of how we have progressed to bring these results?  
 Q. Yes, I would be glad for you to do so.  
 A. Permit me, by way of my advanced years, to say that I am not as clear in my memory as I was. However, I have a fair knowledge of the entire history of this water company, because I was one of its original promoters. It originated about 33 years ago, by home people.

BY MR. TURNER:

Q. Would you mind telling us the name of the water company?  
 A. It is the Citizens Water Company. It was not long, however, before it drifted into the hands of about eight men, citizens of the town, however. They constituted a company for a matter of about 17 years. Our rates at that time were \$5 a spigot and \$20 for fire plugs.  
 However, during that period they advanced us to \$6 a plug, and it continued at that,—not \$6 a plug, but \$6 a spigot. The plug is \$20. They held out amongst themselves and desired to sell the plant. They offered it to the borough. I was chief burgess at the time. They offered it to the borough for \$65,000. I desired to buy it, and called the people together, and thought I gave logical reasons that they should buy it, but at the election it was defeated, through petty politicians and some others, and subsequently they sold it to some wealthy men, two wealthy men, Harlan Williams, a wealthy man of Philadelphia and Norristown, and they were the second owners. When they got possession they jumped our rates from \$6 a spigot to \$8 a spigot and \$40 a plug, from \$20 to \$40 a fire plug.

BY MR. EVANS:

Q. About when was this?  
 A. Let me see,—about 15 years ago. Yes, on or about that time. They jumped our rates up to \$8 and to \$40 a fire plug. The citizens become aroused. They held a public meeting, and,—we are all poor people up there, however, and so it was a difficult matter to go into a vicious fight. We raised \$400, and we formed a committee, and went to Harrisburg and employed a lawyer and engineer, and went before the Public Service Commission, and their ruling against us was that they, the company, was entitled to 17 per cent on their investment, but it was not based on what they paid for the plant, but on the replacement value, and I asked a former member of the company what that rate was, or what that estimate was, and one told me it was \$80,000 and another told me \$120,000. Now, I don't know. I am not here to say what it was based on, the replacement value, but I have my own opinion, however.

Now, then, this company continued to own this up to within a year and a half ago, and they sold out. They sold out, as I understand, to a New York syndicate, and they own a great number of water plants throughout the country, but what they are I don't know. As soon as they got possession they jumped us up to \$10 a spigot, and reduced our allowance on the meter rates, as I call them.

Now, then, I just want to make a comparison. Here is Williamstown four miles away, which gets its supply from the same mountain that we do. The only difference is this, in the case of a drought, our home plant has got to pump through a six or eight inch pipe to feed the reservoir, in case of a drought; otherwise that pump need not run. So, they get the same supply from the same mountain, Peters Mountain, and their rates are six and a half for a spigot and 20 on a fire plug. Four miles below, Lyke is, they get the supply from the same mountain, and their rates are five and a half and \$15 on a fire plug. So, you see where we are.

BY MR. TURNER:

Q. Are they owned by the same company?  
 A. No, sir; not owned by the same company. No; not owned by the same company.

MR. WALKER: Williamstown and Tower City is?

THE WITNESS: Our present company, the syndicate, as I call them, have lately bought the Williamstown plant, but have not as yet increased the rates down there.

BY MR. TURNER:

Q. Where these differences in rates have been prevailing were they owned by the same company?

A. They were at one time—no; they were not owned by the same company, I beg your pardon. The two millionaires, as I call them, they own Tower City only, and the original company owned Tower City, but they sold Tower City. Now, I believe the New York syndicate owns—

BY MR. RICHARDS:

Q. I want to ask you a question, which may appear to be an obvious question. You said that they charged a flat rate of eight or ten dollars per year for each spigot that you have in the house?

A. Not each spigot; the first spigot; and then they make a reduction on the next spigot.

Q. In other words, if you had two spigots in the kitchen, and two in the bathroom, and one in the cellar, they would charge you \$10 for the first, and then a reduced rate for the remainder?

A. That is right. The rate on the meter is two and a quarter per year; \$10 minimum rate.

BY MR. TURNER:

Q. You say that the original time of the purchase of this company was about 1916?

A. Yes, sir; or 1917; on or about that time.

Q. When was the rate case, that you speak of, before the Public Service Commission?

A. After the new company got possession, immediately.

Q. After 1916?

A. Along there. I am not positive of the year, of whether it was '16 or '17, or '18, but along about that time.

Q. Within a couple of years of that time?

A. Yes, sir.

Q. Had there been any extensions or improvements to the plant.

A. I know of no improvements, further than they extended the line, without consulting councils into the town, you understand; two little towns outside of the borough, outside of the borough they extended the lines out there, but I don't know why the borough should be responsible for anything in connection with that.

Q. When was the plant offered to the borough for \$65,000?

A. That was in 1913, I think.

Q. 1913?

A. Yes, sir.

Q. And there have been no additions to the plant?

A. I can't recall any; I can't recall any.

Q. You say the present rate for the first spigot is \$8 a year or \$10?

A. It is ten.

Q. It is \$10 now?

A. Yes, sir.

Q. When was that increased?

A. That was increased—well, the new company has got it about a year and a half, and they raised it to ten.

Q. Did they raise the fire plug rate too?

A. No; they didn't raise the fire plug rate it still stands at 40.

Q. Has there been any change in the minimum number of gallons that is allowed at the minimum rate?

A. At the minimum rate?

Q. As I understand it, there used to be a minimum rate of 2,000 gallons per family, which they allowed.

A. They have reduced. They have made a reduction from two thousand to one thousand. They took advantage of us there too.

BY MR. EVANS:

Q. Is there anything else, Mr. Jones?

A. I don't know of anything else, all I ask is a square deal. That is what we are looking for.

Q. You understand, Mr. Jones, this Committee has no power to fix rates?

A. I understand that, and I want to thank you gentlemen.

MR. EVANS: Is there anybody here from the borough of Palmyra?

(No response)

MR. EVANS: Is there anybody here from the borough of Kittanning?

(No response)

MR. EVANS: Is there anybody else that is particularly anxious to be heard this afternoon?

(No response)

MR. MOORE: This hearing will now stand adjourned until 10 o'clock tomorrow morning in this room.

The hearing adjourned at 5.38 p. m.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment and to the call of the Honorable D. Glenn Moore, Chairman, the Committee met in the Hall of the House of Representatives on Thursday, March 12, 1931, at 10.00 o'clock A. M.

There were present:

Messrs. D. Glenn Moore, Chairman

Chester H. Rhodes

Louis W. Hagmaier

Ellwood J. Turner

Bart Richards

Harry J. Crawford

Father James R. Cox

Harold Evans, Esq.

John M. Walker, Esq.

THE CHAIRMAN: Gentlemen, we are ready to resume.

OAKMONT and VERONA BOROUGHES.

FRED SHOEMAKER sworn.

BY MR. EVANS:

Q. What organization do you represent?

A. I came here as solicitor for Oakmont and Verona Boroughs, both of them sent me here, that is, the Allegheny County Improvement Association.

Q. Are you solicitor for Oakmont?

A. Oakmont and Verona Boroughs.

Q. What is the Allegheny Improvement Association?

A. That is an organization in the valley there for trying to boost the valley and helping it along, and for getting representatives from the different districts to come together and try to improve things as best they can.

Q. Now, on behalf of these boroughs and this association, you have a statement you wish to make to the Committee, as I understand it. What utilities do you have in mind in your complaint?

A. Well, not any particularly. We have just our troubles there with the water company, and we have had with the bus lines. I would like to state that Oakmont has a population of slightly over 6,000, and Verona has a population now of a little over 5,000. The two boroughs are contiguous, and the assessed valuation of Oakmont at the present time is \$8,000,000 in round numbers, and of Verona three million and a half dollars. In 1918 they were supplied by the Suburban Water Company, a local company—the Suburban Water Company of Allegheny County, now taken over I think by the Byllesby interests of Chicago. That company decided during the war period when the rates were highest and the prices were highest, to raise those rates. Under the system it was necessary to put a valuation on the plant, and they came in with replacement values, and so on, and the two boroughs had to employ engineers, high priced engineers and accountants, to go over the books, and a special solicitor, at a total cost to the two boroughs of \$13,772.51. That cost to the two boroughs divided equally. The borough of Verona at that time had an assessed value which was less than \$3,000,000, and it meant about 2.4 mills tax to cover that cost. Then Oakmont, having a larger valuation, it was not so bad. In the opinion handed down by the Commission in the findings—

BY MR. TURNER:

Q. When was that?

A. This was in 1918 and continued over until 1924, different proceedings on it, it was up in the Supreme Court on a suit on the rates, and there were two rate cases, two complaints filed by Verona and by Oakmont.

BY MR. EVANS:

Q. Those complaints were before the Public Service Commission?

A. Before the Public Service Commission. Now, we were treated fairly as far as fair goes, but what I am trying to get at is the expense to these boroughs which was almost prohibitive especially a borough like that, where the taxes are as high as they can possibly get and then they came along, there was no other way of doing it, the borough had to do it, because if the borough did not do it nobody else would, because the rates to the mills were practically the same, no change on that, and so that if they had not taken it up, had not the borough done so for the common user, because there was no other organization to do, and that put an additional expense on the borough. Verona at the present time is in debt practically seven mills and cannot get a bond issue by a vote of the people. Oakmont is in better shape and could increase its debt. Now, in that order—

Q. You mean to say seven mills.

A. I mean seven per cent which is the amount allowed for funds by votes. In the order I find this.

The respondent contends that it has been put to an expense of upwards of \$8,000.00 in preparing its valuation and other expenses incident to the trial of this case and asks that it be allowed to reimburse itself therefor out of the earnings of the company. The complainants in this case are municipalities, and any expense incurred by them will be paid out of public revenue secured through taxation. From the facts in this case, it does not appear, nor is there any good reason shown why reasonable costs imposed upon respondent should not be allowed and amortized over a given number of years, and the Commission will in its estimate of annual operating costs make due allowance therefore. That was put in, and it has never been taken out. That fixes an amount that was to be raised from the taxes, and they filed the rates and at the present time the rates in Oakmont borough are on a five-eighth inch meter \$2.50; three-fourth inch meter \$4.00, one inch meter \$7.00; one and a quarter inch meter \$11.00; one and a half inch meter \$13.00; two inch meter \$30.00; three inch meter \$60.00; four inch meter \$135; six inch meter \$240.00; eight inch meter \$400.00.

Q. Those are quarterly charges?

A. Those are quarterly charges, without readiness-to-serve, or the meter water charge, charges will be made for one thousand gallons on the ordinary pressure, per one thousand gallons, and for the first 15,000 gallons the rates are 25c; the next 90,000 gallons 20c; all over 255,000 gallons per quarter 10c.

In the high service district where it is necessary to repump the water to consumers in districts which are too high to be supplied by the ordinary pressure per one thousand dollars, the

First	15,000 gallons per quarter.....	\$0.27
Next	90,000 gallons per quarter.....	.22
Next	150,000 gallons per quarter.....	.17
All over	255,000 gallons per quarter.....	.12

Then the flat schedule of charges for readiness-to-serve and for output service in  $\frac{3}{4}$ " or less opening in a street main. The quarterly charge for such connection to the street main and for each fixture, to which water is or may be delivered, will be as follows:

For domestic users:

Service charge including first fixture, per quarter ....	\$5.00
Each fixture in addition to the first, per quarter .....	.75

That was the last amendment in 1924, and in that amendment there was nothing said about fire plugs, which is as follows—  
For water use for all purposes;

Building Purposes:

Frame dwelling, per room .....	\$0.75
Brick or masonry dwelling, per room .....	1.25
Frame storerooms, garages, per 100 sq. ft. of floor space .....	.40
Brick or masonry storerooms, garages, per 100 sq. ft. of floor space .....	.75

Flush Tanks:

Double Flush Tank, per quarter .....	\$8.00
Single Flush Tank, per quarter .....	5.50
Street flushing and sewer flushing, per hour .....	1.80

Public Fire Protection:

Fire protection charge for the Borough of Verona, including 36 fire hydrants per year .....	\$3600.00
Fire protection charge for the Borough of Oakmont, including 34 hydrants per year .....	\$400.00
Each additional public fire hydrants in each borough .....	10.00

Each mile of main 4" or greater in diameter laid after January 1, 1921, as an extension .....	300.00
Each mile of main 4" or greater in diameter laid after January 1, 1921, as a replacement of a line smaller than 4" in diameter .....	200.00

BY MR. RICHARDS:

Q. You mean that is over and above this \$10.00?

A. That is over and above, \$10.00 for each additional plug. Then they replaced their mains which were in bad shape, in order to get the increased rate, and the borough of Verona has 44, and they paid \$1132.40, or for the year \$4529.80.

Oakmont ordered in more fire plugs for fire protection; that is, 43 plugs, and their rate was \$5,858.48, or \$80.10. Now, the two districts of Plum and Penn Township adjoin. Plum is a first class township and is built up practically as much as Verona. They came in at one time and tried to get a flat rate, and the adjoining townships of Plum and Penn did not get into the fight at all. It came on to an adjustment, and we consented to an adjustment, and without knowing it, in some way, there was slipped in a \$60 flat rate for Plum and Penn Township, and we didn't know that, and we had a contract up with Penn Township, which abuts on Verona Township about a water line, and they said the plug would be \$60, and we said that we didn't know that, and they said, "We have a flat rate," and there was a schedule adopted fixing their rate at \$60 for each water hydrant located in Plum and Penn Township, at \$60 per annum. Now, they have many times as many miles of line, and they contend that each fire hydrant is at a loss at \$60, and so on, but they are charging every user and consumer, they are charging us for the right to go into the streets and we get nothing back. They say that they are losing on the hydrants because it costs them that much to lay pipe in the streets, but the consumers in the houses use the same main, and they make on that.

BY MR. EVANS:

Q. Has this matter been a subject of complaint before the Commission?

A. That is the first time, and it cost that much, but since that neither the borough nor the county can afford to take it up. Now, I am not complaining about the Commission in those proceedings, but here is the point: The boroughs today with their taxation, could use that money for their own use. The people are complaining always about the amount of money they are spending. Now, the two townships do not have any complaint there, but the boroughs do, but you would have to get an expert engineer on that thing, and you would have to get expert accountants to go over those books and audit them, and there are things that appear on the books that we know about, but by the time we get through with it it is going to cost the borough a lot of money.

BY MR. RICHARDS:

Q. What company is this?

A. The Suburban Water Company of Allegheny County; a local company that serves those two boroughs and part of the two townships.

Q. What would be the average for an ordinary consumer?

A. It just depends on the amount of water they are using.

Q. I know, but I mean what would the average be?

A. I can't tell you that definitely. All I can give you is the—

Q. What is your rent?

A. I don't pay it. I pay the room rent in an apartment there, and they pay it, but I think that the larger user under that gets off easier under the rates than the smaller user on account of the high service charge.

BY MR. EVANS:

Q. You say it is a local company?

A. It is a local company.

Q. You also referred to the fact that it was owned by the Byllesby interests?

A. Yes; they have taken it over, I understand, for a lot more than the stock was originally worth, when it was taken over, but that is only what I have heard. Now, there is another thing, when we paved the streets and so on, we have to take them up, and it has always been that they will never move their lines or anything until we force them to do it, until we tell them that we are going in, and then they always fool around, and then there has always been some question about

the ordinances; that you have to pass an ordinance whenever you hit a public service company, and get it approved by the Commission, and go through that again. Now, in a large city or a large corporation that doesn't mean anything, but in a little borough like Verona it does. The Allegheny Boulevard is going up in Allegheny Avenue, and it comes right into Verona, and the counties and boroughs think that it ought to be run up Hoggen Bridge, a distance of approximately two miles. The county looked into it. The district around there have to pave their front streets, and in some places they are in bad condition. There are two streets parallel with the railroad, and there is a viaduct into Verona which crosses over the Plum Creek Bridge, and the Pennsylvania Railroad, and there are a lot of sidings, and this viaduct there, the people are afraid that it will tumble in when traffic is heavy. The company said it was to be carefully paved before they will go in, and Oakmont cannot improve it until the company does go in, because if it did it would have to be done over again. The company sent in their engineers, and said that the viaduct crossing, which is a matter for the railroad company, the street railway company, the county, and the borough, will cost at least \$1,400,000. And now, we have in Oakmont \$8,000,000 valuation for general rate purposes, and we again assessed fifteen mills. We can go on bonds to \$80,000 without a vote, and then vote on the balance, but where will we be? If we do that we wipe off everything else. Verona is in a hole. That is what we are up against. They say that when the boulevard is in, it is to be improved, and that is what we hit.

Q. That is not primarily a matter of anything in connection with utilities?

A. No.

Q. I think it will help if you will confine yourself as far as you can to matters involving the utilities.

A. The reason I brought this in is that up until this Public Service Law on the location of crossings, it didn't come in that way at all. Now it comes before the Commission and I understand that in different boroughs that they put assessments on boroughs which they cannot raise by levying taxes under the authorized assessment.

Q. You have something to say in regard to the bus lines. I think?

A. A couple of years ago Oakmont and Verona, and up to New Kensington wanted a bus line from these points to the city. If you go by trolley from Oakmont by way of Wilkensburg you lose about an hour and forty minutes, as stated before the Public Service Commission in the hearing in 1928. The Motor Coach Company, which is a subsidiary of the Pittsburgh Railways Company, put in a line on Sundays and holidays out towards the ball park, but they would not put it in any farther. The railroad was cutting down the train service. They had had good service years ago. They were taking off more and more trains and the people had to go that way or travel by bus or automobile. You could not get in to work in time on the street car. They had service in the morning and in the evening, but during the daytime the service was rotten, and it was killing the valley. We asked the Motor Coach Company to put in a line and they refused to do it. We got a bunch together of prominent men in the community and men with money, to get that line and get it through, and we got a charter. That was in August of 1928. This was the Allegheny Valley Motor Coach Company. It was an independent concern. The Pennsylvania Railroad Company did not object at first although the Pittsburgh Railways put in a protest at the time of the hearing. The Allegheny Valley Street Railways put in the first objection. The case was fixed one day for a hearing and the night before I was called up on the telephone from Harrisburg and told the case was being continued and that Mr. Donovan was sick who represented the railroad company and could not be there, although at that time we had no notice of their having filed a protest. The case was continued. The same day that we were called up, the Pittsburgh Motor Coach Company filed an application for a line. At the hearing they admitted the financial responsibility and the character of the applicants, all of them. The Pennsylvania Railroad Company and others came in at this hearing and said that the line was not necessary, at the second hearing the Motor Coach Company applied.

Q. You mean the Pittsburgh Motor Coach Company?

A. Yes sir it is a subsidiary of the Pittsburgh Railway Company. We went ahead but it was delayed and we finally put in our appearance, then the Pennsylvania General Transit

Company applied for a line. That is a subsidiary of the Pennsylvania Railroad Company. The reason they applied, the Pittsburgh Motor Coach Company said they only wanted to go as far as Oakmont and at Oakmont the road crosses the bridge and goes up to New Kensington where there are approximately 20,000 people employed and the men up there wanted it.

Q. The original protest of the two companies was to the effect that there was no need for this line?

A. Yes sir, and then they come in and said there was notwithstanding. I don't think the men who heard this case did this, I think it was somebody in the office. On July 19th he wrote me enclosing the order of June 25, 1929, under the seal of W. D. B. Ainey. They said:

"The Commission having by its report and order dated June 25, 1929, approved the applications of the Pennsylvania General Transit Company," which is a subsidiary of the Pennsylvania Railroad as shown by the testimony. "And the Pittsburgh Motor Coach Company," which is a subsidiary of the Pittsburgh Railways Company, "for routes identical with the route applied for in this proceeding, and by stipulation incorporated in said orders protected the Allegheny Valley Street Railways Company against any local service along the lines of said street railway company, the Commission finds and determines that the application of the Allegheny Valley Motor Coach Company, a subsidiary of the Allegheny Valley Street Railways Company, is not necessary for the service, accommodation and convenience of the public, being of the opinion that the motor vehicle transportation service to be furnished by the Pennsylvania General Transit Company and Pittsburgh Motor Coach Company will adequately and conveniently accommodate the public.

"Now, to wit, June 25, 1929, it is ordered: That the prayer of the petition of The Allegheny Valley Motor Coach Company for a certificate of public convenience evidencing the Commission's approval of the right of said company to transport persons by means of motor vehicles between the Borough of New Kensington, Westmoreland County, and the City of Pittsburgh, Allegheny County, be and the same are hereby refused and the application dismissed."

Now they say there that the Allegheny Valley Motor Coach Company is a subsidiary of the Allegheny Valley Street Railway Company. They have no connection whatever, and the Allegheny Valley Street Railway Company protested the whole proceedings. Then, that letter to us was dated on the 19th day of July, and this order was dated June 25th, and as you know you have thirty days in which to ask for a re-hearing or an appeal. On July 20th we received a letter saying: "We beg to acknowledge receipt of your letter of July 19th enclosing the Commission's finding and report on the application of the Allegheny Valley Coach Company, and the Pittsburgh Motor Coach Company, and the Pennsylvania General Transit Company. We are at a loss to understand how the Commission finds as a fact that the Allegheny Motor Coach Company is a subsidiary of the Allegheny Valley Street Railway Company, which they are not, having no connection whatever, and especially since the Allegheny Valley Street Railway Company was one of the principal protestants. We are further at a loss to know why no reason was given why the first application should not be preferred."

Then we received a letter, mailed on July 25th at 4.00 P. M. in Harrisburg, so the envelope was stamped, on the last day to ask for a re-hearing and appeal would have been July 25th, we got a letter dated July 25th too late for us to have asked for a re-hearing and an appeal. This letter read:

"Frederick Shoemaker, Esq.,

"Walsh Building, 434 Diamond Street, Pittsburgh.

"Dear Sir: I acknowledge receipt of yours of July 20th, and thank you for calling our attention to the fact that a copy of the first draft of the Report and Order issued in the above proceedings, in which it was stated that the Allegheny Valley Motor Coach Company was a subsidiary of the Allegheny Valley Street Railway Company, was inadvertently mailed to you.

"I am attaching herewith a copy of the approved Report and Order. Will you kindly return the first draft which was mailed to you on the 19th inst.

"Very truly yours, E. M. Vale, Chief."

The enclosure referred to reads as follows:

"BY THE COMMISSION:

"The Commission having by its report and order dated June 25, 1929, approved the applications of the Pennsylvania Gen-

eral Transit Company and Pittsburgh Motor Coach Company for routes identical with route applied for in this proceeding and being of the opinion that the motor vehicle transportation service which said companies will furnish will adequately and conveniently accommodate the public, the Commission find and determines that the application of The Allegheny Valley Motor Coach Company, applicant in this proceeding, is not necessary for the service, accommodation and convenience of the public.

"Now, to-wit, June 25, 1929, it is ordered: That the prayer of the petition of The Allegheny Valley Motor Coach Company for a certificate of public convenience evidencing the Commission's approval of the right of said company to transport persons by means of motor vehicles between the Borough of New Kensington, Westmoreland County, and the City of Pittsburgh, Allegheny County, be and the same are hereby refused and the application dismissed."

So that is the way the matter stood and we had nothing to appeal from, and we did not have time in which to ask for a new trial or anything else and we dropped it.

Q. The Commission in connection with that order made no report stating why the certificate was granted to the Pennsylvania General Transit Company and the Pittsburgh Motor Coach Company and refused the Allegheny Valley Coach Company?

A. The only reason given is as per the order. I might say this, that these companies went in, the Pittsburgh Motor Coach Company is giving good service to Oakmont, but the Pennsylvania General Transit Company are giving us service that largely takes the place of trains, and they are cutting down the train service, but the rate is higher than the trains and they don't help the community a bit.

BY MR. TURNER:

Q. Did you ever attempt to take an appeal from this order?  
A. I took an appeal from that order.

BY MR. EVANS:

Q. Mr. Shoemaker, has the Allegheny Valley Improvement Association made any suggestions as to amendments to the Public Service Law?

A. It did.

Q. Do you have those in printed form?

A. I have.

Q. Would you be willing to submit those for the information of the Committee?

A. I would. As I stated before the Commission about that order, the Commissioners that heard this case, I have no complaint as far as they acted in the hearing, and they were generally as fair as one could expect as far as that is concerned, and I don't believe the man who heard this case sent this order down as we got it, and I don't think the man would be responsible for anything of that kind; out that came out and it must have been from their office some way because it was under the signatures of their officials.

#### "PROPOSED AMENDMENTS TO THE PUBLIC SERVICE COMMISSION LAW OF 1913.

"Suggested on behalf of the Allegheny Valley Improvement Association by Clarence V. Tiers, President.

"The Allegheny Valley Improvement Association is a civic organization constructively serving seventy thousand citizens residing in the Allegheny Valley.

#### OFFICERS

Clarence V. Tiers, President	Oakmont, Pa.
Hon. A. B. Davidson, Vice-Pres.	Tarentum, Pa.
L. C. Anderson, Recording Secretary	Oakmont, Pa.
Joseph P. Caulfield, Corresponding Sec'y.	Verona, Pa.
John A. LaSalle, Treasurer	Springdale, Pa.

"The following suggestions are made having in view the theory that public service corporations are supposed to be acting in the capacity of trustees serving the general public through the granting of special monopoly privileges, with the guarantee of fair remunerative returns, and that therefore, they differ vastly from the average business enterprises.

It is our belief that the Public Service Commission law of 1913 should be repealed or amended.

First—Repeal the Entire Law and thereby return to the Courts, to the Legislature and to the Governor, all of the powers that have, by this law, been delegated to the Public Service Commission, and thus restore to the people, through their local authorities, the right to regulate their own public service matters by contract with public service corporations through limited term franchises.

This would restore at least a modicum of free competition, and it is well for interested parties to remember that all indications now point stronger than ever to the fact that the people can have their way and that they are going to insist on some protection from the greed of public service monopolies. Failing to secure this protection they will be driven to demand, and they will secure, public ownership and operation, or lease with specified rates for service, of all natural monopolies. Private ownership of public service monopolies is becoming very unpopular in the United States.

Second—If the Public Service Commission Law cannot be repealed because the Senate, as usual, would stand in the way, then it should be amended in the following respects:

1—Amend it so that Commissioners after being appointed by the Governor shall be approved by the House of Representatives instead of by the Senate as at present.

The reason for this change is that the House members, being more numerous, and being elected every two years instead of four, are nearer to, and are more representative of, the people than the members of the Senate. This is a modification of the idea of Governor Pinchot of having Commissioners or rate makers elected directly by the people. We are well aware of the difficulty that would be encountered in securing the necessary approval of the Senate to such an amendment but it is a change worth fighting for.

While we are solidly back of Governor Pinchot's earnest and courageous fight for the rights of the people, we suggest that a possible objection to his plan of election of Commissioners by popular vote is that until we have in Pennsylvania a law providing for an Official Election Pamphlet and other election laws limiting election expenses (such, for instance, as those of the State of Oregon where the Initiative and Referendum are in force) every election of a Public Service Commissioner will be just as great a scandalous proceeding as are our present elections for Governors or for United States Senators. The rate payers have no state-wide organization and are, therefore, unable to cooperate efficiently or to raise the enormous amounts of money necessary for conducting campaigns to fight the nominees controlled by the public service corporations.

For those reasons we believe that the appointment of Commissioners should be approved by the House of Representatives instead of by the Senate. As this method of approval would require an amendment to the State Constitution we earnestly recommend the immediate adoption of such an amendment.

2—Amend it so that the greatest possible amount of competition will be secured.

This would insure to the public economic and efficient service. Competition has ever been the friend of man, the spur to progress and the most efficient rate regulating agency the world has ever known. It is the policy of the present Public Service Commission to prevent competition and this works a hardship on the rate paying public.

3—Amend it so that increases in rates would have to be approved by the Commission before they become effective, and place the burden of proof of the necessity for the increase upon the corporation instead of upon the rate payers.

4—Amend it so that at least 80 per centum of the cost of plant appraisals and other investigations of increased rates would be borne by the State instead of by the rate payers.

The State should pay these expenses for the reason that it has granted monopoly rights to the public service corporations; it has arbitrarily cancelled franchises and contracts between municipalities and gas, light, water and railway corporations; it has taken away from the rate payers and their local governmental representatives powers and rights to bargain and contract for vitally necessary services, and, after assuming these rights which naturally and properly belong to the rate payers, it has then delegated these rights and powers to the Public Service Commission, and because of the enormous expense of a rate controversy before the Commission this action has left the rate payers practically defenseless.

5—Amend it so as to require the Public Service Corporation to refund to all rate payers the amounts collected in excess of the amounts due under rates allowed.

The present practice is to refund only to rate payers who have actually and formally joined in the proceedings to annul excessive rates.

6—Amend it so as to promote competition between bus lines, electric or traction corporations and railroad companies, and so as to prohibit the granting of permits or franchises to companies controlled by stockholders of competing and interlocking lines.

7—Amend it so that when the Public Service Commission finds that the rates collected by a public utility corporation have been unreasonably excessive or based upon fraudulent accounting or fictitious watered stock, the Commission shall be required to report the facts to the Governor with the recommendation that receivers be appointed to conduct the business of the offending corporation until such time as its charter may be annulled by the Legislature or until its property and franchises shall be sold or leased to the highest bidder. In cases of such sale or lease, provision should be made for government ownership and for permitting municipalities or counties jointly to purchase, lease or operate such public utilities.

In conclusion we desire to state that we believe emphatically that private ownership and governmental regulation of natural monopolies or public utilities (in the State of Pennsylvania at least) has proven to be such an utter failure, such a public scandal,—from either the standpoint of business or of politics,—that public ownership has now become a practical question if not a political issue.

For these reasons we believe that preparatory legislation, including constitutional amendments should be enacted and be in readiness to bring about, in an orderly and dignified fashion, these progressive changes, before an harassed public is driven in desperation to un-American methods of reclaiming their rights. Progress is persistent and unavoidable. The hope of American is that wise statesmanship will lead the inevitable advance by means of constitutional evolution.

Oakmont, Pa., March 6, 1931.

At a meeting of the Allegheny Improvement Association held this evening (officials of eleven boroughs in attendance) a resolution was unanimously adopted in favor of abolishing the Pennsylvania Public Service Commission. It was further resolved that 'we make every effort to put over the Hagmaier Bills (H. R. 20-21-22) and all other similar bills before the Legislature which tend to give the people the relief they are demanding.'

(Signed) R. H. MORRISSEY (Sharpsburg),  
HARRY C. LEA (Aspinwall),  
FRED SHOEMAKER (Oakmont),  
Committee on Resolutions.

Attest: Clarence V. Tiers, President A. V. I. A."

If the Committee desires to see these, they are here.

MR. EVANS: It has already been read into the record.

BY MR. HAGMAIER:

Q. Mr. Shoemaker, in your opinion then in the cases of the boroughs, you feel that the expenses should be assumed by the State in these water cases?

A. That is what I was thinking, but probably you could overcome that in some other way, but it could be handled in that way. The idea is this, that a lot of these cases, small consumers, they just have one complaint at one time, and it costs too much for one consumer to do it, and in the same way, with a small borough it does not pay to do it there either. In a case of that kind I think there ought to be some place for that expense to be met. I don't know how it can be done, but something ought to be done about it.

BY MR. TURNER:

Q. How would you guard against the multiplicity of small complaints?

A. Well, that first bill that Mr. Hagmaier brought in looks about as good as anything I have seen.

Q. You have read it?

A. I have read it.

Q. You think that that would meet the situation?

A. Well, it is the best I know of, or I have seen.

BY MR. EVANS:

Q. Mr. Shoemaker, just in order to clear up this matter of the appeal, as I understand it, you received a copy of an order

upposed to have been issued by the Commission on June 25th, and it referred to the Allegheny County Motor Coach as a subsidiary of the Allegheny Valley Traction Company?

A. I received that on July 20, and the order was dated June 25th.

Q. And you immediately took an appeal from that order?

A. Immediately—I took it out the last day; I took it out on the 25th of July, to the Superior Court of Pennsylvania, and the number of those appeals were Nos. 91, 92 and 93, April Term, 1929, in the Superior Court of Pennsylvania, Western District, at Pittsburgh.

Q. Now, when you got the record sent out by the Commission to the Superior Court, you found that it contained a substitute order which made no reference to the Allegheny County Motor Coach Company being a subsidiary of the Allegheny County Traction Company?

A. I did. I believe though that the order in the two records was transposed by somebody inadvertently, the order from the one case was put in the other, but the order as sent down in these three records was mailed to us on the 25th day of July.

Q. Then in view of that situation you dropped the appeal and never pressed it?

A. Never bothered.

Q. Now, Mr. Shoemaker, just in order to get the record clear, am I not right in thinking that the time for taking an appeal from the Commission runs not from the date of the order, but from the date of its service on the appellant?

A. That may be true; I believe it is.

Q. In other words, you could have taken an appeal before 30 days after July 25th, when the order was served on you?

A. I had already taken appeals in the other ones, and we dropped them. I believe that is right.

Q. I just want to get that clear, because there ought not to be a misunderstanding. Can you state to the Committee how much this valuation of the Allegheny Valley Motor Coach Company cost, have you the figures?

A. I cannot give you the figures, I should have looked it up, but it was a lot of money.

MR. EVANS: That is all, thank you.

#### BOROUGH OF SHARPSBURG

EDWARD A. KRAUS sworn.

BY MR. EVANS:

Q. What is your position with the borough of Sharpsburg?

A. Borough Solicitor.

Q. What is the population of the borough.

A. About nine thousand.

Q. Have you a statement that you wish to make to the Committee in regard to your public utility situation there?

A. I have.

Q. Do you have it in written form, so that you can file it, or do you wish to make a formal statement?

A. We have it in written form, so that it can be made part of the record.

MR. EVANS: Is that satisfactory to the Committee?

MR. MOORE: Yes.

BY MR. EVANS:

Q. If you will leave it with the Committee, that will be filed and made a part of the record.

A. Yes sir.

The statement in question reads as follows:

"STATEMENT OF SHARPSBURG BOROUGH TO THE HONORABLE HOUSE INVESTIGATING COMMITTEE OF ITS COMPLAINTS AGAINST SERVICE AND RATES OF PUBLIC UTILITIES OPERATING ON DOING BUSINESS IN ITS DISTRICT, HEREINAFTER REFERRED TO:

"The Borough of Sharpsburg owns and operates a Water and Light Plant. Several years ago, the equipment of the plant became out of repair, making it necessary for the borough to take up with the Duquesne Light Co. the matter of the Light Co. supplying to the borough emergency municipal electric service to provide it with electric current which the borough was then compelled to furnish to its patrons. The Duquesne Light Co., in response, submitted a rate of 3c per K. W. hour for electric service for the above mentioned use, with minimum service or consumption charge of ten thousand dollars (\$10,000.00) per annum, to be paid by the borough to the Light Co. whether or not the borough uses electric current of

that company to that amount in any particular year of the contract. The Light Co. compelled the borough to enter into a contract on the above basis for a term of five (5) years. The Light Company knew the position occupied by the borough, that it had no election in the matter and took advantage of its needs. If no emergency arises, in any particular year of the term of this contract, whereby the borough is unable to supply the demands of its consumers for current from its plant, generated by it, enabling the borough to use said \$10,000 worth of current, nevertheless, under the terms of the contract, the borough is obligated to pay the Light Co. \$10,000. Therefore, for the borough to get the benefit of actually receiving and using said \$10,000.00 worth of electric current, for which it must pay, the borough is forced to shut down its Light Plant for a period of time sufficiently long to give it the opportunity to dispose of said \$10,000 worth of current, or so much thereof as it has not been normally able to use while operating its plant, during that year, which the borough had to do in 1930, for two weeks, to be able to use \$7,000.00 worth of such service of Duquesne Light Co. The minimum annual consumption required of \$10,000.00 worth of current of Duquesne L. Co. or at least \$50,000.00 worth of current for 5 years of this contract, is not changed or helped any by the fact that the borough did use more than one hundred thousand dollars (\$100,000.00) worth of Duquesne L. Co. electric current during one year of the contract, viz, in 1929.

"This contract between the borough and the Duquesne Light Co. expires in about 15 months from this date, and it requires one year's notice on the part of the borough to the company, of the borough's intention not to renew it, and heretofore the borough authorities have indicated to the Light Co. that it will not renew this contract on the same terms. As a result, the Duquesne Light Co. has recently submitted a new proposition to the borough to supply it with electric current to light its streets and operate its pumping station at a cost of 8½ mills per K. W. hr. and for emergency purposes at a rate of 3c per K. W. hr., which latter current the borough is permitted to sell to its customers, which they had stated the Public Service Commission would not let them furnish for a lower rate than 3c per K. W. hr.

"In connection with the Light Co. furnishing the borough with emergency current and current for the operation of its Water Plant, on terms or rates immediately above mentioned, the Light Co. later suggested making a service charge of \$50.00 per month and 1½c per K. W. hr. for emergency service. By comparison of the rate of 8½ mills per K. W. hr. with the rate of 3c per K. W. hr., the rate of 3c for municipal emergency service is too high.

"The borough has been selling electric current for power to the Pennsylvania Railroad Co. for a rate as low as 1½c a K. W. hr. during the period that the borough paid the Duquesne Light Co. 3c a K. W. hr.

"In order to get the emergency service referred to from the Duquesne Light Co. it was necessary for the borough to put in its own service line from the power station to its plant and also install switches at the plant, etc., at a cost to the borough of about \$21,000.00.

"On another occasion, the borough wanted to construct a crossing over and across the tracks of the Pennsylvania Railroad Co. at 21st Street in Sharpsburg. Application for permission to construct it was made to the Public Service Commission of Pa. The Railroad Co. filed an answer to this application opposing it. Thereafter the borough negotiated with the company about placing a crossing at this point which resulted in the railroad company submitting a proposition to borough to not oppose application if the borough would give it a deed for a lot of ground on Main St., worth about \$2,000.00 and the borough would also modify a contract which it has with the Railroad Co. as to a right of way to be provided by the Railroad Co. over a certain land to the Water Plant of the borough. In this proposition, there were also requirements by the Railroad Co. that the borough pay for all property damages; maintain crossing and provide watchman, if required by Public Service Commission, as well as other demands on the part of the Railroad Co., owing to which the borough and the railroad company did not reach an agreement. On account of the opposition of the Railroad Co. to this application, same was withdrawn.

"On still another occasion, the borough made application to this Railroad Co. for an easement for placing a sanitary sewer along the edge of its Right of Way and to place same under its

tracks at 21st Street, Sharpsburg, and the Railroad Co. agreed to grant this easement to the borough, subject to various covenants and agreements to be kept and performed by the borough and on condition that borough would release the Railroad Co. from all damages for negligence and that the borough would indemnify the railroad company against all damages caused by negligence of the Railroad Co. or otherwise in reference to anything arising in connection with said construction, maintenance, &c. of said sewer, but this agreement of easement contained no time of duration, and since the laying of this sewer would entail the expenditure of a substantial sum of money, without having an easement for a definite term, it would not be advisable to lay it, hence this agreement was not executed by the borough.

"Another matter is the action of the Railroad Co. in taking away its Railroad Station in Sharpsburg, leaving the people of that town, of about 9,000 population without any railroad station, and while the company operates two (2) passenger trains in the mornings and one train in the evening, persons of Sharpsburg using this train service must purchase their tickets at the North Side, Pittsburgh Station, about 5 miles from Sharpsburg, or at the Aspinwall Station, about 1½ miles from Sharpsburg.

"The borough of Sharpsburg had a franchise contract with the Railways Co. merged with the Pittsburgh Railways Co., providing for a five (5) cent fare rate and it also owned a franchise contract with the Equitable Gas Co. to furnish by it to the borough, free gas to certain of its municipal buildings which contracts were nullified by action of the Public Service Commission.

Respectfully submitted,

Sharpsburg Borough,

By Edw A. Kraus, Jr.,  
Boro. Solicitor."

#### BOROUGH OF MIDDLETOWN

H. V. McNAUL sworn.

BY MR. EVANS:

Q. You are the Burgess of Middletown, are you?

A. Yes; and I am also counsel for the telephone subscribers of the borough of Middletown in connection with the borough Solicitor.

Q. Will you state, briefly, to the Committee any complaints that you have in regard to the utility situation in Middletown?

A. We don't have any complaints in particular. We simply have some facts, which are evidence from the Commission's own records, that they have given us an advance indication in the unification hearing and what the result would be in the rate hearing.

BY MR. RICHARDS:

Q. Is that a written record?

A. I would like to read this statement. It is rather rough stuff. Instead of putting it in evidence, I would just like to read it into the record, and then it will give you an opportunity to ask anything you wish about the matters in question.

BY MR. EVANS:

Q. Will you make it as brief as you can?

(No answer.)

BY MR. TURNER:

Q. Is this a case now pending before the Public Service Commission?

A. It includes the case which is closed, as far as the unification of the two systems in this district is concerned. The rate question is now pending, but we are not going to try the rate case before this Committee. We are simply going to show that in the merger hearing, which is already closed, that the Commission stated, in its own words, that the rate case would be against us; that it was decided even before the rate case was tried before the Commission; and also that the Commission had ten years before established us in the free service area from Harrisburg in an order which was reached by agreement, which was approved, on the grounds of intercommunity interests, and the intercommunity interest has increased rather than decreased, and that the rate fixation of the Commission is actually opposed to its former order.

If I am permitted, I will read this statement into the record: It is a three page statement. It will be very clear in case

you wish to refer to it, and if there any questions you want to ask about it.

BY MR. EVANS:

Q. Very well.

A. On September 14, 1920, Complaint Docket 3223, the Public Service Commission of Pennsylvania issued an order approving an agreement between parties to the complaint, which, among other adjustments, removed a toll charge between Middletown and Harrisburg and included Middletown in the Harrisburg free service area.

In the Commission's order it spoke in part as follows:

"In framing its new rate structure the company swung the pendulum to an extreme in the opposite direction. It adopted an arbitrary rule restricting 'free service' area to a six mile limit from exchange points, apparently without regard to the effect of such foot-rule measurement upon local conditions, inter-community interests and other factors which are quite essential to the development of the company's business as they are to the necessities of public service.

"Theoretically correct as may be any exact formulae of rates and service for public utilities they cannot be successfully applied unless they take into consideration all the elements of public and community interests affected.

"The amount of revenues was not seriously contested or challenged. It was rather against the method of applying the rates and producing the revenues that the complaints were most strongly pressed.

"Study has convinced the Commission that the agreement is in accord with public interest and with the facts and evidence developed in the case. Therefore it is given the Commission's approval.

"At the time this order was adopted, there were two telephone companies, the Bell and the Cumberland Valley Company, operating in competition in the Middletown-Harrisburg area. The above ruling affected only the Bell Company, since the Cumberland Valley Company made no attempt to discontinue its free service between these communities. In other words, the Cumberland Valley Company applied no toll between Harrisburg and Middletown.

"In 1930 these two companies applied to the Public Service Commission for approval of the unification of the two systems in the area; application docket 21484. Middletown and others filed objections fearing rate increases and application of toll charges in former free service areas.

"The Commission approved the unification of the two systems saying in its report:

"The applicant companies claim and contend that the proposed unification by eliminating existing duplication of facilities providing connection for interchange of traffic of the two systems and their connecting companies and removing uneconomic competition would improve the service and result in economies beneficial to the public. The benefits and advantages which have followed similar unification of telephone systems heretofore approved by the Commission substantiate this claim.

"The matter of the contemplated rate changes cannot be determined in these proceedings. Whatever changes of rates the companies desire to make after unification of the systems must be filed, posted and published in accordance with the requirements of the Public Service Company. Law and tariff rules and regulations of the Commission. The public will be given thirty days notice of the changes and if complaint is filed against the new rates prior to the effective date, the burden of sustaining them will be on the companies. Any citizen or group of citizens may complain against reasonableness of new rates when filed and will be granted full and complete hearing in the matter. The Commission is therefore of the opinion that it would be inappropriate at this time to hand down any finding or determination on the contemplated rate adjustment which the companies may make after unification.

"Traffic studies of local service in the various exchanges involved submitted by the companies, however, are of interest and tend to show that the contemplated changes in the tariff of the companies would establish rates which would result in the greatest benefit to the greatest number of the subscribers by placing the burden of the expense of calls outside of the proposed so called free area upon the people using them."

"In other words, the Commission expressly states that it is illegal and improper to indicate in advance what the rate would be.

"In other words, the Commission after expressly stating that rate changes can not be determined in these proceedings and that it would be inappropriate at this time to hand down any finding or determination on the contemplated rate adjustment proceeds to indicate in the very next paragraph that the traffic studies submitted by the companies 'are of interest and tend to show that the contemplated changes in the tariff would establish rates that would result in the greatest benefit to the greatest number of the subscribers'; and inferentially indicates that it will approve such tariffs even before they are filed.

"To justify this indication, the Commission proceeds in the same report to quote and analyze the traffic studies, saying of one:

"From Middletown to Harrisburg there were 1459 calls, of which one subscriber made 33 (the traffic study quoted expressly says just the opposite, that 33 subscribers each made one call), three subscribers each 28 (the traffic study says 'twenty-six subscribers each made two calls'); basing its advance indication of what its finding in the rate application will be upon such a superficial examination of the company's traffic study that it quotes the figures for subscribers and calls per subscriber exactly reversed, and also 13 subscribers making 10 calls, which was not even on the exhibits.

"Proceeding the Commission's report says:

"Six per cent. of the subscribers in Middletown occasioned 38 per cent of all the calls,' or, from the traffic study in question, 14 per cent of Middletown's 235 subscribers occasioned 38 per cent of the calls. But, unfortunately, the Bell Company neglected to note on the traffic study that one of these 14 subscribers was not an individual but was the switchboard of the Middletown Air Depot, which has 92 subscribers, so that instead of such a marked discrepancy and excess usage of the service by a few subscribers as the report would indicate, in reality the actual usage is that which is standard and uniform.

"The same traffic study, although made over a five-day period exclusive of Saturday and Sunday, and not over the full month period on which the monthly rates of the telephone company are based, instead of 'establishing rates which would result in the greatest benefit to the greatest number of subscribers, by placing the burden of the expense of calls outside of the proposed so called free area upon the people using them,' as the Commission's report states, actually shows that the rates will be increased for over 80 per cent of the Middletown subscribers.

"Quoting another traffic study the Commission says:

"Less than five per cent of the subscribers residing in Harrisburg made all the calls from Harrisburg to Middletown,' neglecting to mention that Middletown is less than five per cent of the Harrisburg area and naturally would expect only that percentage, that if one ward in Harrisburg were similarly isolated from the Harrisburg area and the calls from the rest of Harrisburg into that ward were counted it would be found that only a similar percentage of the Harrisburg subscribers called that ward, since most calls are made only for business, or social reasons and not promiscuously and in general; and that the traffic study having been made over only five days exclusive of Saturday and Sunday 25 days of the monthly period on which telephone rates are based still remained in which period it is reasonable to suppose that a relatively larger percentage of subscribers would have used the service."

BY MR. EVANS:

Q. And may I just interrupt to ask whether these are findings of fact or whether we are getting into a matter of argument?

A. It is to some extent a matter of argument.

"Although as stated above the Commission had in 1920, C. D. 3223, after exhaustive study and in view of inter-community interests removed the toll between Middletown and Harrisburg, and the said inter-community interests had greatly increased due to building up of the areas into one communicating area; the Bell Company in November, 1930, instituted a toll charge of ten cents per call between Middletown and Harrisburg.

"In spite of its own 1920 order in the same premises, and in spite of the seriously defective traffic studies filed by the Bell company, the Public Service Company took no action in the matter and the toll has been collected since that date by the Bell Company.

"Middletown subscribers immediately within the thirty day period filed protests against the toll rate and have attacked it

and the traffic studies on which it is based in a series of hearings before the Commission. (C. D. 8504-1930)

"Therefore it appears from the Commission's own orders and reports and the traffic studies of the telephone company upon which they are based that:

"(a) The Commission after itself stressing the fact that it is illegal and inappropriate to make any finding as to change of rates in a unification order, immediately proceeds to indicate what such a future finding will be, by forming and expressing such a finding.

"(b) This indication is based upon traffic studies not made by the Commission nor supervised by it, but by an interested party, and without giving the other parties opportunity to examine and point out the many defects in these studies.

"(c) The Commission used these traffic studies to base its indication of the finding in a hearing which had not even been listed, without any study or examination of them whatsoever, or with such a superficial examination that it quotes one with its basic estimates reversed so as to result in an opposite conclusion to the Commission's advance finding.

"(d) The Commission failed to examine the studies so as to reveal other glaring and serious defects therein which render them of no value or of dubious value in the findings.

"(f) Although the Commission had previously established the affected communities in a free service area after proceedings including agreement of parties after exhaustive study and on a fair and reasonable basis considering the inter-community interests, yet it permitted the telephone company to reopen the matter upon superficial grounds based on defective traffic studies, and compelled the Middletown subscribers to again defend their interests at a great expenditure, pending which decision the company is collecting the largely increased rates, in utter disregard of the prior fair and reasonable settlement and the order of the Commission.

"(g) Even though competition is abolished in the area and a monopoly created which should cause the Commission to scrutinize any rate increase the more closely, since the public is powerless to find alternative service and must use the only system available, the Commission without making an effort to maintain its former attitude and follow its precedents, of inquiring what new factors would justify a change in rates, takes no step to safeguard the public, but accepts the figures of the Company without question as to their authenticity or accuracy.

"(h) The Commission follows its precedents in favor of the Telephone Company by refusing to demand a valuation of the telephone company's physical properties in the area in question making it necessary for a single community to use state-wide values for comparison, estimates difficult or impossible for one community to undertake.

"(i) The Commission does not follow its precedents that support the stand of the community affected even though the order of ten years before covered exactly the same territory and the same conditions, and the case in question established the Commission's basis for the area in question. No reason is given for this marked change in the attitude of the Commission and for the Commission's neglect to take action itself for the maintenance of the status of the area as fixed after exhaustive study and agreement of the community and the telephone company ten years before. Not only does the Commission not take action to defend the rights of the public, but even before the rate increase it indicates that it will later decide in favor of the telephone company.

"(j) The telephone company is not made to answer to the specific complaint as to the fact that the rates are unfair and unjust and 'unreasonable with respect to the nature of the service rendered and its cost to respondent,' but is permitted to set up its own issue, 'that they are "standard" rates.' Although the burden of proof is on the company, yet it is to answer the complaint and not to set up its own case and answer a hypothetical issue.

"(k) Traffic studies submitted to prove standardization of rates are not only so contradictory and irregular as to be valueless as evidence, but they are misquoted by the Commission in addition to being cited as proved facts without any investigation whatsoever."

Copy of the testimony in same pending rate case will be interesting as it brings out many details of rate fixing situation.

## BOROUGH OF BROOKVILLE

W. M. CONRAD sworn.

BY MR. EVANS:

Q. Mr. Conrad, you are borough solicitor of the borough of Brookville?

A. I am.

Q. What is the population of Brookville?

A. 4,383.

Q. Have you a statement that you wish to bring to the Committee?

A. I have, and it pertains to the electric light situation in Brookville.

Q. Is that it?

A. It is.

Q. Have you this statement in written form? Or do you wish to make an oral statement?

A. I have it in written form. Our experience with the power trust before the Public Service Commission covers a period of more than five years. I desire the Committee to have a bird's-eye view of the picture at Brookville. I also desire to have that picture in the record. Therefore, I desire to have it before the Committee not merely as an exhibit. I have it boiled down to about fifteen pages. In the abbreviated statement, I say it is abbreviated notwithstanding it has fifteen pages. I set forth the facts. I believe that I have data there that would be an aid to the Committee in working out legislative relief. The power trust has had—

BY MR. TURNER:

Q. That is the name of the power trust, or what is the name?

A. Solar Electric Company is the name of the local company, but it is a subsidiary of the Associated Gas and Electric Company, with many relatives between. I do not desire to worry the Committee, but I would like to read a statement, and I could do so quicker than I could cover the ground verbally. Otherwise I would prefer to make a verbal statement. My only object is to put it in the shape that it will be most useful.

MR. TURNER: If you think you can read fifteen pages quicker than you can put it in verbally, we ought to allow you to read fifteen pages, except that argumentative matter, as Mr. Evans suggested awhile ago, it seems to me you should leave out.

THE WITNESS: Well, may it please, your honor, I think I am safe to say that it is not more than ten per cent argumentative, it is interspersed, and if you will indulge me to the extent of that ten per cent we will proceed. First, I wish to make the preliminary statement that the borough of Brookville has expended the sum of \$6,604.49 in this litigation with what I call the powers trust for short.

BY MR. EVANS:

Q. What is the assessed valuation of the borough?

A. In round numbers \$4,000,000.00, it exceeds slightly \$4,000,000.00. It will not take me over forty minutes to read this.

"DICTATED STATEMENT BY W. N. CONRAD OF THE CONFLICT BETWEEN THE BOROUGH OF BROOKVILLE, THE SOLAR ELECTRIC COMPANY, THE POWER TRUST AND THE PUBLIC SERVICE COMMISSION.

"The last census shows that Brookville has a population of 4,383. In 1912, after seven years of effort at the polls and in Court, the Borough of Brookville forced the privately corporate owned water plant to be transferred to it. The Borough completed the construction of the filtration plant. The purchase price and the completion of the filtration plant stands the Borough about \$130,000.00. The Borough has erected a residence for the engineer, made line extensions, and put in a reservoir of 2,000,000 gallons capacity, at a cost of about \$248,785.88. The water rate has never been increased, and its today the same rate charged by the private owners for unfiltered water.

"The water plant and franchises were given as security for the bonds issued for the purchase and improvements. In less than three years, the first bond issue of \$116,000 will be paid. The engineer's home, line extensions and improvements have been paid out of earnings. The balance remaining unpaid is \$127,500. If the water rate is not decreased, in less than three

years the Borough of Brookville will have available in her net earnings, about \$10,000 annually for appropriation to Borough purposes. The filtration building, with a small addition, is ample for the installation of sufficient electric units to provide ample current for the Borough of Brookville, for street lighting commercial use of its inhabitants and industries, as well as in adjacent territory.

"Upon December 5, 1924, the Town Council of the Borough of Brookville approved an ordinance for the taking over of the plant and works of the Solar Electric Company. Upon March 17, 1925, the electors, three to one, voted for a bond issue for the purpose of acquiring and improving the plant and works of the Solar Electric Company.

"Preceding the election, the two Utility Companies took an active part to defeat the electoral approval of the bond issue. Their agents, on various pretext, talked to our citizens. A publicity man rented a room in the American Hotel and used it as headquarters for the opposition. Articles were written and published in the local newspaper. Circulars distributed. A letter was mailed to the voters, signed Citizens' Committee. Brookville's largest vote was cast.

"The Borough made application to the Public Service Commission for a Certificate of Public Convenience, for the acquisition of the plant and works of the Solar Electric Company. The Penn Public Service Corporation, now the Pennsylvania Electric Company, made application for a Certificate of Public Convenience in approval of the acquisition of the outstanding capital stock of the Solar Electric Company, for the consideration of the sum of \$150,000. About 650 pages of testimony were taken before the Public Service Commission. Upon November 17, 1925, the Commission filed its report, making, among other, the following findings:

"The Solar Electric Company, at the time of its organization, had a capital stock of \$10,000. This was later increased at a date not indicated by the testimony, to \$20,000 by the declaration of a stock dividend in the sum of \$10,000, and on February 13, 1924, it was further increased to \$75,000 by the declaration of another stock dividend in the sum of \$55,000. In addition to these stock dividends, the company paid the following cash dividends: \$1,000 on each of the following dates, —January 5, 1921, January 9, 1922, and May 15, 1923, upon a capital stock of \$20,000 outstanding on said respective dates; \$600 on October 22, 1923, on the same outstanding capital; \$3,000 on February 15, 1924, upon an outstanding capital of \$75,000; and \$2,500 on September 18, 1924, upon the last mentioned outstanding capital. With the exception of the cash dividends above mentioned, all the earnings of the company have been put into improvements and extensions of the plant; but there is no evidence in the case to indicate the exact amounts so invested.

"There is a very marked discrepancy in the testimony as to the value of the plants and works of the company. The applicant, through its engineers, testified that the reproduction cost new as of January 1, 1925, is \$249,713, and the reproduction cost new with allowance for depreciation, as of the same date, is \$211,087. The engineers employed by the Borough of Brookville testified to a reproduction cost new of \$135,000, and a reproduction cost new less depreciation of \$91,154. The applicant's evidence of reproduction cost new was made up of the following items:

Field Cost .....	\$168,109	
Omissions .....	5,043	
Charter and Franchise .....	600	
Land .....	1,800	\$175,552

To these were added the following items:

Preliminary Expenses .....	\$ 2,633	
Engineering .....	8,909	
Administration .....	3,564	
Legal Expenses .....	1,782	
Interest, Taxes and Insurance during Construction .....	6,254	
Cost of Money .....	9,935	
Originators' Remuneration .....	21,856	
Development Expenses .....	5,043	
Cash Working Capital .....	4,250	\$ 74,161

Materials and Supplies	
TOTAL	\$249,713

"The reproduction cost of the physical property, with allowance for depreciation, was \$137,138, as compared with the sum

of \$175,552, reproduction cost new. It will be seen from the foregoing figures that to a total reproduction cost new of \$175,552 for physical property, including land, there are added items aggregating almost \$65,000, mostly for intangibles. No evidence was presented to support a finding that any such amount was actually expended in the development and financing of this company. This history of the company as disclosed by the testimony, indicates clearly that no such sums were, in fact, spent. Starting with a capital of \$10,000, the company found its added finance, in large part, in the profits derived from its business, which were put back into the property, although as has been stated above, the exact amount of such contributions to capital is not disclosed by the evidence. An analysis of the testimony points to the conclusion that the Penn Public Service Corporation's valuation of the property of the Solar Electric Company is too high. The valuation of \$17,865 upon the plant structures of the company is manifestly too high. Competent witnesses testified that they could be reproduced for less than \$7,000. The same thing is true of the valuation put upon the machinery and other property of the company by the testimony of witnesses in behalf of the Penn Public Service Corporation.

"While approval of the present application would not preclude an inquiry into the value of the assets of the company, used and useful in the public service, in a subsequent proceeding in which its rates were drawn in question, we were convinced that approval should not be given to an application for the purchase by one company of the capital stock of another where the price to be paid therefor is largely in excess of the fair value of the property represented by such stock. We, therefore, decline to approve the application of the Penn Public Service Corporation, because we are of the opinion that the public interest and convenience would not be served by such approval.

"We are of the opinion, from a consideration of the evidence, that the Borough of Brookville will be able to operate the electric light plant economically in connection with the water and filtration plant now owned and operated by the borough, and that the public interest and convenience will be best served by granting the application of the Borough of Brookville for the acquisition of the plant of the Solar Electric Company, provided the borough has the power to exercise the right to eminent domain for its acquisition."

"The Commission granted a Certificate to the Borough, evidencing the Commission's approval of the Borough's acquisition of the plant and works of the Solar Electric Company, and at the same time, refused the application of the Penn Service Corporation. At this time, David I. McCahill, Esq., attorney for the Penn Service Corporation, on various occasions stated to me, the Borough solicitor and to members of the Council, and during an argument before the Public Service Commission, that the controversy was between the Borough and the Solar Electric Company, and at one time stated to me, that when the Borough became the owner of the plant, the Penn Public Service Corporation would desire an opportunity to sell it current. In the light of subsequent events, it is apparent that this was sarcasm, masked with blandness and jocularly. The Solar Electric Company and the Penn Public Service Corporation appealed from the order of the Commission to the Superior Court.

"Upon Saturday, January 29, 1927, Harry M. Rimer, Esq., of Clarion, Pa., introduced to me Warren Partridge. Mr. Partridge then proceeded to tell me that W. W. Taylor of New York City had purchased all of the capital stock of the Solar Electric Company, in the interests of the Penn Public Service Corporation and the Associated Gas and Electric Company. That the Penn Public Service Corporation would operate the Solar Electric Company. Better service and lower rates would be given, the plant improved, and Brookville would have greater electric opportunities and advantages than in the past. Extended litigation was in prospect for the Borough. The Borough authorities were mistaken regarding the best interests of the Borough ownership of the plant and works of the Solar Electric Company.

"About the same time, about eight representatives of the Penn Public Service Corporation congregated in a room of the American Hotel and began making efforts to pacificate the inhabitants of the Borough by calling to their room men, believed to be politically active and influential, to whom it was explained that the administration of the Penn Public Service Corporation would be benevolent and advantageous to the

community. In one instance, Mr. S. C. Poe, who, it is said, then received a salary of \$18,000 a year, acted as spokesman, and who, while in Brookville called on the Hon. Wm. T. Barr, Judge of the Courts of the County of Jefferson. Some of the staff made calls upon citizens of the town. Office furniture was purchased from a corporation, of which Rufus G. Reitz was President, and also a member of the Town Council. An office room on Main Street was arranged for, with an annual rental of \$1,500.00, which is now used by the Pennsylvania Electric Company as an office, and storeroom for commodities in competition with local merchants. \$10,000.00 was deposited with Brookville Title & Trust Company, of which I then was and now am, attorney and director, in part, for the purposes, I believe, to influence answers to inquiries regarding sales of preferred stock of the Associated Gas and Electric Company, for which a stock sale campaign was then in progress.

"Upon February 7, 1927, a staff of at least eleven of the Penn Service Corporation's employes was in Brookville. Agents of the company stated that a power line would be brought from Corsica, Summerville, Ramsaytown, or other point to Brookville. Plans were made, involving large expenditures of money. The Penn Public Service Corporation proceeded with great haste with these plans. Upon February 3, 1927, the following advertisement appeared in the three local newspapers of the Borough:

"To the Customers of the Solar Electric Company, and the Residents of Brookville.

"In view of the possibility of extended litigation to determine whether or not the Borough of Brookville may condemn the property of the Solar Electric Company, arrangements have been made for the acquisition of the Stock of the Solar Electric Company in the interests of the Associated Gas and Electric Company.

"This has been done in order that present and prospective customers in Brookville may not be inconvenienced on account of the litigation, and may receive the best possible service in every respect, pending final settlement of the question at issue.

"Effective February 1st, this Company will be operated under the supervision of the Penn Public Service Corporation Officers."

"Upon February 6, 1927, the following letter was mailed, addressed "to the Customers of the Solar Electric Company, and the people of Brookville.

"In view of the possibility of extended litigation to determine whether or not the Borough of Brookville may condemn the property of the Solar Electric Company, arrangements have been made for the acquisition of the stock of the Solar Electric Company in the interests of the Associated Gas and Electric Company.

"This has been done in order that present and prospective customers in Brookville may not be inconvenienced on account of the litigation and may receive the best possible service in every respect, pending final settlement of the questions at issue.

"Effective February 1st, this Company will be operated under the management of the Penn Public Service Corporation, with U. J. Utts as Superintendent. Mr. Utts has had many years of experience in the electrical industry and will be located in Brookville.

"Services will be extended and improved, and a new rate will be filed at once so that service can be furnished Brookville at the same rates as now are in effect in adjoining territory of Penn Public System, which are lower than present rates of the Solar Electric Company."

"Upon February 10, 1927, the Borough passed the following resolution:

"Firmly believing that the Solar Electric Company, and the Penn Public Service Corporation are refusing to render obedience to the legally expressed will of the people, and to the determination, orders and decrees of our tribunals, thereby endangering our institutions and weakening our constituted authority.

"BE IT RESOLVED, that the Borough of Brookville, now in Council, specially and regularly assembled, present to the Public Service Commission of the Commonwealth of Pennsylvania, the following petition."

"Complaint was made to the Public Service Commission, setting forth the facts I have recited and averring:

"(a) That the order of the Public Service Commission had been affirmed by the Superior Court of Pennsylvania, and Judge Henderson, speaking for the Court had said: 'The Bor-

ough is preferred under the statute relating to the subject, in the matter of supplying electricity, and it is under ordinary circumstances reasonable, therefore, that the wish of the citizens with respect thereto should be regarded.' (It is to be born in mind that His Excellency, Gifford M. Pinchot, was the Governor of Pennsylvania when the Borough first appeared before the Commission.)

"(b) The acts of the Solar Electric Company, the Penn Public Service Corporation and W. W. Taylor, which I have recited, were violations to the provisions of the Pennsylvania Public Service Company Law, supported by citations.

"(c) That the Solar Electric Company and the Penn Public Service Corporation were affronting the authorities of the Borough, disregarding and attempting to override the ordinances of the Borough and the verdict of the electorate, the findings, conclusions, reports, decrees, and orders of the Court of Common Pleas of Jefferson County, the Commission and the Superior Court of Pennsylvania.

"The Public Service Commission dismissed the protest of the Borough of Brookville. During the course of the verbal argument, Commissioner Benn, and other members of the Commission, acknowledged their helplessness to cope with Pennsylvania Utility Companies in the control of holding companies. Notwithstanding my suggestion, the Pennsylvania Corporation is the creature of our Sovereign State, and not greater than its Creator.

"I remember very well Commissioner Benn asked me if I knew what a holding company was and he stated to me, to use a homely expression, 'The Devil beating around the bush', and I took the inference to be the holding company in the form of the Devil was able to circle around the Public Service Commission.

"In December, 1927, the Borough of Brookville made an application to the Commission for the approval of the beginning of the exercise of the right, power and privilege of constructing and operating an electric light plant, apparatus and distributing system, for the purpose of supplying and distributing electricity to the public in said Borough, subject to such conditions as the Commission may prescribe, and informing the Commission that the Borough was still willing to purchase the property of the Solar Electric Company at a fair value, and will do so, although the Commission gives it a Certificate of Public Convenience, evidencing the Commission's approval to erect and construct an electric light plant and distributing system.

"At the hearing held before the Commission, the Borough showed:

"1. The capital stock of the Solar Electric Company was held for convenience by Daly and Company, a co-partnership of New York City.

"2. The real owner was the Associated Pennsylvania Corporation, a Delaware Corporation.

"3. Daly was President of the Associated Gas and Electric Company, a New York Corporation, the parent of the Associate Pennsylvania Corporation.

"4. Upon October 22, 1924, the capital stock of the Solar Electric Company was sold by articles of agreement to the Penn Public Service Corporation, subject to the approval of the Commission. (The agreement now referred to is the agreement which the Commission refused to approve.)

"5. Joseph F. McKenna, a nominal director of the Solar Electric Company, testified under cross examination:

"Q. Mr. McKenna, what connection was there between Walter W. Taylor and the Penn Public Service Corporation?

"A. None whatsoever, except that he got an assignment of the contract of the Penn Public Service Corporation, previously had with the stockholders of the Solar Electric Company."

"6. Under direct examination, called as a witness by the Borough, Mr. McKenna said:

"Q. Who has possession of that agreement at this time?

"A. I believe he assigned it to the Associated Gas and Electric Co.

"Q. You have seen the agreement?

"A. I saw it one time, yes.

"Q. Do you know that all of the purchase money for the transfer of the capital stock from the assignor to Walter W. Taylor has not been paid, and is contingent upon the outcome of this application and other proceedings pending between the Solar Electric Company and the Borough of Brookville?

"A. I understand there is a contingent claim.

"7. The directors of the Solar Electric Company were:

"(a) H. C. Flock, a young man of 35, residing in New York City, and an accountant in the employ of H. C. Hopson and Company, which does a great deal of accounting for the Associated Gas and Electric Company. Mr. Flock had never been in Brookville, but believed it has a population in the neighborhood of 10,000. He said the Associated Gas and Electric Company manages and controls the Solar Electric Company. He did not know whom he reported to the Pennsylvania Public Service Commission as the manager of the Solar Electric Company. He further said that the Solar Electric Company is one of the properties of the Associated Gas and Electric Company, and that it employed the J. G. White Management Corporation, a Connecticut Corporation, to manage it.

"(b) Joseph F. McKenna, another young man of New York City, in the employ of the H. C. Hopson & Company, stated that Mr. Daly or Mr. Hopson verbally imparted to him the orders which they have for the Solar Electric Company. The Pennsylvania Electric Company was run in the same way, and his company does the auditing for both concerns. William J. Utts was selected as the local manager and vice-president of the Solar Electric Company by the Associated Gas and Electric Company, through a verbal arrangement, but that Mr. Utts was ostensibly in the employ of the J. G. White Management Corporation, and took orders "indirectly through them." The Solar Electric Company has ceased to hold stockholders meetings.

"(c) E. T. Edwards of New York City.

"(d) Raymond E. Brown, Esq., of Brookville, Pennsylvania, local attorney for the Solar Electric Company.

"(e) Harry M. Rimer, Esq., of Clarion, Pennsylvania, local attorney for the Solar Electric Company.

"(Neither Mr. Brown nor Mr. Rimer has attended any meetings of the Solar Electric Company, which are all held in New York City.

"8. Upon July 1, 1927, the Solar Electric Company entered into an agreement with the Associated Gas and Electric Company for construction and financial service. This agreement was signed upon July 30, 1928, by the Associated Gas and Electric Company to the Consumers' Construction Company, a Delaware Corporation, a subsidiary company of the Associated Gas and Electric Company.

"9. Upon May 1, 1928, the Solar Electric Company entered into a contract with the J. G. White Management Corporation, a subsidiary company of the Associated Gas and Electric Company, for managerial services, superseding agreement of July 1, 1927, between the Solar Electric Company and Associated Gas and Electric Company.

"10. Since the new ownership or control had come into operation, the operating expenses of the Solar Electric Company have shown by the annual reports on file with the Commission, had increased 46%, as compared to the average operating expenses of the preceding four years.

"11. I pointed out in my argument to the Public Service Commission:

"By reference to the J. G. White Management Corporation's agreement for managerial services it will be obvious that the more money the Solar Electric Company makes, the more money the J. G. White Management Corporation will make.

"By reference to Consumers' Construction Company's agreement, for construction and financial services, it is obvious that the more money labor and material cost the Solar Electric Company, the more money the Consumers' Construction Company will make.

"From whence it follows, the more the Solar Electric Company charges its consumers, the more money the J. G. White Management Corporation makes and the more money the Consumers' Construction Company makes, and the more money the Pennsylvania Electric Company gets for its current, the more money their parent, the Associated Gas & Electric Company will make, and the less the people of Brookville will have."

"This, at least, in part, may explain how the Associated Gas & Electric Company is able to pay amazingly fabulous sums to acquire plants and collect what it pays off of the consumers, and it was partly to develop this phase that the Borough made its requests at the last hearing. The requests were refused.

"12. The Pennsylvania Electric Company received from the Solar Electric Company for power, 2½¢ per kilowatt hour.

"13. The Borough placed on the witness stand Mr. Davis of the J. N. Chester Engineers, of Pittsburgh, Pennsylvania, for the purpose of analysing the testimony of Mr. Dreyfuss, the Power Trust Engineer. I quote from Mr. Davis' testimony as follows:

"I find the statement in protestant's 'Exhibit H' to this effect. 'It will be observed that with all things considered, the results represent practically an even break for the Borough. This statement was made after taking into account the fixed charges on valuations that to us appear too high, and after exorbitant operating expenses have been considered. The admission carries with it the recognition that the Borough will own its own plant free of charge at the end of twenty years, and that at the end of that time the Borough is, of course in position to benefit by the reduction in fixed charges occasioned during the period of acquisition of the plant.

"Mr. Drefus, in protestant's Exhibit '1' introduced testimony to controvert statements made by the Borough's witnesses in this case. Upon examination of the Exhibit '1', found that the basis employed for determining the base rate was the valuation as presented in 1925, in the Penn Public Service case, undepreciated. In other words, he has employed as a rate base the full reproduction cost new, without depreciation. In other words, he has employed as a rate basis the full reproduction cost without depreciation.

"14. I also quote from my written argument to the Public Service Commission as follows:

"The whole procedure whereby holding companies make blanket percentage charges to operating utility companies whose stock they own, was characterized by the Indiana Public Service Commission in 1926, in the case of the Southern Indiana Gas and Electric Company, of which the Commonwealth Power Company of New York was the holding company, as a 'process of milking the patrons of the utility and obtaining an enhanced return of investment.' The Commission also declared that \$42,000 a year was paid by the operating utility for engineering services and that this amount was carried to the capital account, which is charged up to the investment on which the consumers have to pay a fair return every year. At the same time the utility charges up to \$42,000, to the cost of operation, which the consumers also pay in their rates every year, but this \$42,000 it passes on to the company which owns and holds it. The consumer not only pays the amount in the first instance (in operating expenses) but pays the holding companies an annual return on the money thus expended.

"15. I also quote further from my argument to the Commission as follows:

"In the instant case the holding company and subsidiary company agreements contain provisions in addition to the percentage features, whereby much more milking can be done.

"The recapitalization scheme is also to be considered. In the Fayetteville Electric Power and Light-Southern Cities Power Company the Tennessee Commission said:

"If the public utilities are permitted to continue the practice of purchasing properties of other utility companies at prices in excess of their value, they will soon be loaded down with unprofitable properties, and will eventually be unable to render the efficient service that the demands of the future development in Tennessee will require.

"16. Also as follows:

"It is a matter of public record that the Associated Gas and Electric Company has paid three to eight times the book value of properties. For the Malone Company, \$547.00 for book value of \$155.00; for the Fort Covington Company, \$1,250.00 for book value of \$358.00, and for the Brasher Falls Company, \$1,687.00 for book value of \$190.00.

"17. Also as follows:

"It is even safe to assume, notwithstanding natural feelings of resentment, that if the Associated Gas and Electric System will sell power equal to or less than the cost of generation by the Borough, that we will buy power from the power company that has several times during the hearings proclaimed itself to be a highly organized, modern, up-to-date, economical and newly built central hydro-electric station of a large interconnected high tension line system extending beyond borough and county and even state borders.

"18. Also as follows:

"Because of the Borough's need for adequate street, park and building lighting, and at some future time the electrification of its water plant; because of the financial phase, and for many other reasons hereinbefore set forth, it is necessary and proper for the service, accommodation and convenience or safety of the public, for the Borough to have a certificate of Public Convenience as prayed for. Local self government is beneficial. The management of local affairs by local authorities works to the convenience of the community and adds to the dignity, responsibility, importance and training of the citizen, thereby adding strength to the state and nation. Councilmen are no more in politics than Commissioners and Judges. The closer local affairs are kept to their respective localities, the closer is the conformity to democracy. The railroad, the telegraph, the telephone, the motor bus and the aeroplane are not to be compared with water and electric current for municipalities and their inhabitants."

BY MR. EVANS:

Q. Could you not quote the decisions, rather place them upon the record?

A. Yes. That is the case of Fayette Power Company, a Tennessee case. I don't have the volume and page, but I quote the Commission and what it said there in that case. In substance, it was by paying these exorbitant prices for utility companies, in the end it would result in the utility company not being able to render efficient service.

Q. Is this a matter of agreement or a matter of fact?

A. It is a matter of fact. The purpose is to show what was presented to the Commission. Of course, I am perfectly willing to eliminate anything that is suggested to me here, but my object is to show that this was before the Commission and how the Commission reacted to these presentations.

BY MR. RICHARDS:

Q. Are they specific complaints as to rates and service.

A. Yes, they are somewhat.

"Upon May 7, 1929, the Solar Electric Company and the Pennsylvania Electric Company jointly applied for a Certificate of Public Convenience, evidencing the Commission's approval of the sale by the Solar Electric Company, of all of its property, real, personal and mixed, and the purchase of the same by the Pennsylvania Electric Company. The Borough of Brookville protested. Testimony was taken. Briefs were submitted to the Commission. The Commission dismissed the protest. An appeal of the Borough is now pending and will be argued in several weeks before the Superior Court. The Commission arbitrarily dismissed the protest without submitting findings of fact or conclusions of law.

"The Commission, under the objection of the Power Trust, has always refused to permit the Borough to present the whole story in any one proceeding. The result is, that the Power Trust has been, from time to time, only presenting one part of the picture, and the Commission has been refusing to let the Borough present the whole picture. In the joint application just recited, Commissioner Walker, with almost humorous countenance, informed me repeatedly at the hearings, that I was trying to work in a rate case, and that the evils, of which I complained, could not be presented. To meet this, a number of the largest consumers of electricity in the Borough, filed a complaint against the rates of the Solar Electric Company, for the purpose of getting before the Commission the whole story. The Commission apparently made haste to file an order in the joint application proceeding before the complaint could be heard, and which makes the complaint futile, if the order is not reversed by the Superior Court.

"In the joint application hearing, the Borough placed its position on record as follows:

"Our position is that we are entitled to be fully informed of the character and parties or corporations with whom we are directly or indirectly dealing, and all of the corporations in this family of corporations, for the purpose of determining their influence upon the service, convenience and accommodation of the users of current in the Borough of Brookville. This sale is based upon the theory that it is for the service, convenience and accommodation of the public. It is obvious that every member of this family of corporations, in some way, are making charges or deriving revenues reflected in the rates paid by the local consumers of current in the Borough of Brookville.

"I asked: 'How much did that stock cost the Pennsylvania Electric Corporation, Mr. Shaw?'

"Mr. McCahill, the power trust attorney made the objection: 'Objected to as incompetent and immaterial. It is a Delaware Corporation, not subject to the jurisdiction of the Commission.'

"Mr. Walker promptly ruled: 'Objection sustained.'

"I then asked for an exception. An exception was granted. I then said, as by reference to the record in the case it will appear:

"We wish to put our position on the record, notwithstanding that the Pennsylvania Electric Corporation is a Delaware Corporation, it is all for the purpose of this merger, subject to the jurisdiction of the Public Service Commission of Pennsylvania, and we respectfully submit that whether it is, or is not subject to the jurisdiction of the Public Service Commission, it is a proper inquiry to have all of the particulars at this time, in the way of the financial organization of either this company or the Solar Electric Company, or the Associated Gas and Electric Company, or any of its subsidiaries, that may have a bearing in determining whether this proposed transfer is for the service, convenience and accommodation of the public, or whether as effecting the rates or otherwise.

"The territory covered by the Pennsylvania Electric Company runs through the State from Maryland to Lake Erie, comprising the counties of Armstrong, Cambria, Center, Clarion, Clearfield, Crawford, Elk, Erie, Forest, Indiana, Jefferson, Somerset, Venango, Warren and Westmoreland.

"Commissioner Walker refused to permit the witness to be asked the question 'Assuming that the Borough of Brookville in the future on the assumption that there is a merger, desires to make a rate fight, will it then be necessary to investigate the assets of the Pennsylvania Electric Company in all of these counties that you mention?'

"Fred L. Cooley for nineteen years a member of the council, and for seventeen years its president, who was present, informed me later that Commissioner Walker would hold up his hand to the stenographer not to note the objections which does not appear of record, and which we considered very important, in order to properly present and visualize our case.

"Mr. McCahill promised to furnish to me for the hearing, itemized statements, and did not. A trial balance of the Solar Electric Company was attacked and made a part of its application. It was very brief and made up of large totals. Mr. McCahill delivered to me, as a compliance of his agreement, sheets, excepting in one instance, setting forth sub-totals of the trial balance total. The sub-totals were not more informative than the totals. The books of account of the Solar Electric Company were alleged to be at the hearing. When I asked that the sub-totals be itemized from the books, by the witness on the stand, objection was made, and Commissioner Walker, refusing, said, 'That is where we are going to get into a long drawn out matter. We cannot go into what kind of labor that was. That is a detail matter. That has nothing to do with this case, absolutely.'

"This position of the commissioner, permitted the Power Company to be the Judge as to whether certain expenditures should be reflected upon the books as invested capital, although the item might be for 'joy rides, neck-ties, bouquets or fast horses.' At Mr. Cahill's suggestion Commissioner Walker directed that the records should show that the books of account of the Company were present for such use as I might wish to make of them. This showing on the record is absolutely false.

"Placing W. E. Shaw, now of Johnstown, Pa., President of the Solar Electric Company, on the stand, I made the following offer:

"We now desire to show by this witness, what are the items making up these various totals, so that the Borough's auditor may go over the record and determine what items, for instance, should be capitalized, what should be charged to income, and the various distribution of these items, for the purpose of showing to the Commission what are the net earnings of the Solar Electric Company, for the years mentioned, and disproving the amounts given in the Annual Reports filed with the Public Service Commission—as to what are the net earnings of this Company for these years; for the ultimate purpose of showing that under proper accounting, that the net earnings of the Solar Electric Company, on its invested capital as reflected by its books and by actual valuation of its assets, would yield a net return ranging from twelve to over

twenty per cent., annually for the years mentioned. As the Solar Electric Company, it is within the ability and financial limitations of the Borough of Brookville to establish what schedule rates should be furnished by the Solar Electric Company upon such a showing of income; that if the merger is effected, these earnings would then not be disturbed over the invested capital of the Solar Electric Company, but would be distributed over the total assets of the Pennsylvania Electric Company, whatever they may be in the eight counties, more or less, constituting the zone of the Pennsylvania Electric Company, and thereby the Borough of Brookville would be deprived of the advantages that it now has by being served by the Solar Electric Company."

"We also offered to show, and were refused:

"(a) That an itemization and analysis of said operating expenses will disclose that the Solar Electric Company has employed a figure of \$249,713.00 as the reconstruction valuation of the Solar Electric Company as of January 1, 1925, undepreciated, which the Commission has heretofore held as being manifestly too high; that upon the basis of the Solar Electric Company's own reconstruction valuation, and upon their own figures and calculations, this sum, to wit, \$249,715.00 depreciated, would be \$174,759.80; that upon the basis of the returns of the Solar Electric Company, as disclosed by its annual reports to the Public Service Commission, the net earnings of this company for the 1923, 1924, 1925 and 1925, have been respectively, 15%, 13.3%, 13.8% and 26.5%.

"That the grand total operating expenses, as given by its annual report for the year 1927, was \$46,339.53, which according to the statement attached to its instant application, has increased for year 1926, to \$59,497.10.

"(b) That under the management of the Associated Gas & Electric System, the operating expenses for the year 1927, were 46% over the average operating expenses for the four years previous thereto.

"(c) That an itemization and analysis of the operating expenses of \$59,497.10, will further show:

"1. That bills rendered by the construction company, a sister company of the Pennsylvania Electric Company, both subsidiaries of the Associated Gas and Electric Company, to the Solar Electric Company, include percentages for overheads, profits, etc., over and above the actual material and labor costs.

"2. That under accounts entitled "other prepaid accounts," explanation should be made of such generalities, as current assets, other prepaid accounts, accounts payable to affiliated companies, managerial services, what is meant by unfunded debt, and where it is shown in the report, what explanation should be made of large increase in operation expense, whether there are hidden charges that are not properly operating expenses, and are in fact a means of diverting some of the earnings of the Solar Electric Company into the pockets of some of the holding companies, and this averting a reduction in rates which should otherwise be obtainable to electric users; as they are neither informative to the Commission, to the public, or localities specially interested, and may include amounts paid to promoters or agents, for effecting a sale of the capital stock of the Solar Electric Company to W. W. Taylor, the Associated Gas and Electric Company, or other holder. And, such analysis would suggest the propriety of an explanation of such an item as appears on page 502 of the 1927 report, showing the sum of \$19,500 set aside as surplus for dividends, which is 26% of the capital stock of the company, and such analysis would probably show that there were arbitrary additions which unduly enhanced the book valuations, and established them at fictitious figures unrepresentative of actual expenditures made in proper service to the electricity users of the Solar Electric Company. It would also further appear that some of the charges to operating expenses, cover work on extensions, not a part of the area of the Solar Electric Company, and that some of the expenditures cover work upon replacements which should actually be charged against the replacement fund and not incorporated in operating expenses.

"The books of the Solar Electric Company and its sister and Grandfather Companies, would probably show expenditures of \$60,000 or more in fighting the views of the citizens of Brookville as to what is to their best interests. This much we did get into the record, that the books of the Solar Electric Company show that over a year ago there had been expended in

this matter the sum of \$39,007.54, in which total appear the following items:

\$14,218.95	Raymond E. Brown, Esq., Attorney for the Solar Electric Company.
5,000.00	Margiotti, Gillespie and Fugliene, Esqs., Attorneys for the Solar Electric Company.
2,261.11	Brooks, English and Quinn, Esqs., Attorneys for Solar Electric Company.
7,869.62	Edwin D. Dreyfus and other engineers.
9,657.86	Sundry persons.

"As Mr. Mitchell appeared at all of the hearings before the Commission and Appellate Courts, and is the Commander of the Power Company Attorneys that I have named, it is only reasonably to assume that his fee is proportionately larger, although we have not succeeded in getting the amount of his fee.

"The Borough of Brookville, on account of her size and financial limitations, has had to depend upon me, only, for the legal work. I have made no charge and will not. What I have done is a patriotic contribution.

"During the days of the water fight, and since the invasion of our territory by the Power Trust, I have been a member of the Council and its solicitor. Aside from my sense of duty as a business man, I am a stockholder and the Treasurer of the American Hotel, which on an average pays annually \$2,150.00 for electricity. Tenants of the Hotel pay in addition to this \$1070.00. I am also Director and Vice-President of Brookville Title and Trust Company, which pays annually on an average of \$275.00. I am also a stockholder and officer of the Brookville Hospital, Brookville Republican, Brookville Dairy Products Company, part owner of the building in which I have my office, and my residence which together pay on an average of \$5500.00. I am also attorney for the owners of a proportionately large number of the business buildings of the Borough, and these interests which I represent, feel deeply the injustice and wrongs to which they are subjected by the Power Trust.

"In my last argument before the Commission, in behalf of the Borough of Brookville, I submitted, "The Commission can and should withhold consent to combinations that menace, impair or destroy the inalienable rights of life, liberty and the pursuit of happiness."

"To the Boroughs' protests, entreatism, representations and cries of despair, the Commission made no reply.

"A czaristic, tyrannical prerogative was conferred upon special privilege. The people in some way must, sooner or later, free themselves."

Q. What is this, a complaint? Have you any complaint as to the rates now being charged or to the service?

A. Yes sir. In some of these offers that are made here, they were made for the purpose of showing how expensive the present rate is.

BY MR. RICHARDS:

Q. What is the present rate?

A. It starts, I believe at twelve and goes down. I shall be glad to furnish you with a copy of that schedule. I do not have it with me.

Q. Will you furnish it to Mr. Walker so we can make it a part of the record?

A. I will. We contend before the Commission that the rate in Brookville was three times what it should be, and that that was one reason why this merger should not be permitted because by reason of our position there we were entitled to the benefits of the invested capital of the Solar Electric Company, and on that invested capital the rate could be reduced to one-third of what it is now, and the Solar Electric Company would still have a seven per cent return on invested capital, whereas after the merger the spread would be clear through to Erie from with a different situation.

BY MR. TURNER:

Q. As a lawyer, Mr. Conrad, you know the rates are not based on capital?

A. Not wholly.

Q. They are based on valuation, are they not?

A. Yes sir, on valuation, but even on that basis, of valuation, as the Commission has practically found the valuation was only \$91,000, while we showed on this ground before the Commission that they were figuring returns on a valuation of, in round numbers, \$250,000.

Q. Who was figuring the returns on that?  
 A. Mr. Dreyfuss was the chief engineer.  
 Q. Was it the Public Service Commission or the power company?  
 A. It was the power company.  
 Q. They were trying to base their valuation on \$250,000?  
 A. Yes, sir.  
 Q. When was the earlier valuation made?  
 A. By a former valuation made before the Commission?  
 Q. What year was that?  
 A. In 1925. The power trust was contending then for the same valuation as it was contending for in 1928 with some additions.

BY MR. EVANS:

Q. You will submit the rate schedule?  
 A. Yes sir. In a few days time I will have my briefs of the case before the Superior Court and I will be glad to furnish each member of the committee with a copy of that, if that is acceptable.  
 MR. EVANS: Are there any other boroughs present that want to make any statement before the Commission?  
 (There was no response to the invitation.)

#### CITY OF BEAVER FALLS

JOHN A. ELLIOTT sworn.

MR. ELLIOTT: I am the city solicitor of the City of Beaver Falls and am here representing that city. In the way of preface, I might say that I have followed pretty closely the hearings and it seems to me our Beaver Valley, which is composed of a number of municipalities lying along the Beaver River and the Allegheny River, rivals the Wyoming Valley very much. We have in that valley the Beaver Valley Water Company. It was composed originally of several separate and distinct water companies and owned by local Western Pennsylvania capital, but they gradually consolidated these companies into one single company known at that time as the Union Water Company, later the Beaver Valley Water Company. They built a central plant and pumped the water from the Beaver River, located right across from the northern end of Beaver Falls, and distributed the water to these several municipalities, ten possibly in number, and four townships, and during that time they built up, I want to say, a very efficient water company and gave very good service to the people. And they built up such a plant that along about the first of 1927, the forefront of 1927 or the latter part of 1926, foreign capital was attracted and the company changed hands, and still later they made application to the Public Service Commission for a change of rates, domestic rates particularly, and these changes were allowed by the Public Service Commission.

BY MR. EVANS:

Q. Was there any complaint filed against them at all?  
 A. I might say that there was a complaint filed at the time. Unfortunately, the solicitors of the several municipalities decided that the boroughs could not appropriate money to oppose the increase, which I think there should be legislation to permit. However, one municipality, the Borough of New Brighton, through their solicitor, entered into an agreement as I am informed, with this complaint, that they could be heard under their complaint, and they agreed at that time that they would not withdraw that complaint so that they could appear and be heard, but when it came down to the time of hearing, this complaint was withdrawn and that left them all without standing.

Q. Who was the complainant?

A. The complainant was, I believe, the Pittsburgh Wall Paper Company; and their complaint was withdrawn and the increase in rates made in July, 1927, was only for domestic purposes. They didn't increase the larger consumers and of course it would be very hard to organize the domestic consumers. You would not be able to do it, and the charge was so small. The Public Service Commission permitted them to raise the domestic rates as follows:

For the first 25,000 gallons per quarter, from 14 cents to 35 cents.

For the next 75,000 gallons per quarter, from 14 cents to 25 cents.

For the next 100,000 gallons per quarter, from 12 cents to 25 cents.

For the next 300,000 gallons per quarter, from 12 cents to 13 cents.

For the next million gallons per quarter, from 10 cents to 13 cents.

And for the next million gallons per quarter, from 8 cents to 13 cents.

That was the increase made in July, 1927, to the domestic rates. The charge for "readiness to serve" was:

"Half-inch to 3/4-inch tap, \$2.75. That was an increase.

Three-quarter-inch tap, \$4.00.

One-inch tap, \$7.50.

One and a half-inch tap, \$15.00.

Two-inch tap, \$30.00.

Three-inch tap, \$62.50.

Four-inch tap, \$120.00.

Six-inch tap, \$170.00.

Then in addition to that "readiness to serve" charge, an output charge was made as follows:

For the first 25,000 gallons, thirty-five per cent.

For the next 175,000 gallons, twenty-five per cent.

For the next 2,300,000 gallons, thirteen per cent.

And all over 2,500,000 gallons per quarter, seven per cent.

That was in addition to this ready to serve charge. Then the flat rates were increased as follows:

For the first opening, \$13.00.

For bath, \$5.00.

For each closet, \$5.00.

For each hose connection, \$5.00.

For each set of laundry tubs, \$3.00.

For each wash basin, wash stand or extra spigot, \$2.00.

That two dollars was a totally new charge. In my little home I have a flat rate. I operate on a flat rate, and it increased my flat rate about twenty-seven and a half per cent.

Q. About what was the old charge?

A. The old charge was about \$28.00 and the new charge is \$36.00 per year. Now in the City of Beaver Falls, for example, we pay for fire protection for each public fire hydrant, seven dollars, and for each mile of main pipe line, four inches or greater in diameter, \$400.00. We have a population of less than 20,000 in the city of Beaver Falls. Our fire protection costs us a little over, the total is, eleven thousand six hundred and twenty five dollars and some cents, and it amounts to a little over fifty-three dollars per fire hydrant. I have compared that, for example with the city on New Castle. They have approximately 50,000 people, and they pay \$8,000 a year.

Q. That is a different company?

A. Yes sir. Just north of us, but it makes our fire rate four times that of the city of New Castle.

Q. How many fire plugs do you have?

A. I don't have the number here, but I do remember it, figuring out, and it runs over fifty-three dollars to the plug. I wish to make this one point, that under the former rate, the company was built up to this high degree of efficiency, and very few extensions have been made since this new rate went in, or improved to any great extent, and that under those old rates the company prospered, and they made improvements and extensions from the income of the company.

BY MR. RHODES:

Q. By whom was this local company purchased?

A. Interests from the State of Maine.

Q. When was the purchase made?

A. Along about the latter part of 1926, or fore part of 1927.

Q. When was the application for an increase or rates made?

A. The rates went into effect July 1, 1927.

Q. In other words, the increase was filed by the new company after its purchase of the old company?

A. The new company, yes, and the point I wish to make was that practically all of the improvements and the present condition of the plant was through the old company, there have not been any radical improvements made since that to cause such an increase.

BY MR. EVANS:

Q. These Maine interests, to which you referred merely purchased the stock, I take it?

A. They purchased the control of the company, and have taken over the management of it.

Q. You don't know the name of that holding company?

A. I don't. They have never—it has never appeared as a corporation, they are operating under the old corporation charter.

Q. The Public Service Commission, as I understand it, has never passed on the new rates?

A. Yes, they were passed upon.

Q. I thought you said that the complaint against them was withdrawn?

A. Well, they allowed that—

Q. Under the Public Service Company Law, however, a rate becomes effective automatically without any action by the Commission?

A. That is true, that situation.

Q. Do you know the name of the man who was president of this Pittsburgh Wall Paper Company, who was the complainant in 1927?

A. I have forgotten his name.

Q. Where is that company located?

A. They have a plant at New Brighton, and one at Niagara Falls. I am not sure whether they have their head office in Niagara Falls, or Pittsburgh, I am not sure. Originally they were in Pittsburgh.

Q. Can you ascertain for the Committee who was president of that company?

A. I will try.

Q. When this complaint was withdrawn?

A. I will try.

Q. Anything else you have to say, Mr. Elliott?

A. Nothing more than my idea as to what ought to be done.

Q. Well, what is it?

A. First, I feel that there ought to be some law whereby these municipalities could spend money for the protection of the people; then I think that the Public Service Company Law, generally speaking, should be more of an inquisitive body,—the Public Service Commission, I mean—that is, if a municipality, or the people have a complaint to make, when they make that complaint to the Public Service Commission, or whatever you may call it, a Public Board, that it would then become the duty of the Public Service Commission, or whatever you call it, to investigate that at the expense of the State, it would be their duty to investigate rather than the individual.

Q. Somewhat in the way of the Federal Trade Commission.

A. I think that is the only way we can get it effective.

MR. EVANS. We are much obliged.

Are there any other third class cities present that wish to be heard.

#### CITY OF CHESTER.

A. COCHRAN sworn.

BY MR. EVANS:

Q. What is your position in the City of Chester?

A. City solicitor of the City of Chester, Pa.

Q. I understand you have one or two matters involving public utilities and their relation to the City of Chester that you wish to lay before the Committee.

A. Yes.

Q. Will you state these briefly?

A. In the first place, gentlemen, is the water situation in Chester. The water furnished by our local company is gotten from the Delaware River, the intake pipe being immediately in front of the city, out towards the deep water channel of the river. A great many years ago when the company was the Chester Water Company, the water became so bad because they were pumping it out with no filtration system, they were taking the water directly from the river into the mains, and to the consumer. We used to get fish, eels, all kinds of fish, and plenty of mud, so that the horses, even dogs, would not even drink it. We took it up in the courts, there being then no Public Service Commission, and as a result they were compelled to put in a filtration plant, a chemical filtration plant. That plant purified the water to the extent of making it safe water to drink, so that our typhoid fever death rate, which was extraordinarily high before was very much reduced. The water was improved somewhat. We went along for a number of years, and in the meantime the water in the Dela-

ware River became more contaminated all the time by reason of increased sewage, and also by reason of increased industrial plants, and then the oil burners coming into the river, and the steamers that used to come up the river and dump their waste right into the river, and it didn't improve it any. Eventually the old company passed into the control of the New Chester Water Company and about three years ago, or a little over, passed into the control of the Federal Water Corporation—I thing I have the name of it—the Federal Water Service Corporation, 27 Williams Street, New York.

BY MR. TURNER:

Q. The same company, Mr. Cochran, that has the Scranton Spring Brook Company?

A. I understand so. About the time that that company took over the local company the name of the local company was changed, as I say, before it had been the Chester Water Company, then the New Chester Water Company, and then it was changed to the Chester Water Service Company, the holding company being this Federal Water Service Corporation of New York. The city with some consumers, had filed a complaint as to the water with the Public Service Commission. That was in September 1927. At the first hearing before the Commission in Philadelphia, Mr. A. W. Cuddeback, who was the vice-president of the Federal Water Service Corporation, appeared, and after the city, or the complainants had produced a number of witnesses who testified as to the character of the water, it was not palatable water, had a bad smell, bad taste, and nobody—I will withdraw that nobody, a great many people, those who could afford were buying water from some companies and individuals who came into the city and sold spring water. If they didn't but it, they went themselves in automobiles to the springs in the city and outside of the city, and carried water in bottles home, so that the water was not being used for drinking by a great many users in the city of Chester. The water, therefore, was really only being used for washing and cooking purposes. Of course, the price that the people paid, that bought the water, was added to the rate that they were paying, which increased their total bill a year. I was saying, in 1927, this hearing was held, and Mr. Cuddeback came, and after we had introduced testimony he took the stand and confessed very frankly that the water was not what it should be, and he asked permission of the Public Service Commission to be given time, after he came in, to see if he could increase the character of the water, or otherwise to get a new water supply. That was granted. Ever since then the city and the consumers have been on the heels of the water company, as to what they were doing and why the water was not increased and improved, and so forth, and while the company, I believe, did put in some devices at their plant on the Delaware River, looking to the more effective ariation of the water, we contend that the water has not been improved, and consequently the other day I asked the Public Service Commission for a hearing, and that has been set down for Wednesday, next Wednesday, the 18th, in Philadelphia.

Q. Mr. Cochran, there has been continuous complaint, therefore, by the Council and the officials of the city to improve the water conditions?

A. Absolutely, as I say, we have been on the heels and on the back of the company all these three years for better water.

Q. Without getting it?

A. Without getting it. We think we have been very liberal in more than three years time to see whether they could increase the quality of this water, and as I say now, we are going to take the matter up again with the Public Service Commission.

The rates in Chester were fixed in 1924, became effective October 1, 1924. We have a ready to serve charge on a five-eighths inch meter or less, 67 cents; a three-quarter-inch meter, \$1.

BY MR. EVANS:

Q. Are these monthly or quarterly charges?

A. Monthly charges.	A one-inch meter, .....	\$ 2;
one and a half-inch meter, .....		\$ 4;
two inch meter, .....		\$ 7;
three-inch meter, .....		\$14;
four-inch meter, .....		\$20;
six-inch meter, .....		\$30;
eight-inch meter, .....		\$40;

And then the rate on top of that is for the first 25,000 gallons of water per month or any part thereof, 30 cents per 1,000 gallons. For water in excess of 25,000 gallons per month, and under 250,000 gallons per month, being the next 225,000 gallons, 25 cents per month, or per 1,000 gallons. For water in excess of 250,000 gallons and under 2,500,000 gallons, being the next 2,250,000 gallons, 12 cents per 1,000 gallons. For water in excess of 2,500,000 gallons per month, 15 cents per 1,000 gallons. And a consumer having two or more meters on the same premises will be billed at the scheduled rate with the quantity of water consumed equivalent to the sum of the readings of all meters. The fixed service charge will be billed for each meter.

BY MR. TURNER:

Q. Mr. Cochran, you have a meter in your own home?

A. Yes. The City of Chester is practically completely metered, under an agreement between the original company, the old Chester Water Company, and the city, that provided for a flat rate, and that was entered into in a contract in 1886, or 1887, and those flat rates continued down until the Public Service Commission came into effect, and the decisions were that those agreements were of no account, and the company then filed those rates, and we are under those rates; but down to at least by 1924 or 1925 the city was fairly completely metered, and the old rate,— I don't know of a single flat rate in Chester today.

Q. Do you know when the meters were installed in Chester?

A. Well, I think they began to install them back in 1914 and '15, and gradually kept on until I think by 1924 the town was practically completely metered.

Q. Was that before the purchase by the Federal Water Company or—

A. Oh, yes.

Q. It was before?

A. Yes, two or three years before.

Q. Was there an increase in the rates at that time?

A. Yes. These rates were filed in August, 1924, and became effective October 1, 1924.

Q. That is when the Federal Water Company came in?

A. No. The Federal Water Company didn't come in until 1927, just at the time we filed this last complaint, in September of 1927.

Q. In other words, the Federal Water Company were not in control of the Chester Water situation until after this 1924 rate case, is that right?

A. That is correct, sir.

Q. There was a rate case in 1924, as I recall it?

A. The rate case in 1924 was more—well, there were some satisfaction of the industrial plants, and, as I say, the con-industrial plants, and that rate case was adjusted to the satisfaction of the industrial plants, and, s I sy, the consumers of the city were not pressing the matter very largely, and because the industrials were satisfied, those complaints were withdrawn, so that there is no rate case complaint pending now before the Commission.

BY MR. HAGMAIER:

Q. What is the cost of an average house in Chester?

A. Take my house. I have a house of nine or ten rooms. Nobody living in it at the present time but myself and my wife. I have the water bill here for the three months. They render bills every three months. This runs from October 6, 1930, to January 7, 1931. Of course, the service charge was \$2. The water consumed is \$2.10. That made \$4.10. At that time I was spending about 20 cents a week for drinking water from the Avondale Spring Water Company. That would be 80 cents a month, and the three months would be \$2.40. Add that to the \$4.10. It ran my water bill up for those three months to \$6. about \$6.70, or \$7, because sometimes I use a little more water, if I have extra people in the house, you know,—about \$7, instead of, as it should be, \$4.10.

Now, our complaint at present, and I think it likely that we will file a complaint, a petition for revaluation,—or complaint, even admitting that these rates are not high rates to-day, they are exceedingly high rates for what we are getting. We are paying too much for what we are getting, and we are going to take that before the Public Service Commission and see where we land.

Q. You are practically only getting the river water?

A. We are getting the river water. Of course, it is made a safe water by reason of the treatment of it.

Q. That is, chemically?

A. But it is not a palatable water. It is very disagreeable. It tastes of tar and everything. They can not get that out. They thought this aeration would do it, but even that does not.

BY MR. TURNER:

Q. You have been a city solicitor of Chester for a good many years, haven't you?

A. Yes, since 1894.

Q. And you have been also active in the League of Third-Class Cities, have you not?

A. Yes, I am a member of it. I am a member of the law committee. In fact, I have headed the law committee for a great many years.

Q. And you must have had, therefore, considerable experience, both through your connections in the cities and through your Chester connection, with these rate cases. Have you any suggestions to make to this committee of improvements that might be made in the law or things that you think are defective at the present time?

A. Well, I don't think,—and I have been of that opinion for a good many years, borne out by my experience and observation and knowledge,—that the municipalities ought to bear the fight with respect to rates, and, in our case, and other cases, possibly, with respect to the quality of the water. It is very difficult to get the consumer to go into a fight, if it means that he has got to go down in his pocket and help raise a fund to pay the expenses. The expense of a rate fight or a water fight runs into a great deal of money.

I have in mind one case that I was in a number of years ago, where we filed complaints in Chester, the consumers, as well as the surrounding boroughs and townships, and consumers outside of the city, a gas rate fight. Stone & Webster were on the other side. I think the Stone & Webster bill that the gas company paid, the public utility company paid, was somewhere around three hundred thousand dollars. We managed to raise \$5,000, and had one poor little engineer, all right, but one engineer, who lived in Swarthmore, as against Stone & Webster's whole outfit. Now, you know where we landed. We didn't get anywhere, of course, and the rates were approved.

Now, I think that situation ought to be covered by the State. I think the State ought to help out the municipalities and consumers, particularly the consumers, because of course, the consumers are the municipalities, the residents and taxpayers, and all that, and they ought to have the assistance of the State or Public Service Commission or some other board or body. As far as possible, I think the thing ought to be done ex parte, so that neither one side nor the other would have any more say than the side that didn't have the money. For instance, simply because the utility company has a lot of money and eventually the consumer pays the costs, that is all in the costs, that is not fair.

Now, another thing, I don't know whether it can be worked out, but if something is not done and the present system continues and the public service or the utility companies go into these heavy expenses. I think there ought to be some way by which that cost should not be put upon the consumer, if there is any way to make the public service people and their stockholders pay that money, and not have it put on the consumers, I think that ought to be done, that would be a big help.

BY MR. EVANS:

Q. In other words, paid by the stockholders instead of the rate payers?

A. Paid by the stockholders. They are the ones that get the benefit. I don't see why we should pay it for their benefit. In other words, it means that if that is done, we put up for instance, in this case, we put up the \$5,000,—of course that was a small sum,— but it took us about a year to get that \$5,000 out of the consumers and the boroughs. The boroughs and municipalities haven't any money, you know, every cent is necessary for their current purposes. If it comes to putting up a lot of money to make a fight, they haven't got it, and they would have to raise the taxes.

Q. How much money did you say the gas company paid Stone & Webster?

A. I understand it was somewhere around \$250,000 or \$300,000, at least that much, maybe more than that. They had engineers there, I think there was 30 or 40 people in at-

tendance at that hearing all the time as to our one little engineer, and he got the help of some of the boys in Swarthmore College who were taking the engineering course there to help him. Now, you know what these boys could do against the experienced men Stone & Webster had. We just simply didn't get anywhere.

MR. TURNER: At least, Mr. Cochran, don't you think that if the expenses are charged against the public, it should not go into the rate base in any way, because it seems from the testimony here that it is forgotten after a time, and while it is only supposed to be amortized for three or five years, that three or five years keeps going on?

MR. HAGMAIER: In other words, the people pay both ends in these cases?

THE WITNESS: They do, they get it coming and going, they are in the middle and get slapped both ways.

BY MR. RHODES:

Q. From your experience and observation in these matters, haven't you found that most of these rate increases have been made after the local companies have been purchased by foreign capital?

A. Well, I think that possibly is correct. That has not been our experience in Chester, but from my knowledge throughout the State, I think that is correct. Now, I have no doubt,—I don't know whether I ought to say this or not,—but knowing these big concerns, they are looking out for themselves,—I have no doubt, if we were getting good water in Chester, this Federal Water Company by this time would have had an increased rate schedule filed with the Public Service Commission; but they could hardly do that in the face of the water they are giving us and the fact that we have to go out and buy drinking water.

BY THE CHAIRMAN:

Q. You possibly heard Mr. Elliott testify?

A. Yes.

Q. He has had about the same painful experience that you have had?

A. Yes. I agree with what he said.

Q. What do you think about his suggestion that the Public Service Commission ought to investigate these complaints when their attention is called to them, take the initiative?

A. Well, I think so, sure. I think we ought to file the complaint and let them put their accountants and engineers and people out to investigate it and find out what there is there.

Q. In other words, they ought to protect the public?

A. They ought to protect the public. We agree with that.

BY MR. EVANS:

Q. Do you happen to remember about what the cost of the water rate case was in 1924 to the City of Chester?

A. Oh, that was negligible, because we got together very quickly. It was not fought out. We had one meeting, and in fact before the meeting the lawyers for the industrial plants and the water company had gotten together and the city simply went along.

Now, I have only one other thing to say, and that is about another character of public utility we have had in the City of Chester. Well, originally, we had a good many trolley companies down there, different lines into Darby and Wilmington and back to Media, and some of them were gradually picked up by the P. R. T. Of course, when those original underlying companies got their rights from the city, it was done under an agreement which they entered into with the city, and in that agreement was a provision, the usual provision that they take care of the part of the city's streets that they occupied with their tracks, and keep them in repair, and that they were to pay for the share of the pavement, for the seven feet, measuring three and a half feet each way from the center of the tracks; and since the P. R. T. got into control, they absolutely refused, in fact, their lawyer said that the provisions of the underlying ordinances did not bind them at all, and we had a terrible time with them for years to get them to do anything with the part of the street between their tracks.

They pursued the same policy throughout the county, and the Borough of Swarthmore, and Collingdale, and certain other boroughs did the work and sued them and won out in the Appellate Courts, the lower courts as well as the Appellate Court, and the company had to pay up.

They then turned in to see if they could not buy off the boroughs,—Mr. Turner will know about this,—could not buy the boroughs off and give them a lump sum in lieu of the yearly repair provisions, and some of the boroughs very foolishly did that, and they spent money the first year, and then they had nothing left, you know, for future years. They tried to get the City of Chester to come in, but the City of Chester wouldn't do it; they were too wise, but it has been a terrible task. They once in a while come down there and do very little.

BY MR. EVANS:

Q. By the P. R. T. you mean the Philadelphia Rapid Transit Company?

A. The Philadelphia Rapid Transit Company. Now there is another thing that it might be well for me to say. Mr. Turner is familiar with this. Although he does not live in Chester, he is one of us. That is the suit between the State of New Jersey and the State of New York looking toward the diverting of water, as they call it, of 600,000, million of gallons from the upper Delaware tributary. The State of Pennsylvania has intervened. The City of Chester doesn't know anything about that suit. We were never invited to go into it, and it just drifted into our ears last fall. At that time it was really too late to do anything, but we are beginning to get scared down there, and we are going to be very much affected by the taking off of 440 millions, which has been allowed by the special master appointed by the Supreme Court of the United States. When we consider that at Trenton the normal flow of the Delaware River is about, we will say in round figures, 680,000 gallons; I can't express it as the engineers do.

BY MR. TURNER:

Q. You mean millions, don't you?

A. I mean millions. I beg your pardon, millions; and with any ordinary drought seasons it has fallen as low as 500,000. If the 440,000 is taken away from that, you will see what is left.

BY MR. TURNER:

Q. And that is a very serious problem in connection with the water supply question, is it not?

A. Yes. I remember in Chester, eight or nine or ten times, when the drinking water has had salt in it. That is due to drought conditions and the lack of fresh water coming down the Delaware River, and the salt water gradually backs up. I don't think it ever stopped beyond Tacony. On a number of occasions it has gotten as far as Chester. Fortunately, it never lasted very long, but this time it has been with us for many months, and that makes the water unfit to drink, and if this 440,000 gallons is taken out, of course, it is just the same as a late drought season, and that salt water will come up, and be with us all the time with the result that we won't be able to drink the water, and also with the result that we are going to lose a great many of our industrial plants, who have to use that water and can't use it if it is salt.

BY MR. EVANS:

Q. That matter is now pending before the United States Supreme Court?

A. That matter is now pending before the United States Supreme Court. The mayor has just told me that some of our large industrial plants, one in particular is the Scott Paper Company, say that they will positively pull out and get out of Chester, and if we lose our industrial plants in Chester, the city will have to go out of business.

MR. TURNER: I want to ask Mr. Cochran to wait, and then ask you if you will not call Mr. Walker who had this connection with the Chester Water Company case.

BY MR. EVANS:

Q. Will you do that?

A. Yes.

IN RE SCRANTON-SPRINGBROOK WATER COMPANY  
AND CHESTER WATER COMPANY

ISAAC S. WALKER sworn.

BY MR. EVANS:

Q. Where do you live?

A. Philadelphia.

Q. By whom are you employed?

A. I am engaged as a constructing engineer at the present time, specializing in water works and sewerage work.

Q. Were you at one time connected with the Federal Water Service Corporation?

A. I was connected with the Federal Water Service Corporation from the date of the sale of the New Chester Water Company, which was in September, 1927, until September, 1929—December, 1929.

Q. December, 1929?

A. Two years and three months.

Q. You had something to do with the Scranton Springbrook Water Company case, I believe, did you not?

A. I was general manager, in charge of the Springbrook Water Service Company, and vice president of the company. You might say that I was an inherited manager. Prior to the purchase of the Chester Company I had operated it for a period of nine years as general manager for the Bucknell estate, and I was, therefore, an inherited manager by the Federal Water Service Corporation, and was selected to go to Wilkes-Barre, in charge of the Wilkes-Barre plant.

Q. And you were thoroughly familiar both with the Scranton-Springbrook System and with the Chester water system, were you not?

A. Very familiar; yes, sir.

Q. Did you ever meet a man by the name of Joseph Geiser?

A. I never met the gentleman in my life, sir.

Q. It has been called to your attention, has it not, that Mr. Geiser, who appeared before this committee last week testified, on page 137 of the record, that he met you in the Hotel Sterling about three weeks after you took charge of the Springbrook system, and had a conversation with him?

A. If Mr. Geiser stated that, he is guilty of an absolute untruth. He never, to my knowledge, uttered a word to me in my life, other than indirectly. At a hearing before the city council, in the early part of my time there, I was called to a meeting by city council, and Mr. Geiser heckled me. I addressed my remarks to the council and not to Mr. Geiser.

Q. Mr. Geiser testified at the time he talked to you that you did not know who he was and he did not know you at the time either. Do you think that it is possible, under those circumstances, you may have talked to him?

A. That is one of his dreams, and very characteristic of the evidence which he has submitted in this three years fight before the people, inflaming the public mind and going to any extent to put through his political ambitions.

MR. TURNER: Mr. Evans, I objected before to this kind of testimony, and I think we ought to say to Mr. Walker that we can not take statements of opinions, not of that character; I mean, reflecting something that may or may not have been said.

BY MR. EVANS:

Q. At the present time have you any connection, professionally or otherwise, with the Federal Water Service Company or with any of its subsidiary companies?

A. Absolutely none.

Q. You are entirely independent, and you have no connection of any sort with them?

A. None whatever.

Q. And you spoke to Mr. Turner about this testimony and requested the opportunity to come here to-day and make a statement?

A. I did.

Q. Have you anything further in this case that you wish to say to the committee?

A. I believe that I can explain to you or show to you the untruthfulness of that statement in regard to the accusation regarding the matters in Chester, and also to make a correction—if it will involve a correction—of Mr. Cochran's testimony to-day. My first connection with the Chester Water Company was in September, 1918. In 1914, as I have read from the records of the Chester management, an action was brought by the citizens of Chester against the water company for a reduction in the minimum rate of \$1 per month on metered service. The company I understand at that time was instituting a program of gradually putting more meters on customers in particular locations where they considered the flat rate was unsatisfactory. So a case was brought before the Public Service Commission. I don't have the date, but I believe it was in 1914, and as a result of that case the Public

Service Commission ordered the New Chester Water Company in 1914 to install meters throughout the city.

BY MR. TURNER:

Q. Was that before you had gone to Chester?

A. That was three years before I knew that there was a New Chester Water Company.

Q. And how many years was it before the Federal Water Company purchase?

A. It was in 1914 and the Federal purchase was made in 1927, and my first connection with the Chester Water Company was in 1918. I never knew there was a New Chester Water Company then.

Q. So that any statement that you had put the meters in could not be correct?

A. It was absolutely untrue, because every meter was installed in the city of Chester in the latter part of 1914 or early in 1915, every service in the city of Chester was metered.

BY MR. EVANS:

Q. Do you know, Mr. Walker, what effect that metering had on the rates to the domestic consumers?

A. It might have been a slight increase, I dare say. I do not have the record. The reason the fight was brought, as I understand, was because they had a tap rate of six dollars, a flat rate service and the company was gradually, as I explained before, changing to meter service and the consumers objected because when they went on the meter charge, there was a minimum charge of one dollar a month whereas if they had just a sink in the kitchen they could obtain water for six dollars a year or fifty cents a month. That was one of the principal reasons for the action at that time as I infer so the Commission ordered a rate of this character under which the company operated for ten years. That would be a meter rate of fifty cents a month for less than one thousand gallons a month. For consumption of one thousand to I think thirty-three hundred gallons a month the rate was one dollar. That was a very bad rate. They operated under it for ten years, but it was the cause of thousands of complaints. The meters would be read and if the reading showed nine hundred and ninety-nine gallons a month or anything less than one thousand gallons they were only billed for fifty cents, but if the reading showed one thousand and five gallons, they would be billed at a dollar which was a terrible situation to the company, but they operated under it for a period of ten years. That was one of the principal reasons why I as General Manager of the company eliminated that rate entirely in my set up for a new rate in 1924.

Q. When did the Commission order that type of rate?

A. I don't know the exact date, but I think it was in 19—, It was issued under the Public Service Law approved July 26, 1913.

Q. That was the date the law became effective?

A. No it was in 1906 it was adopted. (Reading from papers). No there was one before this. This was a supplement. I do not have that information.

Q. You say the Public Service Commission ordered that rate? Do you mean that or do you mean that the company filed that rate and it became effective?

A. (Again reading) PSCA No. 1, 1913.

Q. Was that a rate filed by the company or ordered by the Commission?

A. Ordered by the Commission.

Q. Are you sure of that?

A. I am not sure. I am only stating by recollection because I was not with the company at that time.

Q. I think your recollection, possibly is not correct because they did not get under way until 1914.

A. The particular feature was a double minimum, fifty cents for less than one thousand gallons and one dollar for a thousand gallons and over.

Q. Will you look at the actual facts in regard to this and advise the Committee, please?

A. I will be very glad to. PSCA No. 2 was filed in July, 1915. PSCA No. 2, I do not have a copy of that with me, but there were no flat rates listed under PSCA No. 2 issued in July, 1915.

Q. Your point is that the city was completely metered as early as 1915?

A. Yes sir, the early part of 1915, three years and one-half before I had any connection with the company, therefore, that

man's statement as to my connection with the meters in Chester was absolutely untrue.

Q. What was the occasion of your becoming connected with the company?

A. The former general manager of the company, Robert Clark Wheeler, resigned in 1918. I was in charge of the sewerage disposal department of the city. Owing to the war the organization was more or less disrupted and I accepted the position as engineer and general manager in 1918. The company was owned and operated by the Bucknell Estate which also owned two companies in Indiana which I also managed, Vincennes and the Green Castle Water Company.

Q. And you remained with the company until 1929, or remained with the Federal Water Service Company after they acquired the property?

A. I remained until September, 1927, when the plant was sold to the Federal Water Company and thereafter I was employed continuously with them at Wilkes-Barre and was there until I severed my connection with them in 1929.

Q. Were you in Wilkes-Barre at the time that the stock of the Spring Brook Water Company was being purchased by interests affiliated with the Federal Water Corporation?

A. I had nothing to do with the stock, but it was being purchased by many of the citizens of the town and employees of the company.

Q. Are you familiar with the names of any persons who are engaged in the purchase of that stock from the then bond holders?

A. No sir.

Q. You don't know any of them?

A. No sir.

BY MR. TURNER:

Q. I would like to ask this. In his testimony Mr. Geiser the other day did say that he did not know you and that you did not know him. He said that you had several drinks together?

A. It is absolutely false.

Q. You never knew Mr. Geiser previous to your going to Wilkes-Barre, but you have known him since?

A. Yes sir.

Q. And have had occasion to see him on a number of occasions?

A. I have seen him and I have heard him. If I might make a suggestion, your committee could find a very great mass of information as to the method which the opposition has been conducting up there if you will obtain a transcript of the dictaphone record over the radio every Sunday night for a period of two years which will give your Committee a vast fund of information as to the method used in exciting the entire community to open anarchy and to open rebellion and to open disregard of the law; it will give you a very clear picture.

BY MR. HAGMAIER:

Q. Mr. Walker was it possible at that time that there was an employe under you or with you by the name of Walker?

A. No. There was no employe in the water company by the name of Walker than myself. We had about four hundred employes and I am certain there was no other person by the name of Walker.

BY MR. EVANS:

Q. When did you first know Mr. Geiser by name?

A. As far as I can recall the first time I knew him was at this hearing which I told you I was forced to attend before the city council.

Q. When was that?

A. I don't recall the date, but it was early in 1928.

Q. How long had you been in Wilkes-Barre at that time?

A. Well I know it was early in 1928, it may have been the later part of 1927. I was in Wilkes-Barre from September 15, 1927.

Q. Was it September 15, 1927.

A. Yes.

Q. And this council hearing was the first time you ever knew Mr. Geiser by name.

A. That is the first time.

Q. Had you ever seen him before that time without knowing him by name?

A. I have no recollection. That was the first time that I knew who he was, and I have never spoken a word to that man in my life.

FATHER COX: From Mr. Geiser's statement he didn't know when the company put the meters in Chester, he simply says that Mr. Walker reported that the meters were put in in Chester, and what effect it had, and he said he felt that Mr. Walker wanted to do the same thing in their community. I just read over those words, in which he says, that Mr. Walker said, we have done so in Chester.

MR. TURNER: He says we went into the City of Chester and we purchased their water works. The water works was purchased by the Federal Company thirteen years after the meters were put in, and Mr. Walker did not go there until two or three years after the meters were installed, so that there could not have been any connection of that kind.

FATHER COX: He meant the water company went in there, not that this particular man went in there.

MR. TURNER: Surely.

FATHER COX: They were going to practice the same thing in the new district that they took over, that is my interpretation of his statement.

MR. TURNER: I guess we will have to put our own interpretation on it.

MR. EVANS: I would like to say this that Mr. Walker called me on my phone in my office last Friday, and told me he had seen in the papers the report that has been put there concerning the city of Chester, and that that statement was not correct. As a result of my conversation with him I asked him whether he would not come here today, feeling that now being a citizen, outside of the water company, that anything that would throw light on the subject to get to the truth of these facts should be produced. He consented to come. In the course of that conversation I asked him some questions pertaining to some of the other testimony that has been given here both by Father Curran and by Mr. Geiser as to rates. Now, I don't know whether you want to, while Mr. Walker is here, enter in any of those questions or not, or whether you would want to wait until later, when perhaps, you have the other side of the picture presented, but I asked him several questions pertaining to some of the answers that have been given here, and I therefore felt I should make that known to you while you had the opportunity of going into it if you wanted to.

MR. EVANS: It is my thought that we will make much faster progress if we don't go into cross examination as we go along and have contradictions made of the complainants case, but since Mr. Walker is here, and it would be an inconvenience for him to come back, if it is not going to take any great length of time I see no objection at all to his making any brief statement on the question of rates, which after all are matters of record, and I should not think that there would be any real controversy in regard to it.

MR. TURNER: I was not thinking so much as to the question of what Mr. Walker might want, Mr. Evans, but as to whether you wanted to ask him any questions concerning the testimony that has been given.

MR. EVANS: I am not prepared to go into that because I had no idea that that was going to be brought up. I thought it was only a question of his conversation with Mr. Geiser.

MR. RICHARDS: I would like to ask Mr. Walker with respect to the rates, and rules published over his signature in July 1928, or rather say July 1, 1928.

BY MR. RICHARDS:

Q. Do you recall the matter of 10% penalty for advance payments that was brought out in the testimony by the people from the Wyoming Valley with reference to this schedule, which applies on flat rate service, when not paid within 30 days after the bill, 10% would be added.

A. That was in the schedule.

Q. Will you tell us why, Mr. Walker, the company put a charge as high as a 10% penalty for service not yet delivered?

A. That only applies to the flat rate service. Of course, I am not responsible for that rate schedule.

Q. As general manager of the plant you compiled these rates?

A. I did not, sir. Those rates were handed to me printed, before I ever saw them. I did not compile those rates, they

were put out under my signature as general manager of the plant.

Q. But you were responsible for the collection of those rates?

A. I was responsible for the collection of those rates.

Q. You would have knowledge of what charges would be made then?

A. The only defense I can make on such a thing, generally, I am speaking, of a rate or a penalty collectible in advance, is that it is customary. If you will analyze flat rate schedules of water companies, not only throughout the State, but throughout the United States, I am quite sure that you will find the vast majority of flat rates are collectible in advance, it is customary.

Q. I am interested in knowing why it is, because in the city in which I live, we don't have flat rates at all, everything is metered, and I am wondering why this would be so, particularly when the service is not yet delivered?

A. It is simply a matter of custom, flat rates have generally been collected in advance, and meter rates have been collected after service is rendered, but with meter rates, that is done to give the company some opportunity to escape loss from people who move out, and they have no hold on them, or rather that applies to the flat rates, and with metered service, generally they have the tenants deposit, a deposit is exacted, so that if the consumer does not pay his meter bill, the company has a deposit to fall back on to get something out of that customer, but they have no such deposit on flat rate service, therefore, that is really up to the general policy and practice, more or less general at least, to collect flat rate service in advance.

BY MR. HAGMAIER:

Q. Mr. Walker, you say that is customary. How long has that custom been in existence?

A. I don't know how long, but for many many years.

Q. It has been the custom by company owned water plants, but in these same places where these things are now in effect, before they were brought and taken over by these outside interests there were no 10% penalties?

A. No sir—

Q. Then it is really a newly established custom after being taken over by these large corporations?

A. The penalty was a new custom—

Q. That is what I mean.

A. Yes.

Q. You said it was a custom, and I could not see where it was.

MR. EVANS: If the Committee wishes to adjourn now for lunch, I think I can be ready immediately after lunch to examine Mr. Walker, if he is familiar with the changes in rates, and so on, of the Spring Brook Water Company.

BY MR. EVANS:

Q. Are you familiar with that, Mr. Walker?

A. Yes, I didn't bring much information with me, but I am familiar, and I believe I can answer your questions.

MR. TURNER: It seems to me, Mr. Evans, that perhaps you had better find out by preparing Mr. Walker to answer certain questions. I didn't want to take the time, and I thought you might do that after we adjourn, and then you could determine whether you wanted to go ahead with him or not.

MR. EVANS: The only thing, Mr. Turner, I don't want to spend the whole luncheon hour getting ready for it, and find he does not have the information after I have gotten ready.

MR. RHODES: I would suggest, however, that there may be some other third class cities who are here to be heard, and this cross examination seems to be not under the schedule, and possibly we might gain more time to have your cross examination at a later period and get more detailed information. Would it not be more logical to take this up, if we can agree on some time at a later date.

MR. TURNER: It seems to me we are getting our positions just a little bit mixed up, perhaps through my own fault. Mr. Evans. Mr. Walker volunteered to come after his conversation with me, and my expression of what I felt was his duty as a citizen to come here and do it. Now, whether Mr. Walker wants to come some other time, that is for him to decide.

MR. EVANS: If Mr. Walker wants to come, all right, if not, he can be subpoenaed.

MR. TURNER: There is one thing on page 107, Mr. Evans, that I want to call to your attention. Mr. Geiser mentioned a certain tabulation which he had prepared by comparing bills, from which he said that he computed that there had been an overcharge of about \$2,000,000. I don't find that table in the testimony. It does not appear as an exhibit here at all, and it seems to me that is a very important exhibit, and I am wondering whether counsel or the stenographers have it.

MR. EVANS: We have it.

MR. TURNER: It seems to me it ought to be put in the record.

MR. EVANS: It was not offered.

MR. TURNER: It was offered by Mr. Geiser, and he talked of it.

MR. EVANS: I don't find it on page 107.

MR. TURNER: Yes, he refers to it there. He says, "This was put up in front of the Public Service Commission, and we almost got into a fight, me and the attorney for the water company, he put his fist under my nose, and he said, 'This is not going over the air, nor does it go into the papers.' I got mad myself and I put my fist under his nose, and I said that it was going over the air and that I was going to put it into the press myself, which I did, but nevertheless, it was stricken out of the record in the Public Service Commission, you won't find it there." Then I asked him the question, "Was it offered in evidence?" And he said, "This was offered in evidence and taken out afterwards. This shows that the increase here is 59.3% over the old rate without increasing the rates whatsoever."

You will find that he again goes back to that paper. I remember the paper very distinctly. It is a sheet on which he had a tabulation, and I asked the question how he had arrived at that, and he said he had taken a number of the bills. You will find that you examined him later about it. I think I am right about it, because I read this testimony late last night.

MR. EVANS: I thought you spoke of a two million dollar increase, which I didn't have any recollection of.

MR. TURNER: He says later in his testimony—

MR. EVANS: He had tabulated about 35 bills.

MR. TURNER: Yes, and also that average he says that he figured out.

MR. EVANS: We can very easily, if that is the paper you are referring to, place that in the record.

MR. TURNER: I think it should be in the record.

MR. EVANS: I remember that incident very well, and I was only trying to shorten things by not putting the whole thing in. Is the committee willing to have that put in the record?

THE CHAIRMAN: I thought it was in the record, that was my understanding, that it was to be.

MR. EVANS: We will have that then placed in the record.

THE CHAIRMAN: Before we take a recess, I would like to know, for the committee's information, how many third-class cities have not been reached this morning? Just give me a show of hands. Johnstown. Any others that want to be heard this afternoon?

(No audible response.)

THE CHAIRMAN: There may have been some that have gone out. We will take a recess until two o'clock.

(Recess from 1:10 p. m. to 2:00 p. m.)

Harrisburg, Pa.,  
Thursday, March 12, 1931,  
2:00 o'clock p. m.

CITY OF BUTLER

JOSEPH L. HEINEMAN, sworn.

BY MR. EVANS:

Q. You are the mayor of Butler?

A. Yes, sir.

Q. How large a city is Butler?

A. Around 23,000.

Q. Will you tell the committee, briefly, what your experience with the utility situation has been?

A. My first experience, to go back to 1918, the Butler Water Company, owned by the American Water Works Company,

asked for an advance in their rates; on the fire hydrant rates from \$16.50 to \$50, and the domestic rates, from 40 to 45 cents per thousand. As mayor, I filed a protest for the city and also a protest for private citizens. In coming to Harrisburg before the commission, we decided that we would have an appraisal of the plant, and the hearing was adjourned. A short time after that the water company came to the city council with a compromise, that if we would accept a \$1.25 rate for fire hydrants, they would withdraw the increase in the fire hydrants beyond that amount, and also the domestic rate, and we entered into such an agreement. In 1924 it also applied for an increase in both the domestic and fire hydrants. I have no record whatever of the domestic rates or the increase at that time. On the fire hydrants, they had a new system of rates. Instead of having a flat rate per hydrant, their proposition was \$14,000; what they called a ready to serve charge on the hydrants in place at that time. There were approximately 240 hydrants, and additional hydrants would be charged at their proposition, was two cents per inch diameter of pipe per foot laid. In other words, a six-inch pipe would be 12 cents a foot for the pipe laid to the hydrant.

Q. That was an annual charge?

A. An annual charge. That was changed to one cent, and finally accepted, and the ready-to-serve charge was changed from \$14,000 to \$12,000, which it is at the present time.

In the year 1918 we had 206 fire hydrants at an annual rental of approximately \$5,000. Today there are 271 fire hydrants at approximately \$15,000, an increase of 65 hydrants with an increase of \$10,000 per year in revenue. I don't know anything about the domestic rate at that time, as I said before.

Now, then, at the present time, I think for the second time I was in office, regarding the application for an appraisal of the plant—I think because we were willing to go in at that time to fight it out with an appraisal, that they came back without asking for any increase whatever; that is, a subsequent increase. At the present time there is a case on hearing, where if the same principle is put in by the Commission as it has in the past on at least one case, I think the citizens, and the communities and the municipalities at large would be safeguarded. The case I have reference to is the Pittsburgh and Butler Railway Company asking for permission to remove their tracks from Mars to Butler. At the hearing held in Pittsburgh they brought a mass of figures, some 25 or 30 exhibits, showing the operating costs, and the receipts and expenditures for ten or twelve years, and asked to have the tracks taken up, because they were losing money. The City of Butler protested as also did the Borough of Mars; a protest by the people between Mars and Butler to protest the removal of the tracks, but the only way to refute the testimony was to have an audit made of ten or twelve years. No person thought they had the money to do it. Mr. Walker, the commissioner in hearing the case, made a ruling at that hearing that the auditors—the accounting department of the Commission and the engineers would check up the audit to see that those figures set forth by the railway company were true and correct. I think that if the towns and the citizens, generally, were safeguarded in the same way, that when an application for an increase in rates is made, not to have them go into effect automatically with no protest, and have the Commission investigate and see whether it is worthwhile to allow the increase—

Q. Is there anything else that you want to place before the Committee?

A. Yes. One thing I would like to say, the arrangement that some person spoke about, about having a bill before the House, in taking care of the expenses. The representative from Beaver Falls spoke this morning about the rates they were paying for the water, and compared them with Newcastle and compared them with Butler. Newcastle is about three times as large as Beaver Falls, and he spoke of the flat rate of \$8,000 and the rate of \$12,000, and it looks as if Beaver Falls is paying more for the water.

MR. RICHARDS: May I interpose a statement here about the rates for water in Newcastle? I am not sure that the statement was given, but if it was, about another rate in there; that is, mileage of pipes, I can find it out and give it to you Monday, and from that it might not appear to be so wide a divergence.

BY MR. EVANS:

Q. Does the same water company serve both Newcastle and Butler?

A. It is the parent company.

Q. They are both the American Water Works concern?

A. Yes.

Q. Their source of supply, I suppose, is different?

A. Oh, yes; different impounding dams.

EDWARD McCLOSKEY sworn.

BY MR. EVANS:

Q. Where do you live?

A. 106-108 Market Street, Johnstown.

Q. You do not speak for the City of Johnstown?

A. No.

Q. You speak merely as a citizen of the city?

A. That is all.

Q. Will you state briefly to the Committee what criticisms you have of the utility situation in Johnstown?

A. Our taxes have tripled in twelve years. The statistics last week from Washington in the Pittsburgh papers showed that Johnstown, Harrisburg and New Castle have tripled in taxes in twelve years, and most of it in Johnstown is due to the Public Service Commission allowing a raise in rates. The Johnstown Water Company raised their rates fifty per cent in 1926 after being allowed a raise equivalent to two hundred per cent in 1920 or 1922. I have two books here of the water company which show in 1917 there were \$3391 for fire hydrants.

Q. How many hydrants?

A. In 1920 the first hydrants were 5600. It jumped to 17,400 since 1920. In 1921 they paid \$21,000 part of that comes off and goes in 1920, which would leave a raise from 1919 of \$5100 to \$21,000, and after all that would be off, it would make it down to \$17,000 and was continued at \$17,400 until 1925, when they came back for another raise. They had not built any new dams or did anything to their works at all. It then jumped from \$17,400 to \$38,000, according to their own books. They then settled it with Johnstown city for \$31,350, which was an increase of ninety per cent. The city solicitor and council got together with the water company. For some reason it is a corporation town and is a one-man town and nobody has any voice.

Q. Who controls the Johnstown Water Company?

A. The Bethlehem Steel Company and they reincorporated under the name of the Johnstown Water Corporation in Delaware in 1928 after a second raise was granted. They gave the people one thousand per cent stock dividends. They gave eleven shares for one, paying six dollars a year on each share of stock. In 1929 they made \$105 a share. They have the privilege to recall this stock at any time in sixty days which they will do as soon as they get the next grant. They are now building a dam which as soon as they get it built they will come back here and say they expended a whole lot more money. Anyone knows what property valuation is on the hills around Johnstown. You can take a hundred bags of cement and a little sand and make a dam almost anywhere around Johnstown.

Q. According to the company's rate, what were the charges on a fire plug?

A. In 1922 they were fifty dollars, according to this book. They had paid \$500 for a lifetime when they granted them the privilege of a franchise. Then they said the Public Service Commission made them change that and charged them \$50 a plug. And then they came back and said they had to get \$250 each and every year for a mile of pipe. Surely it will be paid for some day.

Q. Now under the tariff of the Johnstown Water Company, P. S. C. Pa. 3, effective April 1st, 1922, the rate was \$50 for each fire hydrant. What had the rate been prior to this tariff?

A. \$500 for a lifetime. That was when they granted them the franchise for the water company, and I think they gave them something like \$30,000, they paid the city a little money and took over everything themselves.

Q. Under P. S. C. Pa. No. 4, Johnstown Water Company, effective October 20, 1926, what is the rate for each fire hydrant?

A. On pages 5 and 6 you will see there what that was.

Q. 357 fire hydrants, \$3300?

A. They gave it to them for \$31,350.

Q. Then under Supplement 1, P. S. C. Pa. No. 4, effective January 1, 1929, this rate for 357 hydrants is reduced as you say to \$31350?

A. It never went into effect. It was just put in there to make people think they were giving them something.

Q. Now what was the charge prior to 1922 for domestic service?

A. They won't give me any books. I went there and asked for these, but they won't give me any more.

Q. Under P. S. C. Pa. No. 3, the rate for private dwellings was what?

A. They raised it over fifty per cent for me in one place, and a little over fifty per cent in another.

Q. Just read to the Committee what the rates are for private dwellings?

A. The first 20,000 gallons—

Q. No, I want the flat rate?

A. I don't want the flat rate, I am on a meter.

Q. Are not any of the dwellings in Johnstown on flat rate?

A. Mine are on the meter. I pay for four different meters so I don't know anything about the flat rate.

MR. EVANS: If the Committee is willing, I will read the rates into the record:

(Reading) 1922 private dwellings, one attachment, one or two rooms, one family, \$6.40.

Three or four rooms, one family, \$9.72.

Five and six rooms, one family, \$12.60.

Seven and eight rooms, one family, \$15.12.

Nine and ten rooms, one family, \$17.46.

Eleven and twelve rooms, one family, \$19.40.

These rates are all annual rates and for each additional room above twelve rooms, \$.60 per room. Private dwellings will be assessed for such additional toilets as may be used.

For the first bath tub, the rate is \$3.88 per annum.

For each sink with tap, \$1.28 per annum.

The first water closet, \$3.80 per annum.

The 1926 rates are as follows:

One attachment and one toilet, one or two rooms, one family, \$8.00 per annum.

Three and four rooms, one family, \$12.00.

Five and six rooms, one family, \$17.00 per annum.

Seven and eight rooms, one family, per annum, \$20.00.

Nine and ten rooms, one family, per annum, \$24.00.

Eleven and twelve rooms, one family, per annum, \$26.00.

Additional charges, first bath tub, \$4.00. Each sink, \$2.00; water closet, \$4.00, and so forth.

The WITNESS: Now take the meter rate, please, that is mine, the meter rate is what I want, pages 5 and 6, over a fifty per cent increase, from \$6.80 for 1920, and I now pay \$10.30, which is ten cents over fifty per cent. The Bethlehem Steel Company in these raises did not raise themselves, only ten or twelve per cent. They own the company, and to make their seven per cent, or their return as they claim, to the Commission they declared the rates on the fire company and the small consumer, that is they, because the small consumer is a wage earner there, and he could not—

BY MR. RICHARDS:

Q. Would it not be better if we got these rates before us first before we go into conjectures, I think it would be fairer to the Committee to get the matter in that way.

A. If you read that over, from one to the other and get the comparison would it not be better to get that first, take one book and then another and then figure it out on their own figuring, right there.

BY MR. EVANS:

Q. In 1922, P. S. C. Pa. #3, will you just read the meter rates on page 6.

A. 20,000 was 34¢ for 1,000 gallons, that would be \$6.80 for 1920.

Q. What is that?

A. 24¢ per 1,000 gallons, or \$6.80 for 20,000.

BY MR. RICHARDS:

Q. That is \$6.80 for 20,000 gallons of water?

A. They then cut it, and in this book, to give you the first six for four dollars, that would give 6,000 in three months, and man, that gives you fifty gallons, a man who takes a shower bath will use more than fifty gallons, and they have cut you down so that you have to go over the \$4.00 for the quarter. The next four thousand gallons is 45¢ per thousand gallons which makes \$10.30 the first 20,000, which is 3%, or 50% increase on \$6.80 or 10¢ over 50%.

BY MR. RICHARDS:

Q. In order to get some idea, isn't it a fact that the ordinary family will use 35,000 gallons a year of water, which is about 8,000 gallons a quarter?

A. No, more than that, sir.

Q. I don't think so, these facts were established here, isn't it about 5,000 gallons a month for the consumption for an average family?

A. Well, they raised the second 14,000 they gave you the first 6,000 for \$4.00 and the second 14,000, which would make up a 20,000 gallon total, for \$10.50, where we were getting 20,000 for \$6.80. Why didn't they leave it so that 20,000 gallons was at the same rate?

BY MR. EVANS:

Q. If you will just give the Committee the figures, Mr. McCloskey, then as Mr. Richards says the Committee, can form its own conclusions.

A. That is what I gave them; the figures is there.

Q. The rate in 1922, the meter rate for the first 20,000 gallons was 34¢ per thousand gallons per quarter, was it not?

A. Yes.

Q. And for the second 20,000 gallons the rates were 23 cents per thousand gallons per quarter; for the third 20,000 gallons they were 23 cents per thousand gallons per quarter, and so on down to a minimum for large consumption?

A. That is it.

Q. Now, in the 1926 rates, they provide for the first 6,000 gallons per quarter, \$4; for the next 14,000 gallons, 43 cents per thousand gallons; for the next 80,000 gallons, 20 cents per thousand gallons, and down to a minimum for very large consumers of 8 cents per thousand gallons, that is correct?

A. Yes, that is what I want to call your attention to. Now, in the pumping system, they go on down, they didn't raise themselves any for large consumption, it remained at 15 cents, so they juggled it to make—if they had to have a return on their money of 7%, they should have made all the rates an equal 10% raise, or a 15% raise, but they own the company, and they should have made their raise equivalent to the small consumer, should they not. They have one master meter in the house that they have got there, and if you have ten families in it, you might have ten meters, or ten minimum charges, and they themselves have one master meter for the entire Franklin Works.

Q. Now, the 1922 rates, there also was a minimum charge of \$3 a quarter for one-half inch meter, was there not?

A. Yes.

Q. And a \$4 minimum charge for a ¾ inch meter?

A. Yes.

Q. What is the usual size meter for domestic consumers?

A. I cannot say.

Q. What do you have?

A. I don't know. I would not know that. I never knew.

Q. What was your minimum charge under the old rate?

A. \$4—\$3, I don't know. I don't think they changed it. I don't think they changed the price any.

Q. In other words, if you had a ¾ inch meter and paid a \$4.25 charge under the old rate—you would pay that rate?

A. I would think I would—no, it is—no, I would not say that. I think that they raised most of them, I would not say that as a certainty, because I don't know, because I go over the consumption on all of them, my bill is way over, so I don't know what the minimum is.

Q. Do you have your bills here?

A. No sir. If they put in the proper size pipe, they would not have to have the pumping system which they have on these lines to this district, we would have a gravity system, but they have had this pipe line in for 50 or 60 years, and we are paying for the pumping system in there because they will not lay the right and proper lines. They are pumping the water to that district, and that is where the workmen are, and none of those men can come down here from their work, they work for the Bethlehem Steel Company, or one of the other utilities, or they have somebody in the schools, there is a thousand employees in the school, and they are afraid to say anything, because they are afraid someone will lose their job.

Q. How much of the town of Johnstown is supplied by the pumping system?

A. Oh, I would say one-half of Johnstown—no, I would say Johnstown proper, about 2/5 of it anyhow, I guess. I would not say for certain.

Q Is it mostly residential district.

A. Yes.

Q. Supplied by the pumping system. And what were the rates in 1922?

A. I will have to take the book. It is right here, 20,000 was 55.

Q. For the first 20,000 gallons it was 55 cents per thousand gallons in 1926, and for the second 20,000 it was 46 cents per thousand gallons, is that correct?

A. Yes. Now, go on down, please, and you will find when it gets down to 15 cents, that is the same price that they left there for the pumping system as it was in 1922, they did not raise or increase themselves a particle, but they juggled it on the small consumer.

Q. Do you have the 1922 rates there?

A. It is the same for 1926, you go on down and see the pumping system is still 15 cents on the large consumer.

Q. And the 1926 schedule calls for the first 6,000 per quarter, \$4; the next 34,000 per quarter, 60 cents per thousand gallons, and goes on to a minimum of 15 cents per thousand gallons for the large consumers?

A. Yes, the minimum of 15 cents is in this just the same, but the small consumer was raised, that is my complaint, that they were allowed to juggle the meters and juggle their own rates, so that they would not have any of this to pay at all.

Q. Mr. McCloskey, were these complaints filed against these increased rates in 1926?

A. Yes, I think there was, sir.

Q. Well, do you know?

A. I know that they agreed, that they would not fight them, they would cut it from 38,000 to 31,350. That is what a city councilman told me, and he said, "You better not say anything about it," and he said "they would charge us more."

Q. There is none of them here today, is there? There is no city councilman, mayor, or anything here, is there? Showing you that it is a town where everybody is afraid to say anything.

A. They spent \$16,000 to come here once, to sit in on the telephone, and they got nothing only a bigger raise than they expected. So, they have learned a lesson, not to come back.

Q. Besides the water rates, have you anything to say to the Committee?

A. Yes, sir, but I want to know if the Committee will find, or isn't it proper for this Committee to find out who pays this \$66 a year dividend to this same company?

Q. We are going into the—

A. I know, sir, but I am asking.

Q. Just a moment. We are going into the question of the return paid by various water companies. That will be the subject of late inquiry. So, you may rest assured on that. Now what else have you beside the water situation, Mr. McCloskey?

A. Just a minute. I want this Committee to know that between 1920 and 1926, they were granted one raise in 1920, which I showed you was equivalent to 200 per cent, on the fire plugs, and they come back in 1926, when property was naturally lower in value in 1926, than it was in 1922, wasn't it, or 1920? Everyone knows that that property was—the only thing that allowed the valuation to increase was the increased earnings, wasn't it, that were granted by the Public Service Commission? That made the value. Now, I want to be prepared—the reason I asked this Committee to find out this is when they come here next year for a raise, which they will, they are building a dam and they will come back here, instead of the people having to spend the money, the people that are working there, they can't come down here, I think the Committee should know now, in time, if they raise them. If there was any value, they should go into it and find out and ask them to reduce those rates to where they were in 1919.

Q. Mr. McCloskey, you understand this is not a committee that has any jurisdiction over rates at all.

A. I understand though that this is the only committee we will ever get a chance to tell this to. There is no use going to the Public Service Commission, we know that. It will cost us fare to come down here and everything, and this is the only chance you will have to get it.

MR. EVANS: We want to get all the facts in regard to the situation, but we can not regulate rates.

MR. TURNER: I am sure we appreciate the compliment.

BY MR. EVANS:

Q. Now, Mr. McCloskey, what else have you got?

A. The Johnstown Telephone Company was handled in almost similar fashion. They gave stock dividends each and

every year, or every other year, they gave you a stock dividend on the telephone, they came down here and raised the telephone rates. The city had granted them a charter for free telephone service, give them the charter free, and the Public Service Commission ruled, at least the telephone company said the Public Service Commission said you have to charge the city for those telephones that they are using. They then went to them and charged them about 28 hundred or three thousand dollars a year for telephones which they got for nothing. They were granted the increase in rates, and the people spent \$16,000, the City of Johnstown and boroughs, to come down to the Public Service Commission, and after the telephone case the management of the telephone company told them that if they complained about their raising the business telephones, they would later raise the residence phones, which they did.

If you are in a—then, they take and they sell this concern out to the Pennsylvania Telephone System. How much they got for the stock, we don't know. I know what they are supposed to get, and what I want the Committee to find out, to say also when we came back, from that raise, when they say that they paid \$10,000,000 for the concern, or not, I want the Committee to ask the Pennsylvania Telephone Company to tell them what they have charged on their books for it, while it is fresh in our minds, now, when we can get it. I know what they paid for it, what the people got for their stock, but I want to know what they have got charged on the books, so when they come to the utilities for another raise on their valuation.

Q. The Johnstown Telephone Company is not a Bell system, is it?

A. No, sir. They wouldn't even connect you from Greensburg, which is 44 miles, for some misunderstanding between the companies, if you were in Greensburg and you have a telephone in Johnstown, they will not connect you on it, never would, they won't connect you.

BY FATHER COX:

Q. What company exercises the greatest influence in Johnstown, in the way of intimidating? You said if somebody came down to complain,—

A. The Bethlehem Steel Company.

Q. Who it at the head of that?

A. The proposal for this turning this water stock over came on Bethlehem Steel Company literature, signed Eugene Grace, Charlie Schwab is naturally the domineering of it all.

Q. That is what I wanted to hear you say.

A. Yes, sir. They own 51 per cent in this water company. They had owned 51 per cent of it, and then they come and took the rest of it, because the water they have to use for their furnaces has so much sulphur in it that it eats out the boilers. I suppose after a while they will give us the sulphur water to drink, it won't be so hard on us, tell us it is better for our system, after they own it all.

They didn't get all this company, mind. There is still minority stockholders who still naturally receive \$7.50 on the stock they own. But if they turn it in and take the new stock, they could receive \$64.

BY MR. EVANS:

Q. Was the Johnstown Telephone Company owned locally before this recent merger?

A. Yes, sir.

Q. What interests were dominating in that, if you know?

A. Ed. Shade is the president, and the stock was put in the First National Bank, and it hung fire, the Bell system or somebody, the stockholders figured they could get \$200 a share for their stock, if they would sell it, but for some unknown reason they held the deal up, and held it up and held it up, and finally you deposited your stock in the First National Bank of Johnstown for \$130 a share. How much the Pennsylvania system paid or how much they got it charged at on their books, I haven't been able to find out. That is what I want to try to do while I am here before this Committee.

Q. Now, besides these two incidents, what else have you to say to the Committee?

A. The electric light furnishes light to the City of Johnstown. I pay 10 cents a kilowatt.

Q. What is the name of the electric light company?

A. Associated Gas and Electric.

Q. Is there a local company?

A. No. It was the Penn Public. It was a local and then sold to the Penn Public, and then they raised it and turned it over to the Associated Gas.

Q. How many kilowatt hours do you have to pay 10 cents a kilowatt hour on?

A. 50.

Q. For the first 50, and then what is the rate for the next?

A. About 9, I think, or 8. 8, I think. You see, you pay 10 cents, and then they give you, of course, the five per cent reduction, if you pay it today. If you pay it tomorrow you pay 10. You know, they have their day. They used to send the bills out on a regular day. You knowed when your bill was coming, if it was the 15th of the month or the 1st. Now, going back to the telephone, now they sent it out from Erie, you get your bill, nobody pays at a regular time any more, you pay yours today and somebody else tomorrow, and to make bookkeeping handy for themselves, they tell you when they send the bills.

Q. There isn't any penalty on the telephone bills, is there?

A. Oh, yes indeed, there is.

Q. Is there a penalty on the telephone bills?

A. If you don't pay them, you bet there is.

Q. What is that penalty?

A. I don't recall just what that penalty is. I should know. I always try to get under the wire.

Q. What is the minimum charge for electric service per month, or isn't there a minimum charge?

A. Yes, sir. I was paying this 10 cent rate till one month ago, they came and gave me a flat rate, which will run me, I think, about \$3.14 or \$4.14 now, where I used to pay seven and eight. They agreed to give it to me. Now they will give me this. For some reason, I don't know what. I have been paying it for some years and didn't know it. Now, since this investigation started, it seems everybody is waking up and knowing that you can get something that you were not getting before. I paid 10 cents a kilowatt hour for the first 50 on a motor in a dry cleaning plant. They now give it to me for six cents.

Q. Was this a new schedule of rates that has been filed?

A. No. They give it to me for six, providing I put in another meter. I have, I guess, four lights—we just work day-light—but I put another motor in and pay the minimum meter charge for those lights I don't use, and they will give me the rate on the motor for six cents; but as long as the motor is in there I pay the lighting rate for the whole motor, whether I use it or not.

BY MR. RHODES:

Q. Are you in the cleaning business?

A. Yes, sir.

Q. Aren't you afraid that they might try to get you some way?

A. I am one fellow that they can do as they please with.

BY MR. EVANS:

Q. Is there anything else you want to say to the Committee?

A. Yes, sir.

Q. All right.

A. This electric light company, where they furnish lights to the City of Johnstown, they charge a flat rate. They put the globes in. They have got a flat rate charge. They leave them in until they burn out. Any electrical engineering school will tell you that a globe isn't as good after it is burned out, or when it is burned for two or three or four thousand hours, as it was when it was put in. If you sign up and you get four or five or 1500 candlepower—they have come to do that. There should be some sliding scale. The lights are burning out. They leave them in until they burn out.

BY MR. TURNER:

Q. Do you get free lamps if you exchange them?

A. They furnish the lights. They raised it; the city council went with them, and we pay \$1209, and have 31 lights. They took and changed them, and signed a contract with the company to do that; 19 of them, 120 apiece, and 12 of them 100; that's \$3,480. The minimum—the meter charge would be \$1636, I think, if they were on a meter, but they are on a flat rate, which we have, \$3,480, and they leave them in there until they burn out. They never change them.

BY MR. EVANS:

Q. Were those rates increased?

A. This was a change of the lights that the city council did. That was no raise. They just changed the lighting system between themselves, and they put this in. They took the line out—they took three of them four lines—I will tell you now, if you want to use the carbon lights that the city have, which they furnished those lights for \$50, they now tell you that those lights are no longer made, and they put in 10-60 power lights, which was 690. They had three arc lights previously. Now, if you want to go back and get one of those arc lights for a district, they tell you they don't make them no more. Even the three they took back, they tell you they can't get them.

They get the gas from Pittsburgh; I don't know just what the test is supposed to be; I think it is one yard of gas to one pound of pressure; one foot of gas to one pound of pressure; I think that's it, and we get eight inches of air, and four inches of gas, and there is no way of testing it. If we come up to the Public Service Commission—as I stated before, these men are working men, and they can't come in. Council wouldn't come in, the mayor wouldn't come; nobody would appear for them. Surely, the Commission or the Legislature or someone should have some way of reducing it.

If you give me an investigator to go with me for three weeks, and give him access or authority to get at these books, he will come back here with enough in two weeks—if you will grant immunity to one or two people who will tell; I don't want to get in the position that Mr. Farr was here, you see, and when your investigator comes back, I think you can begin to open your jail doors; I feel sure you can, if you give me an investigator to go with me. I am not a bookkeeper or anything, but I can find these things out without access to the books. They won't leave you have them. If you will give me an investigator, and give me access to the books, I will come back with the news. I think, also, that these utility rates should be cut back to where they were in 1919.

Q. What is the name of the gas company that serves Johnstown?

A. The Associated. They buy it from some other company, and a 50 cent ready to serve charge, because they have some kind of an agreement. The Public Service Commission cancelled all agreements that the City of Johnstown has made with any utility. They come and tell you that the Public Service Commission no longer allows it and they cancel it.

When I was in New York, I spent quite a lot of time around Wall Street, and it is the general, common talk around Wall Street of buying public service utilities of Pennsylvania, because of the raising of the meter rates; the raising of utility rates, and everything else, and the epidemic spread from Pennsylvania. If you go to Wall Street, you will find it is the common talk: "Buy in Pennsylvania."

Q. Isn't the Johnstown Gas Supply a natural gas supply, or is it an artificial gas supply?

A. I wouldn't know, sir. I think they have two relays of pumping on that system. I think they pump from Pittsburgh, and then pump from another place. That is why I ask you, if you will give me an investigator to go with me, who has the power to find these things out; then it might be interesting for you to know it; they may not need to know it.

Q. Is there anything else you wish to say to the Committee?

A. No; not as I know of.

BY MR. RHODES:

Q. Why don't the city officials come in here, and tell us this story?

A. That is the system. That's the Bethlehem Steel Company system. You have a thousand employees there, which would mean there are four or five thousand, and you have three or four hundred with the Associated Gas.

Q. But your city officials are not subservient to the Bethlehem Steel Company, are they?

A. They can't afford to speak out of turn. They have taken everything that they didn't want; everything the Bethlehem Steel Company didn't want, they turned over to them. The utilities and the greatest political machine is there right in Johnstown.

The University of Pittsburgh, it might interest you to know; I don't know if all colleges do it; but the University of Pittsburgh has a branch teaching utilities right in Johnstown. They have a teacher there for utilities.

BY MR. RICHARDS:

Q. What do you mean; teaching what?

A. I don't know. It is utilities; in the interest of the utilities. That is what I want to find out.

Q. You people are not always quiet in Johnstown; didn't you put your mayor in jail a couple of years ago?

A. Well, I guess I will have to take the blame for that. Yes, sir; I guess I was the cause of that. As I say, if you give me an investigator, I think you can open the jail doors for plenty more because, you know, there was no reason for granting an increase of 20 to 26, with the property depreciating. There was something wrong. If they come back, the Public Service Commission will allow them another grant.

BY MR. TURNER:

Q. Maybe they didn't get enough in the first place.

A. That's natural, but I think this Committee will offer immunity to those who are in those deals, I think you can get some of them. I think with an investigator, I can force one of them to come in and tell. There are some things that might interest you to know about the Public Service Commission and these rates.

BY MR. RICHARDS:

Q. You are not charging any collusion on the part of the Commission?

A. I am not going to act as Mr. Farr did, but I am going to ask you to give me an investigator with power to find out.

BY MR. RHODES:

Q. This Committee does not have the power to do that, does it?

A. Well, the Committee is beginning, and I think they ought to finish, and they should get that power. You can't expect a man who is working in a mill for a company to go out and say something about the water rates, or he will lose his job. There should be some investigating committee sent from here to do that. There is nobody working there now. They are all out of work.

BY MR. MOORE:

Is there anyone here from Johnstown representing the city officially?

MR. EVANS: We have a letter signed O. W. Saylor, Mayor of Johnstown, addressed to Mr. Richards, in which he says "The city of Johnstown has no formal complaint to make but we will be represented at your meeting on Thursday by Mr. Calvin Oberdorf, Superintendent of Accounts, Mr. H. E. Wilson, City Engineer, and myself. Signed. Very truly, O. W. Saylor."

MR. EVANS: We have a telegram from the city of Pottsville requesting that they be given an opportunity to be heard tomorrow morning, that they were unable to be here today. If that is satisfactory, I suggest that we give them an opportunity to appear then.

We also have a number of municipalities that were unable to be present. I would suggest that these letters be noted on the record and the letters filed in the correspondence file so that it will appear that they were received.

There is a letter from Union City Borough.

A telegram from Derry Borough Council.

A letter from the borough of Northumberland.

A letter from the city of DuBois.

A letter from the borough of Elizabeth.

A letter from the Secretary to the Mayor of Allentown, saying that owing to poor health, he will be unable to be present.

A letter from the Mayor of Lock Haven.

A letter from the solicitor of the city of New Castle.

We have several letters addressed to Mr. Turner that are apparently from associations rather than boroughs, are they not Mr. Turner?

MR. TURNER: Pertaining to the water situation.

MR. EVANS: We have a letter from the attorney for the borough of Parkesburg.

A letter from the borough of McDonald.

A letter from the borough of Fountain Hill.

A letter from Galletzin borough.

A letter from the borough of Arnold.

A letter from the borough of Creston.

A letter from the borough of Wesleyville.

A letter from the city of Bethlehem.

We have here what is entitled a bill of complaint from the counsel of the borough of Conshohocken.

We have a similar paper from the merchants and citizens of Conshohocken, including the First National Bank and the Tradesman National Bank of Conshohocken regarding their electric light rates.

We have a letter from the borough of Bravosburg.

MR. RICHARDS: There is also a letter from the Mayor of the city of Philadelphia stating that he had nothing to lay before the Committee.

MR. HAGMAIER: There is one from the allied boards of trade of Pittsburgh, and one or two more I have here which I will turn over to you.

MR. EVANS: We now propose to go on with data in regard to the rate of return earned by the electric light companies of the State, if the Committee is ready.

WILLIAM W. COLLEDGE sworn.

BY MR. EVANS:

Q. Where do you live Mr. Colledge?

A. Oakmont, Pa.

Q. What is your occupation?

A. Certified Public Accountant.

Q. Will you state briefly to the Committee your experience as an accountant?

A. I have been practicing Public Accounting for fifteen years, ten years of which I was engaged considerably in public utilities work. The rest of the time I was engaged in general practice.

Q. Are you now in business for yourself?

A. Yes, sir.

Q. And under what name?

A. Colledge and Marshall.

Q. What is your office address?

A. Our office address is room 1508 Law and Finance Bldg., Pittsburgh.

Q. You did some work for the State of Pennsylvania during the Fisher Administration?

A. Yes, sir.

Q. What work was that?

A. In 1927 I was at that time with Main and Company. We were engaged in an audit of the various departments and bureaus of the State. I was particularly engaged in auditing the State medical hospitals and the feeble minded institutions. We made considerable investigation and audit of these institutions at that time and rendered full reports on them.

Q. Have you made an investigation, Mr. Colledge, of the reports filed by the Electric Companies of Pennsylvania with the Public Service Commission for the year 1929?

A. Yes, sir.

Q. Have you prepared a statement showing the rate of return earned by these companies on their fixed capital?

A. Yes, sir.

Q. May I see a copy of that statement. I show you a statement consisting of two sheets "Earnings of Class A and Class B Electric Companies of Pennsylvania, 1929, Reports to Public Service Commission," and ask you whether that is the statement to which you refer?

A. Yes, sir.

A. Yes.

Q. That was figured by you under your direction?

A. Under my direction.

EARNING OF CLASS A AND B ELECTRIC COMPANIES, PENNSYLVANIA, 1929 REPORTS, TO PUBLIC SERVICE COMMISSION PRODUCED AND MARKED EXHIBIT NO. 2.

#### EARNINGS OF CLASS A AND B ELECTRIC COMPANIES, PENNSYLVANIA

##### 1929 Reports to Public Service Commission

Page No.	Name	Over-all Return	Per Cent Over 7%	Holding or Controlling Co.
1	Abington Electric Company .....	28.5 %	307.00%	Republic Service Corporation

## BY MR. EVANS:

Q. Mr. Colledge, in this statement I notice the name of a number of electric light companies. Are these all of the Class A and B electric companies reporting to the Public Service Commission in Pennsylvania?

A. No, they cover fifty-three companies, for all of which we were able to prepare reports from the data at hand.

Q. And do you know how many companies there are all together reporting to the Commission in Class A and B?

A. No, I cannot tell you.

Q. In column 3 of this statement, I notice a heading, "over-all returns," with a number of percentages. Will you explain briefly to the Committee what those percentages mean?

A. Those percentages mean that fifty-two of the companies shown earnings of about 7%; eleven of the fifty-two show earnings of less than 10% on book figures; seven of the eleven show deficiencies, and the other forty-two show earnings between seven and eight per cent; thirty-nine show earnings of eight per cent or above; thirty-five show earnings of nine per cent or above; thirty-two show earnings of ten per cent or above; eighteen show fourteen per cent or above; eleven show twenty-one per cent or above and twelve show earnings of fifty per cent or above.

Q. Now, assuming that the companies are entitled to a seven per cent return on fixed capital, what percentage over this returns are these companies earning, if any?

A. Thirty show earnings of twenty per cent higher than seven per cent; thirty-three show earnings thirty-three per cent higher than seven; twenty-nine show earnings fifty per cent higher than seven; and twenty-three show earnings sixty-six per cent higher than seven; twenty show earnings eighty per cent higher than seven; eighteen show earnings one hundred per cent higher than seven; fifteen show earnings one hundred fifty per cent higher than seven; eleven show two hundred per cent higher than seven; six show over three hundred per cent higher than seven; and three over five hundred per cent higher than seven.

Q. In other words, taking the Abington Electric Company, which shows an over-all return of 28.5%, that is a little more than four times the seven per cent which the Commission allows.

A. Yes.

Q. And therefore you show that that is three hundred seven per cent over the seven per cent basis.

A. That is right.

Q. Now, in the last column there is a heading, "Holding or Controlling Companies," I assume that that means that each of these companies in Column 2 is owned or controlled by the companies given in the last column?

A. Yes.

Q. Now, you say these figures were compiled entirely from the reports filed by these several companies with the Public Service Commission for the year 1929?

A. Yes, the annual report for the year 1929, as filed with the Commission.

Q. Now, how do you reach the investment basis for the purpose of these calculations?

A. We took the fixed capital at the end of the year as shown by the reports, deducted therefrom the amount of construction work in progress, which we considered the company was not entitled to earn upon until it was placed in service, and we took it that that is what the figures on construction work in progress mean, and from that result we deducted reserve for repairs and renewals, which gave us the net depreciated value on the fixed capital at the end of the year. We then took the gross operating revenue as reported by the companies and deducted therefrom the actual operating expenses as stated by the Public Service Commission, that is, to include all items as specified by the Public Service Commission, which gave us the net operating income, and from this we deducted in certain cases rentals paid by the companies for property that they were operating under lease. In the statement that you have before you, known as Exhibit No. 2, you will notice under certain of the percentages in the third column a percentage in parentheses. Those companies were the ones that we allowed rentals, and the second percentage is the one without allowing the rentals as a reduction.

Q. In other words, in some cases a company was paying rentals, and you deducted not only the operating expenses, but also these rentals in arriving at your net revenue figures?

A. That is right, net income figures.

Q. Net income figures, correct.

A. Then, in this operating income that we arrived at by dividing the net depreciated value on the fixed assets, it gives the percentages that you have before you in the third column of this statement.

Q. When you say the depreciated assets, you mean fixed capital less construction work, after the deduction of reserves for repairs and rentals?

A. Yes.

Q. Did you find any evidence that in any of the companies there was any inflation either of the fixed capital or of the operating expenses?

A. In the fixed capital, yes. As to the operating expenses we were unable to tell much about the contents of the various accounts as shown, so we could not say for sure that there was any inflation of the operating expenses, and as to the fixed capital, there may have been inflation in others, but we were unable to determine that for the reason that in a great many cases, prior to the installation of the uniform system of accounts, the fixed capital prior to that date was shown in a lump sum, no analysis of that figure being given, and for that reason we were unable to tell whether there was any inflation in that figure.

Q. But in this exhibit you have accepted the company's own figures without any deductions for possible inflation?

A. Yes, sir.

Q. And if you had made allowances for inflation either in the fixed capital or in the operating expense, the percentages in Column 3 would have been increased, would they not?

A. Yes, sir, in some cases.

Q. I mean wherever you found such it would be increased?

A. Yes.

Q. Now, I think you said you took the total fixed capital at the end of the year. If you had taken the average fixed capital during the year, would the percentage of return have been increased or decreased?

A. In most cases.

Q. They would have been increased?

A. Increased, the percentages would have been increased in most cases.

Q. In other words, you have given the company the benefit of construction during the year which had been completed by the end of the year?

A. Yes, and placed in service during the year.

Q. Why did you take the figure of seven per cent. as your basis of comparison?

A. That appears to be a rule of the commission to allow seven per cent. on the value of the company's plant.

Q. In some cases the commission allows less than seven per cent. on account of the Federal income tax, does it not?

A. Yes.

Q. But you have included the Federal income tax as an operating expense in this exhibit?

A. Yes, we haven't taken that out of the operating expenses.

Q. So that in all of these cases you have given the company the benefit of the doubt?

A. Yes.

Q. Now, Mr. Colledge, where there is a low overall return shown on this exhibit, does that necessarily mean that the company is earning little on its actual investment?

A. No, sir.

Q. Will you explain why not?

A. It means that they might have earned a higher percentage. Wait a minute. Let me study that a little bit.

Q. In other words, what I wanted to bring out is this, if, for instance, taking the Clarion River situation as presented to the Federal Trade Commission, if that company had an investment of \$4,000,000 and showed on its books \$11,000,000, and such a situation appeared in this exhibit, what then would be shown on your sheet here as to the rate of return?

A. The rate of return would be higher. It would not necessarily mean that they were not earning a fair return due to the fact that they were carrying their fixed capital at a higher figure than it really amounts to.

Q. Now, does the item fixed capital as used in the uniform system of accounts necessarily include only property which is devoted to the public service?

A. Not necessarily, no, sir.

Q. It may include property of a non-utility character, may it not?

A. Yes, sir.

Q. And if such property is included here under the heading of fixed capital, what effect does that have on the overall return which you have shown?

A. It tends to make the rate of return lower.

Q. Now, you have prepared a chart showing 37 of these companies, I think, have you not?

A. Yes, sir. The information on others was not available at the time, so we just used the 37 companies.

MR. TURNER: Did you pick those out at random, or was that all you could get at?

THE WITNESS: These were really all we could prepare reports for at this time.

BY MR. EVANS:

Q. It was a question of time, not being able to get the data?

A. Yes.

MR. TURNER: You didn't make any particular selection?

THE WITNESS: No, sir. We just took them as we came to them.

BY MR. EVANS:

Q. Have you got that chart here in the room?

A. Yes, sir, it is out in the anteroom there.

MR. TURNER: May I ask this question? Might there be a property valuation greater than the amount of invested capital shown in any case?

MR. EVANS: It does not show, Mr. Turner, valuations at all. This shows the company's book values.

MR. TURNER: I understand, yes; that is, their invested capital value, as I understand it, or is it, book value as they carry it?

THE WITNESS: It is book value as they carry it on their own books.

MR. TURNER: I might carry a property on my books at \$5,000 but it might be worth a great deal more than that.

MR. EVANS: You would not carry it on your books at \$5,000 if you paid \$10,000 for it.

MR. TURNER: No. That is what I am trying to get at. (Chart entitled "Electric Company Earnings 1929 according to their reports to the Public Service Commission," marked "Exhibit Colledge No. 3, March 12, 1931.")

BY MR. EVANS:

Q. Now, Mr. Colledge, turning first to the figures about a quarter of the way up the chart, in the small circles, will you explain to the committee what those refer to?

A. Those are the codes for the companies included on the chart.

Q. And they correspond with the numbers on Exhibit No. 2?

A. No.

Q. Do they not?

A. No. I have the index here.

Q. I see. Those numbers do not correspond to the Exhibit 2? I thought they did.

A. In some cases they do, but not all.

Q. Well then, taking the portion of the chart in black at the bottom, as I understand it, that represents the seven per cent. return as shown on the right-hand side of the chart?

A. Yes, sir.

Q. And you use that as a basis of 100 in your calculations?

A. Yes, sir.

Q. Then at the left-hand side of the chart are a series of numbers which I understand indicate percentages on the base of 100 at the bottom?

A. Yes.

Q. And the figures on the right-hand side of the chart indicate the percentage of return on the overall investment?

A. Yes, sir.

Q. Now, taking the column marked No. 1, I notice it goes all the way up to 400 per cent., and there ends in a point. What does that indicate?

A. That indicates that that company's earnings ran over 400 per cent. above the 7 per cent.

Q. And the chart does not attempt to carry it out to a higher percentage than 400?

A. No, sir.

Q. And now, the next column apparently stops at about 370, or thereabouts, and that indicates its return was 370 per cent. over the seven per cent. return?

A. About that, as between 350 and 375.

Q. Now, will you take up these companies, and indicate which companies the various columns refer to, starting with No. 1 and going right through?

MR. EVANS: I think if the committee cares to, it may be a convenience to them to indicate on Exhibit No. 3 each of these companies that are shown.

THE WITNESS: No. 1 appears as No. 1 on your copy, which is the Abington Electric Company. That shows 28.5 per cent.; 28.5 per cent.

No. 2, shown as No. 3 on your copy, is the Barnesboro-Spangler Electric Company.

No. 3 appears as No. 4 on your copy, Bedford Electric Light, Heat and Power Company.

No. 4 appears as No. 5 on your copy, Bradford Electric Company.

No. 6 appears as No. 5-A on your copy, Brockway Heat, Light and Power Company.

BY MR. TURNER:

Q. You said No. 6. Where is No. 5?

A. I haven't hit that. Wait a minute, I think I better take them in numerical order.

No. 5 appears as No. 44 on your list, on the second page, as Scranton Electric Company.

Then, we will take No. 6, which is 5-A, Brockway Light, Heat and Power Company.

No. 7 appears as No. 7, Carlisle Gas & Water Company.

No. 8, is No. 9 on your list, Citizens Electric Company of Lewisburg.

No. 9 appears as No. 12, Cresson Electric Light Company.

No. 10 appears as No. 11, Culver Electric Power Company.

No. 11 appears as 13, Delta Electric Power Company.

No. 12 appears as No. 14, Delta Water Power Company.

No. 13 appears as 16, Edison Electric Company of Lancaster.

No. 14 is No. 17 on your list, Edison Light and Power Company.

No. 15 is No. 19, Erie County Electric Company.

No. 16 is No. 21, Fleetwood and Kutztown Electric Light, Heat and Power Company.

No. 17 is No. 22, Glen Rock Electric Light and Power Company.

No. 18 is No. 25, Keystone Public Service Company.

No. 19 is No. 24, Hershey Electric Company.

No. 20 is No. 27, Lehigh Electric Heat and Power Company.

No. 21 is 29, Mauch Chunk Heat, Power and Electric Light Company.

No. 22 is No. 30, Metropolitan Edison Company.

No. 23 is No. 31, Natrona Light and Power Company. You will notice that there is a considerable difference between the percentages here. One with the rentals deducted give 69.65, and with the rentals not deducted gives 108.14. The rental is pretty high there.

No. 24 appears as No. 33, Palmerton Electric Light Company.

No. 26 is No. 37, Trenton Water and Power Company.

No. 27 is No. 41, Portage Light and Power Company.

No. 27 is No. 45, Shippensburg Gas and Electric.

No. 29 is No. 47, South Penn Power.

No. 30 is No. 46, Solar Electric Company.

No. 31 is No. 48, Southern Pennsylvania Power Company.

No. 32 is No. 50, Wellsboro Electric Company.

No. 33 is No. 51, West End Power Company.

No. 34 is No. 52, Windber Electric Corporation.

No. 35, goes back to page 1, No. 15; Duquesne Light Company.

No. 36 is No. 40, Philadelphia Electric Company, which includes the Philadelphia Suburban Counties.

No. 37 is No. 38, Pennsylvania Power and Light Company.

MR. TURNER: There are still some that are not included there. Does not the chart include all of those on the list?

MR. EVANS: No; there are 53 on the list and 37 on the chart.

BY MR. EVANS:

Q. I notice in the first column, that it is carried up in the chart to the 400 mark, and on Exhibit 3 the Abington Electric Company shows a percentage of over seven per cent. I take it that that is a mistake in the chart, which ought to be corrected is it not? There has been, I take it, confusion between putting the four times seven per cent. return, instead of the 300 per cent. more than that?

A. That is correct.

Q. That correction in the chart, then, will be made. Taking the Abington Electric Company as a typical example, can you or are you now ready to give the figures on which the percentages are based, or have you done something else you want to give to the committee first?

A. No; I don't think the chart needs any further explanation on my part.

BY MR. RHODES:

Q. I want to ask one question, on the right-hand side, doesn't that indicate the over-all return?

A. Yes, sir.

Q. Then the electric company had an over-all return of twenty-eight and one-half per cent.?

A. 28.5.

MR. EVANS: It is four times the seven per cent., Mr. Rhode, and it is three hundred per cent. over the seven per cent. I thought the right-hand figures indicated the over-all returns?

THE WITNESS: It does.

BY MR. EVANS:

Q. The Abington Electric Company had twenty-eight and one-half per cent.?

A. Yes, sir.

The base line is 100, so you have to deduct 100 per cent. from the figures on the left in order to get the right percentage?

A. That is right.

Q. Now then, Mr. Colledge, have you prepared a statement comparable to Exhibit 2, and dividing the companies in accordance with the holding companies that control the operating companies?

A. Yes sir.

Q. And that is the Exhibit headed "Earnings of Electric, 1929, According to Their Reports to the Public Service Commission for the year 1929?"

A. Yes sir.

MR. EVANS: We now offer that in evidence as Exhibit No. 4.

(Exhibit No. 4 was identified by the Official Reporter).

## BY MR. EVANS:

Q. Now, Mr. Colledge, as I understand it, this Exhibit shows exactly the same data as on the Exhibit 2, except that for the convenience of the committee the companies are grouped according to the system to which they belong.

A. Yes sir.

Q. Now then, turning to the Abington Electric Company, have you got the basic data on which these figures are based?

A. Yes sir.

Q. Will you give that to the committee, first giving the total fixed capital, and so forth?

A. The total fixed capital at the end of the year for the Abington Electric Company, as shown by the 1929 report to the Commission, was \$243,816.61. I might explain, that is the gross figure that their reports show. From that is deducted construction work in progress at the end of the year amounting to \$17,869.07. That gives a net of \$225,947.52. The report showed a reserve for renewals and replacements carried by charges to operating expenses of \$34,112.88, which gives a net or a depreciated value of \$191,834.64. The net operating income as shown by the company's report for the year 1929 was \$54,742.54. Dividing the depreciated book value of the fixed capital of \$191,834.64, into the net income of \$54,742.54, gives a percentage of over-all return of 28.53.

Q. Which corresponds with the figure 28.5 shown on Figure 2.

A. Yes sir.

Q. Now the next company that you have, the Barnesboro-Spangler Electric Light Company?

A. By its report to the Commission for the six months ending June 30, 1929, it showed a total fixed capital value of \$433,933.46, from which we deducted construction work in progress of \$740.39, leaving a net of \$433,193.07, from which we deducted a reserve for renewals and replacements amounting to \$316,085.80, giving us a depreciated book value of \$117,107.25. The report was for six months and showed a net operating income of \$15,091.81 which we placed on an annual basis by multiplying it by two, giving us an annual net income of \$30,183.62. Dividing the depreciated book value of fixed capital of \$117,107.25 into the operating income of \$30,183.62 giving us a figure of 25.77 per cent.

Q. Now will you take up the next company, which is the Bedford Electric Light Company, No. 3?

A. The Bedford Electric Light Company report to the Commission for three months of 1929 showed a total fixed capital of \$455,648.05, from which we deducted construction work in progress at the end of the period of \$258,474.11, which gave us a net figure of \$197,173.94, from which we deducted reserves for renewals and replacements amounting to \$21,099.90, giving us a depreciated book value of \$176,074.04. The company for the three months reported a net operating income of \$9,512.63, which we placed on an annual basis, giving us \$38,050.52. We then divided the depreciated book value of the fixed capital, \$176,074.04, into the \$38,050.52, which gave us a percentage of over-all return of 21.6%.

Q. The next one on the list is No. 4, the Bradford Electric Company?

A. The Bradford Electric Company in its report to the Commission for the year 1929, showed a total fixed capital at the end of the year, \$1,740,014.81, which included construction work in progress, which we deducted, of \$78,439.54, giving us a net figure of \$1,661,575.27. From this we deducted reserve for renewals and replacements, amounting to \$132,949.24, giving us depreciated book value of \$1,528,626.03. The net operat-

ing income as shown by the report for 1929 was \$204,954.95, dividing the depreciated book value of the fixed capital of \$1,528,626.03 into the net income of \$204,958.95, gave us a percentage of over all return of 13.4%.

Q. Now, the next on the chart is No. 6, the Brockway Light, Heat & Power Company?

A. The Brockway Light, Heat & Power Company in its report for the year 1929, reported total fixed capital of \$174,732.96, which included no construction work in progress, and we therefore deducted from the \$174,732.96, the reserve for renewals and replacements amounting to \$32,918.08, giving us depreciated book value of \$141,814.88. The company reported net operating income for the year 1929, of \$15,836.68, dividing the depreciated book value of fixed capital of \$141,814.88 into the net operating income of \$15,836.68, gave us a per cent. of over-all return amounting to 11.16%.

Q. The next is the Carlisle Gas & Power Company. I assume in spite of its name it also has an electric business.

A. The Carlisle Gas & Power Company has reported to the Commission in its report for the year 1929 total fixed capital of \$1,748,687.46, which included construction work in progress amounting to \$16,122.60, which we deducted, giving us a net figure of \$1,732,564.86, from which we deducted reserve for renewals and replacements as shown by the report of \$482,030.74, giving us depreciated book value of \$1,250,534.12. The company in its report for the year 1929 reported operating income of \$145,552.87. Dividing the depreciated book value, \$1,250,534.12 into the operating income of \$145,552.87 gave us a per cent. of over-all returns of 11.64%.

Q. No. 8, The Citizens Electric Company of Lewisburg?

A. The Citizens Electric Company of Lewisburg in its report to the Commission for the year 1929 reported fixed capital of \$152,975.36, which included no construction work in progress, and we therefore deducted from this figure, reserve for renewals and replacements as shown by the report of \$34,388.46, giving us a depreciated book value of \$98,586.90. The company reported in its report for the year 1929, net operating of \$19,712.66, dividing the depreciated book value of the fixed capital into the figure of \$19,712.66 it gave us a per cent. of over-all return amounting to thirty per cent.

Q. The Colver Electric Company is No. 10.

A. The Colver Electric Company reported to the Commission in its 1929 annual report a total fixed capital at the end of the year, \$49,052.92, which included no construction work in progress, and we deducted from this figure reserve for renewals and replacements, amounting to \$18,255.32, as shown by the report, given us a depreciated book value of \$31,267.60. The Company in its report for the year 1929 gave a net operating income of \$2,685.69, dividing the depreciated book value of the fixed capital into the net operating income as stated, gave us a per cent. for over-all return of 8.59%.

Q. The Cresson Electric Light Company, that is No. 9.

A. The Cresson Electric Light Company in its report to the Commission for the year 1929 reported total fixed capital at the end of the year of \$56,380.29, which included no construction work in progress, and we deducted from that figure reserve for renewals and replacements, \$23,953.84, which gave us depreciated book value of \$52,436.45. The company in its report for the year 1929, reported net operating income of \$16,798.80, dividing the depreciated book value as above given into the operating income of \$16,789.80, we reach the per cent. of over-all return of 51.8%.

Q. No. 11, the Delta Electric Power Company.

A. The Delta Electric Power Company, in its report to the commission for the year 1929, reported total fixed capital at the end of the year of \$101,621.28, which included construction work in progress of \$10.10, which we deducted, giving us a net figure of \$101,611.18, from which we deducted the reserve for renewals and replacements as shown by the report of \$12,987.08. This gave us the depreciated book value of the fixed capital of \$88,624.10. The company in its report for the year 1929, reported net operating income of \$13,578.81. Dividing the depreciated book value of fixed assets as above given, into the operating income of \$13,578.81, gave us a per cent. of over-all return of 15.32 per cent.

Q. The 12th is the Delta Water Power Company.

A. The Delta Water Power Company in its report to the Commission for the year 1929, reported total fixed capital at the end of the year of \$146,896.05, which included construction work in progress of \$175.47, which we deducted, giving us a net figure of \$146,720.58. From this we deducted the reserve

for renewals and replacements amounting to \$19,524.62, which gave us the depreciated book value of \$127,195.96. The company reported in its report for the year 1929 net operating income of \$14,018.37. Dividing the depreciated book value as above given into the net operating income of \$14,018.37, we reached the per cent. of over-all return of 11.02 per cent.

Q. No. 13 is the Edison Electric Company of Lancaster.

A. The Edison Electric Company of Lancaster in its report for the year 1929 to the Commission showed total fixed capital at the end of the year amounting to \$8,891,801.05, which including construction work in progress of \$248,474.20, which we deducted, giving us a net figure of \$8,643,326.85. From this figure we deducted reserve for renewals and replacements amounting to \$1,249,893.96, which gave us the depreciated book value of \$7,393,432.89. The company reported net operating income for the year 1929 of \$1,149,594.66. As they were paying rents for lease of electric properties to some other company of \$15,468, we allowed this as a deduction in arriving at the net operating income of \$1,434,126.66. Dividing the depreciated book value of \$7,393,432.89 into the net operating income of \$1,434,126.66 gave us the per cent. of over-all return of 19.42 per cent.

Q. And if the rentals had not been deducted, that percentage would have been 19.6 per cent?

A. Yes, if we had not deducted the rent for lease of electric properties, it would have given us a per cent. of over-all return of 19.6 per cent.

Q. The next one is the fourteenth, the Edison Light and Power Company.

A. The Edison Light and Power Company of York, in its report for the year 1929 to the Commission, reported total fixed capital at the end of the year of \$3,488,405.55, which included construction work in progress of \$73,115.77. This we deducted, which gave us a net figure of \$3,415,289.78. From this we deducted the reserve for renewals and replacements as shown by the report amounting to \$1,321,037.56, giving us the depreciated book value of the fixed assets of \$2,094,252.22. The company in its report reported net operating income for the year 1929 of \$715,917.63. Dividing the depreciated book value of \$2,094,252.22 into the net operating income of \$715,917.63, we reached the per cent. of over-all return of 34.18 per cent.

Q. And No. 15, the Erie County Electric Company?

A. The Erie County Electric Company, in its report for the year 1929, to the Commission, reported total fixed capital at the end of the year of \$5,164,488.24, which included no construction work in progress, and we deducted from this figure reserve for renewals and replacements, as shown by the report, of \$806,655.16, which gave us the depreciated book value of fixed assets of \$4,357,833.08.

The company reported net operating income for the year 1929 of \$556,071.93, and also showed that it was paying rental for leases of electric properties of some other company of \$3,377.60. We deducted that, which gave us a net operating income, for our purposes, of \$552,694.33.

Dividing the depreciated book value of the fixed assets into the figure of \$552,694.33, we reached the percentage of over-all return of 12.76.

The item of rent for leases of electric properties, which we deducted, will make no change in the percentage of over-all return, if we had not allowed it.

Q. No. 16 is the Fleetwood and Kutztown Electric Light, Heat and Power Company?

A. The Fleetwood and Kutztown Electric Light, Heat and Power Company in its report for the year 1929 to the Commission reported total fixed capital at the end of the year of \$260,876.54, which included no construction work in progress, and we deducted from that figure reserve for renewals and replacements, as shown by the report, of \$18,596.00, which gave us a depreciated book value of the fixed assets of \$242,280.54. The company in its report for the year 1929 reported net operating income of \$49,132.51.

Dividing the depreciated book value of the fixed assets into the net operating income of \$49,132.51, gave us the percentage of over-all return of 20.27 per cent.

Q. No. 17 is the Glen Rock Electric Light and Power Company.

A. The Glen Rock Electric Light and Power Company, in its 1929 report to the commission, reported total fixed capital at the end of the year of \$499,189.87, which included no construction work in progress, and we deducted from that figure

the reserve for renewals and replacements, as shown by the report, of \$120,294.58. That gave us the depreciated book value of the fixed assets of \$378,895.29.

The company in its 1929 report reported net income for the year 1929 of \$62,066.90. Dividing the depreciated book value of the fixed assets into this figure of \$62,066.90 gave us a percentage of over-all return of 16.38.

Q. No. 18 is the Keystone Public Service Company?

A. The Keystone Public Service Company, in its 1929 annual report to the Commission, reported total fixed capital at the end of the year of \$4,610,688.61, which included construction work in progress of \$193,794.19, which gave us a net figure of \$4,416,894.42, from which we deducted the reserve for renewals and replacements, as shown by the report, amounting to \$762,738.02. This gave us the depreciated book value of the fixed assets of \$3,654,156.40.

The company reported for the year 1929 a net operating income of \$702,040.81. Dividing the depreciated book value of the fixed assets into the figure of \$702,040.81, we reached the percentage of over-all return of 19.21 per cent.

Q. No. 19, the Hershey Electric Company?

A. The Hershey Electric Company, in its 1929 annual report to the Commission, reported total fixed capital at the end of the year of \$228,339.98, which included no construction work in progress, and we deducted reserve for renewals and replacements, as shown by the report, amounting to \$76,147.55, and reached the depreciated book value of the fixed assets of \$152,252.43.

The company reported for the year 1929 net operating income of \$59,088.36. Dividing the depreciated book value of the fixed assets into the figure of \$59,088.36, we reached the percentage of over-all return of 38.75 per cent.

MR. HAGMAIER: Mr. Evans, does the Hershey Company supply any light to anybody else except their town or their own people there? Do they sell outside?

MR. EVANS: It is my understanding that they sell to the entire community; whether or not they have anything to do with the Hershey plant, I don't know.

MR. HAGMAIER: I am not positive of that.

MR. EVANS: No; I think not. I think it is local.

MR. TURNER: This testimony, as it has developed, it would seem to me that this is not a very fair case to take. As I understand it, those figures are on the books, but from the testimony I have heard in the Senate and read in the paper, this is hardly a case, because I understand there is no overhead paid, and much of the maintenance cost is paid by the Hershey Company, which is practically a co-operative company.

MR. EVANS: I am not prepared to say, Mr. Turner. I don't know all the details of the Hershey situation.

MR. TURNER: I understand that this study that you have here takes it as you have found it.

BY MR. EVANS:

Q. No. 20 is the Lehigh Electric Light and Power Company?

A. The Lehigh Electric Light and Power Company in its 1929 annual report to the Commission reported total fixed capital at the end of the year of \$201,963.09, which included construction work in progress of \$56.66, which we deducted, giving us a net figure of \$201,906.43. From this figure we deducted reserve for renewals and replacements, shown by the report, of \$55,865.57, which gave us the depreciated book value with the fixed assets of \$146,040.86.

The company reported a net operating income for the year 1929 of \$18,079.10.

They also reported paying for rent of the leases of electric properties, \$1,700.00, which we allowed as a deduction, which gave us the net operating income of \$16,379.10. Dividing the depreciated book value of the fixed assets of \$146,040.86 into the net income figure of \$16,379.10, we reached the percentage of over-all return of 11.21%.

Q. Was this that they paid rental for in equipment of property?

A. They paid rent for lease of electric property of \$1700. If this rent had not been deducted the per cent. of over-all return would have been over 12.3%.

Q. The next is the Mauch Chunk Heat, Power and Electric Light Company.

A. The Mauch Chunk Heat, Power and Electric Light Company in its annual report to the Commission reported a

total fixed capital valuation of \$204,034.27, which included no construction work in progress, and from which figure we deducted for renewals and replacements as shown by this report the sum of \$120,613.55, which gave us a depreciated book value of \$124,410.82. The company reported a net operating income for the year 1929 of \$29,186.55. Dividing the depreciated book value of the fixed assets into the operating income figure of \$29,186.55, we reached the percentage of over-all return of 23.45%.

Q. The next is the Metropolitan-Edison Company.

A. The Metropolitan-Edison Company for the year 1929 in their annual report to the Commission showed a fixed capital of \$62,177,759.45 which included no construction work in progress and we deducted from that figure the reserve for renewals and replacements as shown by the report of \$5,288,608.93, which gave us the depreciated book value on the fixed assets of \$56,879,150.52. The company reported the net operating income for the year 1929 as \$5,049,226.36. Dividing the depreciated book value of the fixed assets into the net operating income figures we reached the percentage of over-all return of 8.87%.

Q. Mr. Colledge just let me ask you there, suppose a company like the Metropolitan-Edison Company acquired the property of another utility company: does the purchase price paid for that company so acquired go into the total capital of the Metropolitan-Edison Company?

A. Yes.

Q. So that if any of these companies did acquire a property or other properties at high valuation that would go to increase their total fixed capital and thus decrease the over-all percentage of return?

A. Yes sir.

BY MR. TURNER:

Q. Do I understand these are not all holding company reports; these are the reports of local companies?

BY MR. EVANS:

Yes but the Metropolitan-Edison Company and many companies have actually bought the property of adjoining small companies from time to time. In doing that they are not holding companies at all, but are the actual buyers of the property, and it is that situation I have in mind. I think that is the case with the Metropolitan-Edison Company.

Q. Shall we now take up number 23, the Natrona Electric Light and Power Company?

A. The Natrona Light and Power Company in the 1929 annual report to the Commission reported a fixed capital at the end of the year of \$174,065.67, which included no construction work in progress and we deducted from that figure the reserve for renewals and replacements as shown by the report of \$107,583.02, which gave us a depreciated book value of the fixed capital of \$67,382.65. The company reported operating income for the 1929 of \$72,869, and reported rent paid for lease of electric property amounting to \$25,936.65, which we allowed as a deduction giving us a net operating income of \$46,932.35. Dividing the depreciated book value of the fixed capital of \$67,382.65 into the operating income figures of \$46,932.35, we have a percentage of over-all return of 69.65%. Had we not deducted the rent for lease of electric property amounting to \$25,936.65, the per cent. of over-all return obtained by dividing the depreciated book value into the figure of \$46,932.35 would have given us a percentage of over-all return of 108.14%.

Q. Does the report show at all from whom this property was leased?

A. No it does not specify. The report shows certain subsidiary companies over which they have control, but to show just who that was paid to we cannot tell.

Q. Let us take up now number 24, The Pennsylvania Power Company.

A. The Pennsylvania Power Company in its 1929 annual report to the Commission showed a total fixed valuation of \$7,960,724.84, which included no construction work in progress. We deducted from that figure the reserve for renewals and replacements as shown by their report of \$19,755.79, which gave up the depreciated book value of the fixed assets of \$7,940,969.05. The company reported net operating income for the year 1929 of \$761,317.76 and also reported paying rent for lease of electric property amounting to \$72,000, which we deducted, giving us a net operating income of \$689,317.76. Dividing the depreciated book value of the fixed capital into the

net operating figure of \$689,317.76 we reached a percentage of over-all return of 8.868%. Had we not had allowed \$72,000 rent for electric properties as a deduction, the per cent. would have been 9.58%.

Q. No. 25 is the Palmerton Light Company?

A. The Palmerton Light Company in its 1929 annual report to the Commission showed total fixed capital at the end of the year \$195,556.96, which included construction work in progress of \$11,430.50. We deducted this, which gave us a net figure of \$184,126.46. From this figure we deducted reserve for renewals and replacements as shown by the report of \$68,567.28, giving us the depreciated book value of fixed assets of \$115,559.18. The company reported net operating income for the year 1929 of \$28,011.33, and dividing the depreciated book value of the fixed assets into the net operating figure of \$28,011.33, we obtained the percentage of over-all return of 24.23%.

Q. No. 26, the Penn Water and Power Company?

A. The Penn Water and Power Company in its 1929 annual report to the Commission reported total fixed capital at the end of the year of \$28,333,845, which included construction work in progress amounting to \$842,856.60. This we deducted, which gave us a net figure of \$27,490,988.40, from which we deducted reserve for renewals and replacements as shown by the report of \$2,574,895.87. This gave us the depreciated book value of the fixed assets of \$29,916,092.53. The company reported net operating income for the year 1929 of \$2,490,866.13. Dividing the depreciated book value of the fixed assets into the net operating figure of \$2,490,866.13, we obtained the percentage of over-all return of 9.99%.

Q. No. 27, the Portage Light and Power Company?

A. The Portage Light and Power Company in a three-months report to the Commission, during the year 1929, reported total fixed capital at the end of the period of \$901,651.15, which included construction work in progress of \$6,573.00. This we deducted and obtained a net figure of \$103,077.25, from which we deducted reserve for renewals and replacements as shown by the report of \$50,390.30. This gave us the depreciated book value of the fixed assets of \$52,686.95. The company reported income for three months of the year, 1929, of \$5,985.19, which we placed on an annual basis and obtained annual income of \$23,940.76. Dividing the depreciated book value of the fixed assets of \$52,686.95, into the estimated net income figure of \$23,940.76, gave us a per cent. of over-all return of 45%.

Q. Mr. Colledge, can you explain why this report and some others are for less than a year?

A. For the reason that the companies were taken over by other companies, and their fixed assets and income for the balance of the year was merged with the company that took them over.

Q. No. 28, the Shippensburg Electric Company?

A. The Shippensburg Gas and Electric Company in a three-months report for the year 1929, showed total fixed capital at the end of the period of \$520,862.89, which includes construction work in progress of \$8,942.89. This we deducted which gave us a net figure of \$511,920.00. From this we deducted the reserve for renewals and replacements, as shown by the report of \$108,858.41 which gave us depreciated book value of the fixed assets of \$353,081.59. The company reported for the three-month period net operating income of \$10,505.85, which we placed on an annual basis, giving us an estimated operating income of \$42,023.40. Dividing the depreciated book value of the fixed assets into the net operating income of \$42,023.40 we obtained the per cent. of over-all return of 11.9%.

Q. No. 29, The South Penn Power Company?

A. The South Penn Power Company, in its 1929 annual report to the Commission reported fixed capital at the end of the year of \$1,099,562.96, which included construction work, in progress of \$985.83. This we deducted and we obtained a net figure of \$1,098,577.17. From which we deducted the reserve for renewals and replacements, as shown by the report of \$127,388.95, giving us a depreciated book value of the fixed assets of \$971,188.18. The company reported net operating income for the year 1929 of \$99,292.06. Dividing the depreciated book value of the fixed assets into the net operating figure of \$99,292.06, we obtained the per cent. of over-all return of 10.22 per cent.

Q. No. 30 is the Solar Electric Company?

A. The Solar Electric Company in its 1929 annual report to the commission reported total fixed capital of \$148,111.75,

which included no construction work in progress, and we deducted from that figure the reserve for renewals and replacements as shown by the report of \$66,651.90, and obtained the depreciated book value of the fixed capital of \$81,459.85. The company reported net operating income for the year 1929 of \$8,231.52. Dividing the depreciated book value of the fixed assets into the net operating income figure, we obtained the per cent. of over-all return of 10.1 per cent.

Q. Does the report show whether or not that Solar Electric Company purchases its current or generates it?

A. No. It probably does, in the figure of electric current purchased, but I —

Q. You do not have that data?

A. No.

Q. No. 31 is the Southern Pennsylvania Power Company?

A. The Southern Pennsylvania Power Company?

A. The Southern Pennsylvania Power Company in its 1929 annual report to the Commission reported total fixed capital at the end of the year of \$497,611.87, which included construction work in progress at the end of the year of \$11,071.40. This we deducted, which gave us a net figure of \$486,540.47. From this we took the reserve for renewals and replacements as shown by the report of \$58,528.17, and obtained the depreciated book value of the fixed assets of \$428,012.30. The company reported net operating income for the year 1929 of \$40,337.67. Dividing the depreciated book value of fixed assets into the net operating income of \$40,337.67, we obtained the per cent. of over-all return of 9.42 per cent.

Q. No. 32 is the Wellsboro Electric Company.

A. The Wellsboro Electric Company in its 1929 annual report to the Commission reports a total fixed capital at the end of the year of \$342,074.54, which contained no construction work in progress. From this figure we deducted reserve for renewals and replacements as shown by the report of \$88,517.34, giving us the depreciated book value of the fixed assets of \$253,557.20. The company reported net operating income for the year 1929 of \$31,078.99. Dividing the depreciated book value of the fixed assets of \$253,557.20 into the net operating income figure of \$31,078.99, we obtained the per cent. of over-all return of 12.25 per cent.

Q. No. 33 is the West Penn Power Company.

A. The West Penn Power Company in its 1929 annual report to the Commission reported total fixed capital at the end of the year of \$94,741,778.70, which included construction work in progress amounting to \$2,745,226.35. This we deducted obtaining a net figure of \$91,996,552.35, from which we deducted the reserve for renewals and replacements amounting to \$11,498,980.49, and obtained the depreciated book value of the fixed assets of \$80,497,571.86. The company reported net operating income for the year 1929 of \$8,773,508.96, and reported rent for lease of electric properties amounting to \$53,335.15. This we deducted and obtained the net income figure of \$8,720,173.81. Dividing the depreciated book value of fixed assets into the net operating income figure, we obtained a per cent. of over-all return of 10.83 per cent. Had we not allowed the deduction for the rent of electric properties amounting to \$53,335.15, the per cent. of over-all return would have been 10.9 per cent.

Q. No. 34 is the Windber Electric Company.

A. The Windber Electric Corporation in its 1929 annual report to the Commission reported total fixed capital at the end of the year of \$89,812.52, which contained no construction work in progress, and from this figure we deducted a reserve for renewals and replacements as shown by the report of \$16,900.23, obtaining the depreciated book value of fixed assets of \$72,912.29. The company reported net operating income for the year 1929 of \$15,773.32. Dividing the depreciated book value of fixed assets into the net operating income figure, we obtained a per cent. of over-all return of 21.63 per cent.

Q. No. 35 is the Duquesne Light Company.

A. The Duquesne Light Company in its 1929 annual report to the Commission reported total fixed capital at the end of the year of \$159,872,259.60, which included construction work in progress of \$7,436,928.46. This we deducted, which gave us a net figure of \$152,435,331.14. From this figure we deducted reserve for renewals and replacements as shown by the report of \$10,511,259.66, which gave us the depreciated book value of the fixed assets of \$141,924,071.48. The company reported net operating income for the year 1929 amounting to \$14,989,100.67. Dividing the depreciated book value of the fixed assets amounting to \$141,924,071.48 into the net operating in-

come figure, we obtained a per cent. of over-all return of 10.56 per cent.

Q. No. 36 is the Philadelphia Electric Company.

A. The Philadelphia Electric Company, in its 1929 annual report to the Commission, reported a fixed capital at the end of the year of \$279,287,272.46 which included construction work in progress amounting to \$8,927,513.28. This we deducted, obtaining a net figure of \$270,359,759.18. We deducted from this the reserve for renewals and replacements, as shown by the report of \$25,333,491.14, obtaining a depreciated book value of the fixed assets amounting to \$245,026,268.04. The company reported a net operating income for the year 1929 of \$22,701,919.43.

Dividing the depreciated book value of the fixed assets of \$245,026,268.04 into the net income figure of \$22,701,919.43, we obtained a percentage of over-all return of 9.27 per cent.

Q. Now, No. 37, which is the last, the Pennsylvania Power and Light Company.

A. The Pennsylvania Power and Light Company, in its 1929 annual report to the Commission, reported a total fixed capital at the end of the year of \$170,988,476.81, which included construction work in progress of \$1,389,212.81. This we deducted and obtained a net figure of \$169,599,264.00. From this we deducted reserve for renewals and replacements, as shown by the report, of \$12,834,395.03 obtaining the depreciated book value of the fixed assets \$156,764,868.97.

The company reported a net operating income for the year 1929 amounting to \$13,353,301.03.

By dividing the depreciated value of the fixed assets of \$156,764,868.97 into the net income figure of \$13,353,301.03, we obtained a percentage of over-all return of 8.5 per cent.

(Hearing adjourned until Friday, March 13, 1931, at 10:00 o'clock A. M.)

#### COMMITTEE OF INVESTIGATION OF RESOLUTION NO. 10.

Pursuant to adjournment and to the call of the Honorable D. Glenn Moore, Chairman, the committee met in the House Caucus Room on Friday, March 13, 1931, at 10.00 o'clock A. M. There were present:

Messrs. D. Glenn Moore,  
Elwood J. Turner,  
Louis W. Hagmaier,  
Father James R. Cox,  
Harry J. Crawford,  
Harold Evans, Esq.,  
John M. Walker, Esq.

THE CHAIRMAN: Before we start, Mr. Evans desires to make certain corrections on the record.

MR. EVANS: Mr. Turner yesterday asked that the statement of 35 bills of the Scranton Spring Brook Water Company, testified to by Mr. Joseph Geiser, be introduced into the record. I will produce them as our Exhibit No. 5.

Statement produced by Mr. Geiser of 35 bills of Scranton Spring Brook Water Company, produced and marked Exhibit No. 5.

	774.00	1185.00	1640.66
		59.3%	107.2%

The first column are the amounts charged by the old company. The second column is the old rate but with added fixtures found by this company after making a survey. The third column are the bills as sent out by this company. This shows that this company would get an increase in its revenue of 59.3% without increasing its rates. The third column shows that this company is not charging an increase of 25% as they are trying to get the people of this community believe, but shows that in accordance with the bills as actually sent out by this company the increase on the small home owners is 107.2%. The increase on the small business man and small industries is 300% to as high as 1000%.

This increase on the small industries will drive everyone out of this community, as they all claim that they cannot stand for such an increase in the water rent, taxes, and so forth.

Therefore, it is of vital interest to this community that you vote for the bill creating a water district, this will be the only method by which this community will be enabled to prosper, the people remain in and keep possession of their homes for which they have striven a lifetime. This is so vital to this community that it should be your duty to see that everyone in the house votes with you for the same.

MR. EVANS: Also in the testimony Mr. Geiser referred to an adjustment made by the Scranton Spring Brook Water Company with the Johnson Engineering Company, and at the suggestion of the Committee I wrote Mr. Johnson with regard to this adjustment, and have received his reply under date of March 10, and suggest that that be placed in the record.

Letter addressed to Harold Evans, Counsel, Committee on Investigation of Public Service Commission, signed by Johnson Engineering and Manufacturing Co., dated March 10, 1931, produced and marked Exhibit No. 6.

#### EXHIBIT NO. 6.

##### "JOHNSON ENGINEERING & MANUFACTURING CO.

Wilkes-Barre, Pa., March 10, 1931.

"Harold Evans, Counsel,  
Committee on Investigation of  
Public Service Commission,  
Room 601, South Office Building,  
House of Representatives,  
Harrisburg, Pa.

Dear Sir:

In reply to your letter of March 6.

Our old rate for sprinkler system with the old company was based on \$75.00 per year. The proposed new rate was then increased to three hundred twenty-five (\$325.00) dollars per year, which was changed to \$150.00 per year by the officials of the company, at which time we paid them on that basis.

We are now being billed at \$150 per year, but are paying the first old rate of \$75.00 per year, permitting the balance to stand.

You will notice that Mr. Geiser's statement should have been \$325.00 to \$150.00 instead of \$525.00 to \$100.00. Mr. Morgan Bird received invoices from us today.

Very truly yours,

JOHNSON ENGINEERING & MFG. CO.

(signed) J. Ed. Johnson,

JED:R Vice-Pres. & Gen. Mgr."

MR. EVANS: At the close of yesterday's hearing we presented to the Committee the various letters and petitions from municipalities and cities or organizations. Another of these has come in, the petition of a number of citizens, seven pages of signatures or signers to a petition, complaining with reference to the Latrobe Water Company and headed, "Petition of citizens of Latrobe Borough." I suggest that this be placed in the correspondence.

MR. TURNER: What is the character of their complaint?

MR. EVANS: Do you want it read into the record?

MR. TURNER: Not necessarily.

(Remarks by Mr. Turner at his request off the record.)

MR. TURNER: It does occur to me, Mr. Chairman, that whatever letters are received in this way, there should be a reply to them from the secretary or counsel that the letter has been turned over, because so many of these are coming to us in that way, and a notation should be made of them.

MR. EVANS: As far as our facilities will permit, we are trying to reply to them just as rapidly as possible.

W. W. COLLEDGE recalled.

BY MR. EVANS:

Q. On page 622 of the record of yesterday I asked you whether the electric light companies set forth in your Exhibit No. 2 were all of Class A and B electric companies reporting to the Public Service Commission, and you answered, "no," that it covered 53 companies on which you were able to prepare reports on the data at hand. Have you anything further to say in reply to that question?

A. I should like to correct my answer to yes, all but two, the Logan Valley and the Northwestern Electric Company.

Q. Why were those not included?

A. Those two companies had their reports entangled with electric railway reports, and it was impossible to use them.

Q. In other words, exhibit No. 2 does cover all of Class A and B electric companies which you were able to use.

A. Yes.

Q. On the same page in answer to a question of mine as to what the percentages mean in column 3 of Exhibit No. 2, you stated that these percentages meant that fifty-two of the companies show earnings of about seven per cent. Do you wish to make any correction in that answer.

A. I should like to correct that to read forty-two of the companies show earnings of about 7 per cent.

Q. About 7 per cent?

A. Yes.

Q. Have you any correction you wish to make in regard Exhibit No. 4.

A. In Exhibit No. 4 where we show a holding company, Berwin White Coal Manufacturing Company, as to the Windber Electric Corporation, that should read Berwin White Coal Mining Company. That corrects both Exhibits No. 2 and 4.

MR. EVANS. Thank you, Mr. Colledge.

Is the City of Pottsville ready to go ahead?

JUDGE H. O. BECHTEL noted his appearance for the City of Pottsville as city solicitor.

MR. BECHTEL. What is the method of procedure? To call witnesses or just to make a statement?

MR. EVANS. We have followed both methods. For instance the city solicitor in the case of the city of Chester made a statement for the city, and in other cases the mayor or other citizens have done so.

JUDGE BECHTEL. I would like to call George V. Teasdale.

GEORGE V. TEASDALE sworn.

MR. EVANS. If it pleased the Committee I think we would perhaps save time if we would allow Judge Bechtel as city solicitor to make a statement to the Committee on the facts, and then have that supplemented by evidence of any witnesses he desires to produce. I think we will perhaps save time that way. Would you be willing to do that, Mr. Bechtel?

JUDGE BECHTEL. Yes.

THE CHAIRMAN. You may retire for a moment, Mr. Teasdale.

JUDGE H. O. BECHTEL sworn.

JUDGE BECHTEL. We desire to protest first against the action in relation to the Pottsville Water Company. The company had operated under the old charter granted prior to the new constitution for the city of Pottsville, by virtue of which the city guarantees 6 per cent. of the stock of the company, which guarantee the city was released from if the company ever paid dividends of more than 6 per cent. on that stock.

The company increased its capital stock from time to time by stock dividends until the stockholders had their stock increased about four times. That was just to prevent the increase of the dividends so that the city of Pottsville would not be released from the guarantee. Then we had an agreement with them of which they were given privilege in the city and furnished water to the fire hydrants of the city of Pottsville free of charge. The city furnished the fire hydrants and installed them and serviced them. We had a hearing before the Public Service Commission in which the city and the citizens committee joined forces to prevent the increase of the rate, claiming it was not proper that they should be permitted to earn a return on this stock that had been given away for nothing. It was eventually decided in favor of the water company and the city of Pottsville is required to pay \$40.00 a plug, which I am informed by the superintendent of public safety, who is here, amounted to about \$8,000,000 a year, that we were paying for the privilege of having the water at the fire plugs. Those were paid for by us, and are our own plugs, and we service them ourselves.

In regard to the gas company—

MR. TURNER. May I ask, Judge Bechtel, if they upheld the former agreement after the guarantee so far as the free plugs were concerned?

JUDGE BECHTEL. Yes, that agreement was set aside and we have to pay for the plugs.

Later on and quite recently in fact, during that hearing counsel for the citizens committee, Judge Shay pointed out that the company had no right to furnish water to the different adjoining boroughs and railroad engines and one coal company because under their charter they could only furnish the city of Pottsville and they had not accepted the new constitution. Subsequent to that hearing and quite recently the water company surrendered its old charter and took out a new charter and it is now servicing this territory that was serviced before.

JUDGE BECHTEL. Now, I have Mr. Teasdale here, who was a member of that committee, and I can substantiate these facts by him.

GEORGE B. TEASDALE, sworn.

BY MR. EVANS:

Q. What position do you hold in the City of Pottsville?

A. I do not hold any position, public position. I was a member of the citizens committee which was organized to protest before the Public Service Commission against the increase in rates made in 1925.

Q. What did that increase amount to? For instance, take the case of a domestic consumer, have you got that?

A. I can not separate it, but the total increase has developed,—now, for instance, for the five years previous to 1925, when the new rates went into effect, the gross operating revenue was \$136,084. Under the new rates—

Q. That is per annum, I suppose?

A. Per annum, yes. Under the new rates, the gross operating income from April 1, 1925, to April 1, 1926, was \$227,628, or in other words an increase of \$91,000 or about 70 per cent, in the former rates.

Q. Had there been any considerable extensions of service which would account for that?

A. No, they had not built, but were building a new dam at Indian Run, and they gave that as the main reason for increasing the rates.

Q. When was this dam completed, as far as you remember?

A. It must have been completed, I think, about,—I am not certain, but about in 1926. It was under course of construction at the time they put the rates into effect, and they then issued a capital, they issued capital to the amount of

\$500,000 to their stockholders at par. The approximate cost of the dam was \$636,000.

Q. What is this dam being principally used for?

A. Well, it is used to supplement or augment the supply of the water company, wherever the water is required; but since the new dam has been built and the rates sustained by the Public Service Commission, the water company have made a connection with Schuylkill Haven, in order to help out Schuylkill Haven in its supply of water. Now, in the matter of the hearing before the Public Service Commission, they never divulged that they had in contemplation or expectation supplying Schuylkill Haven with water. They said the new dam was necessary in order to supply the then consumers, who were at that time the consumers.

Q. Did the Public Service Commission sustain the increase in rates filed by the company?

A. They dismissed the appeal entirely, sustained them absolutely. There was no reduction.

Q. What have you to say in regard to the fire protection rates?

MR. TURNER. Mr. Evans, might we ask, before you depart from that, was the attention of the Public Service Commission ever called to the fact that they were supplying Schuylkill Haven?

THE WITNESS: No, because, as I said a moment ago, the supplying to Schuylkill Haven never entered into the question.

MR. TURNER: But I mean afterwards, when you discovered it?

THE WITNESS: Not that I know of, no, because the matter had already been settled and the rates sustained before they made this connection. It was only about a year and a half or two years ago that they extended their line to Schuylkill Haven.

BY MR. EVANS:

Q. You were going to tell us something about the fire protection service.

A. About the fire protection, as has been stated by Judge Bechtel, the Act of Assembly under which the Pottsville Water Company was constituted, and an ordinance adopted by the then borough of Pottsville, in 1834, I think it was, provided that the city, so far as I can understand the language of it, was to have the supply of water, and they always did have the supply of water free of charge, from that time up to 1925. There was never any charge made to the city for supplying these fire hydrants.

Q. And the same ordinance provided for the guarantee of the six per cent?

A. It provided that in case in any one year the revenues of the water company were insufficient to pay the stockholders six per cent per annum on their stock, the paid in stock, the city would levy an assessment on the taxable property to make up the difference.

Q. And the city has fulfilled that obligation?

A. They were never called upon to do so, because the company has always been a paying concern, from the date of its inception right down to the present time; but the guarantee was there nevertheless.

Q. And then in these new rates that became effective in 1925 or 1926, what did the company charge for fire protection service?

A. \$40 for each fire hydrant, as has been said here. I understood it to be about \$8,000 in the city of Pottsville, and \$40 in each of the surrounding boroughs which they supplied, \$40 per hydrant.

Q. And it is a flat charge per hydrant?

A. Yes.

Q. Are you familiar at all with the capital structure of the Pottsville Water Company?

A. I am.

Q. Can you state to what extent the outstanding stock has been increased through stock dividends?

A. I can. I might say previous to that that when the company was organized in 1834, it was capitalized at \$20,000. In 1849 that was increased to \$50,000. In 1854 its capitalization was increased to \$200,000. Now, that remained the capitalization up until 1910, and the company paid during the entire, during its entire business career, approximately six per cent, an average on its capital stock,—some years a little more than that. In 1910 the company declared a 100 per cent stock dividend, which increased its capitalization to \$200,000. I

think two or three years previous to that time it was paying eight per cent, but I am not sure about that. At any rate, after increasing it to \$400,000, they continued paying dividends of six per cent for some years. I can give you that in a moment.

Q. I think by mistake you said that in 1910 they increased the capital stock to \$200,000. You mean \$400,000?

A. I meant increased it from \$200,000 to \$400,000. They increased it 100 per cent, making it \$400,000. They then paid six per cent on that stock, which was equivalent to 12 per cent on the actual capital invested in the company, from 1911 to 1913. They then paid eight per cent on that stock of \$400,000, which increased the return to the stockholders to 16 per cent, from 1914 to 1920. Then they declared another stock dividend of 100 per cent, which made the capitalization \$800,000. They then continued paying 6 per cent on the increased capitalization which was equivalent to 24 per cent of the actual cash invested up to 1925. Now there had never been anything more than \$200,000 of actual cash capital put into the company.

BY MR. TURNER:

Q. Had there been an improvement or extensions during this time.

A. Out of earnings, yes, sir. For example, they built the Kauffman Dam in 1893, which cost them \$207,055. From 1903 to 1910 they built the Wolf Creek Dam, which cost them \$478,102. Now these expenditures were made out of the earnings in addition to paying the dividends that I spoke of. That made a total there of \$685,227 in those two items alone. There were other minor improvements, and of course all their mains and pipe lines or extensions made were made out of the earnings of the company under the old rates.

Q. What value did the Public Service Commission put on the property for rate making purposes, if you remember?

A. They did not put any value on it, they simply dismissed our appeal. The evidence submitted by the Pottsville Water Company—let me see, I think I have that here,—fixed the valuation at \$4,695,479.

MR. EVANS. Repeat that, if you will?

A. The company, through its engineers and accountants, fixed the valuation of their property, the complete property, at \$4,695,479.

BY MR. EVANS:

Q. Has the company recently made any increase in its plant from earned surplus.

A. I don't know of anything of any consequence, except perhaps extension lines. This extension of the line to Schuylkill Haven was one of the things.

Q. Do you know how much they put into Indian Run from their earnings.

A. The approximate cost of Indian Run Dam, the pump line, was \$636,000.

Q. Was that represented by new capital.

A. \$500,000 was new capital.

Q. When was that new capital put into the company.

A. 1925.

Q. That was from bonds.

A. No, an issue of capital stock at par. They have no bond issues.

Q. I think you said the 1925 was 100 per cent. stock dividend.

A. 1920.

Q. 1925 they actually issued stock.

A. Actually issued stock and that was paid for at par.

Q. That was issued at par.

A. Yes, \$500,000, so that their present capitalization is \$1,300,000.

BY MR. TURNER:

Q. As I understand it, the original company served only Pottsville, is that right.

A. I don't know. I can't say as to that, it was chartered to serve Pottsville, Port Carbon and St. Clair, as I remember it, but I am not positive about that. Originally it was chartered as a Pottsville corporation.

Q. Outside of this one extension you are talking about was there any other extension in other communities.

A. None except the immediate surroundings, for instance St. Clair and Port Carbon are at intermediate points between the Kauffman and Wolf Creek Dams and Pottsville. That came along the line of the main which would be required to supply Pottsville.

Q. How large a population does it serve?

A. Altogether I would say 35,000 to 40,000 people, roughly speaking. Pottsville's population is 25,000, and they are serving St. Clair, Port Carbon, Mt. Carbon, Mechanicsville and Seltzer City and the township north of Pottsville now, partially serving Schuylkill Haven. They have some water supply of their own, but roughly speaking I would say 35,000 to 40,000 people.

Q. How many, when they started in say, was the population?

A. I couldn't say that, it is too long ago, 1834, the town was comparatively small then.

Q. How large an increase has there been from 1920 to 1930?

A. The increase in population?

Q. Yes, take Pottsville as an average?

A. I think somewhere around 5,000. I am not positive about that either, some of the others here might be more familiar.

Q. The increase in population from 1920 to 1930 was around 5,000, about 20% increase?

A. That is my impression.

Q. How many rate increases have they had?

A. They never had a rate increase until 1925. The stockholders were content with the earnings they were making under the old rate and with the guarantee if it did not earn that rate, they had Pottsville to fall back upon to supply the deficit. As a matter of fact they not only earned the rate, but in addition to that they made all these extensions and built up a large surplus.

Q. It must have been a wonderfully managed concern?

A. Of course, it is probably well managed, on the other hand all these surpluses were actually paid out of the rates charged the consumers. If you charge the consumer enough the management does not cut so much ice.

BY MR. HAGMAIER:

Q. What does the average house cost—

A. The average home in the neighborhood of \$15, \$18. In my home I pay \$26 a year for my water service.

BY MR. TURNER:

Q. Under this rate?

A. Yes, previous to that rate I paid \$18.

Q. How large a house is that?

A. Six room house.

Q. One bath?

A. Yes, sir.

Q. Laundry?

A. Two toilets, laundry tubs.

Q. Garage?

A. No garage, outside spigot to sprinkle the lawn or wash the pavement and so forth, each of those fixtures are charged for.

BY MR. EVANS:

A. A flat rate?

BY MR. TURNER:

Q. No meter?

A. They will not put any meter in, they will not install a meter for private homes, they refused.

BY MR. EVANS:

Q. Is this a gravity system or do they have to pump the water?

A. It is a gravity system from the Kauffman Dam, and the Wolf Dam. It is a pumping system from the Indian Run Dam.

Q. What is the par value of the stock of the company?

A. \$25 per share.

Q. Does the stock ever sell in the open market at Pottsville?

A. It does.

Q. Approximately what does it sell for?

A. Usually double that, around \$50 a share. It has sold as high as \$75 a share before these stock dividends were declared.

BY MR. TURNER:

Q. And has no bonded indebtedness?

A. No bonded indebtedness, no.

Q. The capitalization now is how much?

A. \$1,300,000. The people probably would not have protested against this rate, but on top of these stock dividends and the fact that they were able to earn and pay dividends

on that additional stock when they came along on top of that and asked for an increase of approximately 70% in the rates, of course it struck the people like a bolt of lightning out of a clear sky, they could not understand why they should ask for additional rates when they were able to do so well under the old rates.

BY MR. CRAWFORD:

Q. You haven't a bad rate as it is, you get your water pretty cheap?

A. That depends.

Q. If you would hear some of these other fellows in here.

A. As compared with some probably it is a good rate, as compared to some others not so good. For instance, in the City of Reading where the city owns its own water works, their rates are much lower than ours. If you compare it with the higher ones, the water rate appears good. If you compare it with the lower ones, it does not look so good. The question is should we be compelled to pay the rate, no matter what that rate may be, as long as they are making a reasonable return on their capital. If by reason of the location of these dams they can supply water at a lower rate, we are entitled to that rate.

Q. You are entitled to a just rate.

A. Yes.

MR. MOORE: Is the city of Pottsville still responsible for the six per cent or was that abrogated?

JUDGE BECHTEL: It was not abrogated by the Commission, but at that hearing the question was raised that the water company had no right to serve additional territory under the old charter, and as a result they took out a new charter, and that relieved the city of Pottsville from their guarantee on the stock.

BY MR. MOORE:

Q. You own the lines in Pottsville?

A. We put in the plugs; we put them in and service them and do everything in connection with servicing them. We pay forty dollars a year for having water at the plugs in the event that we need the water for a fire.

May I make a statement. For example for the Wolfe Creek Dam they purchased six hundred and forty-six acres which was purchased in 1923 at fifteen dollars per acre, but the engineer for the water company valued it at \$225 per acre.

BY MR. EVANS:

Q. What date was that purchased?

A. 1903 at \$15 an acre and in 1925 they put a valuation on it of \$225 per acre. There were six hundred and forty-six acres in that.

BY MR. TURNER:

Q. What does land in that community like that sell for?

A. If you took it as ordinary land, exclusive of the water, it would not be worth five dollars an acre. It is rough mountain land.

Q. Any coal rights under it?

A. No. Then they had another tract of five hundred and seventy-two acres purchased in 1923 at nineteen dollars per acre and that was valued at \$225 per acre. They had another tract, the Indian Run tract, of a thousand acres purchased in 1925 or 1926 at ten dollars an acre, which they valued at \$125 an acre. This is all mountain land, has nothing on it of any value, except the water, there are some few trees but not sufficient to be of any merchantable value. It is simply rocky mountain land with streams running through it. It seems to me that would be equal, you might say that would be equally right to put any value you wanted to on that. They have a monopoly, they have the lands, they have the right to serve the people, they have the right to establish the rates. They might put a value even more or less than that on the land, you can't go out and say you can buy land with the same amount of water to supply Pottsville. It can't be done.

BY MR. EVANS:

Q. Do you have any figures as to the cost of your fight before the Public Service Commission?

A. Yes; the citizens committee collected \$4,457, which they paid out in expenses for engineers and accountants and attorney fees and the city expended out of the city treasury \$5,653.72. This made a total cost to the people in round numbers of \$10,000 and a little more.

Q. Was it appealed to the Superior Court?

A. It was not.

Q. Can you state why no appeal was taken?

A. I think the general opinion was that it would not be worth while. We had expended so much money on this and accomplished nothing and we felt any additional expense would be hardly worth the candle.

Q. You gave us the gross earnings of the company prior to 1925 and after. Have you any information as to the net earnings of the company during the same period?

A. I have not.

Q. You don't know what the increase, if any, of the operating expense was?

A. Very naturally there was some increase, but the fact remains that there was plenty of revenue to pay six per cent on the capitalization and I am told they are now paying eight per cent.

Q. Do you know what the Commission found would be the net earnings of the company under the rate which they approved?

A. I do not know. I know as an actual fact—you say the net?

Q. Operating yes?

A. No I have only the gross.

Q. The Commission, I assume in making the valuation must have found that the net operating revenue of the company was not sufficient to make more than a seven per cent on the valuation which they felt they should have?

A. I don't know what their reasons were. They simply dismissed our appeal.

Q. They didn't file any report?

A. Not that I know of.

MR. TURNER: We can call for the record.

MR. MOORE: Mr. Evans, if it is pertinent, I can give the official figures on the population of Pottsville for the last two decades.

MR. EVANS: I think it would be well to read it into the record.

MR. MOORE: In the 1830 census it was 24,300; in the 1920 census it was 21,870; in the 1910 census it was 20,236.

JOHN B. DENGLER sworn.

BY MR. EVANS:

Q. You are the Mayor of the city of Pottsville?

A. Yes sir.

Q. In regard to the charge made by the company for the fire plugs, were any statements made to you by representatives of the company in regard to the reason for that charge?

A. When we started to fight them on these rates they came to Council and made a statement that they was willing for the city to have the water free but the Public Service Commission forced it upon them.

Q. Did the Public Service Commission require them to make a charge?

A. Yes sir of forty dollars.

Q. Can you state who made that statement to Council on behalf of the company.

A. Why, I guess that was Mr. Beisel.

Q. Do you know his first name?

A. Norman B. Beisel.

Q. What position did he hold with the water company at that time?

A. He was the engineer and at the head of it.

Q. And that statement was made to the city council?

A. On the council floor.

Q. You heard it made?

A. Yes, and others heard it made. In fact, last night I was talking to Nelse Clayton—

Q. Who was Mr. Nelson Clayton?

A. He is superintendent of the Pottsville Water Company.

Q. What did he say.

A. Why, I told him we were over here and making a protest on the rates they charged in this city on the fire plugs, and I asked him over and he said over the phone he didn't care what we would do on that, as much as to say it would be satisfactory if we would not have the rate. Mr. Wilson heard the conversation over the phone at the same time.

BY JUDGE BECHTEL:

Q. He said he wished you luck?

A. Yes.

BY MR. EVANS:

Q. Mr. Dengler, is Mr. Beisel still connected with the company?

A. Yes.

Q. And he lives in Pottsville, does he?

A. Yes.

MR. EVANS: That is all, Mr. Dengler.

JUDGE BECHTEL: In corroboration of what has been testified to I have here the superintendent of finance who was a member of council at that time and who was present during that conversation.

THOMAS B. SHOENER, sworn.

BY MR. EVANS:

Q. Mr. Shoener, what position do you hold?

A. Superintendent of finance.

Q. Of the city of Pottsville?

A. Yes.

Q. You were a member of council when Mr. Beisel made the statement to which Mayor Dengler has referred?

A. Yes, it was at a meeting in council, we were all gathered together in the council chamber, and Nelson Clayton was there and Mr. Beisel, and members of council, we were talking over these things and he made the statement at that time, that the Public Service Commission has forced them to charge the rate on the fire plugs.

BY MR. BECHTEL:

Q. Do you know what the city paid for the fire plugs?

A. May I look at the book?

Q. Yes.

A. For the year 1929, we paid for the fire plugs \$7,841.32, although a number of those plugs were never used at all. We had to pay \$40.00 just the same. Last year we paid \$7,992.63 for the water rent, although there was not many plugs used, we paid \$40.00 just the same, whether we used them or not. We bought our own plugs. If I may say this, we have a half mill tax that we have to assess in Pottsville to make this up, it amounts to half a mill. The valuation is a little over \$16,000,000, and to make this up we have a half mill on our taxes.

BY MR. EVANS:

Q. Mr. Shoener, have you had any difficulty with the Pottsville Water Company in regard to extensions which the city desired made?

A. Yes, I live in the same ward of the city of Pottsville, and the people out in what we call Hillside Road have asked me a number of times to see if we could not have the water put out there. They live in the city there, are assessed the same rate of tax, and they have no fire plugs, no fire service, no water service of any kind. In fact, there is a drought out there all the time, although there is water furnished I should say to the Sherman Colliery, which is possibly only a couple hundred yards from the nearest house on this road, and on this road there is a number of nice homes, and they have to depend entirely upon their springs, and wells for their water, and they have asked me a number of times to see whether we could get it. They have been promised the last four years—I am in council four years now—and they promised during all the time since I have been in it would be done, and they have always had some reason why it was not done. Prior to that time I was committeeman in the ward—prior to that time—and they were after me for water for eight or ten years, why I cannot get them water.

Q. Has this matter ever been taken up with the Public Service Commission?

A. No, not that I know of, no sir. No, it was just brought before counsel a number of times. It was taken up by the people before this Commission, I believe. I believe they sent a petition here, I don't know who they sent it to, but there was a petition drawn up by these residents and sent to Harrisburg, but who it was, I cannot say, but there was a petition drawn up.

Q. Can you say why this matter has not been taken up with the Public Service Commission?

A. Well, the only reason I can see is they said this Spring a committee would come before council—they had had it in before council I guess about three times. The residents that live on that road, and every time council would get the o. k. from the water company, as much as it was going to be done in the spring. Well, the spring comes, and there is nothing done.

and they would say it would be done before the fall or winter. I can only say that from the time I have been in council, and this is the fourth year,—

Q. And this petition was sent where?

A. The petition was sent to Harrisburg, whom he sent it to I don't know. Frank Miller, he is now dead, but he was the man who drewed it up and had it sent here.

MR. EVANS: I think that is all. Mr. Shoener.

MR. BECHTEL: I desire to call Mr. McKnight, who has been manager of the Pottsville Gas Company for a number of years, and have him testify to the rates for gas and the company's valuation, with your permission.

J. J. MCKNIGHT, sworn.

BY MR. EVANS:

Q. Mr. McKnight, you formerly held a position with the Pottsville Gas Company?

A. Yes.

Q. What position was that?

A. General manager.

Q. How long did you hold that position?

A. From 1908 up until 1927.

Q. What rates does the Pottsville Gas Company charge domestic consumers in Pottsville?

A. A \$2 rate.

Q. \$2 per thousand cubic feet?

A. Yes. Let me make a correction there. I started with the gas company in 1902, and 1908 I was made general manager.

Q. Are you familiar with the plant of the gas company?

A. Yes.

Q. And the capital structure of the company?

A. To a certain degree.

Q. What was the capital of the company?

A. In 1902 when I started with the company, it was \$200,000.

Q. And what increases have been made since?

A. I think in about 1920 it was increased to \$400,000.

Q. Was that new capital or stock dividends.

A. Stock dividends.

Q. A hundred per cent stock dividend; have there been any further increases?

A. I don't think so, only the sale of the property.

Q. When was the stock of the company sold, that you refer to?

A. In the spring of 1927.

Q. Do you know what interests purchased it at that time?

A. The new company paid \$800,000 for the plant.

Q. Well, what is the new company? Is it also called the Pottsville Gas Company?

A. It is called the Pottsville Gas Company, but it is a Chicago concern that owns it, that bought it. Central Public Service of Chicago.

Q. Did the company, while you were general manager, ever have its property valued?

A. Yes, sir.

Q. When?

A. In 1919.

Q. What was the value placed on it by the company's engineers?

A. \$237,000, I think it was.

Q. Are you familiar with any extensions and betterments that have been made since that time?

A. Oh, yes. I was with the company from the time of that appraisal up to 1927.

Q. Can you give us in a dollar figure approximately the amount spent for extensions and betterments from nineteen—

A. No, I couldn't give you any dollar figures, but every year we made a certain amount of extensions, main extensions and new meters and meter connections and so forth.

Q. From your knowledge of the business, can you give us what you think is an approximate figure of the plant value in 1927, when you left it?

A. I would imagine at that time the real value of the plant—of course, it was built up from the earnings—\$200,000.

Q. Do you mean \$200,000 total or—

A. Total yes.

Q. And you say the Central Public Service Company, in purchasing it, paid \$800,000 for it?

A. Yes.

Q. Do you know what dividends the company has been paying during these years?

A. No, sir. I know that the auditor said that it was a very difficult task for him to juggle the accounts in order to file a report in Harrisburg every year. He said that was some big job for him to do.

BY MR. TURNER:

Q. This was the auditor of the old company?

A. Yes, on the \$400,000 investment.

Q. Well, you said a moment ago that the company's engineers had valued it at \$287,000?

A. Yes.

Q. In 1920?

A. It was not the company engineer, it was an expert engineer from Philadelphia.

Q. In 1920?

A. 1919.

Q. Now you said a minute ago in 1920 you had valued it at \$200,000.

MR. EVANS: 1927.

MR. TURNER: Or 1927, yes.

THE WITNESS: His valuation was based on a rate increase at that time, and very much inflated.

MR. TURNER: I see.

BY MR. EVANS:

Q. What has been the history of the rates of the company? What were they when you first went with them?

A. When I first went with them, they had a dual rate, a dollar rate for illuminating and \$1.25 for fuel, and I think in 1920 or later on, they increased it to \$1.25 and \$1.50,—\$1.25 for fuel and \$1.50 for illuminating. In 1919 or 1920, after that report was gotten up by the engineer, I think they got an increase from \$1.50 and \$1.25 up to \$2. At that time they did away with the two meter system.

Q. Have any complaints been filed against the rates of the company with the Public Service Commission that you know of?

A. Not that I know of. The papers don't have anything to say. You know, there is two rates there. Our papers, I think they get a 65 cent rate. They are pretty well satisfied.

Q. In other words—

A. The newspapers, you know.

Q. The newspapers are given a different rate?

A. Yes.

Q. Regardless of consumption?

A. No; it is based on consumption. But the ordinary consumer would never reach that consumption, you know. The rate was gotten up in order to satisfy the papers.

Q. In other words, it is a block system of rates?

A. Yes.

Q. Do you know what the charge of \$2 covers in the way of consumption, how many thousand cubic feet?

A. The \$2. I don't know. It is probably all over 25,000, it used to be.

Q. Well, who decides the newspapers get these reduced rates for large consumption?

A. Well, on account of that high block, our big hotel comes in, they get that rate, and a bakery in town.

Q. They are the larger consumers?

A. Yes, and they are entitled to it, because they reach that high consumption.

Q. Well, as I understand it, Mr. McKnight, anyone who reaches a certain consumption gets a certain rate?

A. Yes.

Q. Whether it is a newspaper or hotel, or whatever it might be?

A. Yes.

BY MR. TURNER:

Q. But do the newspapers reach that rate?

A. Yes. At the time that was taken into consideration, that they would get in on that.

BY MR. CRAWFORD:

Q. But every consumer who consumes that amount of gas gets the same rate, though?

A. Yes.

BY MR. EVANS:

Q. And you do not know how large a consumption you have to have in order to get that 65 cent rate?

A. No, but that is on the file, you know. The rates. It is a very large consumption. Up until that time, you know, we had a lot of trouble with the paper, you know, knocking the company, rotten gas, low b. t. u's, poor service and so forth.

Q. Are you familiar at all with the steam heat situation in Pottsville?

A. Up until a year ago I was a director in the company.

Q. What company serves steam heat in Pottsville?

A. A new company. It was bought up last fall. We sold our stock to a new concern.

Q. What is the name of the company?

A. Pottsville Steam Heat and Power.

Q. What is the capitalization of that company?

A. I think a little over a year ago, I think it was capitalized at \$70,000.

Q. Was that the initial capitalization?

A. I think so, yes.

Q. Have there been any stock dividends declared since that time?

A. Last year a 25 per cent. stock dividend.

Q. Any others?

A. And they have notified their stockholders this year that there will be a 25 per cent. dividend this year.

Q. You spoke of a change in control in the company a year ago. To whom was the company sold?

A. To local men.

Q. What are the rates charged for steam?

A. I can not give you that.

Q. Do you know anything about dividends paid by the company?

A. Stock dividends, last year, and—

Q. Have cash dividends been paid?

A. No, just stock dividends. Well, they pay eight per cent.

Q. Do you know anything about the cost of the plant?

A. No, sir.

Q. What is the par value of the stock, Mr. McKnight?

A. \$50.

Q. Is the stock sold in the open market in Pottsville?

A. Yes.

Q. What did it sell for prior to this sale, approximately?

A. \$105, \$115, the new company paid \$115.

Q. What did it sell for prior to that time?

A. \$65, \$75. Within six months before it was purchased, I think you could buy stock for \$65 or \$75.

Q. The par is \$50?

A. \$50.

BY MR. CRAWFORD:

Q. Who was the original company in the water plant?

A. The original company was Pottsville capital.

Q. Local people?

A. Yes, sir.

Q. You say that stock was worth about \$200,000?

A. Yes, sir.

Q. How much did you get for it?

A. About 1900. C. P. King and Company of Philadelphia bought the plant. I wasn't there at that time, at that time I was in Bethlehem working for a gas company in Bethlehem and I was sent to Pottsville by that company and I heard it talked around that that Mr. King squeezed the little stockholders, that he got the stock for almost nothing. That was in 1902 that I arrived there.

Q. You haven't any idea what he paid for it?

A. He got it as low as \$10 a share.

Q. What was the actual value of that stock at the time it was sold to this last company?

A. The plant was not worth any more than \$200,000.

Q. What did they pay for it?

A. They paid \$800,000.

Q. And the local stockholders there got the benefit of that?

A. No, it was owned by Philadelphia capital at that time. Up until 1928 it was a bond company, bonded, and then it changed hands on account of conditions and C. P. King robbing the plant it passed into the hands of the bondholders and they changed it to a stock company.

Q. And this little heating plant that you say was worth \$70,000, what did that bring?

A. \$115 per share.

Q. What would that be at the rate of \$70.00, what would be the actual value per share?

A. I don't know.

BY MR. EVANS:

Q. And how many shares of stock were there outstanding?

A. I don't know how many were outstanding.

Q. Was it sold for more than it was worth?

A. Well it was a good plant and any plant is good that has a high rate, any gas company that is getting a high rate, it is a good plant, or steam heat. It all depends upon the rate you are getting whether it is a good plant or poor plant.

Q. Mr. McKnight, following out Mr. Crawford's question, as I understand it, the Steam Heat Company had a capital of \$70,000?

A. Yes, sir.

Q. And that represented an investment in the plant?

A. Yes, sir, and they had forty or fifty thousand dollars in the treasury besides.

Q. And the par of the stock was \$50 a share?

A. Yes, sir.

Q. So there were 1400 shares at \$50 a share?

A. Yes, sir.

Q. 1400 shares were sold at \$115 a share to the new owners?

A. There were more than 1400 at that time, because they had declared a stock dividend.

Q. They declared a stock dividend of 25 per cent?

A. 25 per cent, yes, sir.

Q. So there would be 1750 shares outstanding at \$115 a share and since that time there has been another stock dividend of 25 per cent?

A. My father-in-law owned stock and he got a notice a week or two ago that there was going to be another stock dividend besides the 8 per cent. that they paid on the stock.

BY MR. CRAWFORD:

Q. Did I understand you to say that they used the B. T. U. on the gas?

A. I said that the newspapers used to razz the company on the B. T. U. and the rotten service and so on up until the time they got this fair rate.

Q. You said rotten gas, did you not?

A. Yes.

MR. EVANS: The newspapers complained of that until they got the 65 cent rate.

THE CHAIRMAN: Are there representatives here of any other boroughs or cities that wish to be heard at this time? I thought possibly some that were over here yesterday and did not get heard, might want to appear today.

B. FRANK MORGAL, sworn.

BY MR. EVANS:

Q. Mr. Morgal, you are Chief of the Bureau of Accounts and Statistics of the Public Service Commission?

A. I am.

Q. How long have you held that position?

A. Since 1923.

Q. And before that you were employed in the Bureau, were you not?

A. Before that I was employed in the Bureau, from 1914 to 1923, in various capacities as Senior and Junior Accountant.

Q. What in general are the duties and functions of the Bureau of Accounts and Statistics?

A. The duties of the Bureau of Accounts and Statistics are first to formulate and prescribe uniform systems of accounts for the various public service companies under the Commission's jurisdiction, secondly to formulate annual reports based upon those systems of accounts upon which form the companies file their annual returns with the Commission; thirdly, to conduct field audits of the books and accounts of public service companies. By field audits I mean going into a detailed examination of their accounts, capital, revenue, expenses, income and surplus accounts; and the fourth duty is to make a study and digest, both before hearing on cases scheduled for hearing, a study and digest of the records following the hearing and conclusion of the case. We also in the Bureau of Accounts handle the certificate of notification work, involving the issuance of securities. We carry on all the personal budgetary work of the Commission, prepare a financial statement and have charge of all the duplicating processes of the Commission. I think, in general, Mr. Evans, that covers it.

Q. How many employees are there in the Bureau of Accounts and Statistics?

A. At the present time there are twenty-eight including myself.

Q. And that has remained about the same during the past five years?

A. I think it has. We are preparing a statement now at the request of this committee which will show that. I think that in 1926 we had—I don't want to make a definite statement—by my recollection is that there was around seventeen or eighteen or maybe twenty.

Q. Mr. Morgal, the various utilities that are subject to the Commission's jurisdiction are compelled to make annual reports which are filed with your bureau?

A. That is right.

Q. And you have these reports examined as they are filed, or as many of them as you can?

A. We do not have them examined. The staff has not been sufficient to do it.

BY MR. TURNER:

Q. How many reports do you get annually?

A. Between three thousand and thirty-five hundred.

BY MR. EVANS:

Q. Turning specifically to the electric company reports, these are divided, are they not, between Class A and Class B companies in your classification?

A. That is correct. I believe those having revenues in excess of \$250,000.

Q. Do you know approximately how many Class A companies there are that file reports?

A. I could not say. I don't know. Class A and B at the present time runs somewhere around a hundred reports.

Q. Will you check that up?

A. I will be glad to. I have prepared so many statistics it is hard to hold them all.

Q. The reason I ask that is that Mr. Colledge filed with the committee yesterday Exhibit 2 covering fifty-three companies in Class A and Class B, and has testified that these comprise all the Class A and Class B companies except two?

A. I would accept Mr. Colledge's statement on that. It is possible that the figure I had in mind may take in all the classes down to C and D.

Q. Now, it has been the practice, has it not, of the Bureau to make analyses and studies or some or all of these reports and check the companies from time to time?

A. It has been our practice whenever we can get to it, but it has been very seldom that we have had an opportunity to do any checking of annual reports because of the pressure of routine assignments from the Commission which utilizes practically all our time, and of course whenever we would go to check our annual report, it takes a highly qualified man to check an annual report and do it properly. It is not just a matter of adding up totals and comparing one schedule with another. It is a matter of looking at the picture as a whole, particularly if you are looking at it from a rate standpoint.

Q. Has the Bureau during the last five years prepared any summaries or analyses of the annual report of any electric companies either Class A or Class B?

A. We have for the use of the electric rate committee from time to time beginning, my recollection it, late in 1929 or early 1930, we have prepared some studies of the electric companies as the result of which the electric rate committee has taken action from time to time in directing the Bureau to examine the books, and in some few cases I believe we filed formal complaints against these companies.

Q. Have you copies of these summaries or reports that you made?

A. I have a rough pencil copy. We didn't run them off because we adjusted them from time to time as new tariffs came in, and as we collected more information we added it to the sheet.

Q. Who are the members of the electric rate committee?

A. Commissioner Charles H. Young is the Chairman, and Commissioners Benn and Brown are the other members.

Q. And have you copies of any reports furnished to them during these past five years?

A. On specific companies?

Q. Any reports at all?

A. I have no reports we made on the companies, but I have the audit report prepared at their direction. I do have the summary of the companies that we were directed to examine by that electric rate committee.

Q. Will you produce to the committee copies of any reports that you have furnished to members of the Commission covering either Class A or Class B electric companies?

A. Audit reports?

Q. Yes, either summarized or audit reports?

A. I will be glad to do that.

Q. What is this statement?

A. It shows there that some twenty companies which the commission directed the Bureau to examine the books and accounts. Four of these companies there were formal complaints filed against. The remaining sixteen were inquisitorial proceedings and all of them are still pending. They are at various stages as far as the Bureau work is concerned.

BY MR. TURNER:

Q. Are they on the list which we had yesterday?

A. I think all of them are on the list.

BY MR. EVANS:

Q. Will you just read over the list that you have covered according to this report.

A. Scranton Electric Company.

Edison Power and Light Company of York.

Abington Electric Company.

Renovo-Edison Light and Power Company.

Fulton Electric, Light, Heat and Power Company.

Chester Valley Electric Company.

Glen Rock Light and Power Company.

Keystone Public Service Company.

Penn Central Light and Power.

Chester County Light and Power Company.

Erie County Electric Company.

Erie Lighting Company.

South Penn Power Company.

Mauch Chunk Power and Electric Light Company.

Bradford Electric Company.

Gallitzin Electric Company.

Hershey Electric Company.

Palmerton Lighting Company.

Wellsboro Electric Company.

Windber Electric Corporation.

Q. Can you tell us the ones in which formal complaints were filed?

A. Formal complaints were filed against:

Scranton Electric Company, Edison Power and Light Company of York.

Abington Electric Company.

BY MR. TURNER:

Q. Is that the one owned by the Middle-West Utilities?

A. Yes, sir.

And The Renovo-Edison Light, Heat and Power Company.

Q. Can you tell us when these complaints were filed, Mr. Morgal?

A. Yes, I can tell you when each one of them was filed.

MR. EVANS: May I just ask the question; when the Bureau was first directed to make these examinations?

THE WITNESS: The Scranton Electric, February 10, 1930; Edison Light and Power, March 10, 1930; Abington Light and Power Company, June 19, 1930; Renova Edison Company, June 19, 1930. Do you want the dates upon which the complaints were filed?

BY MR. EVANS:

Q. Go ahead and give us all the dates for all the complaints that you have here?

A. Fulton Electric, March 20, 1930; Chester Valley Electric, March 25, 1930; Glen Rock Electric, March 18, 1930; The Keystone Public Service Company, March 20, 1930; Penn Central Light & Power, March 25, 1930.

Q. And then the remaining companies?

A. And then the remaining companies under date of March 25th, 1930.

Q. In other words, Mr. Morgal, as I understand it, the first date that you were directed to make any such reports to the Committee or to the Commission was on February 10, 1930, for the Scranton Electric Company?

A. Not necessarily to the Committee. That was the first date on which we were directed to make a field examination of any of these companies, but we were doing work for the Electric Rate Committee before that time.

Q. And was the occasion for the Scranton Electric examination the disclosures that were made before the Federal Trade Commission in their examination of that company's accounts?

A. I don't believe they were. I have no reason to believe they were, because the Scranton Electric Company came to our attention along with all the rest of these examinations.

Q. Will you state the dates when these reports have been submitted by the Bureau to the Electric Rate Committee?

A. The Bureau's field reports in the Scranton Electric Company Case on May 22, 1930, and that report, by the way, was submitted in evidence in the formal complaint. The Edison Light & Power Case, the date of the Bureau's report was June 16, 1930; Abington Electric, the date of the Bureau's report was August 18, 1930; in the case of the Fulton Company, the date of the Bureau's report was September 2, 1930; Chester Valley on September 7, 1930; Glen Rock, July 21, 1930; Keystone Public Service, September 18, 1930; Penn Central Light and Power, December 23, 1930; Hershey Electric Company on February 9, 1931. The reports of the remaining companies are either in the course of preparation or the accountants are now working on them in the field.

Q. Can you state, Mr. Morgal, when the Commission first directed the Bureau of Accounts to make an examination of the accounts of the Scranton Electric Company? You stated that it was prior to February 10, 1930.

A. In the Scranton Electric Company Case it was prior to February 19, 1930, that the electric rate committee directed the Bureau to make studies of all electric companies.

Q. When was the Bureau first directed to make a report on the Scranton Electric Company?

A. I have the date here, February 10, 1930. I would like to check that, but I feel that is correct.

Q. Now, as a result of these reports have there been any reductions in the rates, resulting from any of these facts?

A. In the case of the Scranton Electric Company there has been a reduction estimated at approximately \$750,000 annually, that is, in revenues.

Q. When was that reduction made?

A. I think the effective date of the tariff was November 1, 1930.

Q. And what rates did it primarily effect?

A. I think largely residential and commercial.

Q. And what other reductions have been made as a result of your examination?

A. That Scranton Electric Complaint, however, is still pending, it has not been disposed of, awaiting the actual experience in the reduction of rates.

Q. But your estimate of the annual reduction, effective November 1, 1930, is \$750,000, in the Scranton Electric Company Case?

A. That was the company's estimate, not mine.

Q. Now, what other reductions have there been as a result of your reports?

A. As a result of the formal proceedings against the Edison Light & Power Company, the company on November 1, 1930, filed a new tariff reducing its residence and commercial rates to an extent of about \$126,000 in revenue, as estimated by the company.

Q. All right, will you give us any others?

A. In the case of the Abington Electric Company, they filed a tariff reducing the rates on their own estimate by about \$14,000. The Fulton Electric Company about \$900 that is just a small company, rural company. The Chester Valley Company filed reductions amounting to approximately \$54,000.

Q. What date was that effective?

A. August 1, 1930. The Glen Rock Electric Company filed reductions on November 1, 1930, amounting to approximately \$20,000. These reductions in all cases largely representing reductions of residential and commercial consumers.

MR. EVANS: I understand you will be good enough, Mr. Morgal, to furnish us with 30 copies of that statement?

THE WITNESS: I will do that.

BY MR. EVANS:

Q. Can you recall any reductions in electric company rates made as a result of audits of your bureau at the request of the Commission prior to 1930 and, say, subsequent to 1926?

A. I can not recall any offhand. We have so many of these audits and activities that it is very hard to remember them all. I will be glad to check it and let you know.

MR. EVANS: All right, if you will, I will be obliged. You are going to submit to us copy of all reports that you have made to the Commission, and then perhaps you can at that time say whether reductions in rates resulted from those reports?

THE WITNESS: Yes, sir.

BY MR. EVANS:

Q. Mr. Morgal, I show you copy of Exhibit No. 2, introduced yesterday by Mr. Colledge, showing the over-all return of some 53 Class A and B electric companies for the year 1929. Mr. Colledge has placed in the record, of which you will also be furnished a copy, the supporting data for each of these. It is my understanding that you have already checked in the bureau the reports of six of these companies for the Senate committee.

A. That is correct.

Q. Did you find them correct?

A. I found in the six companies that I checked for the Senate committee that the arithmetical calculations laid before that committee were correct, but the premises upon which they are based are not correct, from a rate making standpoint. That is, I mean to say that from the standpoint of a rate base as it is determined by the commissions and appellate courts—

Q. Well, Mr. Morgal, the report does not attempt to show whether or not the companies are earning more than a fair return on the fair value of their property as determined for rate making purposes, but merely whether or not the companies, on the basis of their fixed capital shown by their books, less reserve for depreciation, are making more than a seven per cent return or what return they are making.

A. It is true the annual report shows neither an estimated fair value by the company or a fair value that might have ever been found by the Commission, nor do they show the reproduction cost of the property or any of the other elements of value which are ordinarily taken into consideration in fixing a rate of return.

Q. What do you conceive to be the purpose of the companies' filing annual reports with the bureau?

A. I conceive it to be the purpose to set out exactly what the books of the company show, both on fixed capital, operating revenues and operating expenses.

Q. And to give the Commission information as to the results of the companies' operations, is that not true?

A. Results of the companies' operations and financial status.

Q. And so far as the reports indicate, whether or not the companies' earnings are excessive, is not the method which Mr. Colledge has followed, in your opinion, as good a method as is available?

A. It is a method that might be used to some extent to guide the Commission's attention to these matters, but it is not and has proven to be not at all conclusive, for the reason largely that these book values or book costs, or whatever you call them, as they are found in an annual report, are not at all reliable, as our bureau experience has disclosed, in many instances, in examining the books and accounts of these public utilities, particularly prior to the time when the uniform accounting method became mandatory, that the companies did not keep their books and accounts in good shape, they did not have the proper distinction between capital and income, and therefore a book value built up over a long period of time is rather unreliable as a basis for fixing rates, and it, of course, is only one of the elements, after you have it, that are recognized by the courts in fixing the fair value upon which the rate of return is based.

Q. It also is true, Mr. Morgal, is it not, that the book value of the fixed assets of the company, as shown by their annual reports, may be far too high for rate making purposes?

A. That is true, yes, sir.

Q. And this results wherever a company purchases a property at an excessive valuation, does it not?

A. I would not say it results in every case. It may result.

Q. Will you explain why it does not result when the price paid for the property of the other company is excessive? Doesn't that price go into fixed capital?

A. It depends upon the way they record it. Now, I can not say the way they record it.

Q. Well, is it not usual to include the price paid for the property purchased in fixed capital account?

A. It is sometimes done that way. I would not say in the preponderance of cases it is done that way. Sometimes the properties are brought over at old book values. Sometimes they are brought over at consideration.

BY MR. TURNER:

Q. Is there anything on these reports that would indicate that?

A. Not on the annual reports, no, sir.

Q. You would only find that by your field work?

A. Only by our field work, and by analysis, and files of the formal proceedings involving purchases and sales that come before the Commission.

Q. What do you say at one place that the Commission has no power to regulate the sales so far as securities are concerned and in the next place you talk about regulating sales?

A. We have no jurisdiction over the issuance of securities, but the Commission does have jurisdiction—I am not a lawyer, understand—but the Commission does have jurisdiction over the sale of the property of one public service company to another public service company.

Q. May that not involve an issuance of securities?

A. It may or it may not.

Q. In such cases would they have jurisdiction over the issuance of securities?

A. That is a legal question I cannot answer.

BY MR. EVANS:

Q. Mr. Morgal, Mr. John H. Bickley was at one time employed in the Accounting Bureau of the Commission, was he not?

A. He was.

Q. He has recently been employed by the Federal Trade Commission and is one of their expert accountants, is he not?

A. I believe he is, yes, sir.

Q. Are you familiar with the testimony that he gave before the Federal Trade Commission on the Scranton Electric case?

A. I am not. I have gotten a set of those reports but I have not had time to read them.

Q. You don't know the date when he testified before the Federal Trade Commission as to the Scranton Electric Company and submitted his full report?

A. I recall having read it in the paper, but I don't know the date that took place.

Q. Mr. Morgal, will you be good enough to have this Exhibit No. 2 checked and if you find any errors in it call the attention of the Committee to those errors. You will have in connection with it the supporting data which Mr. Colledge gave the Committee yesterday.

A. I have a copy of Exhibit No. 2, I don't have the supporting data.

Q. That is in the record?

A. In this record.

Q. It is in the record of yesterday's hearing. They were all handled in exactly the same way as the six companies you have already checked. I might say for your information on that Mr. Colledge testified that where in some cases in Column 3 under the heading "Over-all Returns" figures are placed in parenthesis, as for instance, the Edison Electric Company at Lancaster shows first 19.42, then 19.6, the figures in parenthesis are over-all returns for rentals paid for these properties are not included in the company's operating expenses. That also appears I think in the testimony.

BY MR. TURNER:

Q. Mr. Morgal, would you have any data there that would give you this information as to whether the figures as contained here as to capital would be representative of actual investment, or whether it would be inflated or not?

A. I have not the data. You cannot get that data unless you would go into a detailed examination of the property and find its value for rate making purposes, and the base here used is only one of the factors that are customarily used in finding the valuation for rate making purposes. It really would involve getting a correct rate of return, it would involve a valuation of all these properties.

Q. As I understand it, what we are getting at here, is not valuation but the question of what is capital return, is that right?

MR. EVANS: Yes, return on fixed value.

MR. TURNER: It only shows earnings on fixed value and according to the reports that have been filed that fixed capital is book value, isn't that right, Mr. Evans?

MR. EVANS: That is correct.

MR. TURNER: The book value as shown by the reports?

WITNESS: That is right, but that value may be more or less. If we would launch into a rate making proposition on each one of these companies that value might be more or less.

BY MR. EVANS:

Q. Now, Mr. Morgal, let me ask you one or two questions: When, for instance, as in the case of the Abbington Electric Company, which you have checked, the report of the company for 1929 shows an over-all return of 28.5, would that not suggest to you as an accountant the possibility that its rates were too high?

A. It did, and as a result of our recommendation to the Electric Rate Committee that company was picked as one of them for investigation.

Q. Exactly, and that was never done until—I will not say never done, it was not done during the past five years, as far as you can remember, with regard to this company prior to June, 1930?

A. It was not done and we did not have the force and staff to do it. This, Mr. Evans, is all more or less research work. The burden of the examining work in that Bureau is tremendous, we have pressure on us all the time. The Commission assigns us work, as you know from your experience there "We want it by a certain date," and the pressure of assignments was such that we had no time for such research. I think we could go into it if we had the force and staff available to do it.

Q. Do not misunderstand me for a moment, I am not criticizing your Bureau, because I realize the pressure under which you work, from your own experience with you; what I do want to bring out is that there was a time in 1924, perhaps, when the Commission did request from your Bureau analyses of electric companies annual reports, did they not?

A. In 1924?

Q. Yes, you made such analyses from time to time.

A. I don't recall of any, I may if I check it up.

Q. If you check it up, I think you will find it, I happen to have some personal knowledge of that. What I want to find out is how frequently the Commission has requested that sort of information from you during the past five years. You furnished it to my knowledge with great efficiency in the past. Now, I notice that in the year 1930 the Commission has requested it of you and I want to find out to what extent that is a continuing process during the past five years?

MR. TURNER: Mr. Morgal, have you made any study as to the amount of force that it would require, additional force, it would require to keep up on such work of investigation?

A. I submitted some data to the Senate Investigating Committee as to what I feel the staff requirements ought to be.

BY MR. EVANS:

Q. I want to ask you this, one man, for instance, working on the electric reports, and merely reporting what the over-all return for the various companies is from year to year, he could cover a great deal more than the electric companies, could he not?

A. I think he could; it depends upon how far he went. If he merely sat down and made an arithmetical calculation, such as has been made by Mr. Colledge, that would not take him so long, but if he were to go into our book records and seek out all the sources of information that we have leading up to it, that might enable the Commission to fix a rate of return, that would be a very long and time consuming thing, it would take the services of several men and good men, men who would have to know the theory of rate making regulations from end to end.

Q. It would not, however, require that in order to suggest, as Exhibit No. 2 does, that certain companies may be earning excessive returns and require further investigation?

A. It would not take a man long to report that sort of a tabulation, but you realize, of course, Mr. Evans, that the suggestions there might lead you, in view of the unreliability of the data, might lead you into an expensive and unproductive fishing expedition, because of the fact that companies may not have the data on the books that they should have, that the books may not have been kept as they should have been, their

accounting may not have been absolutely correct, as we have found it in many instances, and we could pick out the high ones and might get some that when we investigated them we would find that the rates of return were O. K. on a proper rate basis.

Q. Now Mr. Morgal, it also is perfectly true that reports made through you or to your Bureau, that some of the companies whose return was grossly excessive, it might not appear so from the filed reports?

A. That is correct.

Q. I notice on this report that the Clarion River Power Company shows an over-all earning of 4.34. Do you consider that shows the actual return on the actual property?

A. I do not, knowing as I do the history from my book examination of that company. That instance proves my contention, Mr. Evans.

Q. You made a report on the Clarion River Power Company in 1925?

A. I did.

Q. You did that in conjunction with the accountants of the Federal Power Commission, I believe?

A. Yes sir.

Q. Have you been asked recently to make any reports on the Clarion River Power Company?

A. Reports for the Commission?

Q. Yes?

A. No sir.

Q. Has anything further been done to your knowledge relative to that situation since 1925?

A. In 1930 the Commission asked me to confer with the chief accountant, Mr. King, of the Federal Power Commission, as to the status of the proceedings before that Commission to determine the actual legitimate investment under the Federal Water Power Act, which I did and filed a short report with the Commission.

BY MR. TURNER:

Q. When in 1930?

A. I think March 1st, 1930.

BY MR. EVANS:

Q. Will you be good enough to produce for the committee the report of 1925 you have prepared, and also the report of 1930?

A. I have these all ready now under your general request.

BY MR. MOORE:

This hearing will now stand adjourned until March 18, 1931, at 2.00 o'clock P. M.

The hearing adjourned at 12.10 P. M.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment and to the call of the Honorable D. Glenn Moore, Chairman, the Committee met in the House Caucus Room on Wednesday, March 18, 1931, at 2.00 o'clock P. M.

There were present:

Messrs. D. Glenn Moore, Chairman

Bart Richards

Martin Memolo

Louis W. Hagmaier

Ellwood J. Turner

Frank L. Bowers

Chester H. Rhodes

Harry J. Crawford

Harold Evans, Esq.

Morris L. Cooke, Esq.

John J. Walker, Esq.

MR. MORGAL resumes witness stand.

BY MR. EVANS:

Q. Mr. Morgal, you were on the stand on Friday. I understand you have gone over the transcript of your testimony, are there any corrections you wish to make in it?

A. There are. On page 749 I stated that A and B companies were those with revenue in excess of \$250,000 per annum. I wish to correct that now by stating that Class A companies

are those with revenue in excess of \$250,000. per annum and class B companies are those with revenue between \$50,000 and \$250,000. per annum so that class A and B companies which comprise the companies with revenues in excess \$50,000.

On page 749 and on page 750 of my testimony the correct number of electric companies filing annual report for 1929 or a portion thereof was as follow:

Class A and B .....	61
Class B .....	51
Class C .....	20
Total .....	132

Q. How many of those companies that filed reports, how many of them in Class A and B that filed reports were for the full year?

A. I can tell you the ones you didn't cover.

Q. Suppose you give the ones not covered in Mr. Colledge's exhibits.

A. None of Class B and D and of Class A and B there were omitted the Altoona and Logan Valley Electric Railway Company, The Chester Valley Electric Company, the Delaware County Electric Company, which is included in the system report of the Philadelphia Electric Company.

The Lackawanna and Wyoming Valley Power Co.

The Northwest Electric Service Company of Pennsylvania.

The Philadelphia Electric Power Company.

The Susquehanna Electric Company.

The Susquehanna Power Company, the last three companies known as the companies included in the Conowingo project.

Q. And a part of the Philadelphia Electric System?

A. Yes sir.

Q. Then so far as you know the list of companies covered by Mr. Colledge's report covers all of Class A and B companies reporting for the year, 1929, with the exception of the two companies which combine street railway earnings and therefore should not be used.

A. I think there are three companies, Mr. Evans, which involve street railway earnings. The Altoona and Logan Valley Street Railway Company, The Lackawanna and Wyoming Valley Power Company and the Northwest Electric Public Service Company. And in addition to those three for some reason or other the Chester Valley Electric Company was omitted from Mr. Colledge's exhibits.

Q. Is that a part of some other system?

A. No sir. The Chester Valley Electric Company is a separate company. There is the Chester County Light and Power Company, but that company is included in Mr. Colledge's report.

On page 754 of my testimony, the third line the Galletzin Electric Company should be the Cresson Electric Light Company.

On page 754, in answer to a question by Representative Turner as to which one of the four companies against which the Commission filed formal complaints, I was controlled by the Midwest Utilities Company, the answer should have been, The Edison Power and Light Company of York. As the record now reads the name of the company given was Abbington Electric Company.

On pages 255 and 256 of my testimony various dates were stated in error.

Q. Will that not be corrected by the exhibits you are going to submit?

A. It will. There is one more correction. On page 758, I stated that the Scranton Electric Company complaint had not been adjusted pending actual experience under the reduced rate. I have found upon examination of the records that the case has been marked closed with the following comment: "The Commission may subsequently institute a new inquiry if the reports of the company show that the tariffs produce more than a fair return and are resulting in any other feature inequitable to the rate payer."

Q. On page 753 you refer to certain companies which had been investigated by your bureau during the year 1930. I think all of them are 1930. Have you now the copies of that tabulation?

A. I have. I would like to say that I have made some changes in these exhibits to bring them down to date.

MR. EVANS: We offer in evidence exhibit 5, this statement being headed "Public Service Commission. List of Electric

Companies under review by the Commission and its electric rate committee as of March 17, 1931."

Q. Mr. Morgal, you also were going to submit copies of the accounting report which you had submitted to the Commission on A and B Electric Companies. Have you got those report here or copies of them.

MR. TURNER: May we ask in the line "Submitted to Electric Rate Committee & Co." Does the "Co." refer to the Commission in this statement?

A. No sir, to company. The reports were submitted to the Company.

The first tabulation which the Bureau made contained a statistical analysis of certain electric companies for the year 1923 and was submitted under date of December 30, 1924. I have a copy of that report here.

Q. That study was made at the request of the Public Service Commission?

A. Yes sir. My recollection is that that study was made in connection with studies that at that time were being undertaken by the Commission with regard to rural electric facilities.

Q. And this report covers some forty electric companies?

A. It does.

Q. And shows in detail the earnings per share and considerable other information in regard to these companies?

A. It does, statistical information.

Q. Complete from the annual report from the companies to the Commission?

A. Yes sir.

Q. For instance, Table 2 of this report sheet for this year 1923, Duquesne Light Company was earning 19.29 per cent per share. The Edison Electric Company, 8.07 per share, and so on, some of the companies earning as high as 60 per cent a share?

A. I would like before I answer that question, Mr. Evans, to study the report. I have just picked this one out of the files.

Q. It purports to show that on the face?

A. Yes sir, but whether these earnings are gross earnings or whether they are net, and whether or not the outstanding capitalization is authorized I could not say unless I study the report.

MR. EVANS: This report is offered in evidence as Exhibit No. 6, being "Statistic Analysis of Selected Electric Light and Power Companies in Pennsylvania for the year 1923."

Q. Mr. Morgal, what is the next report?

A. The next report prepared apparently in connection with the same matters, that is the rural electric facilities, covered a study of the reports for 1923. This report, however, was dated June 10, 1925. I have not examined either of these reports and I am not sure whether they contain all classes of electric utilities. I think they contain the large and small companies as well.

Q. And this report also shows detailed information taken from the reports of some forty-two electric companies giving the book value of the electric companies, operating revenue, operating expense, annual depreciation, operating income, and the ratio of the operating income to the book value of the electric companies, does it not?

A. Yes, sir.

Q. Taking the current ratio of operating income to book value, it shows that the companies were earning, many of them, well over seven per cent on their book values, does it not?

A. It shows that some of them were earning over seven per cent on their book values.

Q. Again taking—first, the Duquesne Light Company, earnings, 11.34 per cent, the Edison Light & Power Company earnings, 12.47 per cent?

MR. TURNER: Mr. Evans, are these the same companies that Mr. Colledge gave us?

MR. EVANS: Many of them, but there are two or three that are not.

Q. What other reports have you submitted to the Commission analyzing the electric companies?

A. Under date of August 27, 1928, the Bureau submitted a survey with respect to the control, financial and operating characteristics of electric utilities operating in the State of Pennsylvania. This survey is a statistical analysis comprising two volumes, the first containing some texts and graphic

charts, and the second contains the details underlying the summary of the first volume.

Q. May I see a copy of that, Mr. Morgal?

MR. EVANS: I think it will save time, if the Committee please, if this be offered in evidence at the present time, and later when I have a chance to go over it I will ask Mr. Morgal any questions in regard to it that seem pertinent. Copies of this report were furnished to the members of the Commission on August 27, 1928. One was also furnished to Governor Fisher at that time.

MR. EVANS: We offer in evidence Exhibit 8.

Q. Mr. Morgal, what other figures if any do you have there?

A. During the year 1929, between April 1st, 1929, and the close of that year, the Bureau prepared certain summaries showing tentative returns and calculations for Class A electric companies based upon the annual reports for 1928.

Q. And this is the sheet which you now produce entitled "The Public Service Commission. Tentative Rate of Return Calculations for Class 'A' Electric Companies (Revenues in Excess of \$250,000), Operating in Pennsylvania, Based Upon Data Contained in Annual Reports for 1928."

A. It is.

Q. And this report showed the book value of the assets in one column and the tentative rate base, and in the final column the balance estimated as available for a fair return and the rate?

A. That is right.

Q. There are other columns in the statement, and they lead down to what net result?

A. This shows on the basis of this report rates of 8.57 for the Philadelphia Electric Company, including the Philadelphia Suburban Gas & Electric Company, 10.70 for the Erie County Electric Company, 9.04 for the Luzerne County Gas & Electric Company, and one company, the Edison Light and Power Company showed 36.25 per cent return, that being the highest I think on the sheet.

BY MR. TURNER:

Q. Are you going to offer that sheet in evidence?

A. Yes, I am.

MR. EVANS: We offer in evidence this Exhibit No. 9.

BY MR. EVANS:

Q. I would like to ask you, Mr. Morgal, whether it would be possible to furnish copies of this to the members of the Committee, or whether that is too much?

A. The copies are rather limited, I don't believe I have copies of it.

Q. Will you furnish as many copies as you find are available, and may I ask for copies of Exhibit No. 9 furnished to all the members of the Public Service Commission on or about the latter part of 1929?

A. I don't know whether they were furnished to all the members. There was a committee working at that time, studying electric rates in conjunction with certain studies that were made by the Bureau of Rates and Tariffs and by the Bureau of Engineering.

Q. Of whom did that committee consist?

A. The committee consisted of Mr. Ainey, Mr. Benn, and Mr. Collins.

Q. Was that known as an electric rate committee?

A. No, they functioned before the electric rate committee did.

Q. What was that committee known as?

A. I don't think they had any title.

BY MR. TURNER:

Q. When was the electric rate committee formed?

A. In February, 1930.

BY MR. EVANS:

Q. What other report have you?

A. The next report is a tentative calculation of the rate of return earned by Class A and B electric companies based on 1929. This data was brought together following April 1st, 1930, and brought down to date, say April 1st, 1930, because the studies were started following the time that the 1929 annual report came in.

Q. And when was this report submitted to the Commission?

A. It was never submitted to the rate committee in this particular form. We have worked at most times just on a work sheet because the data as it came in was being compiled

currently and we did not run the data off. This is a summary brought down to date of what has been furnished from time to time.

BY MR. RHODES:

Q. Who are the members of the rate committee?

MR. EVANS: It was testified to before, that the electric rate committee was composed of Commissioners Ainey, Benn and Brown.

MR. EVANS: We offer in evidence Exhibit 10, which is entitled a tentative calculation of Rate of Return Earned by Classes "A" and "B" Electric Companies based on 1929 Operations.

Q. Now Mr. Morgal, were there any other reports requested by the Commission, or members of the Commission, from your Bureau on the subject of electric rates during the last five years?

A. I may have made studies on individual companies for individual commissioners, but I believe these reports submitted here today comprise all the former reports that were made.

Q. Mr. Morgal, I take it from Exhibit 10 that the Commission has had for some time in its files practically the same information, or similar information, to that set forth by Mr. Colledge in his exhibits furnished to this Committee, and that you have checked his figures from these tabulations which your Bureau of Accounts had made?

A. I have not checked his figures from the medium of that statement, but I have made a separate study of his figures which I am prepared to testify on today.

Q. Turning to his figures, have you had an opportunity to check them since the last hearing?

MR. TURNER: I don't think that he has answered your question whether the commissioners did or did not have these figures in the past.

MR. EVANS: I think this exhibit will speak for itself. He said it was presented to the Commission in the spring of 1930.

MR. TURNER: You asked if the Commission had not had the same figures from which Mr. Colledge prepared his data?

MR. EVANS: He answered that by saying it was not the same, that he had not checked it from this report, and I take it that it was not the exact figures.

MR. MORGAL: In other words, the distinct data on which my statement is made is not quite the same as that used by Mr. Colledge.

MR. TURNER: That doesn't answer the question whether the Commission had the figures or not.

MR. MORGAL: The Commission had the figures or the electric rate committee had the figures in exhibit number 10 between April, 1930, and the present date.

BY MR. EVANS:

Q. This exhibit 10 shows for instance that the Chester County Light and Power Company was earning a rate of 10.71% on a tentative basis. The Delta Electric Power Company was earning 12.27% on a tentative basis. The Fleetwood and Kutztown Electric Light and Power Company was earning 17½% on a tentative basis. The Altoona and Logan Valley Electric Railways Company was earning 18.7% on a tentative basis. The Chester Valley Electric Company was earning 13.91% on a tentative basis. The Edison Light and Power Company was earning 28.85% on the same basis. The Glen Rock Electric Light and Power Company 15.76% on the same basis. The Keystone Public Service Company 20.84% on the same tentative basis, is that correct Mr. Morgal?

A. I think these are correct from the statement.

Q. Mr. Morgal, is there anything more on that?

A. I want to make a statement that these last two exhibits here are of course, the percentages are based on the depreciated book cost and they are not comparable to the Colledge exhibits in that they were not—in that different elements were taken into consideration in the preparation of them.

Q. Will you, for the information of the Committee, take exhibit number 10 and just state how that exhibit was prepared and the results that have been referred to and what was arrived at in regard to the rate of return. Just take a typical company?

A. The first column shows the undepreciated book value of fixed capital as of December 31, 1929. From that was deducted the accrued depreciation deducted at the close of that year.

Q. You say the accrued depreciation was deducted. You mean by that the depreciation reserve?

A. Yes sir, and the depreciated book value of the fixed capital at the close of 1929. There was added an estimated allowance for going concern value and another allowance for working capital.

Q. Neither of which are taken from the books of the company?

A. Only to the extent that we might have been able to determine that such items were deducted. All of these items have been included in the column entitled: "Tentative rate base." Then we took the operating revenues and from other operating expenses exclusive of state loan tax and added to it the adjusted non-operating income and rent for lease of properties and come down to the estimated balance available for return, and then the ratio of that balance to the tentative rate base was found and that result was called the rate of return on the tentative base.

Q. Then if I understand you correctly, so far as the base is concerned you differ from Mr. Colledge only in that, first, you added to the book value items which you estimated for going concern value and working value, and second, you did not deduct the amount expended for property under construction and which was not on December 31 in operation, is that correct?

A. I included the construction work in progress in my fixed capital.

Q. And Mr. Colledge did not?

A. He did not.

Q. And you included also going concern and working capital?

A. Correct.

Q. Is there any other difference so far as the base is concerned.

A. Not so far as the base is concerned. In my tabulation I did show the ratio of accrued reserve to the non-depreciated base.

Q. That did not enter into the final?

A. It did not. It was put there for the information of the Committee. I felt that it was a very important item in the determination of a solution of the question.

BY MR. COOKE:

Q. May I ask how you estimated that going concern item?

A. In most the instances here it has been included at ten per cent of undepreciated fixed capital except where we found that an appraisal had been recorded and that element had been recorded on the books. There were some fixed cases in which it had been recorded.

Q. Just a flat ten per cent?

A. That is an arbitrary ten per cent. That is an arbitrary ten per cent; in fact I have recorded this calculation as pointing only in a general way to the returns in the last column. Now you asked me whether I differ from Mr. Colledge in any of these point, Mr. Evans.

BY MR. EVANS:

Q. Insofar as the base is concerned?

A. In submitting this statement I don't want to be understood as putting this rate in as a proper rate base.

MR. EVANS: I think we understand that. They are put in for the information of the Commission as guide posts, so to speak, to determine what needs investigation and what perhaps does not need investigation.

MR. MORGAL: They were given to the Commission and the electric rate committee for what they were worth in pointing out what might be taken up for investigation on the Commission's own motion.

BY MR. EVANS:

Q. Turning to the calculations of the income of the company, will you explain briefly to the Committee how your method differed from Mr. Colledge's? You took first the gross operating revenues?

A. Yes, sir.

Q. So did he?

A. Yes sir.

Q. You then deducted the operating expenses?

A. I deducted the operating expenses exclusive of the State loans tax. He left that in. I took that out because it was not a proper allowance as an operating expense in a rate-making proceeding.

Q. And to that extent his operating income would have been slightly lower than yours by the amount of the State loans tax?

A. Yes sir.

Q. Now you also take into account certain other items and I am sure that Mr. Colledge did take those into account. Will you outline the difference there?

A. We took into consideration the adjusted non-operating income. By that I mean the income from the sale of appliances and other non-operating income. That from a study of the reports would seem to be includable. Our reason for including this item particularly the appliance income was that in many cases the sale of these appliances were on the books. Of course we had no way of determining whether they were or not, but we thought they ought to be included, and for the purposes of this calculation. There may be cases where they should be included and there may be cases where they should not be included.

Q. In other words, you included net operating income where you felt the property from which that was derived was included in the book value of the property. Did you include non-operating income consisting of dividends from the stocks of other companies?

A. No sir.

Q. What item upon operating income did you include?

A. Principally the merchandise sales and jobbing work income.

Q. You also speak of rentals, I think?

A. We included all the rentals as part of the expenses on the theory that if the company was leasing a property the value of that property was not booked. Of course, that is open to some criticism because if the Commission were valuing the property for rate-making purposes that would not add to the value of the property.

Q. Mr. Colledge also called attention to that item of rentals in his statement?

A. I think he did.

Q. Were there any other points of difference?

A. No, not in this statement.

Q. Now, have you any comments to make in regard to the accuracy of Mr. Colledge's figures which you checked?

A. I have gone over Mr. Colledge's Exhibit No. 2 and I desire to make the following comments:

The depreciated book value on which these rates of return shown in Exhibit No. 2 are calculated is the figures under the present fair value of the property for rate-making purposes.

Q. It may or it may not?

A. It may or it may not be. Therefore if the premises are incorrect, the rate of return must be incorrect.

Q. Let us be perfectly clear, all Mr. Colledge attempted to show was to show the rate of return on the book value of the property and not in any way to show what the fair valuation for rate-making purposes might be?

A. His exhibit shows there the return.

Q. It makes no statement what that return is on? In his statement he made it clear he was dealing entirely with book value.

A. I think I should make it clear that in checking Mr. Colledge's exhibit that the rate of return there found were not on the present fair value. They were on the depreciated book value as shown by these annual reports.

In the fourth column of Exhibit 2 entitled "Per cent. over 7 per cent" is a percentage on a percentage and the high percentage obtained in this column, I think it should be perfectly clear that the high percentage contained in that column bears no relation whatever to the base.

Q. I think that also is clear. That is the percentage of advance they show on a certain rate of over all on a certain amount.

A. As I said before the book value shows as a base for Exhibit 2, in Mr. Colledge's Exhibit 2, he did not take into consideration construction in progress. I feel that rate making calculations should take into consideration construction work in progress because an examination of the books of many of the companies discloses that they carry the construction work in progress into that account long after it has been placed in service and therefore in many cases all the portions of that cost are actually in service.

Q. Is that in accordance with the uniform system of accounting?

A. The uniform system of accounting provides that it shall be transferred from those accounts as soon as the work is completed. In many cases that is not done, because of companies hold it over awaiting the time when all the bills are in. The case in point, in Mr. Colledge's exhibit, is the Bedford Electric Light, Heat and Power Company. The base used by Mr. Colledge there, the depreciated base used was \$197,174, and at the same time, March 21, 1929, the company had \$258,474 of construction work in progress, more than the base used, which indicates that each one of these companies is and should be a separate study.

Q. Now, Mr. Morgal, if the companies as they are supposed to do, follow out the uniform system of accounts and the regulations which the Commission has prescribed, Mr. Colledge's method would be correct, would it not?

MR. TURNER: Don't you think we are dealing with theory?

MR. EVANS: If we get the answer to this question, we can find out to what extent he knows whether the companies do follow that.

THE WITNESS: If the companies adhered strictly to the uniform system of accounts and transferred every dollar's worth of property to the fixed capital account at the time it was placed in service, Mr. Colledge's calculation—I would not say that Mr. Colledge's calculation would not be correct, because in the fixing of future rate the company has frequently taken into consideration construction work in progress.

Q. We are not dealing with fixing future rates, Mr. Morgal, we are dealing with the rate of return on the book value of the property devoted to public service, and it seems to me if the system of accounts were followed Mr. Colledge's method is correct, and if not, I want to find out why not.

A. If they adhered strictly, it would be correct.

Q. But you think that they do not?

A. Many of these companies disclose that.

Q. How do you know whether or not a given item of property which is carried in the construction account is in operation on December 31st of any year?

A. You don't know it from looking at the annual report, but you would know it if you were making a field examination.

Q. Do you make your field examinations on December 31 of the year?

A. We make them up to whatever date is closest to the date that we happen to be in the field.

Q. I still have some difficulty in finding out as to how, when a company reports on December 31st it had \$200,000 of work under construction, and you go out six months later and find that some or all of that property is in operation, that you know it was in operation on December 31st of the preceding year.

A. You could determine from the books and from inquiry as to whether it was in operation on December 31st of the preceding year.

Q. In other words, can you point out some cases where you have actually done that?

A. I cannot offhand. I could examine some of our reports and point out to you cases where property was held in the construction work, in the process account, beyond the time that it actually went into service.

Q. I suppose then you have the companies follow your uniform system of accounting, do you not?

A. We endeavor to have them follow it to the letter, sir.

Q. So in this situation that you now picture as called to your attention, you direct the companies to correct their books?

A. We do.

MR. EVANS: All right, I think that clears that feature.

MR. TURNER: May I ask Mr. Morgal a question, Mr. Evans?

MR. EVANS: Yes, indeed.

BY MR. TURNER:

Q. In other words, a report on the income from these statements that you read does not mean that the rates of these companies are too high?

A. I would not say that it indicates that the rates are too high, the mere fact that we come to a high rate of return in the last column on these statements, and that cannot be determined unless you go into the value and a complete rate making proceeding, the value of the property, and through all the formalities of a rate proceeding.

Q. Now, Mr. Morgal, you say it does not even indicate that the rates are too high, yet when the company is earning 40%

on its book value, that does not indicate to you that its rates are too high.

A. Not conclusively.

Q. I didn't say that, Mr. Morgal, I say it does not indicate it in any way.

A. It indicates that it might be a subject for the Commission to look into.

Q. Exactly. In other words, it does not show that the rates are too high, but it indicates that they may be too high.

A. It indicates that they may be too high, and it might be a subject for the Commission to investigate on its own motion.

Q. So far as the purpose for which these reports have been offered here in evidence this afternoon, they were offered in order to guide the Committee as to what situation needed investigation.

A. I am sure that the last two reports were made for that purpose, but I don't know whether the prior reports, that is the statistical reports were made for that purpose, exhibits nine and ten were made for that purpose.

Q. Mr. Morgal, it is not much good to get companies to file annual reports of their operations unless the taxes were indicated by those reports, are brought to the attention of the Commission and acted upon by it, is there?

A. I think they should be brought to the attention of the Commission. Of course, I have nothing to do—

Q. I won't ask you to make any comments whether they should be acted on, that is not your function.

MR. TURNER: I didn't mean whether they did not indicate that they were too high, I asked whether that didn't mean in the final analysis that the rates were too high?

MR. EVANS: I only wanted to bring out the fact that Mr. Morgal said, they didn't even indicate that—

THE WITNESS: My statement is general, that they are not conclusive.

MR. EVANS: I think that is perfectly plain.

THE WITNESS: I think that is a plain statement.

MR. TURNER: There is a difference between the word indicate and conclusive.

BY MR. RICHARDS:

Q. When the rate of return is such as indicated in these cases, isn't it a practice of the Commission to investigate them to see whether the rates are too high; have they done that, or what is the policy?

MR. EVANS: I think it might be embarrassing to Mr. Morgal to answer that question. We are going to have Mr. Young, the head of the rate committee on the stand tomorrow, and he probably can answer that question.

THE WITNESS. This exhibit which I have put in here today shows that we have gone into some twenty companies as a result of the study.

BY MR. EVANS:

Q. Commencing February 10, 1930.

THE WITNESS. An examination of the rates of return found by Mr. Colledge in the light of the accrued depreciation reserve, which was deducted by him in arriving at undepreciated book costs, indicates that in the majority of cases, where high rates of return are shown, on accrued depreciation deducted in arriving at a rate these are likewise high. For instance in the case of Latrona Light and Power and the Cresson Electric Company, the two companies shown with returns in excess of 50%, the book figure deducted for accrued depreciation was 61½% and 42½% respectively, of the undepreciated book costs—

Q. May I interrupt you just a moment. These depreciative reserves were funds collected from the consumers. were they not?

A. I don't know. That cannot be determined unless you study the books.

Q. Under your uniform system of accounts isn't that what they should be?

A. The uniform system of accounts has only been in effect since January of 1919, and the history of these companies extends much further back than that.

Q. However, under the uniform system of accounting which has been in effect since 1919, the depreciation reserves represent funds collected from the patrons of the company. do they not, in the way of rates?

A. The system of accounting did not provide that depreciation reserve must be set up out of operating expenses; under the system of accounting, they may accrue from surplus.

Q. Which in turn also represents collections from the consumers.

A. That would be stockholder's funds, if it was an appropriation to surplus.

Q. Mr. Morgal, does not surplus represent surplus earnings; isn't it earned surplus?

A. Surplus earnings over and above operating expenses.

Q. So that an appropriation from surplus is in the last analysis an appropriation or a contribution made by customers in the way of rates.

A. Or it may be a part of fair return, ordinarily payable to the stockholders.

Q. In other words, if the company has not been paying adequate dividends, but has been accumulating surplus?

A. That is true, and you cannot determine how these high reserves were set up, how they came on the books, unless you made a complete analysis of the reserve account from the books. Now, by analysis I mean both the credit to the reserves, the method by which it was made, and the debits to the reserve which would represent the retirement losses. In other words, the company may have, instead of charging this retirement loss to reserve, may have charged that to maintenance, so that unless you study a whole period, or a long period over the company's history, about the details underlying these reserves, it seems to me unfair to deduct them in total from the undepreciated book cost.

Q. But you have done that very thing in your reports to the Rate Committee, which are offered as Exhibits 9 and 10?

A. I didn't do it for that reason, but it was done because I didn't have the men to send out to analyze these books.

Q. There again, Mr. Morgal, when you say it is unfair, you mean it is inaccurate, and it may be unfair either to the consumer or it may be unfair to the company?

A. Positively. Probably unfair was the wrong word to use, but it is inaccurate and unreliable. May I go ahead?

Q. Yes, surely.

A. Another point that I should like to make in connection with this depreciation reserve is that our experience discloses that companies in their efforts to pay as little income tax as possible, many times more depreciation than would be allowed in a rate proceeding were allowed, resulting in a high accrual on the reserve. Now, with respect to No. 18 on Colledge Exhibit No. 2, the Elwood City Hydro Electric Company, it shows a deficit in return of 13.62. This should be 1.36; it is a slipping of the decimal point. Rentals paid for leased property by the holding companies were not included in the Colledge Exhibit No. 2, No. 15, the Duquesne Light Company, \$185,976—

Q. What is the gross operating revenue of the Duquesne?

A. Company No. 30, the Metropolitan Edison Company, \$66,198. Company No. 40, the Philadelphia Electric Company, including the Philadelphia Suburban Gas and Electric Company, \$133,892.

Q. What difference does this make in the overall return in column 3 on Exhibit 2 for these companies?

A. In the case of the Duquesne Company the percentages changed from 10.56 to 10.43. In the case of the Metropolitan Edison Company, the percentages changed from 8.87 to 8.75. In the case of the Philadelphia Electric Company, the percentage changed from 9.26 to 9.21; makes very little difference.

Q. It still remains 9.2, as it is on the exhibit?

A. On page 677 of Mr. Colledge's testimony, he stated that the valuation report of the Natrona Company did not show where the rental was paid, although the annual report shows that the rental was paid to the Pennsylvania Salt Manufacturing Company, which controls the company. With respect to company No. 41, the Renovo Edison Light, Heat and Power Company, the rate of 1.78 is not correct, because it did not take into consideration the selling of steam to the Renovo Heating Company, which the company erroneously credited to non-operating expenses. If that is to be credited to operating revenue, the return would be 12.76.

Q. You said which the company erroneously credited to non-operating revenue?

A. Credited to non-operating revenue. The Lehighton Light, Heat & Power Company—I don't know what number that is—

Q. No. 27.

A. The Lehigh Light, Heat and Power Company, while it files its reports to the Commission, is not subject to its jurisdiction, because it is a lessee of a municipality owned plant.

BY MR. RHODES:

Q. Who operates the Lehigh plant?

A. The Lehigh plant operates the municipally owned plant for the municipality.

Q. Does not the Pennsylvania Light and Power Company own the plant?

A. I believe they do.

MR. EVANS: It is not shown on Exhibit No. 2.

THE WITNESS: The only other correction I would like to make is in Mr. Colledge's testimony on page 652 and 635. In summarizing the results of his Exhibit No. 2, he states that eleven companies out of the fifty-three show earnings of less than ten per cent. That should be two companies out of fifty-three showing earnings of less than ten per cent. He also states that seven companies out of—

Q. It ought to be less than seven per cent. Mr. Morgal, it is a typographical error.

A. You say that should be less than seven per cent?

Q. It should be less than seven per cent.

A. Then he said seven out of twenty-seven earn less than ten per cent. He also showed that forty-two out of fifty-three show earnings between seven and eight per cent. I can only find three out of the fifty-three that show earnings between seven and eight per cent. He also said that twelve companies out of fifty-three show earnings of over fifty per cent. As a matter of fact there were only two over fifty per cent.

MR. EVANS: If the Committee please, I think it is very clear that a mistake has been made in transcribing Mr. Colledge's figures. I think that the Committee is willing that the errors shall be corrected by having Mr. Colledge go over his testimony, rather than having Mr. Morgal, make it on the record in this way.

MR. TURNER. May we have that on a separate sheet if the stenographer can give it to us in that way, and put it in the record in the proper place, so as not to have to hunt all the way through the book.

MR. EVANS. Yes, we will do that.

Mr. Walker also says that there are some other transpositions of Mr. Colledge's testimony, which we will also later correct.

THE WITNESS. There is one other matter in Mr. Colledge's testimony on page 640, he states that reference is made to the inclusion of property of non-utility character in the company's capital accounts. The facts there are that since the prescription of the uniform system of accounts for electric companies a separate account has been provided for property of a non-utility character, so that if the companies are keeping the system of accounts properly non-utility property would not be recorded in the fixed capital accounts of the company, but such non-utility property might be recorded in the company's accounts prior to that time. Do I make that clear?

Q. There also might be a matter of judgment which the company would exercise its discretion as to whether the property was utility or non-utility.

A. That is a matter of judgment, that is right.

MR. EVANS: Thank you very much, Mr. Morgal, that is all.

MR. STEPHEN ROUSHENBUSH sworn.

BY MR. EVANS:

Q. Mr. Roushenbush you are employed in making research for this Committee in connection with the electric and other utility situations in Pennsylvania?

A. I have been employed by the Governor.

Q. And will you briefly state to the Committee your experiences in working along these lines.

A. Graduate of Amherst College, author of a book on coal and of a book and various pamphlets and articles on power regulation. Was assistant professor at Dartmouth College, also taught economics at New York University and Bryn Mawr Summer School. Formerly economic consultant to the Tri-District Scale Committee of the anthracite miners, later to the United Mine Workers of America. Formerly a member of the Bureau of Industrial Research of New York. Formerly economic assistant to Senator Couzens on taxation problems. Was a member of several committees of business and professional men and women interested in power control. Lived in Pennsylvania for some years, Shamokin and Pottsville, worked

in the mines. Also been engaged in the clothing industry as a labor manager, and in the oil industry as a camp superintendent. A member of no political party. Employed temporarily by the Governor as economic expert on power regulation.

Q. Have you prepared for the committee on exhibit showing the holding companies controlling operating companies in Pennsylvania?

A. Yes, this is the exhibit (showing the exhibit).

The exhibit shows in rather simple form, perhaps too simplified—

MR. EVANS: We offer this in evidence as Exhibit No. 11. Pennsylvania Holding Companies, produced and marked Exhibit No. 11.

#### EXHIBIT NO. 11.

#### PENNSYLVANIA—HOLDING COMPANIES

##### A. ASSOCIATED GAS & ELECTRIC COMPANY<sup>\*</sup> 61 Broadway, N. Y.

1. Clarion River Power Co.
2. Metropolitan Edison Co.  
Bangor Electric Co.
3. Sullivan County Electric Co.  
Northern Pennsylvania Power Co.
4. Fleetwood & Kutztown E. L. H. & P. Co.
5. Pennsylvania Electric Co.  
Erie Lighting Co.  
(Solar Electric Co.)

Sullivan County Electric Co. has applied to Commission and has been granted permission to take over Northern Pennsylvania Power Co. and to then change their name to Pennsylvania Power Co.

##### B. ELECTRIC BOND & SHARE CO. 2 Rector Street, N. Y.

1. American Gas & Electric Co., 30 Church St., N. Y.  
Scranton Electric Co.  
Lackawanna Light Co.
2. Pennsylvania Power & Light Co. (Allentown, 2 Rector St., N. Y.)  
Carlisle Gas & Water Co.  
Lehigh E. L. H. & P. Co.  
Pine Grove E. L. H. & P. Co.  
(Edison Electric Co.)\*  
(Lancaster Electric L. H. & P. Co.)\*  
(Half Penny Grove Inc.)\*  
(Intercourse Electric Co.)\*  
(Laurel Park P. & L. Co.)\*  
(New Kingston E. L. H. & P. Co.)\*  
(Sherman's Valley E. L. H. & P. Co.)\*  
(Hubley Electric Co.)\*  
(Naomi Pines Electric Co.)\*  
(Penns Creek Hydro Electric Co.)\*  
(Shenandoah L. H. & P. Co.)\*

\* Taken over by Penna. Power & Light Co., on Dec. 31st, 1930.

##### C. MIDDLE WEST UTILITIES CO., Chicago

1. National Electric Power Co., New York.  
Penn Central Light & Power.  
(Portage Light & Power Co.)\*  
(Barnesboro Spangler Elec Co.)\*  
(Bedford Elec. Co.)\*
2. National Public Service Co.—New York.  
Municipal Service Co.  
Chester Valley Elec. Co.  
Edison Light & Power Co.  
Glen Rock Elec. Lt. & P. Co.  
Keystone Public Service Co.

\* Taken over by Penn Central during 1929.

##### D. NIAGARA & HUDSON POWER CO. New York.

1. Buffalo-Niagara & Eastern Power Corp., Buffalo,  
Niagara-Lockport & Ontario Power Co., Buffalo,  
N. Y.  
Bradford Electric Co.

**E. CHARLES H. TENNEY & CO.**  
Boston.

1. Rockland Light & Power Co.—New York City.  
Pike County Light & Power Co.  
Shohola Power Co.

**F. AMERICAN WATER WORKS & ELEC. CO.**  
50 Broad Street, N. Y.

1. West Penn Elec Co.—Pittsburgh.  
West Penn Power Co.  
(Center Elec. Co.).\*  
Potomac Edison Co.  
South Penn Power Co.

\* Taken over by West Penn Power Co., October 31st, 1930.

**G. UNITED GAS IMPROVEMENT CO.**  
Philadelphia.

1. Philadelphia Electric Co.  
(Delaware County Elec. Co.)\*  
Lower Chanceford E. L. H. & P. Co.  
Delta Elec. Power Co.  
Delta Water Power Co.  
Chester County L. & P. Co.  
Philadelphia Hydro Elec. Power Co.  
Philadelphia Elec. P. Co.  
(Philadelphia Subr. Counties Gas & Elec. Co.)\*  
Southern Penna. Power Co.  
Susquehanna Elec. Co.  
Susquehanna Power Co.
2. Erie County Elec. Co.
3. American Gas Co.—Camden, N. J.  
Luzerne County Gas & Elec. Co.

\* Taken over by Philadelphia Electric Co., Nov. 1st, 1929.

**H. UNITED STATES POWER CORP.**  
Jersey City, N. J.

1. Standard Power & Light—Chicago.  
Standard Gas & Elec. Co.—Chicago.  
Philadelphia Company—Pittsburgh, Pa  
Duquesne Lt. Co.

**I. COMMONWEALTH & SOUTHERN CORP.**  
New York.

1. Pennsylvania Power Co.  
(Peoples Power Co.)  
(Harmony Elec. Co.)  
(Elwood City Hydro Elec. Co.)

**J. REPUBLIC SERVICE CORP.**  
Philadelphia, Pa.

- Abington Elec. Co.  
Mauch Chunk H. P. & E. L. Co.  
Brockway L. H. & P. Co.  
Fulton Elec. L. H. & P. Co.  
Green Castle L. H. & P. Co.  
Mercersburg-Lehmaster & Marks E. Co.  
Renovo Edison L. H. & P. Co.

**THE WITNESS:** This exhibit shows in rather simple form, perhaps too simplified, the holding companies controlling outside of Pennsylvania practically ninety per cent. of the area might be said to be controlled outside through various holding companies. The stock of practically all the operating companies. The stock of practically all the operating companies in Pennsylvania is owned by the holding companies. The Associated Gas and Electric Company, that is a company outside of Pennsylvania, and has offices in New York. The Electric Bond and Share Company also is in New York, Middle West Utilities, is in Chicago. The Niagara-Hudson Power Company, up in New York, has a large plant in the northern part of the state. The American Water Works and Electric Company has a New York Office. The United Gas and Improvement Company has some connection with the big United Corporation, which will be brought out later, if you are interested in that, in a more detailed way. The United States Power Corporation is in New Jersey. The Commonwealth and Southern Corporation is in New York, and the Public Service Corporation is in Philadelphia, so that of these you have two big holding companies, such as the Pennsylvania Company, rather

the United Gas Improvement Company in Philadelphia, and the Republic Service Corporation. The complete charge of their financial connections with the other corporations outside of the state, has not been completed, but the chart in that respect will show that practically every holding company owns all the common stock and gets all the profits over and above 6%, or 5%, that goes to the bondholders or preferred stockholders, and that goes outside of the state to these companies. One might draw from the conclusions that the Pennsylvania operating officials, the directory will show them appointed by the holding companies, and are not actually free agents and cannot do what they want to do about rates in Pennsylvania, but have to take into consideration—

**MR. TURNER:** I think that goes into some of the testimony that we objected to before, conclusions based on presumptions and not in the way of evidence.

**MR. EVANS:** Which do you mean, Mr. Turner?

**MR. TURNER:** This statement about the directors and what they have to do.

**THE WITNESS:** If you wish to have that proof, sir, we can put it in the record, by putting in half of Moody's Manual, that is the only way to show it.

**MR. TURNER:** I was not thinking of that portion of it.

**MR. EVANS:** Which part of the statement do you object to; do you mean in regard to the holding control, or what?

**MR. TURNER:** The actions of the directors.

**MR. EVANS:** That the managers in the state were not free agents.

**BY MR. EVANS:**

**Q.** I don't suppose you have any direct evidence at the moment that you wish to submit on that point, Mr. Roushenbush?

**A.** If you wish me to prepare a list of owners of common stock, that is, holding companies, and to show that it is customary and common practice for them to elect the presidents and officers of operating companies, that can be done very easily.

**MR. TURNER:** The thing to which I have objected right along is the statement of witnesses of conclusions that were not based on direct evidence to prove it.

**MR. EVANS:** I think what Mr. Roushenbush was testifying to was that the best of the operating companies in Pennsylvania through these controlling companies are controlled from outside of the state.

**BY MR. EVANS:**

**Q.** Mr. Roushenbush, in this exhibit 11 as I understand it, the holding companies, are really the companies that control power boards.

**A.** Yes sir.

**Q.** Is there any further comment you wish to make in regard to exhibit number 11.

**A.** No sir.

**Q.** Now have you prepared an exhibit showing earnings, the percentage earned by the various companies covered by your exhibit number two for five years?

**A.** Yes sir.

**Q.** And what years have you covered?

**A.** I have covered the years 1925, 1926, 1927 and 1928. This is a copy of it, and also a summary sheet.

**MR. EVANS:** Exhibit number 12 is offered in evidence. This exhibit which is in two sheets is entitled, first summary of excess earnings 1925 to 1929 (before deduction of revaluation), Class A and B Electric and combination, and the second part is, "Earnings of Electric Companies on their own claimed investment in utility property, 1925, 1926, 1927, 1928, Class A and B Companies and combinations (from their annual reports to the Public Service Commission)."

Passing by the summary sheet which is the first sheet of this exhibit for the moment and turning to the second sheet, I understand that you have prepared in eight columns the data for the various years exactly comparable to that prepared by Mr. Colledge for the year 1929.

**A.** Yes. The eighth column, which would give the amount of excess return has not been figured out simply for the lack of time. That can be figured out and offered later. The same group of Class A Electrics were taken into consideration, but we decided to omit those three tied up with street railways and we think this is as near complete as we can make it.

**Q.** In order that there may be no misunderstanding in this exhibit as in the Colledge exhibit number 2, you merely show

the percentage of over-all return as shown from the books of the company without attempting to show that this conclusively establishes what the rate base is on the actual rate of return in a rate case would be?

A. That is true. Of course these figures are not compiled for the purpose of amusement. We do in a way get the set-up proposed to help to set up some standards of performance by which we can judge the performance of this condition and they show a return that is closer to the actual money invested. I mean outside of the question of this fixed capital, which does not represent money invested but it is closer and fairer to base a finding on how much is earned on capital invested than any other we could find out.

Take 1925, the figures for which commence on page 3 of the exhibit, the rates of over-all return are shown in column 7, are they not?

A. In column 6.

Q. They show the Abington Electric Company 37.33%.

A. Yes sir.

Q. It shows the Allegheny Valley Light Company 51.89%?

A. Yes sir.

Q. Now then on down the same thing on subsequent pages for the year 1926, 1927, 1928?

A. Yes sir.

Q. Now turning to the first page of your exhibit which is a summary, which you have headed "Excess Earnings," there is given the excess money, the excess over seven per cent over-all return on book value?

A. As calculated, yes sir. May I state at that point, these percentages would be much higher if we had calculated the average fixed capital during the year rather than at the end, the percentage would be much higher. It would also be much higher if we made a comparison with the deduction for Federal income tax, which is the way the Commission has stated it. Also, these percentages would be higher than now if we had been able to deduct on utility property. In many cases going back to the companies in 1919 before the Commission in many rate cases has found a great deal non-utility property was included in them for three or four years which would raise this percentage rather than lower it.

Q. And as I think Mr. Colledge explained, if the company has inflated its book valuation by write-up of any sort, that again leads and raises the rate of return?

A. These write-ups are not eliminated from these figures.

MR. COOKE: The computations are based on the same figures Mr. Colledge used?

MR. EVANS: That is right.

BY MR. EVANS:

Q. Referring still to the summary on the front page of Exhibit 12, as I understand it, there were seventy-four companies whose reports you have examined for 1925?

A. Yes sir.

Q. And seventy-three for 1926?

A. Yes sir.

Q. And the figures given at the bottom of the page in figures shows the total?

A. Yes sir.

Q. You have totaled these up among the various percentages over all and with the seven per cent. return?

A. Yes sir.

Q. Now I notice, Mr. Roushenbush, that the number of companies tended to diminish from 1910 down to 53. Will you explain that?

A. That is largely a merger and sale. In 1925 I think you will find the Harrisburg Light & Power Company, and in 1929 you will not find it. There is one jump up in 1928, that may be because one company came into Class B, from Class C. On the whole these companies have been merging during the last years.

Q. This would indicate a very marked decrease in 1928 and 1929 in the number of companies?

A. Yes sir.

Q. Now what is the reason for preparing this data for the committee?

A. Well, the reason for preparing this data is to set up in a way a standard of performance by which the performance of this Commission can be judged. You cannot do that out of thin air. One way to approach the question is by comparison with regulation in other states. Another way of comparison is to see how much these cost the Commission as compared

to our own state on some other system or with some other set-up. In this State within the last few years we have the giant power question which sought to set up a system of return on the original cost basis. That has been set up in New York with the approval of the administration, at least it has been offered for legislation as an administration measure. The same thing has been up in Massachusetts. In Massachusetts the head of the public utilities is definitely on record that if the companies tried to introduce the form we have in this State in Massachusetts they will fight for the principle of going back to the original cost on a contract basis. You can look at this performance of this Commission in this State on these rate earnings as against any one of these three standards and say it is a very good Commission or perhaps it has been negligent or whatever these figures work out to show a conclusion on. They have been prepared in order to afford the members of the committee an opportunity of saying whether this is the cheapest and best way that the regulation can be had, and afford the committee a basis upon which they can base their findings.

BY MR. TURNER:

Q. The Commission is bound by the law of Pennsylvania, is it not?

A. Yes sir. It is against that law that New York and Massachusetts are fighting. They are taking the other viewpoint of this. You are saying the Commission cannot do anything except allow these returns on account of the law, and they are going further and trying to see if they cannot get something that is a little better to work with than this is. So these figures in a way show, I believe you will find that they show to what extent we have gotten into a situation in Pennsylvania, where the companies have a fair earning power then and beyond that may furnish information for a set-up of some other scheme.

BY MR. EVANS:

Q. This summary exhibit 12 shows, as I understand it what we might call the excess earnings, meaning the excess over seven per cent. over-all return on depreciated book value is not confined to 1929 but has existed for a number of years?

A. It is not at all unique to 1929. It has been going on at pretty much the same ratio for the last four or five years, the four years before 1929. In each of the five years in total here and 1929 covered by Mr. Colledge, about one-half of the companies were earning at least fifty per cent. more than a fair return on the money they claimed to have invested and the money written on the books for utility purposes. Out of every two dollars paid to these companies by the consumers as a return on capital invested one dollar goes in excess profits to the holding company.

Q. In each year close to one-third of all of the companies were earning at least double a fair return on the money they claim to have invested themselves. Out of every two dollars paid to the companies by the consumers as a return on capital invested, one dollar goes as excess profits to the holding company. Each year about one-fifth of these companies were earning three times a fair return on the money they claim to have invested. Out of every three dollars they pay to the companies by the consumer as a return on the capital invested two dollars has gone in excess profits to the holding company. That is the situation the last five years, pretty much that way.

Q. Now have you made any calculation at all as to what you call these excess returns amount to in dollars and cents?

A. Yes sir. We have been working under some pressure and have not been able to complete all the calculations indicated on these sheets. I have calculated the years 1925 and 1928. Discarding cents in the calculation I find that in 1925, I find invested capital in utility property less depreciation was \$461,359,206. Now this is the average of all the companies. It was gotten by adding the column 5 as net operating income column 4 as invested capital less construction.

Q. The figure you have just given now is the total of column 4?

A. The fixed capital \$461,359,206. The operating income was \$54,478,445. This was 11.8%. That was the average put together on the whole seventy-four companies for the year 1925. A 7% return would have been \$32,295,144. Excess over 7% return is \$22,183,301. Now taking for that one year the rate of excess over seven per cent. is 68.5%. I have done the same thing in 1928. The fixed capital less depreciation, was

\$808,092,703, and the operating income was \$77,866,777. The percentage of over-all return was 9.35% and the 7% return would have been \$56,566,489, an excess over the seven per cent. of \$21,300,280 or an excess of 33.6% over the 7%.

Q. So in 1925 the excess over the 7% amounted to \$22,000,000.

Q. And in 1928, to \$21,300,000?

A. Yes sir. If this same average has been established for all the five years, it would make something over a hundred million dollars, it would run over one hundred million. To make it clear: If by some chance this provision in the giant power survey were adopted the saving to the State would have been about \$100,000,000, or to the consumers under this evidence.

Q. The decline in the rate of excess from 1925 to 1928 may possibly be due to write-ups of capital assets in some cases?

A. Yes.

Q. Those were the years during which the merger proceedings took place?

A. Yes sir.

Q. Also, Mr. Roushenbush, that was the period of high construction costs, was it not, so that would affect the situation?

A. Yes sir, there was a great deal of capital added in those years.

Q. Of course these figures you have given take no account at all of the expenses of regulation from other angles?

A. No sir, but if that one hundred million dollars for five years should be doubled up say possibly for ten years, then you must add the expenses of the Commission, which runs around a million dollars a year, the expenses the consumers and the companies are put to in rate cases, and their total gets beyond \$22,000,000 a year very quickly.

BY MR. TURNER:

Q. Do you mean to imply that there should not be a Commission?

A. No sir, you must have some sort of a commission. But when you are figuring performances you have to figure how much you have to pay these people to do a job and what is done for the money. It might pay to have a five million dollar commission if you got results.

Q. Mr. Roushenbush, are you prepared to give to the committee the names of the companies whose rate of return was fifty per cent. or more in excess of seven per cent.?

A. A great many run over.

The Abington Electric Company runs over for three years.

The Allegheny Valley Light Company runs over for three years, and as Mr. Morgal pointed out, we didn't have that spotted for 1929.

The Bangor Electric Company runs over for one year.

The Barnesboro-Spangler Electric Light Company runs over for two years.

The Bedford Electric Light, Heat and Power Company runs over for four years.

The Berkshire Electric Company runs over for one year.

The Boyerstown Electric Company runs over for three years.

The Brackenridge Light & Power Company runs over for four years.

The Bradford Electric Company runs over for four years.

The Carlisle Gas and Water Company has been away over for three years.

The Chester County Electric Company has been over for one year.

The Chester Valley Electric Company which was omitted on the November, 1929, report, was over for four out of the five years. I think Mr. Morgal testified it was over the fifth year.

The Citizens Light & Power Company was over for four years.

The Colver Electric Company was over for three years.

The Duquesne Light Company was over for two years.

The Edison Light & Power Company was over for four years.

The Erie Lighting Company was over for one year.

The Gettysburg Electric Company was over for two years.

The Glen Rock Electric Light and Power Company was over for four years.

The Hamburg Gas & Electric Company was over for three years.

The Harmony Electric Company was over for one year.

The Harrisburg Light & Power Company was over for two years.

The Holtwood Power Company was over for one year.

The Juniata Public Service Company was over for two years.

The Keystone Power Company was over for two years.

The Langhorne Electric Light & Power Company was over for three years.

The Lehigh Electric Light & Power Company was over for one year.

The Mauch Chunk Heat, Power & Electric Light Company was over for four years.

The Mercer County Light, Heat and Power Company was over for two years.

The Meyersdale Electric Light, Heat and Power Company was over for one year.

The Middleburg Light, Heat and Power Company was over for three years.

The Natrona Light, Heat and Power Company was over for one year.

The New Castle Electric Company was over for one year.

The Northern Pennsylvania Power Company was over for one year.

The Palmerton Lighting Company was over for four years.

The Panther Valley Electric Company was over for one year.

The Pennsylvania Public Service Corporation was over for one year.

The Philadelphia Electric Company System was over for three years.

The Sayre Electric Company was over for two years.

The Scranton Electric Company they lost on two years and we have it calculated for two years.

The Shippensburg Gas and Electric was over for four years.

The Senango Electric Light Company was over for one year.

The Titusville Light and Power Company was over for four years.

The United Electric Company was over for four years.

The Waynesboro Electric Company was over for three years.

The Windber Electric Company was over for four years.

That will be higher if 1929 had been included. So all together 48 companies have been over 50% in the course of these years, one year or more and in some cases all of them.

Q. Mr. Morgal pointed out that the property of some of these companies at least had largely been constructed in pre-war days, when construction costs were considerably lower than they have been since the war, and that therefore for rate making purposes you would have to consider the reproduction cost and that pre-war reproduction cost of that pre-war property as well as the original cost. Have you made any investigation of any of these properties as to the amount of pre-war investment as compared to the post-war?

A. Yes sir, as they carry their own fixed capital on the books prior to 1919 and since. Some are new companies. Some have been in existence for a long time. You find in the case of the West-Penn that they have about 26% of their capital—was before 1919.

The Pennsylvania Power and Light have 62%.

The Duquesne Light had 801%.

The Penn-Central had 57.08%.

The Metropolitan-Edison had 50.04%.

The Pennsylvania Electric had 47.06%.

The Philadelphia Electric had 54.02%.

In answer to your question, if we may again go to common knowledge, there is nothing to the mind of any one that provides a definite law that reproduction cost must be revalued at one hundred per cent. or any definite per cent., and the courts have sustained various valuations. Take the Duquesne Light which carries its investments at only \$10,000,000. You could practically go ahead and have a revaluation made of that property at double the price and easily get a very considerable excess return over the return given you on these sheets. In 1928 the Duquesne Light showed a capitalization of \$10,672,945 before 1919. You could redouble their present valuation and still find a huge excess return over the 7%. 7% on that valuation, adding the ten millions, that 7% return would be \$11,741,718 which is still almost \$2,500,000 over the 7% return of that company.

Q. Now as a matter of fact, have any of the company officials recently made any statements as to how—have you prepared any sheet?

A. Yes, sir, I have prepared a statement here of the calculated rate in every town and city in Pennsylvania above one thousand, we could get a hold of, and you have your copy there, figuring how much it cost the consumer. This is net

rate, how much it cost the consumer using 15 kilowatts a month, one using 40 kilowatts a month, one using 80 kilowatts a month. We have calculated it in dollars and cents and I have separated the city according to the size. I have also prepared sheets showing very simply and clearly the difference between the various companies if you want them.

Q. Suppose we have those. Suppose we take first the consumer of the 50 kilowatts, the 40 kilowatts, the 80 kilowatts a month for the big cities. The city of Reading has rates that are away up there at nine cents, one of the highest rates in the State. By the way these are 1930 rates. There has been some reduction on the part of some of the companies.

Q. In other words, you have taken five cities, Philadelphia, Pittsburgh, Erie, Scranton, and Reading being the five cities in the State having one hundred thousand population or more.

A. Yes sir.

Q. And you have taken the actual rate to the consumer first for the consumption of fifteen kilowatts a month and next for a consumption of forty and next with a consumption of eighty kilowatts a month.

A. Yes sir.

Q. And this shows that in Philadelphia the rate is seven cents per kilowatt for fifteen kilowatts per month, and in Pittsburgh it is 7.1 per cent and in Erie it is 8 cents and in Reading it is 9 cents and in Scranton it is 7.6 cents, and in each of these cities on the consumption of forty kilowatts per month what will these rates become?

A. In Philadelphia the rate is 6.3 cents, in Pittsburgh 5.7, in Erie 8.01, in Reading 8.05 and in Scranton 7.01. You will notice under the eighty kilowatt per month consumption Erie stands out very much above the others. Reading stands out in practically every classification.

Q. What will be the average consumption, Mr. Roushenbush, for a small residence consumer taking the year round?

A. The Commission doesn't know. We asked for that information and could not find out, as to how that consumption is split, that is you mean those using fifteen kilowatt a month and how many use forty kilowatts and how many use eighty kilowatts. They give an average figure that shows a little under forty kilowatts. Most of the companies around the State show a little under forty kilowatts a month. There is one more piece of data that comes to you from New York State, and they found out that if they were going to lower the rates for the smaller consumer, they would hit the people using fifteen kilowatts a month, that they would hit 51 per cent of the consumption.

Q. An eighty kilowatt consumer would be an unusually large residence consumption?

A. Yes sir.

Q. The rate for that in the different cities would be what?

A. Philadelphia 5 cents, Pittsburgh 4.06 cents, Erie 7.05 cents, Reading 7.01 cents, Scranton 5.09 cents.

BY MR. TURNER:

Q. Does your study show any reason for these high rates in places like Erie and Reading?

A. That is an engineering matter and I believe there are engineers who are studying that now who may be able to give an answer to that.

This is the second group of cities those from fifty to one hundred thousand. There are some of the Pennsylvania Power and Light Company rates that were reduced since the first of the year. This covers the cities of Allentown, Altoona, Bethlehem, Chester, Harrisburg, Johnstown, Lancaster, McKeesport, Wilkes-Barre, and York. York is very high there The Pennsylvania Power and Light Company stands out higher than those around Pittsburgh.

Q. The rates for the fifteen kilowatt consumer per month in the different cities would be what for 1930?

A. The high rates stand out there on the chart like that (indicating) you find York above McKeesport by about .04 cents, and above Chester by about .035 cents, you find this group of the Pennsylvania Power and Light stand out. You see them standing out on the forty kilowatt consumption. Here we understand that what these companies have been doing is to try to reduce the rates to induce people to use power.

Q. The Pennsylvania Power and Light Company have reductions effective January 1, 1931?

A. Yes, sir, a little under one cent.

BY MR. RHODES:

Q. Can you give us these rates, so we can get an understanding of the difference?

A. Yes sir.

BY MR. EVANS:

Q. Will you give us the fifteen kilowatt per month consumption on each city?

A. Allentown, 9.06 cents; Altoona, 8.02; Bethlehem, 8.906; Chester, 7.06; Harrisburg, 10.06; Johnstown, 9.00; Lancaster, 9.06; McKeesport, 7.01; Wilkes-Barre, 9.04; York, 11.00.

On the forty kilowatt consumption you have Allentown, 9.02; Altoona, 6.02; Bethlehem, 9.02; Chester, 6.06; Harrisburg, 6.57; Johnstown, 6.07; Lancaster, 9.02; McKeesport, 5.07; Wilkes-Barre, 9.02; York, 6.08.

And on the consumption of 80 kilowatts per month in the same cities we have Allentown, 8.01; Altoona, 5.06; Bethlehem, 8.01; Chester, 5.01; Harrisburg, 5.08; Johnstown, 4.08; Lancaster, 8.01; McKeesport, 4.06; Wilkes-Barre, 8.05 and York 5.01.

Q. In order that there may be no misunderstanding, you state that the Pennsylvania Power and Light Company, which operates, in Allentown, Bethlehem, Harrisburg, Lancaster and Wilkes-Barre has reduced its rate since this time?

A. Yes sir, at the beginning of the year.

Q. These rates at the present time are anywhere from one-half cent to a cent lower, are they not?

A. To be exact, it is .3 of a cent, in other places except Harrisburg for the 15 kilowatt consumer, it drops from 9.06 to 9.03.

Q. At Harrisburg what does it drop?

A. 10.01 to 8 cents.

Q. Now, on the 40 kilowatt consumption?

A. It drops from 9.02 to 8.05, .7 of a cent.

Q. Is there any change in Harrisburg?

A. Yes, it drops from 6.07 to 5.07.

Q. What is the drop in the 80 kilowatt consumption?

A. From 7.1 cents to 7.4 cents, .3 of a cent. Harrisburg drops from 5.8 to 4.9.

Q. What is the drop in Wilkes-Barre?

A. The other ones are all the same—.74—is all I have got on this.

Q. It drops to 7.7?

A. Yes.

Q. In 1930 it was higher than the other?

A. Yes.

Q. Now, have you got any similar chart for the smaller towns?

A. Yes, we have others for practically every division. (Another chart produced.) Cities from 25 to 50 thousand, 11 cities. This is just a chart for the 15 kilowatt hours again, and shows the same big difference. There is, New Castle, for instance—

Q. You have there Aliquippa, Bedford, Easton, Hazelton, Lebanon, Nanticoke, New Castle, Norristown, Sharon, Wilkesburg and Williamsport?

A. Yes.

Q. And what are the rates in these cities for 15 kilowatt hour consumption per month?

A. 7.1, Aliquippa; Bedford, 7.4; Easton, 9; Hazelton, 9.6; Lebanon, 9; Nanticoke, 9; New Castle, 5.7; Norristown, 8; Sharon, 8.6; Wilkesburg, 7.1; Williamsport, 9.6. Then there is a reduction. The Pennsylvania Power and Light Company has the same reduction indicated before, to 9.3.

Q. That applies to Hazelton and Williamsport?

A. Yes.

Q. Now, have you a similar chart for cities from 25,000 to 50,000, having 40 kilowatt hour consumption?

A. Yes, that shows also such cities as Hazelton, Williamsport, Easton, Lebanon and Nanticoke.

Q. In the same way will you give the rate per kilowatt hour for this consumption in the same 11 towns?

A. Aliquippa, 5.7; Butler, 5.3; Easton, 8.5; Hazelton, 9.2; Lebanon, 8.5; Nanticoke, 8.5; New Castle, 5.7; Norristown, 7.2; Sharon, 5.9; Wilkesburg, 5.7; Williamsport, 9.2. And again there is a reduction there by the Pennsylvania Power and Light Company at the beginning of the year, which evens it up.

Q. Mr. Roushenbush, I understand you will have this photostated and also introduce the supporting data as an exhibit?

A. Yes.

Q. You have another chart which shows some 11 cities from 25,000 to 50,000 inhabitants, having 80 kilowatt hour consumption, and as I understand in each of these last three exhibits the price per kilowatt hour is put at the bottom of each?

A. Yes, it shows clearly how much it is.

Q. All right, we will not bother you to read it over again. Now, have you gone down into the smaller cities?

A. Yes, we have another chart from 10,000 to 25,000. There is a big group here on the left, in the western part of the State, Ambridge, Beaver Falls and Duquesne, and so forth, Homestead. The high one there is 11 cents, Coatesville, DuBois, Franklin, Meadville, Oil City are 10, Hanover, Kingston, Plymouth, Steelton, Warren 19, and the group headed under Berwick. The numbers Mr. Evans, on the chart show clearly how much the city is paying.

Q. Now, you have similar charts for the 40 and 80 kilowatt hour consumption?

MR. HAGMAIER: I don't think we need bother about the 40 and 80.

THE WITNESS: All right. The next thing I would like to show, Mr. Evans, is the counties, if I may.

BY MR. MEMOLO:

Q. Nothing below 10?

A. Yes, they are coming on right now. These are shown in two ways. We just took the towns and boroughs under 10,000, between 10,000 and 1,000, and got the county averages for them, and all that is on this exhibit. That is going to be mimeographed and submitted.

Q. Have you taken the cost to the consumer in the municipal plants?

A. They are not shown on this particular one. The data for the municipal plant is prepared and can be offered later.

MR. EVANS: We are expecting to put that in, Mr. Memolo. (Witness producing another chart.)

THE WITNESS: That is the answer to your question.

BY MR. EVANS:

Q. Now, as I understand it, Mr. Roushenbush, this map shows for each county the same data for 15 kilowatt consumption for boroughs and towns under 10,000 population. Grouped as to counties?

A. Yes.

Q. So that when you see the figure of 10.3 cents in Susquehanna County, it means that all the towns and boroughs in Susquehanna County, with a population of under 10,000 pay an average of 10.3 cents per kilowatt hour consumption of 15 kilowatt hours per month?

A. Yes, all of those that we could locate. You will see from the big maps just about everything, but there were some we could not get from the tariffs; we took what we could. The high counties there are very considerable—Pike, perhaps, with 15.8 is high, and then there is Berks, Clinton, Cumberland, Fulton, Dauphin, Wayne, Franklin, Juniata, Lancaster, Lebanon, Lehigh, Lycoming, McKean, Mercer, Montour, Northumberland, Pike, Schuylkill, Snyder, Sullivan, Tioga, Union, Wayne, Wyoming, are all pretty high for small towns.

Q. Have you a similar map, Mr. Roushenbush, for 40 kilowatt hour consumption?

A. Yes.

BY MR. HAGMAIER:

Q. Is that the 15 kilowatt hour price?

A. Yes, that was it.

Q. This is prepared (Indicating another chart exhibited), exactly the same way, only showing a consumption of 40 kilowatt hours per month?

A. Yes, it does not, of course, include rural rates where they are on a special rate. They are rates filed for small boroughs and towns.

Q. And what are the high counties in this, or do you not have them tabulated?

A. In many cases they are the same, Carbon, Lehigh, Lancaster, Northumberland, Snyder, Union, Montour, Juniata, Clinton, Franklin, and then the northern counties, Pike, are pretty high.

Q. Fulton seems in both cases to be the high one?

A. 14.6 in Fulton and then I think there is only one town we could locate there, that is all I could get on that.

Q. Mr. Roushenbush, I understand you have prepared two large wall maps of the state, showing in graphic form much of this same data for the State?

A. Yes, they enable almost anybody to find out exactly how the rates are in their own county and home city, and how they are in the nearby cities, in a very simple way.

Q. Suppose we have those brought in so that the Committee can see them?

A. If they could be put on the office wall there, they could be seen very quickly, and they might be left there, perhaps for the benefit of the Committee.

Q. Mr. Roushenbush, will you just briefly explain this map to the Committee? (Referring to large map placed on wall.)

A. This was just done in order to present rather graphically where the high rates in the State were and where the low ones were. This sort of half cross is the rate over ten cents. This cross is between 9 and 10 cents; the star shows pretty good behavior, it is between 7 and 8, but these seals indicate better behavior, between 6 and 7 cents. The chevron is between 5 and 6. The high rates are not entirely along the northern border there, but you get these crosses coming down in a sort of sweeping way, all the way down here (indicating on map), you get crosses pretty steady. Up here in the Wyoming Valley, and around Scranton you have some scattered fields of between seven and eight cents and lower rates; between six and seven are rather few, Philadelphia has got one and Pittsburgh is just a little over seven, just a fraction of a cent. Then there are different colored stars and crosses, or whatever they are, and they simply mean the size of the town. The big cities having green, and the cities of 25,000 to 100,000 have blue, the ten to twenty-five thousand have gold and the one to ten thousand, the ones we show here, the little boroughs have the red. That is why you see so many more of them, because there are red stars all over. Just because there are so many of these small ones, it looks more like a ten cent state than a lower state. Of course, when you are calculating for Philadelphia and Pittsburgh which are pretty low, they bring the net average down. We have done the same thing, Mr. Evans, for the forty kilowatt hour consumers, if you want to see them.

Q. Mr. Evans, these charts show the rates of residential consumers and not industrial rates?

A. No sir, we could not have shown all the industrial rates, without making a chart too complicated for anybody to work out.

BY MR. RHODES:

Q. Will there be any compilation of the industrial rates? A. Not on this work today.

MR. EVANS: There will be, Mr. Rhodes, if we can get to it. It is just a question of time with the limited facilities we have.

MR. RHODES: I was wondering whether you proposed to make an industrial exhibit the same as these exhibits.

MR. EVANS: Mr. Rhodes, I think that the rate schedules are such, and there are so many different rate schedules that apply to different kinds of industrial consumers, that it would be a very long and difficult job, if it were possible at all, I am afraid we can not go into that.

THE WITNESS: This is a map showing the net cost to the consumers of 40 kilowatt hours for residential lighting throughout the State. The symbols are the same, cost per kilowatt hour. As you see, the rate, the general average drops a little bit as the consumption increases, so there are fewer half crosses and crosses on this map than before, although all through here, Pennsylvania Power and Light territory, you still show a great many of them. This is the 1930 arrangement. There are some lower rates. We get into the Chevron story all around the western part of the State.

BY MR. EVANS:

Q. Philadelphia still maintains a six to seven cent rate?

A. Philadelphia is still six to seven.

Q. Is that Chester that has a six to seven cent rate there?

MR. TURNER: Yes, in Delaware County.

MR. EVANS: In Delaware County. The City of Chester is the blue circle?

THE WITNESS: Yes, that seems to be Chester, yes. One could make a great many comments on the differences between the various communities. Some of them are very close to each other, and have very considerable differences in rates, but that is a very long, technical story.

MR. RHODES: What company serves the southwestern part of the state, where they seem to have the lowest rates?

THE WITNESS: The West Penn and the Duquesne Light, both are serving close to each other.

MR. RHODES: And the Pennsylvania Power and Light serves the central part of the state, where they have the higher rate?

THE WITNESS: Yes, they circle in there around the central part of the state.

BY MR. EVANS:

Q. The Metropolitan Edison is around there?

A. Yes, around Reading and Lebanon and Easton is all Metropolitan Edison, but you get the cities like Hazleton and Williamsport, they are Pennsylvania Power and Light. We have these marked here in case you want to check them up. That is all I have on that.

BY MR. TURNER:

Q. Of course, population and location of plants, and proximity to the course of power and so forth would have some bearing on these rates, wouldn't it?

A. Yes.

MR. COOK: Hazleton is right alongside of the—

MR. TURNER: That is what I was saying here, Hazleton is right in the coal district.

BY MR. EVANS:

Q. Now, in view of this very great discrepancy in rates, Mr. Roushenbush, has your attention recently been called to any statement made by any power company official as to how these rates are fixed?

A. Yes. When the vice president of the Cresson Electric was on the stand before the Senate recently, he was asked this same question, how it happened that with the high profits this company was making they did not charge lower rates, and he said, "Oh, the rates charged were governed pretty largely by other tariffs in effect in the nearby community." Certainly implying very definitely that regulations had very little to do with the tariffs.

Q. Whom do you refer to?

A. C. M. Memory, vice president of the Cresson Electric.

Q. And that was his testimony before the Senate committee?

A. Yes, sir, it was quoted in the newspapers.

Q. Now, have you made any comparison between rates effective in Pennsylvania with those effective in other states?

A. Yes, sir, I have.

MR. EVANS: I would like to note for the record that the charts and maps which Mr. Roushenbush has been testifying from will be photostated and introduced into the record as exhibits 13 to 22.

BY MR. EVANS:

Q. You prepared this chart showing consumers costs for residential lighting in various states. This will be introduced as Exhibit No. 23. Will you explain this chart to the committee?

A. The information for this chart was compiled, as far as Pennsylvania goes, from the tariffs filed with the Commission. Information from the City of Washington was furnished by the public utilities commission there. The information on the other states, Massachusetts, Ohio, New York, Maryland, and West Virginia, were taken from the rate book of 1930 published by the National Electric Light Association. In each state in the rate book were taken and put in there, and in all cases the lowest possible rates available to consumers, using 40 kilowatt hours per month, were used. So, we have here a chart in which all the cities listed in the rate book, which is our only information available, are all here, and compared to Pennsylvania cities.

Q. Now, this exhibit, Mr. Roushenbush, applies only to cities over 50,000 inhabitants?

A. Yes, sir. All these cities over 50,000 are grouped on one chart, and those under on another one. Here we find the rates of Pittsburgh and McKeesport, for 40 kilowatt hours.

Q. Is that five and 8-10th cents per kilowatt hour?

A. Yes, sir, about 5.7, and underneath that we have put,—you see this ascending ladder of red is Ohio, running along up there, and the purple is Maryland, which shows Baltimore under our lowest in Pennsylvania, and Lakewood,—Niagara

Falls, New York, and these municipal plants, Cleveland and Holyoke. In the next highest is Altoona, a little over six cents, and there is a city in Ohio below it, and a city in New York below it, and a city in Massachusetts, and of course the Ontario cities, and Philadelphia is the next highest, and Ohio is below that, and Massachusetts, and here is the next,—you see, the Pennsylvania cities set up along the ladder that way, and the cities come a step along below it a little bit. Rochester here is close to it, and the cities step on.

Q. In other words, you have arranged the Pennsylvania cities in an ascending scale of rates?

A. Yes.

Q. And then the rate under that, the Ohio cities in a corresponding scale?

A. Yes.

Q. And the green for the Massachusetts cities?

A. Yes.

Q. The brown is New York?

A. New York, yes.

Q. The purple is Maryland?

A. Yes, sir.

Q. Yellow is West Virginia and blue is Ontario?

A. Yes. And in all those seven states, or eight, including the City of Washington,—in all those six other states there are only two rates in the whole six states that are higher than the Pennsylvania rates in Allentown, Bethlehem, Lancaster and Westmore, and there are only those two, Mount Vernon and New Rochelle, New York, and three others, that are higher than Reading. So, there are some Pennsylvania rates, even with the reduction, that are practically above anything, even in cities as far off as Brocton, Massachusetts, and Springfield, Massachusetts, New York City, and so on, that have to carry their coal a good deal farther than Wilkes-Barre, let us say, right in the coal fields, and we have prepared another chart showing those cities under 50,000 in the same states. This shows a somewhat similar story for the similar—

Q. Just a moment, in order to get our records straight,—the next chart shows similar information for cities from 10 to 50 thousand, and will be Exhibit No. 24?

A. Yes. Again the same procedure has been used, and here it is found that while the rates in practically all of these other states; these other states, using all that we could get information on, step along below the Pennsylvania rates, they do finally get a little bit above, when it comes to the interior cities of Massachusetts, which not only get their coal either by long land haul or land and water haul, and a few cities in New York State above it, but on the whole the same big group here are just about above everything, with that little exception, in all the other six states.

Q. Ontario rates are very materially lower, are they not, according to this?

A. Yes.

Q. Ontario rates for this group seem to come around three, and the Pennsylvania cities along here run from two to six cents higher.

BY MR. RHODES:

Q. Where does Ontario get its power?

A. Mostly Niagara Falls water power.

Q. That makes the difference?

A. Well, sir, you could give away to the Pennsylvania companies all the water power, the power they have, it costs about a cent, I would say, to generate it,—you could give them that, and there would still be a little question about explaining that five cents difference, which would bring it down to four cents difference. Still that would have to be explained, wouldn't it?

Q. The letter M after a city means it is a municipal plant?

A. Yes, sir.

Q. And not a privately owned plant?

A. As you see here, the city again in the western part of the state, there are quite a number of them that have pretty low rates compared to the rest of the states. Here is this whole group from Arnold to Washington in the western part, that have got a little over a five cent rate, which is not a bad rate.

Q. Have you prepared in the form of a table the similar information to that shown by this chart?

A. Yes, sir, I have.

MR. EVANS: That table will be Exhibit 25.

BY MR. EVANS:

Q. Mr. Roushenbush, will you explain this table to the committee, Exhibit 25?

A. Yes, sir. Here I have taken the averages of all the cities in these various states, on which information was available, excluding none that were high and none that were low, and weighted the averages according to population, and found that for cities over 500,000 Pennsylvania averaged 6.215 cents, and then the others are below it. New York,—

Q. Now, this is for a consumption of 40 kilowatt hours per month?

A. Yes. New York, as you see, is a little higher, 6.87. Ohio, that is one city there, Cleveland, is lower, five. Massachusetts is higher, 6.76. There are no cities of that size in West Virginia. Maryland, that is Baltimore, is lower. Washington, D. C. is lower, and Toronto, Ontario, is lower.

In the next column the cities from 100 to 500 thousand are grouped, and there the Pennsylvania average of 7.834 cents is higher than any of the others.

The third column shows the cities of 50 to 100 thousand grouped together in a weighed average, Pennsylvania showing 7.657 cents. The next one, New York, is 8.4 cents, and is higher than the Pennsylvania average for that column. However, all the others are lower, Ohio, Massachusetts, West Virginia. There are none in Maryland, and Ontario is lower.

In the fourth column the cities from 25 to 50 thousand are grouped together. Pennsylvania averages 7.36 cents. New York is about equal, just a fraction of a mill lower. Ohio is lower, Massachusetts is higher, 7.72. West Virginia, Maryland and Ontario are lower.

Pennsylvania in the fifth column, of cities 10 to 25 thousand, is 6.9 cents. New York is higher. The rate book listed none for Ohio. Massachusetts is higher. West Virginia is lower, and Maryland has none listed in the rate book, and Ontario is lower.

(Exhibit 25 reads as follows:)

#### "COMPARISON OF LIGHTING COSTS IN SEVEN STATES 1930

Cost per kwh for the user of 40 kwh monthly, in cents.

	I	II	III	IV	V
	Cities Over 500,000	Cities 100- 500,000	Cities 50- 100,000	Cities 25- 50,000	Cities 10- 25,000
Pennsylvania ...	6.215	7.834	7.657	7.36	6.90
New York .....	6.87	7.31	8.04	7.35	7.57
Ohio .....	5.0	7.45	6.52	6.58	none
Massachusetts ..	6.75	6.31	7.56	7.72	7.76
West Virginia ..	none	none	7.37	6.87	6.87
Maryland .....	5.6	5.67	none	6.6	none
Washington D. C.	4.7				
Ontario .....	2.32	2.47	3.5	2.62	2.74

"This information was compiled for the tariffs filed with the Pennsylvania Public Service Commission for Pennsylvania. The Washington information was furnished by the Public Utilities Commission of the District of Columbia. The Ontario information was taken from the report of the Ontario-Hydro-Electric Commission. Information on the other states was secured from the Rate Book, 1930, published by the National Electric Light Association. In each case all the cities listed were taken to comprise the average, and in all cases the lowest possible rates available to consumers using 40 kwh per month, was taken. Where no cities were listed in the Rate Book the word 'none' is used in the table.

"The relative distance of Massachusetts and some of the New York cities from the coal fields is an item for consideration in the comparison. Out of 26 comparisons the Pennsylvania averages show higher in 19 cases and lower in 6 cases."

BY MR. EVANS:

Q. Taking these rates in their entirety, in how many comparisons is Pennsylvania higher than other states?

A. There are 26 comparisons in which the Pennsylvania rates show higher; in 19 instances they are a little lower, and in 6 they are about equal. This showing is made not

withstanding the fact of the very considerable advantage Pennsylvania has in being closer to the coal.

BY MR. TURNER:

Q. West Virginia and Ohio have coal also?

A. That is true.

Q. And some of the other states like New York and Massachusetts have coal haulage by water?

A. Some of the eastern states do.

BY MR. HAGMAIER:

Q. To what do you attribute the fact that Pennsylvania cities from 100,000 to 500,000 and from 50 to 100 thousand down, rates are higher than in the smaller cities?

A. That is a very interesting fact. Some of the cities in the state have lower rates than the middle class cities. I think in Reading it is due to the fact that Reading has such a high rate, and some of the other Pennsylvania Power and Light rates are pretty high.

BY MR. TURNER:

Q. You have made some mention of Ontario. Ontario has a government owned plant there?

A. It is a complicated system of government and municipal ownership.

Q. But is it not publicly owned, distinguished from privately owned?

A. Yes.

BY MR. HAGMAIER:

Q. In places where they use more light, it seems to me the rate should be smaller there?

BY MR. RICHARDS:

For instance, do you know whether this government owned plant in Ontario is supported by taxes, or is it self supporting?

A. As far as I know nobody of any standing in the academic situation, not paid by the power companies, ever deducted from the reports as to their earnings, and I might state there is a very slight difference in rural extensions, where I think they get something from taxes, but I think it is a very minor item as compared to the whole. They tell a story of these electric rates being allowed the domestic consumers, but they are getting rates for municipal purposes much higher than our companies do. They don't pay any considerable taxes themselves, but they also retire their investment, which is something our companies do not do. What that seems to be doing is building up an equity in the plant and allowing the rates to be reduced each year up there. There are less capital charges.

BY MR. RICHARDS:

The thing I wanted to know the rates show a difference of four or five cents a kilowatt and were higher here with companies making fifteen per cent over all returns, then certainly the gross returns would be higher where the kilowatt charge was the higher, and the net returns would not show such a difference.

A. There are two stories to that. You find some companies like the Duquesne Light that has a comparatively low rate making a considerable profit and some with higher rates making a very little profit. I think someone else could tell you about the relation of profit to high rate better than I could. There certainly needs to be some explanation. I think the two things go together in a large way. When you look at this first exhibit and see the earnings through 1925 and 1929, and then look at the high rate, part of the story is told. These two things have some inter-relation there.

BY THE CHAIRMAN:

This hearing will now stand adjourned until tomorrow morning at 10.00 o'clock in this room.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment and to the call of the Honorable D. Glenn Moore, Chairman, the Committee met in the House Caucus Room on Thursday, March 19, 1931, at 10.00 o'clock A. M.

There were present:

Messrs. D. Glenn Moore, Chairman,  
Bart Richards,  
Martin Memolo,  
Louis W. Hagmaier,  
Ellwood J. Turner,  
Frank L. Bowers,  
Chester A. Rhodes,  
Harry J. Crawford,  
Father James R. Cox,  
Morris L. Cooke, Esq.,  
Harold Evans, Esq.,  
John M. Walker, Esq.

MR. EVANS: Mr. Chairman, while we are waiting, I would like to make a correction in regard to exhibit numbers of yesterday. The first two exhibits that were introduced were indicated as Exhibits Nos. 5 and 6, but we find that 5 and 6 had already been placed in the record, and therefore suggest that Exhibit No. 5, which is a list of electric companies under review before the Committee, introduced yesterday by Mr. Morgal, be designated as 5A; Exhibit No. 6, which was the report submitted by Mr. Morgal to the Committee and designated as 6, be now designated as 6A. That will straighten us out.

M. CLYDE SHEAFFER sworn.

BY MR. EVANS:

Q. Mr. Sheaffer, what is your position in the Department of Revenue?

A. Supervisor of Corporation Tax Bureau.

Q. You have been subpoenaed by the Committee to produce capital stock reports of various electric companies; have you got those certified copies of the material portions here?

A. I have some certified copies of the material parts of those reports. Due to lack of time it was necessary to curtail all of the information, insertion sheets which show a list of bondholders and similar information.

MR. EVANS: I think the easiest way will be for us just to call for these reports for each company, and introduce them as exhibits without any comments. They can later be examined.

BY MR. EVANS:

Q. Have you the report of the Abington Electric Company?

A. Yes.

Capital Stock Report of the Abington Electric Company, produced and marked Exhibit No. 26.

Capital Stock Report of Bangor Electric Company, produced and marked Exhibit No. 27.

Capital Stock Report of Barnesboro-Spangler Electric Company, produced and marked Exhibit No. 28.

Capital Stock Report of Bedford Electric Light, Heat and Power Company, produced and marked Exhibit No. 29.

THE WITNESS: That report covers a part of the period.

Capital Stock Report of Bradford Electric Co., produced and marked Exhibit No. 30.

Capital Stock Report of Brockway Light, Heat and Power Co., produced and marked Exhibit No. 31.

Capital Stock Report of Brechenridge Light and Power Co., produced and marked Exhibit No. 32.

Capital Stock Report of Carlisle Gas and Water Co., produced and marked Exhibit No. 33.

Capital Stock Report of Chester County Light and Power Co., produced and marked Exhibit No. 34.

Capital Stock Report of Citizens Electric Co., of Lewisburg, produced and marked Exhibit No. 35.

Capital Stock Report of Clarion River Power Co., produced and marked Exhibit No. 36.

Capital Stock Report of Culver Electric Co., produced and marked Exhibit No. 37.

Capital Stock Report of Cresson Electric Co., produced and marked Exhibit No. 38.

Capital Stock Report of Delta Electric Power Co., produced and marked Exhibit No. 39.

Capital Stock Report of Delta Water Power Co., produced and marked Exhibit No. 40.

Capital Stock Report of Duquesne Light Co., produced and marked Exhibit No. 41.

Capital Stock Report of Edison Electric Co., of Lancaster, produced and marked Exhibit No. 42.

Capital Stock Report of Edison Light and Power Co., produced and marked Exhibit No. 43.

Capital Stock Report of Ellwood City Hydro-Electric, produced and marked Exhibit No. 44.

Capital Stock Report of Erie County Electric Co., produced and marked Exhibit No. 45.

Capital Stock Report of Erie Lighting Co., produced and marked Exhibit No. 46.

Capital Stock Report of Fleetwood and Kutztown Electric Light, Heat and Power Co., produced and marked Exhibit No. 47.

Capital Stock Report of Glen Rock Electric Light and Power Co., produced and marked Exhibit No. 48.

Capital Stock Report of Harmony Electric Co., produced and marked Exhibit No. 49.

Capital Stock Report of Hershey Electric, produced and marked Exhibit No. 50.

Capital Stock Report of Keystone Public Service Co., produced and marked Exhibit No. 51.

Capital Stock Report of Lancaster Electric Light, Heat and Power Co., produced and marked Exhibit No. 52.

Capital Stock Report of Lehigh Electric Light, Heat and Power Co., produced and marked Exhibit No. 53.

Capital Stock Report of Luzerne County Gas and Electric, produced and marked Exhibit No. 54.

Capital Stock Report of Mauch Chunk Heat, Power and Electric Light Co., produced and marked Exhibit No. 55.

Capital Stock Report of Metropolitan Edison Co., produced and marked Exhibit No. 56.

Capital Stock Report of Natrona Light and Power Co., produced and marked Exhibit No. 57.

Capital Stock Report of Northern Pennsylvania Power Co., produced and marked Exhibit No. 58.

Capital Stock Report of Palmerton Lighting Co., produced and marked Exhibit No. 59.

Capital Stock Report of Penn Central Light and Power Co., produced and marked Exhibit No. 60.

Capital Stock Report of Pennsylvania Electric Co., produced and marked Exhibit No. 61.

Capital Stock Report of Pennsylvania Power Co., produced and marked Exhibit No. 62.

Capital Stock Report of Penn Water and Power Co., produced and marked Exhibit No. 63.

Capital Stock Report of Pennsylvania Power and Light Co., produced and marked Exhibit No. 64.

Capital Stock Report of People's Power Co., produced and marked Exhibit No. 65.

Capital Stock Report of Philadelphia Electric (Inc. Philadelphia Suburban Counties all year), produced and marked Exhibit No. 66.

THE WITNESS: This report covers a portion of the year on account of a merger.

Capital Stock Report of Portage Light and Power Co., produced and marked Exhibit No. 67.

THE WITNESS: This report covers five months of 1929 on account of the sale of property and franchise.

Capital Stock Report of Renovo Edison Electric Light, Heat and Power Co., produced and marked Exhibit No. 68.

Capital Stock Report of Rockingham Light, Heat and Power Co., produced and marked Exhibit No. 69.

BY MR. EVANS:

Q. The Scranton Electric Company?

A. That report has been misfiled, and it was not possible for me to locate it at the time.

MR. EVANS: We will reserve the number 70 for that report when it is filed.

Capital Stock Report of Shippensburg Gas and Electric Co., produced and marked Exhibit No. 71.

THE WITNESS: That covers five months of 1929, on account of the sale of property and franchise.

Capital Stock Report of Solar Electric Co., produced and marked Exhibit No. 72.

Capital Stock Report of South Penn Power Co., produced and marked Exhibit No. 73.

Capital Stock Report of Southern Pennsylvania Power Co., produced and marked Exhibit No. 74.

Capital Stock Report of Sullivan County Electric Co., produced and marked Exhibit No. 75.

Capital Stock Report of Wellsboro Electric Co., produced and marked Exhibit No. 76.

Capital Stock Report of West Penn Power Co., produced and marked Exhibit No. 77.

Capital Stock Report of Windber Electric Corporation, produced and marked Exhibit No. 78.

MR. EVANS: I offer Exhibits No. 26 to 78 inclusive, in evidence.

BY MR. EVANS:

Q. Mr. Sheaffer, have you got a copy of the Philadelphia Electric report including the Philadelphia Suburban and Counties Gas and Electric systems for the entire year of 1929?

A. The Philadelphia Electric report covers a portion of the year 1929. I have here a certified copy of the report covering 10 months of the year 1929 for the Philadelphia Suburban Counties Gas and Electric Company.

MR. EVANS: I offer that in evidence as Exhibit 66A.

W. M. DIETRICK sworn.

BY MR. EVANS:

Q. You are a certified public accountant.

A. I am.

Q. What has been your accounting experience, briefly?

A. I have been in public accounting since 1924.

Q. And have you had any experience in utility accounting?

A. During that time I have been on audits of all different concerns, including public service companies and corporations, and my experience in the gas field in the neighborhood of Kane and Warren, Pennsylvania. I also worked on the Clarks Ferry Bridge rate case.

BY MR. TURNER:

Q. Under whom?

A. At that time I was working with Main and Company.

BY MR. EVANS:

Q. Have you made any study of valuation cases before the Commission?

A. I have prepared from the record of decisions of the Public Service Commission from 1921 to 1930 a series of charts and statements comparing values of the various companies as submitted by the respondents, the complainants, and the Commission. In preparing these statements and charts I reviewed 68 cases.

Q. Have you prepared a table showing valuations by the Public Service Commission from 1921 to 1930?

A. I have.

MR. TURNER: Of these 68 cases?

MR. EVANS: Well, this table does not include the whole 68. I will ask him about that.

BY MR. EVANS:

Q. This table, Mr. Dietrick, does not include the whole 68 cases, does it?

A. No, not the first table. This is Table No. 1 of valuations of Public Service Commission as presented in their volumes of decisions of 1921 to 1930 inclusive. There were nine cases from which I will present a comparison of original cost depreciated and fair value according to the Public Service Commission, together with the per cent over original cost.

Q. Now in selecting the cases for this examination covered by your tables 1 to 4, did you use all of the cases that you could get the information from during this period?

A. I used the cases wherein I could clearly determine the figures as presented in the decisions.

BY MR. TURNER:

Q. That is, you took the figures from the decisions, not from the records in the Commission.

A. No. These figures are taken entirely from the Public Service Commission decisions.

Q. And, as I understand it, these cases entail all of the cases in which you could get complete enough figures on which to base your calculations, is that right?

A. That is right.

Q. They were not selected in any other way?

A. There was no discrimination shown in the selection.

MR. EVANS: I offer this exhibit, consisting of two sheets, as Exhibit No. 79.

(Two sheets titled "Valuations by the P. S. C. 1921-1930, Tables 1, 2, 3 and 4," marked Exhibit No. 79.)

BY MR. EVANS:

Q. Now, Mr. Dietrick, have you prepared a chart covering the information set forth in table 1 of Exhibit 79?

A. I have had this chart prepared covering this information.

Q. And this is the chart headed "Valuations above original cost depreciated, Commission's own figures, 1921 to 1930?"

A. Yes.

MR. EVANS: I offer this in evidence as Exhibit No. 80.

BY MR. EVANS:

Q. What comments, Mr. Dietrick, have you to make on this chart? What, for instance, does the black portion of each column at the bottom represent?

A. The black portion of each column represents original cost depreciated, the Commission's own figures.

Q. And the shaded portion above represents the additional amount found in determining the fair value of the property?

A. That is right.

Q. So that, taking the cost of the Panther Valley Water Company, in 1921, the fair value of that property, as determined by the Commission, was somewhere over 120 per cent above the original cost as found?

A. No. The original cost is the 100 per cent.

Q. Oh, I should say 20 per cent above the original cost.

A. 22 per cent.

Q. Now, the next case is the Pennsylvania Gas Company, and that shows about eighty some per cent over original cost found for fair value.

A. 81.8 per cent.

Q. In the Waynesboro Gas Company case, what was the percentage there by which the fair value exceeded the original cost as found by the Commission?

A. 26.9 per cent.

Q. And in the Johnstown Water Company case?

A. 43.9 per cent.

Q. The Dallastown Yoe Water Company?

A. That should be the Dallastown Yoe Water Company, 29.7 per cent.

Q. Ridgway Light and Heat Company?

A. 50.1 per cent.

Q. Lehighon Water Supply Company?

A. 92.5 per cent.

Q. Minersville Water Company?

A. 54.6 per cent.

Q. Clearfield Water Company?

A. 56.6 per cent.

Q. And another case in 1930 of the Lehighon Water Supply Company?

A. It was 74.4 per cent.

Q. In other words, there were two cases of the Lehighon Water Supply Company, one in 1924 and one in 1930?

A. In the 1924 case the original cost was given as \$155,000, on which was allowed a fair value of \$390,000. In the 1930 case, the original cost depreciated was \$215,000, and the Commission allowed \$375,000.

Q. In the case of the Ridgway Light and Heat Company I notice a note on Exhibit 79 says "Minimum Value fixed by the Public Service Commission" will you explain that briefly, Mr. Dietrick?

A. In that case the Commission did not set out clearly the fair value but stated the minimum value that they could find was \$1,580,000.

Q. I assume therefor that the rates—

A. The rates were based on that figure.

Q. And were not excessive based on that valuation?

A. No, sir.

Q. Have you got any other comments in regard to Exhibit 80? That is the charter that we have been discussing.

A. No. I think the facts are clearly set out in the figures and in the chart.

Q. Have you prepared a chart covering the information set forth in Table 2 of Exhibit 79?

A. In Table No. 2 I wish to present a comparison between original cost undepreciated and fair value found by the Public Service Commission, also per cent over original cost. These figures were taken from 11 cases. I want to emphasize in this case that the figures give our original cost undepreciated.

Q. And the figures in Table 1 of 79 are original cost depreciated?

A. That is right.

BY MR. TURNER:

Q. Does that appear in the report?

A. Yes, sir.

Q. That is, it appears in the report that those were original cost figures, undepreciated?

A. That is right.

Q. And they were selected how by you?

A. In the same manner as the first table.

Q. That is, you selected all the cases where you could get sufficient facts?

A. That is right.

MR. EVANS: In saying that, Mr. Dietrick, my understanding is that it covers the period of 1920 to 1930?

A. 1921 to 1930.

MR. EVANS: The chart covering Table 2 of Exhibit 79 is headed "Valuations above original cost before depreciation, Commission's figures, 1921 to 1928." I offer this in evidence as Exhibit No. 81.

Q. What comments, Mr. Dietrick, have you to make on this chart?

A. On this chart the blank is the 100%, that is the original cost before depreciation.

Q. As found by the Commission?

A. As found by the Commission.

Q. The red line block is the fair value in excess of the original cost before depreciation from the Commission's own figures?

A. Yes.

Q. In the case of the Ellwood Water Company, what is the percentage over undepreciated original cost found by the Commission as fair value?

A. 17.8.

Q. And the Middletown & Swatara Water Company?

A. 16.5.

Q. The Waynesboro Water Company?

A. In the Waynesboro Water Company case a fair value is under the original cost undepreciated.

Q. How much under?

A. Original cost undepreciated was \$205,000 and the fair value found by the Public Service Commission was \$200,000.

Q. The Water Company of Punxsutawney?

A. 32.6%.

Q. Above original cost?

A. Above original cost undepreciated.

Q. Kulpmont Water Company?

A. 17.8%.

Q. Mt. Carmel Water Company?

A. 34.9%.

Q. Shavertown Water Company?

A. 63.8%.

Q. McConnellsburg Water Company?

A. 22.8%.

Q. Armstrong Water Company?

A. 11.5%.

Q. South Pittsburgh Water Company?

A. 28.4%.

Q. And the Snow Shoe Water Company?

A. 45%.

Q. Have you any further comments you wish to make in regard to this exhibit?

A. I think the Table No. 2 and the chart as presented show that the fair value on all except one case is above original cost before depreciation from the Commission's own figures.

Q. Turning to Table No. 2 of Exhibit 79, have you prepared a chart in the same way showing graphically the material there presented?

A. In Table No. 3 I present a comparison of original cost depreciated according to the city's fair value as found by the Public Service Commission.

Q. When you say the original cost according to the City's, is that set forth in the Commission's report?

A. I might qualify that and make it complainants.

Q. In other words, the Commission sets forth in its report what the complainants estimate what the original cost is?

A. That is right.

Q. You have used that figure there as original cost depreciated and you have used that figure and compared it with the fair value found by the Commission?

A. Yes.

Q. And this chart is the one I now show you valuations above original cost depreciated and you have called it city's

figures 1921 to 1928, and by city's figures you mean to include the complainants in general?

A. Complainants.

BY MR. TURNER:

Q. Again do you arrive at the cases which you selected by the methods as you did in the others?

A. I did.

MR. EVANS: I think he said in his original testimony that was true.

MR. TURNER: I think that is important to know in each one of these cases.

THE WITNESS: I can go on record as stating that there was no discrimination shown in the selection of these cases.

MR. EVANS: I offer this exhibit No. 82.

BY MR. EVANS:

Q. Mr. Dietrick, the black portion of these columns again represents the cost depreciated as testified to by the complainants in the case?

A. That is right.

Q. And you compared that with the fair value found by the Commission, the first case is the Luzerne County Gas and Electric Company, you have divided that column into two parts, one marked Gas and the other marked Electric; will you explain that to the Committee, please?

A. The figures as set out in the decision separated these figures so we show them separate on this chart. They separate them as to gas and electric divisions of the Luzerne County Gas and Electric Company.

Q. And what is the percentage of fair value as found by the Commission from the original cost depreciated by the Commission over the original cost depreciated as testified to by the complainants in the case of the gas property?

A. In the case of the gas property it is 39.8%.

Q. In the case of the electric property?

A. 70.5%.

Q. In the case of the Lewistown-Reedsville Water Company?

A. The case was the excess, was 60.1%.

Q. And the Renovo-Edison Light, Heat and Power Company?

A. 86.7%.

Q. In the Biglerville Water Company?

A. 83.3%.

Q. Do you have any other comments that you wish to make in regard to this chart?

A. I think statement No. 3 on the chart as presented shows that the fair valuation in each case is in excess of the original cost depreciated from the witness' figures.

BY MR. TURNER:

Q. What does the word "historical" mean in Biglerville?

A. That is set out as a historical cost in that case.

BY MR. EVANS:

Q. What is historical cost? Explain it to the Committee.

A. By the Commission, in its report, in Volume No. 4 of Public Service Commission decisions, on page 750, historical cost is defined, I read from that volume: "Historical cost may be defined to be cost ascertained by applying to the profit of the company the prices prevailing at the time the plant was constructed or properly acquired. It is ascertained when original cost is not available. Historical cost therefore may be more or less than the original cost, but neither should be confused with fair value as they are only elements ascertainable in the manner indicated to be considered by the Commission in reaching its decision."

Q. Mr. Dietrick, have you prepared a chart covering the first set-up in Table 4 of Exhibit No. 79?

A. I have. Table No. 4 sets forth a comparison—

Q. This is headed "Valuation above costs on either basis, Commission's own figures, 1923-1929"?

A. Yes, sir.

MR. EVANS: I offer this chart in evidence as Exhibit No. 83.

BY MR. EVANS:

Q. This chart is prepared on the same principle as the preceding one?

A. It is.

Q. Except in this case the black portion of each column represents the historical cost undepreciated as found by the Commission?

Q. In no other case was set up as historical costs?

A. In two the original figures, figures in the first column, are on the investment as stated in the volumes of decisions referred to.

Q. Suppose we run through these. Which cases are historical cases on this Exhibit?

A. The Marion Heights Water Company is actual investment.

The Clark Summit Water Co. is actual investment.

The others are all historical cases.

Q. I notice some of them—one of them is marked historical cost undepreciated, the Belle Vernon Water Company. As far as could be determined that is the only one that had clearly set out historical costs undepreciated?

Q. Do any other cases clearly set out that depreciation has been taken into consideration?

A. They do not.

BY MR. MEMOLO:

Q. Were there not two cases of the Clark Summit Water Company, one in 1926 and one in 1929?

A. Yes, sir.

Q. In other words, were there two boosts of the rate there?

A. I am not prepared to say that.

There is an error in that chart. In 1926 there should be the Waterford Water Company.

BY MR. EVANS:

Q. Mr. Dietrick, will you submit a corrected exhibit showing that?

A. I will.

Q. Eliminating that and taking up the Belle Vernon Water Company column, what was the percentage by which the fair value as found by the Commission exceeded the historical cost not depreciated?

A. 40.3 per cent.

Q. And in the case of the Marion Heights Water Company, by what percentage did the fair value exceed the actual investment, as found by the Commission?

A. 46.6 per cent.

BY MR. TURNER:

Q. Why the change to actual investment?

A. The decision did not clearly set out any other figures. In this last table we have taken original cost or rather historical cost.

BY MR. EVANS:

Q. And in the other tables in each case you used the original cost there as found by the Commission or as testified to by the complainants.

A. I did.

BY MR. TURNER:

Q. What is the difference between original, historical cost and actual investment? I know what the difference is in one way, but I want to know why this table change is made on actual investment.

A. In the case of the Marion Heights Water Company the only figure I could use to indicate the original cost was the actual investment figures as set out.

Q. The actual investment figures appeared in the report?

A. In the decision.

BY MR. EVANS:

Q. Now in the case of the Philadelphia Suburban Gas and Electric Company, by what did the fair value as found by the Commission exceed the historical cost?

A. 22.5%.

Q. Did it appear in the Commission's report in that case whether the historical cost as set forth in the report was depreciated or not depreciated?

A. It did not.

Q. In the case of the Warren Water Company, what was the excess of the fair value as found by the Commission over the historical cost?

A. 5.7%.

Q. And in the case of the York Water Company?

A. 76.8%.

Q. And in the case of the Myerstown Water Company?

A. 80%.

Q. And in the case of the Towanda Water Company?

A. 27.2%.

Q. And in the case of the Waterford Water Company, which you are going to have placed on the chart?

A. 36%.

Q. And in the case of the Newville Water Company?

A. 7.7%.

Q. And in the case of Clarks Summit Water Company?

A. 115%.

Q. In that case that was from the actual investment and not from the historical cost?

A. That is right.

Q. Have you any further comments to make in this matter?

A. I have not.

BY MR. COOKE:

Q. About what is the percentage in all of the cases, valuation cases, during that period?

BY MR. EVANS:

Q. Your next table covers some 60 cases, does it not?

A. 68 cases covered during that period.

BY MR. COOKE:

Q. Only 35 of them gave you enough material to make these tables?

A. Yes, sir; they only gave me figures that I could be sure of—clearly set out.

BY MR. TURNER:

Q. How many cases approximately were decided within that time? How many are in the report?

A. I think you will find that there was all of the cases on gas, light and heat—on gas, light and water, that could be found during that period.

Q. 68 cases are all the reported cases found during this period?

A. I qualify that by saying cases, wherein figures were set out—

Q. I understood that to be your answer, that the 68 cases were the only ones you got figures on, and I am asking you the further question, how many cases were there in the report during that time?

MR. EVANS: Do you mean valuation cases or not?

MR. TURNER: Yes, surely.

THE WITNESS: I am unable to state how many there were, valuation cases, light, gas and water, during that time.

BY MR. TURNER:

Q. There were a number of other cases in which no figures of valuation sufficient were set forth for you to make a report on?

A. Yes, sir.

BY MR. EVANS:

Q. Have you prepared another chart covering 60 odd companies?

A. I have.

Q. Mr. Dietrick, I show you the chart headed "Valuation cases, reproduction, estimate, light, gas, water cases, estimate, 1921 to 1930," in which the maximum value is \$200,000 or under, and I ask you whether you prepared that exhibit or had it prepared under your direction?

A. Yes, sir, I had it prepared under my direction.

Q. This covers all of the valuation cases that you have included in your 60 cases, where the valuations were \$200,000 or under?

A. That is right.

MR. EVANS: I offer this in evidence as Exhibit No. 84.

BY MR. EVANS:

Q. Now, will you explain this exhibit briefly to the Committee? Take as a typical example the column marked 1, at the left of the chart.

A. Before I go into this chart, I want to explain that these figures—there is a new element in this case, in the valuation, in the preparation of these figures, we now deal with reproduction new and reproduction new depreciated. The figures as set forth on these charts are on those two valuations, as given by the respondents or complainants and the Commission. The respondent's figures are in red; complainants' figures are in blue, and the Commission's figures are in green.

Q. In order to make this perfectly clear, as I understand this chart deals solely with reproduction estimate?

A. Reproduction new and reproduction new depreciated.

Q. How have you indicated the difference between reproduction new and reproduction new depreciated on the chart?

A. They have not been indicated.

Q. Taking the column marked 1, the red column goes up to a point somewhere above 150,000. What does that represent in that case?

A. Valuation case No. 1 is the Borough of Frackville, v. Mountain City Water Company.

MR. TURNER: Are we to have a schedule of these like we have on these other cases, or are we just to follow the testimony?

MR. EVANS: We are going to have prepared by Mr. Dietrick, as a final exhibit, but it is not yet ready—those actual figures.

BY MR. EVANS:

Q. The first red portion of column 1, you were just stating what it represents?

A. That was reproduction cost new, respondent's estimate, \$162,255, which was the highest estimate submitted. This figure includes intangibles.

Q. What do you mean by intangibles, such things as going concern value?

A. I will read from Volume No. 6, page 553 of the Commission's report, wherein they state their intangibles. They give a list of intangibles in that case:

"To this is added \$823,410 for intangibles during construction, less omissions and contingencies, engineering and supervision, general and administrative expense, taxes, insurance and interest and for promotion and organization; also for materials and merchandise, working capital, securities, discount, franchises, and going concern value, making a total alleged value of the plant, exclusive of gas lines of \$2,058,080."

In Volume No. 6, page 628, the Commission gives an additional definition, "Legal expense during construction."

In Volume 5, page 552, future capital requirement is included as an intangible.

BY MR. COOKE:

Q. What you are reading, Mr. Dietrick, has nothing to do with this case?

MR. EVANS: I understood that he has stated that these things are included.

THE WITNESS: They are to explain that in the first four charges, original cost, original cost depreciation and original historic cost and book cost, intangibles are not included, but in the reproduction cost new and reproduction cost depreciation, the question of intangibles now plays a very important part.

MR. COOKE: And you have gone to other cases to get your information as to what is included in these intangibles, because none of these cases go above \$200,000?

MR. EVANS: This is just a chart, and we are going to get charts in the higher valuations.

BY MR. COOKE:

Q. And does what you are reading appear in those cases that you are going to bring in?

A. Yes.

BY MR. EVANS:

Q. And does what you have on this chart, the reproduction estimate of the company, include items for intangibles?

A. That is right.

Q. And what you have been reading from the reports is merely to, in a general way, indicate to the Committee what items are comprehended under that head of intangibles?

A. That is right.

Q. When you said intangibles are not included in the original costs which you have been testifying to, as I understand it, you mean they are not included as any separate time, but they are a charge that went into the company, if the books had been complete, would have been shown in that original cost?

A. That is right.

Q. And that would have included legal expenses, interest during construction and all of these various items?

A. That is right.

MR. TURNER: Are you going to take the other table in connection with this table?

MR. EVANS: I was just trying to make it clear to the Committee when he said that intangibles were not included in the

original cost which he had been testifying to in the other tables, Mr. Turner, what he meant. In other words, they are not included separately as cost estimates so made, these are actual figures so far as the books of the company are concerned.

MR. TURNER: Do I understand it then that these other tables, in making up your totals for original cost depreciated, original cost undepriciated, and so forth, that you took different items as they appeared in the report, or was there a lump sum valuation finally found?

A. A lump sum found.

Q. Therefore, you don't know what element went into that original cost depreciated or undepriciated?

A. That is right.

Q. You don't know what elements went into that, you only know that is a lump sum as found?

A. That is right.

BY MR. EVANS:

Q. Mr. Dietrick, are you prepared to give the Committee a definition as to what original costs is? I think we ought to get this perfectly straight.

A. Original cost is the cost of the plant, the cost of property, the land and any other element that goes into making the plant a going concern.

Q. And if interest was paid during construction that would be entered as an item of original cost.

A. That is right; in should be.

Q. And if legal expenses were incurred in connection with the property, those also would be included.

A. It should be.

MR. TURNER: What I was trying to get at Mr. Evans, was this: That while they should be, as he says, and while these ordinarily are the elements that make it up—I understand that perfectly well—what I wanted to know was whether from these reports the different elements were given that make up the sums totals, as he has them on the chart, or whether it is merely given in the report as the lump sum.

MR. EVANS: I think he has so testified, that it was given as a lump sum.

MR. TURNER: Therefore he does not have those elements; he does not know whether those elements are in there or not.

BY MR. EVANS:

Q. I take it that is true, Mr. Dietrick.

A. Yes.

MR. TURNER: I am not trying to raise any question, I am merely trying to be perfectly clear as to what these items mean.

BY MR. RHODES:

Q. Were these intangibles taken into consideration?

MR. EVANS: That is in reproduction costs, he means.

BY MR. BOWERS:

Q. Were they taken into consideration on the other charts?

MR. EVANS: Mr. Bowers, the distinction between original cost and reproduction cost estimates, is that original costs is supposed to represent the actual investment in the property as shown by the books of the company, including every proper item chargeable to capital. Now, if the books of the company are incomplete or inaccurate, of course, the amount found for original cost will be correspondingly inaccurate. When you come to reproduction cost, that is an estimate of what it would cost at current price to reproduce the property, and as an element of that cost these various intangibles are added to the actual reproduction cost of the physical property. I don't know whether I made that clear.

MR. BOWERS: That is clear, that is what I wanted to know.

MR. EVANS: That is my understanding the situation.

BY MR. EVANS:

Q. Now, in some of these cases, Mr. Dietrick, I notice there are very considerable differences between the columns, not only different colors, but also the columns of the same color. Have you comments to make in regard to that, and won't you just go ahead and make comments such as you have for this chart.

A. You want me to go ahead and develop each individual case?

Q. Well, I think it is only necessary for you to pick out special ones that you wish to call attention to, because the

figures will be shown in later exhibits for each case. I don't think we want to take the time of the Committee to go over everyone in detail.

A. I might be discriminating.

Q. Now, Mr. Dietrick, take for instance No. 24. There seem to be three red columns there of different heights. Will you tell the Committee what case that represents, and what the different columns are?

A. Case No. 24, is the borough of State College, which is the State College Water Company. The figures submitted here, three respondents' figures, they are all reproduction costs depreciated, the respondents submitted three estimates, one was \$96,531, based on an average of prices over a ten year period; the next figure was \$122,579, based on five years average prices; the next was \$189,214, based on one year prices, as of 1920. Now, there is a difference of \$92,685 between the respondents low figure for reproduction costs depreciated, or a difference of 96% in those estimates on that one case.

Q. Now, are there on this chart any cases where there are different estimates based on reproduction cost on spot prices at the time of valuation?

A. The last in 1924 was on spot prices, or rather on current prices in that year.

Q. Yes, but those you stated were one a ten year average and one a five year average and one a—

A. One year average.

Q. Now I ask you whether in this case there are any differing estimates based on the one year average, for instance?

A. I don't believe I understand what you mean, Mr. Evans.

Q. Well, cases where the respondent had two or more engineers who made estimates of reproduction costs on the same basis and differed in their results.

A. No, there was only one estimate on the one year basis given by the respondent in this case.

Q. Well now, in case 41, there seems to be some five or, I guess, six red columns. What do they represent?

A. The six red columns represent the different estimates given by the respondent in this case.

Q. Of reproduction cost?

A. They are reproduction cost new and reproduction cost depreciated.

Q. Well, will you give those figures briefly to the committee?

A. The respondent first submitted a figure of \$129,749 based on 1923 prices. That is reproduction cost new. His next figure was submitted on a five year average prices of \$115,244. The next estimate, based on a ten year period, was \$97,750. Based on ten years, that is. There was a difference of \$31,999 between these different estimates submitted by the respondent of reproduction cost new, or a difference of 32.7 per cent in his own estimates.

The respondent then submits reproduction cost depreciated first on 1923 prices, \$122,444. On five year average prices \$108,684. And on a ten year average \$90,282.

The complainant in this case gave a figure of \$77,208 based on 1923 prices. The complainants gave a figure of \$70,212 on five year average and \$60,025 on a ten year average. The difference between the complainants' low figure of \$60,025 based on a ten year average and respondents high figure of \$122,444 was \$62,414, or a difference of 104 per cent.

Q. All right; well now, let us take a look at 52, which seems to have a variety in the high columns. What case was that?

A. That is the case of Brubaker v. Millersburg Home Water Company.

Q. Where was that reported? In the commission's reports? Have you got it?

A. Volume No. 8, page 195.

Q. What do the two left-hand red columns in that series represent?

A. They represent the respondent's estimate. He gave two estimates in this case on reproduction cost new. The first was on a ten year average \$140,786. He gave an estimate on cost prices at the time of the complaint of \$189,811. The complainant in this case gave reproduction cost new of \$77,027 based on a ten year average, and \$102,427 on current prices. The difference between the complainant's low figure and respondent's high figure was \$112,782, or a difference of 146.4 per cent between the low estimate for reproduction cost

new and the high estimate for reproduction cost new in this case.

Q. But in that, Mr. Dietrick, you are comparing the respondent's, the company's estimate of reproduction cost on one year average prices with the complainant's estimate of reproduction cost on a ten year average, are you not?

A. That is right. I am comparing the high and the low.

MR. EVANS: I just want it perfectly clear.

BY MR. EVANS:

Q. Now, there is a second series of red columns. What do they represent?

A. They represent the respondent's estimate on reproduction cost depreciated. His first figure is on a ten year average of \$129,540. His second estimate was on cost prices, \$173,385. Complainant gave a figure on a ten year average of \$69,093; on current prices at \$92,220. And the commission in this case gives an estimate of \$81,175 on a ten year average, or \$113,200 on current prices. The difference between the low estimate given on reproduction cost depreciated and the high estimate given on reproduction cost depreciated was \$104,292, or a difference of 150.9 per cent.

Q. Are there any other particular cases in the chart, Mr. Dietrick, that you want to call attention to?

A. No, not unless there is any that the committee would like to have read, or they want to know the figures on.

MR. TURNER: Let me ask you, before you take that down. The ones that the questions were asked on there, 26 and 41, are they water companies?

MR. EVANS: Would you like to have all the names of the cases?

MR. TURNER: No. Just the question asked here.

THE WITNESS: 26 is the Dallastown Yoe Water Company,—and what is the other?

MR. TURNER: And what is 41?

THE WITNESS: That is the Matamoras Citizens Water Company.

MR. TURNER: Could you tell us the capitalization in each one of those cases? Have you got that data?

THE WITNESS: I can not. I can give you the fair value in each one of them.

MR. TURNER: No. We want the capital.

THE WITNESS: You mean the capital stock plus the—

MR. TURNER: Yes, what is the capital stock of the company?

THE WITNESS: I couldn't tell you. I can look it up, if you want it.

MR. TURNER: Will you get that information, Mr. Evans, please?

MR. EVANS: Yes. Will you make a note of that, Mr. Dietrick, and get the capitalization?

MR. TURNER: Mr. Crawford would like to have 48.

THE WITNESS: The capitalization of 26—

MR. TURNER: The capitalization of 26, 41, and 48.

MR. EVANS: Do you want the name of 48?

MR. CRAWFORD: Yes.

MR. EVANS: What is 48?

THE WITNESS: That is the West Norriton Water Company.

MR. HAGMAIER: 52 is a water company too, isn't it?

THE WITNESS: It is the Millersburg Home Water Company.

BY MR. EVANS:

Q. Are there any other features you want to comment on, Mr. Dietrick?

A. Not unless the Committee would like something else.

MR. EVANS: If the Committee please, I asked Mr. Morgal to come over and give us one or two additional reports that the bureau of accounts have made. He was not here when we started, and he has come here now, and we are taking a good deal of his time from his work at the commission. I do not like to interrupt this witness' evidence, but I think, in order to let Mr. Morgal go, it would be well to do it.

B. F. MORGAL recalled.

BY MR. EVANS:

Q. Mr. Morgal, in your previous testimony you referred to certain reports which the Bureau of Accounts had made to the Commission in regard to the Clarion Power Company; I have

asked you to produce those reports this morning, have you got them with you?

A. I have.

Q. Will you just state what these reports are?

A. The first report filed by the Bureau of Accounts and Statistics on the Clarion River Power Company was dated October 2nd, 1925. This was a preliminary report prepared jointly by accountants from the Public Service Commission and the Federal Power Commission in connection with the determination of actual legitimate cost of the project under the Federal Water Power Company Act.

MR. EVANS: May I just ask that that be introduced in evidence as Exhibit No. 88.

BY MR. EVANS:

Q. Have you any other report on Clarion River?

A. The second and complete report on the Clarion River project was dated November 4, 1925. This was also a report prepared jointly by accountants of the Pennsylvania Public Service Commission and the Federal Power Commission.

MR. EVANS: I offer this in evidence as Exhibit No. 89.

WITNESS: The third report prepared by the Bureau of Accounts was dated March 1st, 1930, and was merely a report upon the basis of the proceedings before the Federal Power Commission as it was determined by the Chief Accountant of the Bureau at that time in a conference with Chief Accountant King of the Federal Power Commission.

BY MR. EVANS:

Q. Between 1925 and 1930 the Bureau of Accounts was not asked by the Commission for any further reports on Clarion River?

A. We kept in touch with the case through correspondence with the Federal Power Commission but we were not asked to file any reports. We were asked by the Federal Power Commission to participate in a further audit of some of the construction company's account, but at that time the request was made our accountants were tied up with other assignments and we were unable to participate.

Q. When was that request made, Mr. Morzal?

A. In April, 1927.

BY MR. COOKE:

Q. What reason was given the Federal Power Commission for not co-operating in that? I understood you to say that the Federal Power Commission had asked the co-operation of our Commission?

A. In a further audit.

Q. Yes.

A. As I explained, at the time that request came from the Federal Power Commission our accountants were all in the field and we could not undertake the work at that particular time, they were all engaged.

Q. You wrote the Federal Power Commission that you could not take it up because of that?

A. That is correct.

MR. EVANS: I offer the Bureau's report to the Commission dated March 1st, 1930, as Exhibit No. 90.

BY MR. EVANS:

Q. Are there any other reports on Clarion River?

A. That is all.

BY MR. COOKE:

Q. You do not happen to recall, Mr. Morgal, what other cases you worked on at that time?

A. No, I don't.

Q. Would it be a difficult matter to find out?

A. I think it would at this time, that was back in 1927.

BY MR. EVANS:

Q. Mr. Morgal, turning to page 27 of the report dated November 4, 1925, Exhibit No. 89, I note the following: "From the above statement, as well as the foregoing report, it will be noted that out of an aggregate net charge to fixed capital as of December 31, 1924, of \$10,985,729.62 we were able to verify cash transactions amounting to only \$1,824,524.25, or 9.33%, the remaining 91.67% being represented by security transactions?"

A. That is what the report showed.

Q. Mr. Morgal, in connection with the Scranton Electric case you stated that the company had filed a new schedule effective November 1st, 1930, which the company estimated

would reduce the rate by a total of \$750,000; what steps are being taken by your Bureau to check up the accuracy of that estimate?

A. We have not had any direction from the Commission to make any verification thus far of that reduction.

BY MR. COOKE:

Q. I would like to ask, Mr. Morgal, whether it has been the practice to check up? We read in the newspapers that this company and that company is going to make a reduction amounting to sometimes as high as a million dollars a year, does your Bureau check up afterwards to find out what happened?

A. We have a direction from the Commission when a deliverance is made by the Commission finding an allowable gross revenue that when subsequent annual reports are filed we shall make an effort to check through those annual reports to determine whether that allowable gross revenue has been exceeded. We have not, except there are some cases in which we went out and made a field examination to determine that, notably the Clarks Ferry Bridge case was one of those. There may have been others, I don't recall them at the present time.

Q. In my home town the company has on three or four occasions in recent years announced cuts of approximately a million dollars a year, have you ever checked up on that to find out whether that was the case?

A. No, sir.

MR. DIETRICK resumes the witness stand.

BY MR. EVANS:

Q. Now, Mr. Dietrick, this represents similar data to that of the preceding chart except that this covers valuations, light cost and water cost up to \$1,000,000 as I understand it?

A. That is right.

Q. It does not cover any of the cases on the preceding chart?

A. No.

Q. Each case, one or more of the estimates on this chart runs over the \$200.00 mark, which was the limit of the preceding chart?

A. That is right.

BY MR. TURNER:

Q. Where did you get these cases?

A. These were taken from the Public Service Commission's volumes of decisions from 1921 to 1930.

Q. Just the same way as you got the other?

A. Just the same as the others.

BY MR. COOKE:

Q. What is the 31 case. Apparently the lowest limit is one-third of the top estimate. Will you tell me the possible reason for that?

A. Case thirty-one is the borough of Mount Carmel v. Mount Carmel Water Company. These figures were submitted through an engineering conference representing the principals involved, that is the respondent, the complainants and the Commission.

BY MR. EVANS:

Q. You have designated that all in red?

A. Yes, sir.

BY MR. COOKE:

Q. Can you identify the comparison of that bottom one to the lowest one in 1931?

BY MR. EVANS:

Q. Give the Committee the various figures of estimate.

A. The lowest one is \$186,586 that is reproduction cost depreciated on a ten year average.

The high figure in that case is \$702,516. That is reproduction cost too, based on 1920 figures.

BY MR. TURNER:

Q. What year was that case?

A. The case was decided in 1923, rather the decision was written in 1923.

BY MR. EVANS:

Q. The valuation, I take it, that was as of the time of 1920?

A. The 1920 prices were used in the valuation.

Q. Is there anything there to show what the Commission findings were in that case?

A. The Commission found a fair valuation of \$295,000. The lowest figure on the ten year average was \$186,586.

BY MR. HAGMAIER:

Q. What was the high figure given?

A. \$702,516.

In the reproduction cost value and the figures just given there was a difference of \$477,008.

The difference between the high exceeded the low by 211.5 per cent.

New reproduction costs depreciated, there was a difference between the low and the high of \$177,742.

And the difference between the high and low was 95.3 per cent of the low figure.

BY MR. COOKE:

Q. Now take No. 43, tell us what the difference is between those estimates?

A. Case 43 is the Borough of Towanda versus the Towanda Water Company.

Q. You have four different values for the Commission.

A. The first figure and the highest as submitted by the Commission in this decision was \$647,863. That was based on 1923 prices.

The next lowest figure was \$552,804, which was based on 1922 prices.

The next figure was \$483,949 based on a five year average.

And the lowest figure was \$380,516 based on a ten year average.

Q. What was their final figure? What was the reproduction cost new after consideration of depreciation?

May I ask, Mr. Dietrick, the Commission's estimate of reproduction in that case seems to be higher than that of the respondent, were they on the same basis?

A. Apparently as set out in the decision.

Q. What was the company's estimate of reproduction new as of 1927 figures?

A. \$607,224.

Q. As compared with the Commission's, what?

A. \$647,863.

THE WITNESS: You want the fair value, as given in this case? The Commission found the fair value in this case to be \$350,000, with their ten year average reproduction cost of \$380,516.

MR. TURNER: They found \$350—?

THE WITNESS: Yes, sir. That isn't their low figure; that is reproduction cost new, not considering depreciation.

BY MR. EVANS:

Q. In the table that you are going to prepare and later introduce as an exhibit, are you expecting to give the fair value as found by the Commission for each of these cases?

A. I will include that, if the Committee would like.

MR. EVANS: I think that will be helpful.

BY MR. EVANS:

Q. Take No. 59, Mr. Dietrick, what case does that represent?

A. Case No. 59 is Borough of Clearfield v. Clearfield Water Company. In that case there were estimates submitted by the respondent, complainant and the Commission on reproduction cost new. The respondent's figures, based on 1926 prices were \$925,476. The complainant's estimate, based on 1927 prices, was \$583,576. The Commission's estimate, based on 1926 prices, was \$792,000. The difference between the high and the low and the reproduction cost new was \$341,900, or an excess of 58.6 per cent. The reproduction cost estimated on 1926 prices was \$803,799; the complainant's, \$413,344; the Commission's, \$717,009, or a difference in reproduction cost depreciated between the high and the low of \$390,075, a difference of 94.4 per cent.

BY MR. HAGMAIER:

Q. What was the Commission's finding in that case?

A. The Commission allowed a fair value of \$600,000 in that case.

BY MR. EVANS:

Q. Which of these cases are electric cases, can you say?

A. I can go over each one—

Q. You need not do that. It happens that the ones we picked out were mostly water cases. I notice in No. 47 that the

respondent's estimate of reproduction cost seems to be lower than the complainant's estimate. Will you state whether or not those are on the same basis?

A. What case is that?

Q. 47.

A. No; the highest figure on that—yes, you are right, that was submitted by the complainant, \$623,193, based on prices in 1923. The company's engineers claimed on the same basis \$583,262; that is on the same basis.

Q. Did you say what case that was?

A. That is the case of the Borough of Minersville v. Minersville Water Company.

Q. Do you know who the engineer for the company was in that case?

A. No, I do not.

Q. Have you got the reference to the report, volume and page, of that case?

A. Yes, sir; Volume No. 8, page 143.

Q. Are there any other cases there that the Committee want specially commented on?

MR. RHODES: In taking up these exhibits, in addition to the amount found by the Commission, would it not be well to have him give the volume and page where these are found in the report?

THE WITNESS: That will be submitted.

BY MR. EVANS:

Q. Mr. Dietrick, you have prepared also a similar chart, covering valuations of \$1,000,000 or over?

A. Yes, sir, I have.

MR. EVANS: This chart, headed valuation cases, reproduction estimates, light, gas and water cases, 1921 to 1926, is offered in evidence as Exhibit No. 86.

BY MR. EVANS:

Q. This was prepared under your direction?

A. Yes, sir.

Q. Prepared on the same basis as the preceding chart?

A. Yes, sir.

Q. That is, taken from the reports of the reports of the Commission?

A. That is right.

Q. This chart—suppose you take up No. 5 and tell the Commission what case that involves.

A. Case No. 5 is the complaint of the City of Erie against the Pennsylvania Gas Company. In this case the respondent submitted three figures, including intangibles. The first figure, average—based on average prices from 1906 to 1915, was \$6,268,327. The next figure, based on prices from 1914 to 1918, was \$9,026,290. The third figure, based on 1918 prices, was \$13,217,375. The difference between these three estimates was \$6,949,048, or a difference over the low of 110.9 per cent.

Q. In these cases, such as that, where there is only the company's estimates given, does the report not show what the respondent's estimates or the Commission's estimates were?

A. No, they are not given—not clearly set out.

Q. What was the Commission's finding of fair value?

A. The Commission found a fair value of \$14,380,000 in that case.

Q. More than the reproduction cost estimated by the company's own engineers, as of 1918?

A. That is right.

Q. Were these estimates that you have charted here depreciated or undepreciated?

A. Not depreciated—reproduction cost new.

Q. Take No. 13, what case was that?

A. Case No. 13 is the complaint of the city of Reading against the Reading Transit and Light Company.

Q. And what were the companies' estimates in that case?

A. In that case the complainants gave an estimate based on prices from 1913 to 1915 of \$3,737,886.

Q. That is the complainant's?

A. That is the complainant's estimate. The complainant next gives a figure of \$4,128,056, based on average prices from 1913 to 1915. The next figure submitted by the Public Service Commission of \$4,522,827. The rest of the figures are all from the respondent.

Q. Was the Commission's estimate of reproduction cost new undepreciated?

A. All these figures are reproduction cost new depreciated. The respondent gave as a valuation \$6,526,711, not stating what

prices were used. The next was \$7,658,509, on basis given. The next was \$6,850,472, no basis given. The next was \$7,962,452, based on 1914-1919 prices. The next figure was \$8,532,964, based on 1917 prices. The next figure was \$9,551,137, no basis given. The next figure was \$10,072,019, based on 1919 prices. The next figure was \$12,727,784, based on 1920 prices.

Q. What value did the Commission find as a fair value?

A. The Commission allowed fair value of \$6,000,000 in that case.

BY MR. COOKE:

Q. Do I understand that \$6,000,00 was the company's low estimate?

A. \$6,000,000 was the Commission's valuation \$3,526,711 was the respondent's lowest estimate.

BY MR. MEMOLO:

Q. As of what year?

A. There was no basis given.

BY MR. EVANS:

Q. But the Commission's figure there of reproduction value was four million and something, was it?

A. What is that, please?

Q. The Commission's estimate of reproduction value was \$4,000,000?

A. Yes, \$4,526,827.

BY MR. COOKE:

Q. What did I understand you the Commission's final figure was?

A. The final finding was \$6,000,000, or a difference of about \$1,500,000.

Q. Above the Commission's estimate?

A. Yes.

BY MR. EVANS:

Q. Now, take No. 19, what case was that?

A. That is the complaint of Cauffiel against the Johnstown Water Company.

Q. What was the company's estimate in that case?

A. The respondent gave two estimates of reproduction cost new. The first estimate they show five year average prices was \$5,899,655.00. The next estimate based 1920 was \$8,283,485.00. The complainants in this case offered an estimate based on ten year average prices of \$4,025,138.00 or a difference between the complainants figures and the respondent's high figures of \$4,258,547.00, or an increase over the low of 105.8%. On reproduction cost depreciated the respondent's estimate was \$5,496,790 on a five year average and \$7,167,741.00 on 1920 prices. The complainant on a ten year average submitted a figure of reproduction cost depreciated of \$3,789,555.00, a difference between the high and the low of \$3,927,241.00 or an increase of the high over the low of 103.7%.

Q. What did the Commission find the fair value?

A. The Commission granted a fair value in this case of \$4,750,000.

Q. And suppose we look for a moment at No. 37. What case was that?

A. That is the city of York, complaint against the York Water Company.

Q. The respondent's figures or the company's figures were what?

A. The respondent's estimate were two. First based on five year average prices, \$5,887,574.00 and on 1922 prices \$4,246,813.00. The complainant one a ten year average submitted \$2,503,370.00 and on 1922 prices \$3,221,296.00. The Commission submitted an estimate of reproduction cost new in this case on ten year average prices of \$3,556,200.00 and on 1922 prices \$4,154,700.00. There was a difference between the high and low estimates of reproduction cost new of \$3,384,204.00, or an increase of the high over the low of 135.1%. For reproduction cost depreciated the respondent's estimate was \$5,360,810.00 based on five year average prices. The complainants figure was \$2,264,136.00 based on ten year average prices. The Commission submitted two estimates of reproduction cost depreciated, first on a ten year average of \$3,329,800.00 and on 1922 average prices of \$3,794,200.00, or a difference between the high and low in reproduction cost depreciated of \$3,096,674.00 an increase of the high over the low of 136.8%.

BY MR. COOKE:

Q. What did the Commission find as the fair value?

A. The Commission found as a fair value \$3,823,800.00.

BY MR. EVANS:

Q. Now, Mr. Dietrick, I notice No. 57, the columns are reasonably near the same height. What case was that?

A. That is the case of the city of Pittsburgh against the South Pittsburgh Water Company. The respondent submitted a figure based in 1924 prices, on reproduction cost new, of \$9,112,933. Now this excludes working capital and going concern value. That is what it states in the decision. The complainant's figure is \$8,211,343, based on 1924 prices, and they also exclude working capital and going concern value. The commission submits an estimate on 1924 prices of \$8,990,000. Now then, they exclude working capital and intangibles in this case, the Commission.

Q. At what amounts are they included? Have you got that?

A. I can not set that out.

Q. That looks as though—what are the other Commission figures?

A. On reproduction cost depreciated the Commission submitted three figures. First, \$8,340,000 based on 1924 prices, \$8,640,000 on five year average prices, and \$7,850,000 on ten year average prices. All these figures submitted by the Commission on reproduction cost depreciated include working capital and intangibles.

Q. And what was the fair value found there?

A. The Commission found a fair value in this case of \$7,500,000.

Q. Now, turning to the three columns at the right of the chart, they all end in points. What does that indicate?

A. They go over the \$15,000,000 mark. Each figure is set out in the column there.

Q. Suppose you give us the data for these three cases.

A. Case No. 61 is the City of Pittsburgh against the Equitable Gas Company. The respondent's estimate on reproduction cost new based on 1914 prices was \$45,961,654. On ten year average prices \$79,844,229. On five year average \$93,844,851, and on 1923 prices \$93,989,134. Now, those figures include no intangibles. There was a difference between the high and low there of \$48,027,480, or an increase of the high over the low of 104.5 per cent.

On reproduction cost depreciated, and respondent's estimate—these are based on the straight line depreciation—the 1914 prices, \$30,548,515; on ten year average prices, \$52,118,270; on five year average prices \$61,030,240, on 1923 prices, \$61,338,793; on 1914 prices \$28,184,438; on ten year average \$47,957,006; on five year average \$56,137,814; and on 1923 prices \$55,957,929. A difference between the high and low of \$33,154,355, or a difference of the high over the low of 117.6 per cent.

Q. Did the complainant or the Commission find reproduction cost in this case?

A. No, nothing except the Commission's fair value.

Q. You referred to depreciation on the straight line method. Can you briefly explain to the Committee what the straight line method of depreciation is?

A. In the straight line method, take furniture and fixtures, the usual procedure is to take ten per cent. on the beginning balance and one-half of ten per cent. on the net additions during the year,——

Q. In other words, in general you estimate the life of the property and set aside for depreciation the same amount each year during the life of the property?

A. Yes.

Q. What other methods of depreciation—

A. In this case the respondent wants the four per cent sinking fund method.

Q. Will you explain briefly what that means?

A. I can quote from an accountant's handbook, which I have, which I think will give you a clearer definition than any that I can give you. This was written by E. A. Saliers. "Sinking Fund Method. This method employs the principles ordinarily used in establishment of sinking funds. The rate of depreciation is made a function of an interest rate and is purely theoretical. A fixed sum of money is set aside each period to accumulate at compound interest. Amounts thus set aside plus interest accumulations should equal the desired amount at end of life of assets in question."

FATHER COX: How did this Pittsburgh company so manipulate things that they could get up to \$95,000,000 without those

marvelous intangibles that you talk about? Don't need excuses in Pittsburgh, is that the idea?

THE WITNESS: I am from Pittsburgh, and I would rather not—

MR. EVANS: I do not believe Mr. Dietrick can answer that, Father Cox. He is dealing only with figures.

MR. TURNER. Perhaps the difference is, Father Cox is used to dealing with intangibles and Mr. Dietrick with tangibles.

FATHER COX: I thought the clergymen only dealt with tangibles.

BY MR. EVANS:

Q. Mr. Dietrick, taking No. 62, what case is that?

A. No. 62 is the City of Pittsburgh, complaint against the People's Natural Gas Company.

Q. What were the respective reproduction cost estimates there?

A. Reproduction cost new submitted by the respondent in this case was \$51,310,742, based on 1924 prices. The complainant in this case submitted an estimate based on the same prices of \$37,717,933, a difference between the respondent and the complainant of \$13,592,809, or an increase of 36 per cent. On reproduction cost depreciated the respondent's estimate was \$39,419,079, based on 1924 prices. The complainant's was \$23,121,695. He also based his estimate on 1924 prices. The difference between the two of \$16,297,384, or a difference, the high over the low, of 70.5 per cent.

Q. What fair value did the Commission find?

A. The Commission in this case allowed a fair value of \$29,100,000.

Q. I am not sure whether you stated what valuation the Commission found in 61, did you Mr. Dietrick?

A. No, I did not. Case No. 61 the Commission found a fair from forty to forty-three million dollars.

Q. Taking their last column, No. 68, what were the figures in that?

A. Case of Citizens of Scranton and Wilkes-Barre against the Scranton-Spring Brook Water Service Company.

Q. What were the respective estimates there?

A. Reproduction cost new submitted by the respondents \$43,910,246. The complainants submitted an estimate of \$23,465,586. The Commission submitted an estimate of \$36,179,242, or a difference between the high and the low estimate on the reproduction cost new of \$20,444,660, or a difference in the high over the low of 87.1%. On reproduction cost new depreciated the respondent submitted a figure of \$41,317,593, the complainant \$20,927,484, and the Commission \$34,528,459, or a difference of \$20,399,109, or an increase of the high over the low of 97.4%. None of these figures neither reproduction costs new nor reproduction costs new depreciated include intangibles.

BY MR. COOKE:

May I ask the witness, Mr. Evans, what do you mean by that now? Are you just quoting from the report?

A. Yes, sir, it is stated in the report whether or not these figures include intangibles.

Q. What I would like to know is, what is the most intangible thing that was included? There is not a sharp line between what is tangible and what is intangible.

A. Earlier I read from one of their decisions what they considered—what the Public Service Commission considered to be intangible. I will read that again if you want it.

MR. EVANS: I think, Mr. Cooke, that Mr. Husselman in his testimony on the Scranton-Spring Brook valuation of properties brought that out.

BY MR. MEMOLO:

Q. Have you the fair rates as given by the Commission?

A. The Commission found a fair value in that case of \$43,650,000.

Mr. MEMOLO: Was that fair value with all intangibles?

A. Yes, sir.

Q. With the intangibles in?

A. They are all in there, I suppose.

MR. TURNER: When they found fair value it is reasonable to suppose that everything is in there?

A. Yes, sir.

BY MR. EVANS:

Q. I want to ask him in regard to No. 32 A, C, F and J, what would these indicate?

A. They are the Philadelphia Suburban Gas and Electric Company. They are set out in the decision under the different divisions of that company, and that is 32 A, 32 C and 32 F, refer to the divisions of that company.

Q. Is there any other comment, Mr. Dietrick, that you want to make on this chart?

A. I could not make any more except an expression of opinion and it is not within my duty as certified public accountant to do that.

Q. May I ask you this: From an examination of all these cases, have you been able to ascertain any standard by which the Commission apparently fixes fair value in rate cases?

A. After reviewing all these cases I am unable to find to my complete satisfaction how or what method the Public Service Commission uses in determining their fair value.

Q. When you say to your complete satisfaction, can you give us any idea from this study as an accountant how you think the Commission arrives at its valuation?

A. The thing that is given the most weight in these decisions is reproduction cost new and reproduction cost new depreciated. To this is added intangibles and that is what I find to be their method of determining fair value, but I have not been able to take any figures and build up the fair value as submitted by the Commission or determined by the Commission.

Q. And in one case, for instance, they found a fair value that was under the original cost of the property, if I remember rightly, was it not?

A. Yes, I believe it was.

MR. HAGMAIER: In case 5 and one other.

Q. Yes, and in other cases the Commission's estimates of reproduction costs exceeded even those of the companies, or in one case, I should say?

A. Yes, sir.

Q. That is the only case you found?

(No answer.)

BY MR. RHODES:

Q. In that Spring Brook water case did you say that the valuation was fixed by the Commission at \$34,000,000?

A. \$43,000,000.

Q. I mean their original estimate?

A. Reproduction new depreciated was \$34,528,459.

BY MR. MEMOLO:

Q. Fixed by the Commission?

A. That is what they determined to be the reproduction new depreciated, but included no intangibles.

Q. Then their fair value was—

A. \$44,000,000—\$43,650,000.

BY MR. RICHARDS:

Q. The difference between that would be intangibles?

A. That is about the only thing would make it go up.

Q. That is what I want to know, what constitutes that difference?

A. The reason for my hesitancy is, it does not clearly set out what that difference is made up of.

MR. TURNER: You cannot determine from the Public Service Commission's figures given what went into making up that figure?

BY MR. RICHARDS:

Q. Can you find out what constitutes that difference? I would like to know.

A. In that Scranton-Spring Brook case I have gone beyond the decision for information, I went to the docket of the Superior Court, 1931 term of February, Volume No. 35, page 45 A, and I found a possible make-up of the difference and I will give you that if you would care to have it.

BY MR. MEMOLO:

Q. Let us have that.

A. The Commission found reproduction cost new depreciated \$34,528,459. To this the Commission adds omissions and tangibles \$960,000, engineering and superintendence, etc., \$1,396,000, promotion and organization \$627,000, administrative and legal \$485,000, insurance and taxes \$313,000, interest during construction \$1,342,000, working capital and supplies \$500,000, cost of financing \$1,900,000, going concern value \$2,600,000. Now that makes a total of intangibles of \$10,123,000, which

added to the original estimate of the property made \$44,651,000. The Commission allowed a fair value of \$1,000,000 less than that, \$43,650,000. I don't know where the million was lost.

BY MR. RHODES:

Q. Those intangibles are intangibles that come within the definition according to that decision you gave us a few minutes ago?

A. Yes.

MR. COOKE: What percentage is the going value there of the total?

BY MR. EVANS:

Q. Going concern value.

A. The Commission's original estimate was \$33,187,571, to which were added additions from the time that these figures were submitted to the date of the writing of its decision \$1,340,888, or the total cost of the plant, excluding intangibles was \$34,528,459 by the Commission's own figures.

BY MR. EVANS:

Q. Reproduction cost?

A. Yes, reproduction cost depreciated.

Q. You said actual cost.

A. Pardon me, reproduction cost depreciated.

Q. What did they find for what the concern valued as intangibles?

A. \$2,600,000.

MR. COOKE: That is very conservative, because Mr. Morgal testified here yesterday that they used 10% of those estimates that he gave us yesterday, which would make it over four million.

BY MR. EVANS:

Q. That is about 5% they added for going concern here.

A. More than that.

Q. You spoke of this data you are now reading, I think, coming from Volume 35. I think you meant by that the number of the case in the Superior Court?

A. I don't know whether there was a number on the outside cover.

Q. That was the number of the appeal in the Superior Court, for the information of the Committee.

BY MR. MEMOLO:

Q. From these figures there was an appeal?

A. This Scranton-Spring Brook case? I really don't know whether there was an appeal in that or not.

MR. EVANS: Both sides have taken an appeal to the Superior Court.

If I have not already done so, I offer Exhibit No. 86 in evidence. The testimony given by Mr. Dietrick has related to this exhibit.

Recess until 2 o'clock P. M.

CHARLES H. YOUNG sworn.

BY MR. EVANS:

Q. Mr. Young, when did you become a member of the Public Service Commission?

A. July 21, 1927.

Q. For the term to July 1, 1931, I think?

A. That is right.

Q. You are chairman I understand of the Electric Rate Committee of the Commission?

A. That is correct.

Q. When was that committee formed?

A. On February 28, 1930.

Q. What was the occasion for that committee being formed?

A. I think it is set forth in the minutes of the Commission more clearly probably than I could express it. Prior to that time, I think in 1928, a list of the electric companies was compiled by the Chief of the Bureau of Rate and Tariff showing, I think, 94 of them had rates above ten cents in the first block. A conference was had with the chairman of the Commission with the electric companies and the Electric Association for the purpose of getting all these companies who had this rate for the first block to reduce their rates to a block not to exceed a ten rate for the first block. The occasion for that was that there was some difficulty in getting extensions of electricity to rural communities under General Order No. 28,

with these high rates prevailing. These matters were handled by the Chairman after this conference and subsequently, I cannot give the exact date, the rates were reduced until there were only about twenty companies that had the high rate and since it has been reduced, I think, to five. The Commission determined when this Committee was appointed that there ought to be someone in charge of that activity and also to keep in touch with the annual reports of the electric companies and to proceed against those whose reports indicated that they were making too high a rate of return.

Q. You spoke of a conference called by Chairman Alney with the representatives of the electric industry. When was that conference called?

A. My recollection is that it was in February, 1928. There is a record of it in the minutes of the Commission. I cannot give you the exact date in February.

Q. Prior to the formation of the Electric Rate Committee whose duty do you concede it to have been to look after the subject of electric rates, so that the consumers were protected?

A. Well, I would say the duty rested on the whole Commission, not one any more than another one.

Q. Were no particular members delegated for that duty before that time?

A. No, sir.

Q. You spoke of reports filed annually by the electric companies with the Commission. What do you conceive is the purpose of requiring utilities to file annual reports with the Commission?

A. It is to give the Commission information as to their operation and income and all the facts set forth in these annual reports. As I understand the Commission has outlined a form of report to be made by the companies.

Q. And ultimately the purpose is, is it not, to see whether or not the rates that are collected from the public are too high or too low or whether they are properly adjusted?

A. I think that is possibly the principal purpose.

Q. Now you are familiar with the fact, are you not, Commissioner Young, that the Commission in 1928, directed the Bureau of Accounts and Statistics to submit an analysis of the electric rates of the companies in Pennsylvania?

A. No I am not familiar with that fact, Mr. Evans.

Q. Mr. Morgal has introduced here two reports made in 1924, covering an analysis of the reports of the electric companies for 1923, which has been furnished to the Commission?

A. I don't think I ever saw those reports. That was three years before I came to the Commission and I don't think I ever saw them.

Q. Now just for your information these reports are dated, according to Mr. Morgal's testimony, June 10, 1925 and December 30, 1924, both covering the electric companies reports for the year 1923. Mr. Morgal also testified that the Bureau of Accounts and Statistics had presented to the Commission on August 7, 1928, survey with respect to the control, financial and operating characteristics of electric utilities operating in the state of Pennsylvania.

A. Yes.

Q. You are familiar with that report, are you not?

A. Yes sir.

Q. And that is this report of (showing exhibit to the witness) Statistics in 2 Volumes.

A. Yes I received a copy of that report at the time it was compiled.

Q. It appears in the record of this Committee as exhibit number 8.

Have you made any careful analysis of that report to the Commission from this Bureau of Accounts?

A. You mean by this Committee or individually?

Q. Individually?

A. Well, at the time it was submitted I read the report, that was some time ago.

Q. You familiarized yourself with the fact of what was set forth in the report, I assume?

A. I don't know how familiar I am with it. There is a lot of data contained in it. I would not say I could retain all that, after having read it two or three years ago.

Q. Referring to Schedule C-1 of this report, this gives among other things the income statistics of the various companies listed for the year 1927, and among other things shows their net income, the dividends declared, and the balance available for surplus. Among other companies covered by this

C-1, Commissioner, is that of the Scranton Electric Company, which shows that in the year 1927 it declared dividends on the preferred stock of \$171,552; on common stock, \$1,200,000, at the rate of 48 per cent, and in addition to that transferred to surplus \$1,659,359.

A. Yes.

Q. Does that data as regards the Scranton Electric Company suggest to you the possibility that the rates of the Scranton Electric Company are too high, or were too high in 1927?

A. No; that data alone would not determine that.

Q. I did not say that it would determine it. I said, does it suggest it, Mr. Commissioner?

A. It might be some indication that it was too high; I don't think very much.

Q. What investigation was made of the Scranton Electric Company as a result of this report?

A. None that I know of.

MR. TURNER: May I ask you why?

THE WITNESS: The reasonableness of rates is based on the valuation of the property. A company might declare a large dividend one year; it might partly declare it out of surplus—

BY MR. EVANS:

Q. This is all earnings, Mr. Commissioner, gross income, deductions, net income?

A. That is the net income, but I was speaking of the 48 per cent dividend.

Q. That is this figure.

A. But in any event the reasonableness of rates is determined on the value of the property and the operating expenses, and the law determines how we shall fix the valuation.

Q. Mr. Young, the annual reports of the companies do not show the value of their property, do they?

A. The annual reports show the book cost, as they carry it on the books, but it does not show the fair value of the property for rate making purposes.

Q. Therefore, in your opinion, the annual reports are of very little value in determining whether or not the Commission should investigate any particular company to see whether its rates are excessive?

A. I wouldn't say that. They are of some value. It is an indication, but if the company has never had a valuation made of their property, it is not of very much value. If the company in the past has had a valuation and put in on their books, put the valuation on their books and carried it on their books, it is a pretty good indication of what their earnings are and a fair value of their property.

Q. I am not saying that it is determinative at all, but I am asking you whether in your opinion, in your construction of the facts such as are disclosed in this report in regard to the Scranton Electric Company to the Commission in the summer of 1928, whether or not the facts are sufficient to make it advisable that the Commission investigate that company and see whether or not its rates are excessive. That is what I am trying to get at.

A. I would have to make a closer scrutiny of this report than I can do just in a few minutes, and determine whether or not it would be advisable for the Commission to make a further investigation. I am not an accountant myself, but the annual reports, I think, do give sufficient information to put the Commission on notice whether or not they should make an investigation. I would say that.

Q. Well now, Mr. Commissioner, a study of the annual reports of the Scranton Electric Company for the years 1925, 1926, 1927, 1928, and 1929, introduced before this Committee as Exhibits No. 2 and 12, show that the Scranton Electric Company in 1925 was earning 17.96 per cent on the depreciated overall book value of its property, and in 1929 was earning 14 per cent on the depreciated book value of its property. The last figures I have stated have been checked by Mr. Morgal, the chief of the bureau of accounts, but he has not had an opportunity to check the other figures. Taken in connection with the reports you have before you, does that suggest to you as a Commissioner the possibility that the rates of the Scranton Electric Company have been too high for a number of years and merited investigation at the hands of the Commission?

A. Yes, I think it does and that is the reason the Commission instituted inquiry and investigation against the rates, it was on that information submitted by Mr. Morgal.

Q. In 1928, and the Commission acted in February of 1930?

A. No, at the time that it instituted it.

Q. What report was submitted by Mr. Morgal at the time the Commission instituted this action?

A. The Commission had before it some data submitted by Mr. Morgal, and I think it had working sheets that he had in his office, showing a return of 14% more for that company, together with a number of other companies.

Q. Mr. Morgal has testified that he has produced to this Committee all the reports that he has submitted to the Commission.

A. Well, my recollection is that it was not a report, but at the request of the Commission he submitted some working sheets he had in his office containing this data, and it was done at the request of the members of the Commission. I don't think it has been tabulated in the form of a report, that is my recollection of it. It had been later on submitted to the members of the Commission.

Q. Now, Mr. Commissioner, I realize that you were not a member of the Commission in 1925, but in the report which I refer to, submitted by the Bureau of Accounts and Statistics under date of June 10, 1925, entitled Earnings of Pennsylvania Electric Companies during the year 1923, and introduced here as Exhibit No. 9, The Scranton Electric Company, as far back as 1923 shows their earnings 14.7% on the book value of its electric properties.

A. Yes.

Q. With all this data for these number of years before the Commission, up 1928, do you still feel that there was nothing on the records of the Commission which indicated the desirability of investigating the rates of The Scranton Electric Company.

A. No, I didn't say that; I have not said it.

Q. Will you answer me; do you think there was?

A. Well, evidently there was if it was in the annual report that they were earning 14% in 1925, I think you were on the Commission then, I think there was some evidence that they were earning too much money, and that is the kind of evidence that the Commission acted on at the time they filed the complaint.

Q. And you think it should be the Commission's policy, and it has been your policy, to urge the Commission to act in every such case?

A. I think it is the duty of the Commission to do it if they have evidence and reliable information that the company is earning more than a fair return on the fair value of the property.

Q. You, you have no knowledge of the fair value of the Scranton Electric property? I take it, have you, Mr. Commissioner, except its book value?

A. Well, we have some knowledge, of course, it is not definite, but there was a valuation of that property made in a merger proceeding in 1928, which made it easier to determine the fair value than it would be in a company that had never had such a valuation.

Q. That was the time that the company wrote up its valuation about \$5,000,000, wasn't it?

A. Well, I don't know how much they wrote up their valuation, but there was a merger in 1928, and I think they did write up some figures. I cannot give you the figure.

Q. What I am anxious to get, Mr. Commissioner, if I can, clearly, would you think it is the duty of the Commission to proceed against a utility on the basis of the data furnished by the annual reports of utilities subject to the jurisdiction of the Commission in regard to their annual return and its relation to the book values of the property?

A. I answered that before the Senate Committee yesterday, and this is my view about it. I think it is the duty of the Commission to act on their own initiative, institute an investigation, whenever there comes to the Commission reliable information that the company is charging too high rates, or their earnings are too high on the fair value of the property. Now, that information, most of it, of course, comes from the Commission through the annual reports, or it might be on some information from some other source, and if we do get that, it is our duty.

Q. When it is indicated by the annual report that the company is earning too high a return, you think it is the duty of the Commission to act on its own initiative?

A. Well, at least make an investigation, or make a decision to have the accountants go over the books and check them up to see whether there is any real foundation for instituting an inquiry, and that is the policy of the Commission, and has been the policy since its organization.

Q. How many cases, since you were on the Commission, prior to February 19, 1930, did the Commission on its own initiative institute and investigate the rates of utilities subject to its control?

A. I cannot give you that information off-hand.

Q. Can you name any cases?

A. I cannot off-hand, now.

Q. Can you name any case where you urged it to be done?

A. No, I don't think so.

Q. And yet you had this data before you, and you think it is the duty of the Commission to do it, and yet it was not done?

A. Well, this data when it was submitted to us, why, the Commission acted on it. Of course, it is not possible for the members of the Commission to examine all these annual reports.

Q. This was submitted to the Commission in August of 1928?

A. Does this show the percentage of income? I don't see it here.

Q. It is very easy to figure out, if it is not on that sheet, our accountants have done it very readily?

A. Well, we depend, of course, on the accounting bureau to figure out these tabulations.

Q. Now, Mr. Commissioner, when a company with a fixed capital, as shown by its annual report, of \$17,329,261, as shown by its own books, earnings and net income of \$3,030,911, it is not very difficult to find what the percentage of earnings on fixed capital is?

A. No, that could be easily computed.

Q. And right on the face of it, this is over 15 per cent, isn't it; three millions income on 17 millions fixed capital?

A. Yes.

Q. And still I understand you did not feel that there was any duty of the Commission to investigate the situation when this report was submitted?

A. No, I don't think I said that, Mr. Evans.

Q. Will you tell me then whether you do or not, Mr. Commissioner?

A. Well, I explained that in my former answer—

Q. Won't you answer yes or no and then explain, and then we can get at it that way?

A. I don't think that I can answer it yes or no. I say that it is the duty of the Commission to investigate when they have reliable information that the law is being violated or that too high a return is being earned. Now, of course, I don't mean that we can do that; in fact, we can not do it, we do not have the force to do it, and that has been evidenced by the work that we have done in the past year. We know that there are other companies that ought to be investigated, and we have had our accounting bureau working all year, all that we could spare, and they have only completed about half of what we directed them to do. It is impossible for us to do the work with the force that we have.

Q. I appreciate, Mr. Commissioner, that there are decided limitations of the personnel at the command of the Commission, but can you explain why what was done in 1930 could not equally as well have been done in 1928?

A. Yes, and it might as well have been done in 1925, when you were a member of the Commission.

Q. I say, will you explain why it could not be done in 1928?

A. I can make no further explanation than I have made.

Q. Now, as a matter of fact, Mr. Commissioner, is it not true that the real reason for the Commission commencing activity in February, 1930, in regard to the Scranton Electric Company was the fact that in that month the Federal Trade Commission made an investigation of the Scranton Electric Company and introduced into its records exhibits showing that the company in 1923 had earned 15.25 per cent on its fixed capital, in 1924, 14.75 per cent on its fixed capital, in 1925, 17 per cent on its fixed capital, in 1926, 20.8 per cent on its fixed capital, in 1927, 21.9 per cent on its fixed capital, and in 1928, 14.7 per cent, without making allowance for the write-up at that time? Is not that actually the fact?

A. No, it is not.

Q. You were not familiar with this at all?

A. I never saw that. I have heard recently some talk about the action of the Federal Trade Commission. I never saw their report. I never even saw anything in the papers with reference to the Scranton Electric, coming from their report.

Q. Did you know that the Federal Trade Commission was investigating the electric industry?

A. Yes, I knew that.

Q. And you did not in any way attempt to keep informed as to the matters investigated in that committee that pertained to Pennsylvania?

A. No, I didn't know that they were making any special investigation in Pennsylvania.

Q. No, but I mean—

A. Except I did know this later, that they sent some men up here from the Federal Trade Commission to examine our reports. I learned that—I can not give you the date when I did learn it, but I know that they had some men up there. It was talked about.

Q. And it was a mere coincidence that in February, 1930, this disclosure was made before the Federal Trade Commission and in the same month the Public Service Commission of Pennsylvania commenced its investigation of the earnings of electric utilities in Pennsylvania?

A. The Pennsylvania Commission did not commence their investigation at that time. As I stated before, back in 1923 this matter of electric rates was taken up and a conference had with the companies to get them to reduce their rates, and very much was accomplished, and it was followed up, but not as actively as it has in the past year, since this committee was formed because then it was placed definitely in the charge of certain members of the Commission.

Q. Mr. Morgal has submitted a table, introduced here as Exhibit 5, showing the list of electric companies under review by the Commission and its electric rate committee as of March 17, 1931.

A. Yes.

Q. You are familiar with that, are you not?

A. I am familiar with that, yes.

Q. This report states that with regard to the Scranton Electric Company, the date the bureau was directed to examine the accounts was February 10, 1930; is that correct, as far as you know?

A. I think that is correct. It was about that time.

Q. And on the 11th of March, 1930, the Commission filed a complaint on its own motion against the Scranton Electric Company?

A. That is correct.

Q. Now, according to the testimony of Mr. Morgal, no directions were received by the bureau to examine the accounts of electric companies prior to February 10, 1930?

A. Well, it was after the formation of this committee that he received directions to examine reports.

Q. Well, Mr. Commissioner, was not the committee actually formed after February 10, 1930?

A. Yes, it was formed on February 28th, I believe.

Q. So this one case was—

A. Well, I explained before that he brought before the Commission some working sheets that he had showing the earnings of the Scranton Electric, together with some other companies, and that was the basis on which he was directed to make an examination of the Scranton Electric's books, before the committee was formed.

Q. Can you explain to the Committee how the electric rate committee reached its conclusion as to which companies the bureau should examine into, as set forth in this list?

A. Yes, I think I can. After the committee was formed, we asked Mr. Morgal to make a tabulation of some of the companies that, from their annual reports, appeared to be earning more money than they should, and I think a copy of that was offered in evidence here by Mr. Morgal, and it was from that tabulation that the committee determined what companies should be examined.

Q. Now, you have before you the report to which you are referring, have you?

A. Yes.

Q. And that is headed "Public Service Commission tentative rate of return calculations for Class A electric companies, revenues in excess of \$250,000, operating in Pennsylvania, based upon data contained in annual reports for 1928?"

A. Yes.

MR. EVANS: Introduced before the committee as Exhibit No. 9.

BY MR. EVANS:

Q. According to my check on this, Mr. Young, and I had only last evening to do it in, you requested the Bureau of Accounts on March 10, 1930, to examine the accounts of the Edison Light and Power Company of York, which, on Exhibit No. 9 showed a return of 36.25% on its fixed capital.

A. Yes.

Q. And you considered that sufficiently high to warrant an investigation?

A. Yes, that is one of the companies that we thought ought to be investigated.

Q. As far back as 1923, according to the report submitted by the Bureau of Accounts to the Commission, that company was earning a return of 12.47% on its book value; in your opinion did that warrant an earlier investigation of that situation?

A. Well, I would think so.

Q. The Abington Electric Company, you requested the Bureau to investigate its accounts on June 19, 1930?

A. Yes.

Q. That is shown on Exhibit No. 9—no, I think that is not shown on Exhibit No. 9.

A. My recollection, Mr. Evans, is that the reason that was investigated was on account of some informal complaint that was made. I am not certain about that. It is not a large company, but I think that is the reason that we directed an investigation there.

Q. It has been testified here that in 1929 it showed an overall return of 28.5%

A. I don't see it on this list.

Q. I think it is not on Exhibit No. 9, Mr. Commissioner. Now you also requested the Bureau on the 19th to investigate the Renovo Light, Heat and Power Company?

A. Yes.

Q. Is that on Exhibit 9?

A. No, it is not on this, and that is in the same class I think with the Abington, it is a small company, there was some complaint made there about the rates.

Q. On June 29th, 1930, you requested them to investigate the Fulton Light, Heat and Power Company?

A. That was on informal complaint.

Q. And on March 25th, 1930, you requested them to investigate the Chester Valley Electric Company?

A. Yes.

Q. Is that on this report?

A. I think so, yes, sir, about the middle of the page.

Q. And what return was it earning?

A. Slightly over 14%.

Q. So you felt that 14% merited an investigation?

A. Yes.

Q. Now, going down the list, you also requested an investigation of the Glen Rock Electric Light and Power Company, did you not, on March 18th, 1930?

A. Yes.

Q. Is that on this report?

A. The way they came to be investigated, it is a subsidiary of the Edison Light and Power Company of York and there was an informal complaint came in with reference to the rates, and while we were investigating the one we started it against the other.

Q. Now, Mr. Commissioner, has it been the practice of the Commission whenever there are informal complaints against the rates of a company to institute an investigation on the Commission's own initiative?

A. No, not in all cases. It is not the practice even now today in all cases, often those informal complaints can be adjusted.

Q. Can you refer me to any cases where it was done prior to 1930?

A. Well, we usually make some kind of an investigation, I don't know that we ever sent our Accounting Bureau out to go over their books on an informal complaint.

Q. I mean, Mr. Morgall testified that it was a case that the Bureau has requested?

A. I think probably that is true.

Q. Now the next one is the Keystone Public Service Company?

A. Yes.

Q. That, I believe, is covered by Exhibit No. 9, is it not?

A. Yes.

Q. And that shows a return of 12.28%?

A. That is right.

Q. So you felt that 12% merited an investigation?

A. Yes.

Q. The next one is Penn Central Light and Power Company on March 25th, 1930, that is covered by Exhibit No. 9, is it not?

A. Yes.

Q. And shows a return of 7.35%

A. That is right.

Q. What made you investigate that company?

A. Well, that is, I think, one reason why we directed an investigation there, it is the same company really that owns the Keystone and the Edison of York, the Penn Central Company are all under the Middle West Utilities Company, and also the Chester Valley.

Q. In other words, then you did not do this on the basis of a return but you took a system of companies—

A. No—complete your question.

Q. You took a system of companies where some of those companies, or a substantial number of them, were showing a substantial return, you investigated all of them?

A. No, that is not correct. In this particular case they did show an excess return according to their annual reports. Now, the Penn Central of course is not as large as the others, but we directed an investigation.

Q. The Penn Central is not as large as the others?

A. I mean the return is not as large.

Q. But as a company it is larger?

A. It is very much larger.

Q. Do you mean 7.35% return on the book value indicated an excessive return in that case that merited investigation?

A. Well, that alone would not.

Q. What other investigation did you have?

A. Well, I have stated that it applied to this group, and while we were investigating those others we also investigated this, really the larger one in the group.

Q. I am just trying, if I can, Mr. Commissioner, to find out the basis on which you determined which companies were to be investigated and which were not. Now, under date of November 25, 1930, you requested the Bureau to investigate 12 companies, did you not?

A. Yes.

Q. I think a number of those are not included in Exhibit 9—Chester County Light and Power Company I think is not, is it?

A. It doesn't seem to be on there.

Q. The Delta Electric Power Company?

A. No.

Q. The Cresson Electric Light Company?

A. No, I might explain, Mr. Evans, I think we had some other data before us than this Exhibit at the time we directed these investigations of some other companies. I don't know in what form it was given us, but it came from Mr. Morgall's office. At the time this was done there were twelve of them picked out by the committee for investigation. Mr. Morgall had reported to us that his force had completed the other work on which they had been engaged, so the committee went over a list of the companies and picked out what they thought were the companies that were the next important one for investigation and they selected these companies.

Q. What I am not quite clear on yet, Mr. Commissioner, is whether you did that on the basis of the rate of return on the investment employed or what were the determining factors as to why a given company should be investigated or not?

A. It was largely determined on the rate of return. There may be some where other factors entered into it, where informal complaints were made and the rate indicated that much.

Q. I think, Mr. Commissioner, one of the things that disturbed me was that you ordered an investigation on November 25, 1930, of the South Penn Power Company, which is a company having an undepreciated book value of fixed capital of \$1,400,531 and shows a return of 8.60 per cent. You did order an investigation of that company?

A. Yes, sir.

Q. At the same time, you did not order an investigation of a company of the same system, the West Penn Power Com-

pany, with undepreciated book value of \$92,000,000, and showing a return of 10.54 per cent?

A. Well, I don't know but what that probably should have been put in with this group, but the real fact is, that we were giving the accounting bureau probably enough work to keep them going for a year. The order in which these companies is taken up and examined by the accounting bureau, we might have taken those showing the highest return and worked backwards, but we did not think it was necessary.

Q. You did not judge it as important from the public standpoint to investigate a ninety-four million dollar company that was earning a very large return than you did a million dollar company with a much smaller return?

A. In one sense of the word you might think so. Here is the position the Commission is in: If we put our accounting force on the books of the West Penn Company, that might occupy them for four or five months, and they would not get anything else done but investigate one company in the year. It is a matter of judgment I think with the Committee whether they ought to do that or whether they ought to investigate a number of companies scattered over the State.

BY MR. TURNER:

Q. In what section of the State does the West Penn operate?  
A. The West Penn is in the southwestern part of the State

BY MR. EVANS:

Q. Another large company which didn't seem to be investigated was that of the Pennsylvania Water and Power Company. That is the last one on the list, a twenty-seven million dollar concern, book value, with a return of 10.41 per cent. Was there any particular reason for omitting that?

A. Not that I know of. There are several we have not directed an investigation which I think should be and probably will be investigated if the Legislature increases our funds.

BY MR. TURNER:

Q. According to the testimony produced yesterday, that territory in the southwestern part of Pennsylvania, has the cheapest rate of any part of the state?

A. That is a factor that entered into the judgment of the Committee. We compared the rates being charged also and found that the rates were comparatively low, we took that into consideration in directing our investigation. If the rate runs unusually high that is a factor that enters into it.

BY MR. EVANS:

Q. According to Mr. Morgal's report, exhibit number 5, a number of these companies filed tariffs as a result of your investigation. The first one on the list being the Scranton Electric Company, a tariff being effective November 1, 1930. That was about a week before the election, was it not?

A. That is correct.

Q. What does the Committee estimate that reduction to be?

A. \$750,000.

Q. It was a reduction supposedly in residential and commercial rates?

A. Yes sir I think in both.

Q. What steps has the Commission taken, if any, to check that and see if the reduction actually amounts to what is claimed by the company.

A. There has been nothing done yet because the annual report will be filed by this company and then we can make a check on the return, and it is the purpose of the Committee to follow these up and probably get monthly reports to check it up. It would only be an estimate if you would make any analysis of the new tariffs and compare them with that.

Q. Did the Commission make any comparison with the reports of the company?

A. I have not.

Q. Did the Commission just accept, the company's rates?

A. We had an analysis made of the rates by the Bureau of Rates and Tariffs, showing the amounts of the reductions.

Q. So the Bureau of Rates and Tariffs has made a report to you?

A. I think I have it here. It is just in the form of a letter from Mr. Pickenscher.

Q. Will you be good enough to give us that. Mr. Morgal said he had not been directed to make any check of it. The paper you have just handed to me is nothing but a statement. Is there any calculation as to what the new rate would bring in in way of return, or is it a statement of the reduction of

rate. The company's report to the Committee showing how much in kilowatt hours is sold for each class of service covered by their tariffs, do they not?

A. Yes sir.

Q. Then from this data it is not difficult to make some calculations as to the reductions in given rates, and what it would amount to?

A. You can make calculations, you would have to take the amount sold in the past and make your calculations on that.

Q. The Commission marked the case against the Scranton Electric Company closed, did they not?

A. It is not closed, it is subject to being reopened again. We don't regard it as closed at all, although it was so stated in the minutes.

Q. The next company on that list is the Edison Electric Light and Power Company of York. They also filed a new tariff under date of November 1, 1930?

A. That is right.

Q. It estimates that its reduction will amount to \$126,000 in a year.

A. That is correct.

Q. What you have stated as to the Scranton Company with regard to checking up applies also to that?

A. After the annual reports are made, it will be checked. In that case the complaint instituted by the Commission is still pending. There has been no disposition made of it.

Q. Other decreases also were made effective on November 1, 1930 by the Fulton Electric Light, Heat and Power Company and the Glenrock Electric Light and Power Company?

A. That is correct.

Q. The Chester Valley Electric Company seems to have made a small reduction, effective on August 1, 1930.

A. That is right.

Q. Then the last 12 companies that have been ordered to be investigated, some seem to have filed tariffs before the investigation was ordered and some after, but the amounts are not estimated.

A. No; some of these companies have been making studies of their rate structures, with a contemplation of filing a new tariff. For instance, the Chester County Light and Power Company, I see they have filed a tariff after the investigation was ordered, and even before Mr. Morgal had made his report. They probably had that in contemplation.

Q. Mr. Commissioner, in making up statistics from the annual reports of the company, showing the rate of overall return on the fixed capital, no adjustment is made for the write-ups of that fixed capital, is there—in the reports that you have had?

A. You mean the report that Mr. Morgal—

Q. Made to the Bureau.

A. No, I don't think he makes any adjustments of that. He probably would make reference to it.

Q. The report submitted by the Bureau of Accounts in 1928 did show that, didn't it—in some cases, at least?

A. It may be. I don't recall.

Q. It is a matter of knowledge to you as a Commissioner, isn't it, that a number of these companies have very largely written up their fixed capital?

A. That is true.

Q. What action has the Commission taken in regard to it, if any?

A. I don't know that they have taken any action on it, as the companies make an appraisal of their property from time to time; they enter it on their books at the appraised value. It is a write-up, but it doesn't affect the rates in any respect, in the valuation case.

Q. It must, however, be taken into account when you look at a report, showing the rate of overall return on the fixed capital?

A. Of course, you would have to take it into account in such a report as this.

Q. Now, Mr. Commissioner, going back to the report furnished you by the bureau of accounts in August of 1928, take, for instance, the Harrisburg Light and Power Company. That shows, does it not, that the company in 1927 paid \$310,663 in dividends?

A. Yes, sir.

Q. Or the equivalent of 12 per cent, on its common stock?

A. That is correct.

Q. It also transferred in that same year \$463,206 to surplus, did it not?

A. Yes, sir.

Q. That would be an addition of approximately 18 per cent, would it not, half as much again as the dividend, roughly?

A. About that.

Q. So altogether, according to that report furnished to the Commission, the Harrisburg Light and Power Company in 1927 earned nearly 30 per cent. on its common stock?

A. That would probably be correct, but I don't see it appearing on this sheet prepared by Mr. Morgal.

Q. I think by that time it had merged, had it not, into some other company? Didn't it merge into the Pennsylvania Power and Light system in 1928?

A. Yes, sir; but the Pennsylvania Power and Light doesn't show an unusual high return—a little higher than seven per cent.

Q. Of course, we are dealing with 1927. You turn to page A-1 of this same report, which is Exhibit No. 8 before the committee. You find a fixed capital of \$10,479,441, do you not?

A. Yes, sir.

Q. What are the reserves for renewals?

A. \$590,946.

Q. So, that shows a depreciated fixed capital of somewhere around \$9,900,000, does it not?

A. A little under \$10,000,000—about \$9,800,000.

Q. The operating income of that company for the year 1927 was what?

A. The total operating income, \$1,100,351.

Q. So a return of \$1,100,000 on something less than \$10,000,000 fixed capital, would be a return of something over 11 per cent., would it not?

A. About that, yes.

Q. Now, Mr. Commissioner, just taking this as a typical case, and 10% return on say \$10,000,000 of capital would be \$1,000,000, would it not?

A. That is right.

Q. And this company actually received \$1,100,000 income.

A. That is what I said before, \$1,100,000.

Q. So the excess over 7% was something over \$400,000 in the one year collected from the consumers?

A. Well, I would not say that.

Q. Well, that was the excess over 7%?

A. As shown by their return here it would be. If a valuation was made it might be less than 7%.

Q. Well, assuming that the book value of approximately \$10,000,000 was the actual value of that property there would be an excess return to the company, collected from the consumers of \$400,000, would there not?

A. Yes, assuming that fact.

Q. Suppose we look at it another way, Mr. Commissioner. If we capitalize \$400,000 on a 7% basis you get something like \$5,800,000, don't you.

A. I have not figured it out, but that is about what it would be.

Q. Well, approximately, I am only dealing in round numbers. So that in order to make that company have a fair return you would have to add to its \$10,000,000 of book value, fixed assets, \$5,800,000, and to get a total fair value of \$15,800,000.

A. It would be about that, I assume. I did not make the computation, but it would have to be increased over the book value.

Q. In other words, the fair value of the company would have to be approximately 58% over the book value of the property in order for them not to be earning more than a fair rate of return?

A. I have not computed it.

Q. I think we have gone right along with the figures.

A. Well, I agreed it would be increased yes; it is just a matter of computation.

Q. Does that not suggest to you that that company's rates might be investigated by the Commission, or did it not suggest to you that fact, in 1928?

A. Well, I said before, Mr. Evans, that while the annual reports show that the rate of return is larger than that allowed by the Commission, considerably larger, that that is sufficient evidence to justify the Commission, and in fact, I think makes it their duty to make an investigation. It does not mean, however, that after the investigation that the facts developed are going to show that they are in excess of the rate of return.

Q. I appreciate that. It is merely that it is a matter for investigation.

A. Yes.

Q. Now, I do not want to weary you, Mr. Young, but if you would be good enough to have the Bureau of Accounts of the Commission from their report of August 27, 1928, pick out the Portage Light & Power, the Solar Electric Company, the Edison Electric Company of Lancaster, the Pennsylvania Power, the West Penn Power, the Metropolitan Edison, the Pennsylvania Water Power Company, the Duquesne Light Company and the Philadelphia Electric Company, and take from those reports the data such as we have just gone over on the fixed capital depreciated, and the income of these companies, and capitalize the excess of their 7% return on fixed capital, I think it would be very helpful if we could have that in the records of the Committee, if you could introduce it at a later date?

A. I didn't write all that down, and I would suggest, Mr. Evans, that you address a letter to us, giving us what information you want, and we will get it for you.

Q. I will do that. Then we can get you to go over that at a later date.

BY MR. TURNER:

Q. Before you get away from these sheets, might we ask, Mr. Young, whether there is any significance in these dates, in the first place, under this Exhibit 5, it shows the date effective of the new tariff filed—

A. Yes.

Q. Does that mean that the Commission made an order on that date, or the company filed it?

A. No, these tariffs were voluntarily filed. I might explain to the Committee how the Commission has operated. You will notice in the first column there are four of the first companies mentioned in the list, where formal complaints were filed. Three of these are still pending, and one of them is the Scranton Electric Company, to be dismissed after they file their tariff. The others, after Mr. Morgal, or the Accounting Bureau have examined their books and made a report to the Committee, the Committee would direct this report to be sent out to the company for their inspection, for a reasonable time, and then our legal bureau would ask the company to meet with the Committee and our Bureau in conference, and see what they would do about it. We have always done that, and we would ask them if they had criticism of the report to make. Some of them have made a few criticisms, not very material, and then the Committee would put it up to them whether or not—what they were going to do about it, that the reports show that they were earning too much money, and in most instances they agreed to file a new tariff or reduced rates. Now the reason the Committee adopted that policy was on account of the lack of help, and if we could get them voluntarily to reduce the rates without sending our engineers out to make a valuation, we felt that we were accomplishing some good, without the expense of litigation, and we can get over more territory by doing it that way than if we went through with a formal complaint. We didn't have much difficulty in getting them to do it. Now most of those tariffs were filed voluntarily at the suggestion of the Committee after a conference.

Q. Now then, four of these were filed on November 1, 1930, and one October 1, 1930?

A. Yes.

Q. Is there any particular significance, in so far as the election of 1930 was concerned?

A. Not at all. You will notice that nearly all of those tariffs are to go into effect on the first day of the particular month. I think that is a matter of convenience for the companies, probably, in sending out their statements.

Q. Can you give us any records as to the time when those companies agreed? Is there anything in your records between your committee and these companies as to the date of the conference and when they finally agreed to the time?

A. Yes, you will find in the minutes of the committee, of which I think you have a copy here, and also in the minutes of the Commission, a reference to all of these cases. Now, in the minutes of the Committee they may not be complete, because we didn't have any secretary. I simply acted as secretary myself. After we had had a meeting of the Committee, I would take notes and after it was over, dictate to a stenographer the action of the committee, and place it in the file. There may be one of two instances that I failed to make a minute of the action, but in that case it would appear in the minutes of the Commission, because we make a report to the Commission.

Q. Well, the company would file its schedule, of course, sometime before this date that it was effective, would it not?

A. Yes, at least thirty days before.

Q. And in that they would state the date when it was to become effective?

A. Yes.

Q. Would it be possible to supply that information?

A. Oh, yes, you can get that from the rate bureau, the dates when they were filed.

BY MR. EVANS:

Q. Won't Mr. Fickenscher's reports show that, as to when the Scranton Electric was filed?

A. I think I can give you that, yes. No, he don't state the date when it was filed. He says to become effective November 1st.

BY MR. TURNER:

Q. What is the date of his letter?

A. It was on October 9th that he made this report, and in it he states, "I would report that the Scranton Electric Company has filed a new tariff known as P. S. C. Pa. No. 9, effective November 1, 1930," which would be filed at least 30 days before the effective date; it would have to be; and it might be a longer period.

Q. Was there any pressure put by your committee upon these companies to reduce their rates before the November election?

A. No. The matter of politics had no consideration whatever in the action of this Committee. There were two companies that the effective date is on November 1st. There is one that is on October 1st. Three companies on November 1st, and one October 1st.

Q. There are four on November 1st?

A. One August 1st.

Q. Four on November 1st and one October 1st?

A. Yes, the Chester Valley; and the Fulton, which is a small company.—their reduction is only \$900. Now, the reason we directed an investigation there was on an informal complaint, and their rates were unusually high, but they serve a rural community, where it is sparsely settled, and really I don't know that we ought to have compelled them, or asked them, to reduce the rates, because they are not earning any money, they just serve a few people.

BY MR. EVANS:

Q. Mr. Commissioner, perhaps it would help you, in connection with the Scranton Electric case, the minutes of the Electric Rate Committee on September 30, 1930, reads, "Counsel Weiss advised the Committee that the Scranton Electric Company had filed a new tariff, and in connection therewith had also filed a supplemental answer to the complaint of the Commission. The matter was discussed generally by the Committee and Counsel Weiss was instructed to submit to the Bureau of Accounts and Statistics and the Engineering Bureau the supplemental answer filed, with instructions to study the same and be prepared to advise the Committee as to the effect of the new rates and the accounting features involved in the answer of the respondent company at a future meeting."

A. Yes.

Q. Has that report on the effect of the new rates ever been made?

A. No, it has not; that gives the date when that was filed.

BY MR. RHODES:

Q. Mr. Commissioner, you speak of obtaining the valuation of these properties. That means the same thing as the fair value, does it not?

A. Yes.

Q. Does your Commission have any recognized, distinct method for determining the fair value?

A. Only that fixed in the law.

BY MR. TURNER:

Q. Well, what is that?

A. Well, the act creating the Commission determines how fair values shall be determined. There are certain elements that we must take into consideration: Original cost, sometimes referred to as historical cost, and the earnings, as fixed by municipal contract, on any rate determined by.—I can not give you the exact language of that. We must take into consideration the reproduction cost now less depreciation. And

the act says that we can take into consideration any other factor affecting value.

BY MR. RHODES:

Q. That makes it pretty wide, doesn't it?

A. Yes.

BY MR. CRAWFORD:

Q. How wide, Mr. Commissioner?

A. Well, that would be pretty hard to define. I don't think I can define it.

BY MR. TURNER:

Q. Well, going concern value is considered one of those factors, is it not?

A. Yes.

BY MR. CRAWFORD:

Q. In your experience, though, what would be the high and the low that would come into your consideration?

A. I don't know what you mean by high and low.

Q. I mean does it vary,—if you state certain things you would expect a variation of, say, five per cent., and other things might vary by a greater percentage. Now, on this reproduction new less depreciation, in your experience, how widely have two estimates made by the Commission varied?

A. I can give you a pretty good example of that, in the Scranton water case, where the estimates of one side were just double what they were on the other.

Q. I mean the Commission's estimates, though?

A. I don't know what you mean. As compared with what other figure?

Q. Well, you have your own Bureau of Engineering?

A. Yes.

Q. To make these estimates. Now, in your experience, how widely have your own engineers varied in their reproduction cost new less depreciation estimates?

A. With that of the Commission itself?

Q. Between two,—we have shown this morning cases where the Commission itself had used it in valuations and arrived at different rate bases, rather; now, I was just wondering what,—you say you do it by the law,—now, how definite does the law make it? We would expect the two contenders to vary by a great deal, perhaps; but your own estimates, how widely do they vary?

A. Well, I don't think I could give you any rule on that, or any percentage. Ordinarily, the engineers do not vary a great deal in their—

Q. Well, when you say a great deal, what do you mean by that? Would 20 per cent. be a great deal?

A. Well, I think that would be high. I would not think it would be ordinarily over five or ten per cent.

Q. Reproduction cost new less depreciation?

A. Yes. As I stated, in this water case, it was very much more than that; but that was unusual, it was not an ordinary case.

Q. My recollection of the exhibits we had this morning, Mr. Commissioner, was that there was not a single case where the variation was as little as five per cent. I am sure we would have very little trouble if the percentage was as low as that.

A. Yes; I never made any comparison to determine that.

BY MR. RHODES:

Q. What I had in mind, Mr. Commissioner, there is no fixed formula that you can apply to every case alike, is there?

A. Only the law itself. It says what factors we must take into consideration, and then any other matters.

Q. That allows a great deal of discretion to the Commission?

A. Oh, yes. Now, ordinarily, I don't know of any case where the Commission has ever fixed a fair value at the reproduction cost. We have to determine the reproduction cost, but I don't know of any cases where the Commission has ever fixed it at that figure. It is usually lower.

BY MR. COOKE:

Q. You said in connection with the Scranton electric case, Mr. Commissioner, that the case was closed but subject to being reopened and checked, simply a matter of procedure; what do you mean by procedure?

A. Well, we could have held that open and secured reports to see how the reports tallied with their estimates.

Q. On a case of that kind, I take it from what you said, that you had a regular procedure of checking up afterwards when you give the order, a procedure for checking up?

A. That is the purpose of the Commission, to follow them up and check them, and we have not done that yet, for the reason that there has not been any annual report filed since the investigations have been made. The last day of this month is the last day for filing of those reports.

Q. Do you know of any case since you have been on the Commission where they have checked up to see whether the prediction as to what changes in rates, presumable reductions, would amount to if checked, any case where they checked up to see whether they actually did amount to that, whether your expectations were realized?

Q. Do you mean electric companies?

A. Any case.

A. I recall this toll bridge out here north of Harrisburg—what is it?—Clarks Ferry Bridge, the Commission directed the company to file monthly reports of their revenues for the purpose of checking up on the order which they made fixing their rates.

Q. Do you know of any other case?

A. I think that has been done in a number of cases, I cannot recall them offhand.

Q. I wonder whether you would be willing to let us have one good sized case where that has been done? I have often wondered whether the Commission did do that.

A. I will make inquiry about that.

BY MR. EVANS:

Q. Mr. Commissioner, earlier in your testimony you spoke of having a conference called by Chairman Ainey with representatives of electric light companies and the Pennsylvania Electrical Association with a view of reducing the highest brackets of rates; I understand by that you mean the residential rates, the first bracket. There was just put in evidence before the Committee a study made by Mr. Roushenbush of rates throughout the State in towns and boroughs of under ten thousand, and averaging them by counties for the year 1930, taking a typical small consumer using 15 kilowatt hours per month and showing how much he was paying per kilowatt hour. There seemed to be in 1930 a number of cases where there is an average charge of 10 cents or more for that much consumption; have your studies of the situation covered this angle of the rate situation at all?

A. Well, not in that form. As I stated before, there has been submitted to the Commission a tabulation of the companies in 1928 that charged rates above 10 cents and that had been reduced, I think, to four or five companies at the present time.

Q. There seemed to be, for instance, on the northern tier of counties, McKean, Potter, Tioga and Bradford, are all paying an average of 10 cents or more; what companies are operating there?

A. I can't tell you offhand.

Q. From what date were these figures obtained?

A. These were taken from the rate schedules of the companies on file with the Commission.

Q. At what time?

A. 1930.

Q. Well, that may have been correct at that time, and at the present time there are only about five tariffs on file that provide for rates over 10 cents.

BY MR. COOKE:

Q. Do you know what five companies these are?

A. I have that data, I don't know whether I have it with me or not. It is at the office, they are small companies.

BY MR. TURNER:

Q. When you say 10 cents, do you mean 10 cents on the kilowatt hour basis?

A. Yes.

BY MR. EVANS:

Q. Are you not taking into account the service charge in addition to that? Are you really dealing with the energy charge?

A. I am not certain about that, Mr. Evans.

Q. Of course the thing the consumer is interested in is the total bill and not whether it is energy or service charge?

A. I think it relates to the energy charge, but I am not certain.

Q. Who made that rate study for the Commission, was it made by the Bureau of Rates?

A. Bureau of Rates and Tariffs.

Q. Would it be possible for you to submit to the Committee a copy of that study, showing the five remaining companies that have a charge of 10 cents or more?

A. Yes, I can do that, yes, I will do that.

BY MR. COOKE:

Q. You have said in connection with another case, as I got you, that write-ups do not affect rates on the ground that in a rate case these inflations would be disregarded, that is my own recollection of what you said, just what did you mean when you said write-ups did not affect rates?

A. For instance, a company is carrying their property on their books at a certain figure, then they have a valuation made by engineers that shows the property is worth say two or three million more than they have been carrying it on their books; now they would write that up on their books to correspond with the valuation that they had made, but when you come to determine the reasonableness of rates—

Q. Would not that at the same time they did that be a temptation to them to raise the rates?

A. I don't think so.

Q. You would not say that is not an actual tendency?

A. No.

Q. If it was an actual tendency, then the only way it could be counteracted would be through a rate case?

A. Yes, if that was a tendency of course it would result in a rate case, it probably would.

Q. You could not get the influence of those write-ups out of rates except by a rate case?

A. Well, I don't think it would influence the rates, a write-up of that kind at all.

Q. Increasing the capitalization of a company would not have any effect on rates?

A. Well, it is not increasing the capitalization. They have the same property, they only put a different value on it than they had before.

Q. The point I want to ask to get your opinion about, is that it is only the property of an operating company that affects rates, that is a matter of fact I assume that it was the general experience that holding companies are required to pay a return on their securities and they do hold up rates or move up rates, and the only way you can get that influence out is by a rate case, and out of the hundreds of companies that we have the number of rate cases is almost negligible, is that not so?

A. I don't think there is any tendency to increase the rates because they have written up the value of their property on their books. My experience has been these large companies that take over smaller companies, and there is a good deal of that has occurred in the electrical industry, the result has been a reduction of those rates in those communities in almost every instance.

BY MR. COOKE:

Q. Between the time you went on the Commission on July 21, 1927, and December 31, 1929, that was two and a half years, what rate cases were started, or rather, what rate cases were there started or consummated on the initiative of the Commission?

A. I cannot name them for you, Mr. Cooke.

Q. Where there any?

A. Yes sir, there were four of them.

Q. In the last half of 1927, and in 1928 and 1929, in a period of two and a half years, the first two and a half years you were on the Commission, what cases were either started or finished on the initiative of the Commission?

A. This rate case on Clarks Ferry Bridge is one I recall. There may be others I cannot recall them now.

Q. You don't recall any others than the Clarks Ferry Bridge?

A. No.

Q. Leaving out rate cases, what action was taken by the Commission on its own initiative during the two and a half years that I refer to, that resulted in anything of a benefit to the consumer?

A. I think one of our bureaus made a tabulation of all our cases that were instituted by the Commission.

Q. I say, leaving out the Clarks Ferry Bridge and the conference with the electric companies, what other action taken on the initiative of the Commission during this two and a half years resulted in anything of benefit to the consumers, that you recall?

A. There are a great many things that the Commission has done that resulted in benefit to the consumer.

Q. I say on their own initiative?

A. What I have mentioned here, the action of the Commission in having the conference with the heads of the electric companies in Pennsylvania, and persuading them to voluntarily reduce their rates in no case to exceed ten cents, certainly resulted in favor of the consumers.

Q. I asked in regard to the Commission on its own initiative?

A. These are some of them.

Q. These are not matters of record, they are just informal conferences?

A. There is a record in the minutes, that is, the conference was had, and our records show the result that was obtained. And the Commission on its own initiative in 1927 adopted General Order No. 28.

Q. That was before you were on the Commission?

A. Just about a month before.

Q. I say between the time you went on the Commission and the next two and a half years, you have given me the Clarks Ferry Bridge case and these informal conferences, or got-togethers, with the heads of certain companies?

A. Now Mr. Cooke, I started to explain and you interrupted me—

Q. I am sorry, proceed?

A. That we have tabulated by one of our bureaus all the cases in which the Commission initiated the proceedings. I cannot recall them here without having that data before me.

BY MR. TURNER:

Q. Mr. Cooke, I think we can find that among the data that we have called for from the Commission.

MR. YOUNG: It is all tabulated, I cannot recall all of that.

MR. COOKE: Are these the cases that were started, which the Commission initiated?

MR. EVANS: I think so, that is just what was received today.

BY MR. COOKE:

Q. I have been interested in the Rate Committee. Are there other such agencies within the Commission?

A. There have been a few committees appointed of the membership of the Commission, but the work of the Commission is largely done through its organization of bureaus, but the Commission has divided some of its work among the members of the Commission. This is the principal committee which now exists among the members of the Commission.

Q. It would be helpful, it seems to me, if we could get inside of your council chambers and offices and see you function. We talk about the Commission but it leaves me with a very inadequate idea as to how you function. You are something more than a court, you are an administrative body.

A. Yes sir, we have the right on our own initiative to conduct investigations and inquiries on matters which we think are justified.

Q. But you cannot tell us of any other agency within the Commission that has this administrative work such as is being done by your rate committee?

A. There are other committees in the Commission whose functions are not as important as these.

Q. I mean in working out some general policy.

A. I don't know of any that is working out some general policy. There may be matters that come up that would go to some member of the Commission who would be asked to consider that.

Q. Now in the two and one-half years that you have been on the Commission, was there anything that you individually did, that you can point to, any special assignment as working out a general policy?

A. Not as to working out a general policy. I have done a lot of work on the Commission.

Q. Hearings and things like that?

A. Yes sir and I have been present at most of the meetings.

Q. And what is the greatest contribution you as an individual have made in working out a regulation.

A. I would not want to answer that question, Mr. Cooke. I would rather have other people pass on my work than do it myself.

Q. Now, another thing I would like to get your opinion on—we started regulation in Pennsylvania in 1913—quite an experimental procedure at that time. What recommendations have originated in the Commission in those 17 years as to its improvement? I know there have been some. Can you tell us what they are?

A. Of course, I can only speak from the time I have been on the Commission. From personal knowledge I know that the Commission has considered certain amendments that ought to be made to the Act to make it more effective.

Q. Have they been transmitted to the Legislature—the Governor?

A. I think the Senate committee have asked for some of them. I don't think they have been transmitted.

Q. That is for the present session?

A. Yes, sir.

Q. Before this current session, what recommendations?

A. We have been studying that question for a year or more, the matter of what amendments have to be made to the Act.

Q. Do you know of any recommendation definitely made since the act was originally passed, except to ask for a larger appropriation?

A. I have been told—I don't know this from my own knowledge—I get it from other members of the Commission—that they frequently have made recommendations to amend the act in the past. I have no personal knowledge of that.

Q. Formal or informal?

A. I can not answer that question.

Q. You do not know of any formal action?

A. I was not a member at that time.

Q. Since you have been a member do you know of any formal action taken, looking towards the strengthening of the regulations in Pennsylvania, taken by the Commission itself?

A. Only in the form of recommendations as to legislation.

Q. What, for instance?

A. The Commission, I think, is united and have prepared—the Law Bureau has prepared an act to amend our present act—

Q. I mean action that has already been taken at previous sessions of the Legislature. There is a good deal of interest now. I mean prior to this time, has the Commission made any definite recommendations?

A. Are you referring to legislation or to—

Q. I am referring now to suggestions, formal suggestions from the Commission as to how the legislation controlling regulation might be improved. At the last session, the New York Legislature had 28 bills passed, and at the present session, I understand there are eight. I do not recall of any recommendations ever having come out of the Pennsylvania Commission. I haven't looked into it.

A. I have only been on the Commission during one session prior to the present session. There was some legislation passed, I think, at nearly every session since the act has gone into effect, amending it in some respects. I have been advised by my colleagues that the Commission has made suggestions from time to time in the way of amendments, but I can speak from my own knowledge that during the past year they have given a good deal of consideration to amendments that ought to be enacted.

BY MR. EVANS:

Q. Mr. Commissioner, the Commission did take an active part, did it not, in the introduction of the Daix bill, providing for the underlying street railways in Philadelphia—

A. That was before I came on the Commission. I understand they did. That was to carry out the McChord report. The Commission had employed McChord to make that study. He recommended the enactment of such a law, authorizing the condemnation of the underliers. As a result of that, the Commission recommended it.

BY MR. RHODES:

Q. Are there any important changes that you recommend now to the present law?

A. There are some that I am in favor of.

Q. For instance, what?

A. I am in favor of the act being amended to give us the right to suspend rates.

Q. For how long?

A. That is a matter of judgment. There are two ways that that might be dealt with,—either give us the right to suspend rates, with a limitation of a certain number of months or a year, or, as it is dealt with in some of the states, a longer period of time is fixed for the rates to go into effect, to give the Commission an opportunity to determine the reasonableness before they can go into effect. There are different kinds of acts of that sort, but the real purpose is to determine the reasonableness of the rates before they become effective. That might be done in several different ways. I am in favor of giving the Commission the right to pass on securities before they are issued, which we do not have now. Another very important thing, and I think it is a thing which has caused more criticism than any thing else, is the excessive cost of rate cases. That is particularly burdensome on small municipalities. Some people recommend that we have a people's counsel to deal with it, but as I stated yesterday, before the Senate committee, I am not satisfied that that is the remedy. I think a better plan is to provide, either in the Commission organization, or in an independent body, technicians, who can be called upon by the municipalities to make their appraisals—accountants and engineers—and relieve them of the appraisal expense. If that is done, there won't be the demand that now exists for the Commission to institute proceedings on their own motion, because they are relieved of the expense. They will be willing to make the complaint, where they feel they are justified. The Commission can sit in judgment in those cases. There is an excessive expense incident to rate proceedings. If that were corrected, it would remedy a lot of criticism that now exists.

Q. The matter of the determination of the fair value could be more specific—

A. That might help a little, but you would have to go up against the Supreme Court of the United States and the Federal Constitution, but I don't think that would help very much.

BY MR. TURNER:

Q. They do it in other states by legislation.

A. How do you mean?

Q. A determination of the methods of arriving at valuations.

A. Well, all of the laws of the states are not the same. Massachusetts has a little different system than most of the other states. There may be one or two other states. There are some other particulars that I think there ought to be amendments for, but they are not so important as the ones I have mentioned.

Q. I think you have already mentioned that the personnel of the Commission was not adequate?

A. I think that is very important.

Q. Do you mean in the number of employes or in the Commission itself?

A. I mean in the employes, particularly in the accounting and engineering bureau. There ought to be a much increased force to do the work that we ought to do. We have been handicapped all along in the work. In the work of this committee, we could have done much more work if we had the accountants put on it. We do not have them and can not get them.

Q. You mentioned a while ago that the question of increase in the capital or in the book values of write-ups did not have anything to do, as far as you could see, with the rate question. You mentioned the electrical field, but we have had before us a number of representatives of boroughs, and it seemed to be true in almost every complaint there that a rate increase followed immediately after a consolidation or a merger, or a purchase of some kind by outside interests.

A. Are there any particular instances related?

MR. TURNER: I think we have quite a number.

MR. EVANS: The Scranton Spring Brook case was one.

MR. TURNER: That is the most glaring, but we had a great number of others.

THE WITNESS: Was that a rate increase?

BY MR. EVANS:

Q. There was according to the testimony and the reports.

A. There may have been a few instances of that kind, but I think you will find in the great majority of cases where

there has been a merger, it has generally resulted in a reduction of rates, that is, where the smaller companies have been taken over by a stronger company, giving it a more efficient management, and it has resulted in a reduction of rates.

Q. Didn't you sit in the Scranton Spring Brook case and hear the testimony?

A. Yes—the water case?

Q. Yes.

A. Yes. I thought you were referring to the Scranton Electric Company.

Q. No, the Scranton-Spring Brook, and I was surprised to hear you say that?

A. Yes, that is true, of the Scranton-Spring Brook, I was thinking, and I had in mind electric cases. That is true, they did raise rates.

Q. Can you give us an instance of water or gas where there was a consolidation that resulted in a decrease in rates?

A. I cannot offhand. I had in mind electric companies when I was speaking of these consolidations. Now, in the water companies, I don't think it has resulted that way so much.

BY MR. TURNER:

Q. Mr. Young, it has been said, and it is common knowledge, that in the meeting of the League of Boroughs, for instance, that comprise some 900 boroughs of the State, and that had 800 or 1,000 representatives at their convention, that there have been lately motions to abolish the Public Service Commission, and there has been a great deal of complaint. Why has not the Commission investigated those complaints?

A. You mean of the organization?

Q. Yes, of the criticism; what would cause such public sentiment as that?

A. Well, I think I said the principal reason, the expense that boroughs and municipalities have to go to to determine rate cases in the past, has caused a great deal of criticism which should not have been directed against the Commission particularly, but against the law.

Q. But it seems to me, as I heard the testimony, that the Commission failed in not carrying out what you have termed public relationship in contact with these people. If they are wrong in their theory and the Commission is not to blame, they should have brought that to their attention.

A. Well, I think the Commission has been a little lax in the matter of public relations. As a matter of fact, publicity—the Commission so far as I know don't give publicity to any matters except that as sent out in the reports in the individual cases. I think it would be much better for the Commission if the public better understood the work the Commission was doing.

Q. And the problems involved?

A. Yes.

BY MR. MOORE:

Q. Mr. Young, in one or two instances, or three that I recall, the costs incurred by the water companies in these particular instances in fighting rate cases, were saddled on the boroughs, in addition to what they had to expend themselves, and amortize over three or five years, and that still held on?

A. You mean where they lost the case—where the boroughs lost the case?

Q. Yes.

A. Or where the water company lost the case?

Q. Yes, that is what I have in mind.

A. That may have been done in some cases, and I will not say that it was not, but since I have been on the Commission I don't know of any case where the respondent lost the case and was permitted to amortize the cost of the litigation and put it in.

BY MR. TURNER:

Q. If they were permitted to amortize that cost does that in any way go into the rate?

A. Well, it might affect it, yes.

Q. Is it added into the rate?

A. They are permitted to put it in as an expense.

Q. Well, I know it may—

A. Of course, that would affect the rate.

Q. I have heard it contented that it does not enter into the rate, and yet these people contend that it does enter into it, and they have pointed to instances ten or fifteen years ago where there was a complaint and they were permitted to

amortize it and put it into the rate, and their feeling is, and that is one of the complaints, that therefore they are still paying the \$10,000 or \$15,000 that was allowed to be amortized.

A. Well, it might affect the rate, I would say that, and if it is a large amount it probably would affect it more.

BY MR. EVANS:

Q. If the cost of a rate case was permitted to be amortized by the respondents it seems that these costs over the amortization period are put in as an operating expense of the company, does it not?

A. Yes, and it permits the company, of course to earn a greater return than it otherwise would.

Q. And does the Commission, so far as you know, make any check to see that at the end of that amortization period the rates are reduced.

A. Well, I cannot answer that. I don't know any.

Q. That was the complaint of several of the boroughs.

MR. TURNER: And I think a very valid complaint if it exists.

BY MR. COX:

Q. Where you receive reports of excessive rates,—or do you receive reports each year of excessive earnings of each company—does the Commission receive them?

A. The Commission receives every year an annual report of all utility companies, that is, they are required to file them. I think they are filed with our accounting bureau something like thirty-five hundred of them every year.

Q. When you know they are making more money than they are entitled to, do you call them in, or do you do anything to have them reduce their rates? Today you didn't seem to know very much about it, seemed to be news to you that they were making excessive earnings, and I wondered whether it was the fault of your organization.

A. I thought I had explained that so it was understood. These annual reports do not determine definitely whether they are making too much money or not. That is only the book value, it is not the fair value for rate making purposes, but it is an indication, if their annual report shows they are making say ten or fifteen per cent., it is an indication that they are making too much, but when you go into the value of the property, it might be that they are not.

Q. Do you do one or the other, when you find that, do you make an examination of the company to determine whether that is right or not, or do you just let it ride.

A. The work of this electric rate committee which we have done this last year, is work of that kind affecting electric companies. Now, we cannot go any further than that because we have not the force to do it. In addition to these electric companies there are the water companies, there are the gas companies, the street car, and in fact there are about thirty-five hundred utilities. Now, to go over all these annual reports, and check them and then to send out accountants and go over their books, as we would have to, would require a much augmented force.

Q. Don't you think it would be a good idea to maintain a force to do that work, it would save a whole lot of money?

A. I certainly do.

Q. It would not cost them as much in taxation as it would in excessive rates?

A. That is what we are asking for.

BY MR. COOKE:

Q. There are only two ways in which rates could be reduced, either somebody make a complaint or the Commission take action upon its own initiative?

A. Yes, our rate cases are instituted either by formal complaint, by some municipality or determined on the action of the Commission.

Q. And this schedule that you have handed us, which covers five years, shows that eight cases have been initiated on the part of the Commission, several of them are obviously very important, so that it represents an average of a little bit over one case a year for that period, started on the Commission's own initiative, so that in a community where there are not enough people with sufficient interest to make a complaint, or so situated that they cannot bear the expense of making a complaint, the community is practically helpless, isn't that true?

A. Well, I wouldn't say they are helpless. I would say this—

Q. What acts in a community, where you only make an average of a little over one—initiate on an average a little over one case a year? Now what operates in those communities where there are no complaints, to see that the people get a square deal?

A. Well, there wouldn't be any action taken. If the local people or the Commission didn't act,—I might explain,—

Q. Whether it should or not, the Commission does not act, because one case a year is not very many?

A. Well, I would say it has not been the policy of the Commission to institute proceedings, rates cases, in the past, and the reason for it largely is the lack of help. We haven't got the force to do it with. But there are some cases of—some cases that have been brought to the attention of the Commission, that were unusual, in which they have done it.

BY MR. EVANS:

Q. Mr. Commissioner, just in regard to that, will you explain to me why it involves so much more help and necessity for work on the part of the Commission to institute a rate case than it does to have had the engineers go out in the field, as they do in an ordinary rate case, and go over all of the items which naturally enter into a rate case, and in many cases submit those in evidence before the Commission?

A. Well, you are mistaken, Mr. Evans; they don't do that in the ordinary case.

Q. Well, they do it in many cases?

A. Well, I wouldn't say in many. That is, as compared with the total number of cases.

Q. Isn't it a very common thing for the Commission to have engineering conferences, Mr. Commissioner?

A. Oh, yes.

Q. And is not the result of those conferences quite often introduced in evidence?

A. Yes.

Q. And isn't it perfectly possible in a rate case instituted by the Commission to follow that same procedure?

A. Well, someone would have to make a valuation in the first place, an inventory of the property and a valuation, to make a basis for a conference.

Q. Well, if the complaint is filed before the effective date of the rates, that burden is placed on the company, isn't it?

A. Yes.

Q. And then all the Commission has to do is to check over that value and put in its own independent engineering data and accounting data, or do it at their conference?

A. Well, that would be true in that particular case, but you mentioned sending our engineers out and going over the property. Now we don't do that to any great extent and—

Q. Didn't they in the Scranton-Spring Brook?

A. In the case where you mentioned where the burden is on the respondent, is where they file a new tariff, but if it relates to an old tariff, which has been in existence for some time, the burden is on the complainant, and they have to do it.

Q. Take the Scranton-Spring Brook case, Mr. Commissioner, didn't the Commission send its engineers out to make an examination of the property?

A. No.

Q. Are you sure of that?

A. Well, they may have made an inspection. Our own engineers, you mean?

Q. Didn't they make an inspection of the property and file engineering reports?

A. Dr. Snow may have gone up there and gone over that property himself, and he may have had someone with him.

MR. TURNER: Dr. Snow is here. Why not call him? He is right over there.

THE WITNESS: There was no time spent on it.

MR. EVANS: Dr. Snow, will you take the stand just a moment? I think you haven't appeared before the House committee?

DR. SNOW: No.

F. HERBERT SNOW sworn.

BY MR. EVANS:

Q. Dr. Snow, in the Scranton-Spring Brook water case, did you or your assistants make any examination of the property?

A. Yes, one week, in company with the representatives, legal and others, of all parties concerned.

Q. And you made your appraisals based on what is known as the Downs' appraisal, going back to 1918, which consisted of a complete inventory, supposedly, of the property, as it then existed?

A. Yes, and all other portions of the record.

Q. And you could have introduced that engineering report of yours in evidence before the Commission, could you not?

A. If called upon, we had it there.

Q. And so far as the word of your bureau was concerned what additional work would have been involved in placing your report before the Commission if it had instituted a complaint on its own initiative?

A. We would have had to examine the property in detail, all classes of the property, as of the date of the proceeding.

Q. Did the respondent's engineers do that?

A. Yes.

Q. Didn't they make their report on the basis of the Downs' appraisal?

A. Well, they testified they used it in part, and then they had real estate experts and their own engineering staff, and they did new work as of the date of the purchase of the property.

Q. But you could have put your report in evidence before the Commission without any great additional amount of work, could you not?

A. Well, no; I think we would have had to cover the field the same as the engineers of both parties.

Q. Suppose you had had one additional assistant? Could you have done it then?

A. Oh, no. There were 75 water companies merged in one operating company now, and we would have had to have done a very considerable, long job to inventory, and especially inventory and appraise the property, and that would have to have been done.

Q. So that your appraisal, then, you do not consider was a real valuable appraisal for determining fair value?

A. Well, our appraisal was made in 1917, and as of that date—

Q. I do not mean the Downs' appraisal, Dr. Snow. I mean the appraisal that you submitted to the Commission, the engineering report on the value of that property. You do not consider that was of sufficient value to be introduced in evidence?

A. Oh, no, I don't say that at all. The work that we did was confined wholly to a review of the record after the record was closed.

Q. Didn't you say you made an examination of the property?

A. I said we, in company with all parties were out for a week.

Q. Then you did more than go over the record, did you not?

A. Well, that was just to go and look and see it.

Q. That was a junket, was it?

A. In automobiles, about the same as you would see property when you were on an express train.

Q. Then that was just for a little outing?

A. Well, it was not an outing.

Q. Well, Dr. Snow, was the appraisal that you made for the Commission a valuable appraisal for the purpose of determining the fair value, or wasn't it?

A. Yes.

Q. It was?

A. On the record, on the record, and wholly on the record.

Q. What do you mean, on the record? Didn't you put your own prices on the units?

A. Yes, sir; that is office work.

Q. Then you did not just take it on the prices put by the other engineers?

A. Why, there was all kinds of prices, all kinds of engineers, and all kinds of property.

Q. I am just asking you what you did, Dr. Snow.

A. I worked from the record.

Q. And the only thing then that you haven't got in that appraisal is a complete and original inventory of the property?

A. Yes, that we did not do.

Q. And the respondent's engineers themselves did not make that, did they?

A. Yes, they did.

Q. Did you go out and measure the—

A. Oh, my, yes.

Q. Dr. Snow, doesn't the record show that they took the Downs' appraisal and added to it property that was—

A. Mr. Counsel,—

Q. Added from that time?

A. —the Downs' appraisal was only for the Spring Brook Division, which is one-half of the total property.

Q. Well, we will take the Spring Brook Division.

A. I am answering you the best I can.

Q. We will take the Spring Brook Division, as to that. The respondent's engineers took the Downs' appraisal, didn't they?

A. Yes.

Q. And they did not make a new appraisal of the property, I mean a new inventory of the property?

A. Yes, they did.

Q. How then did they take the Downs' inventory?

A. Well, they took it; I don't know what they did with it. The record shows itself.

Q. Don't you know that they did that, as the basis of their appraisal?

A. They testified to the extent to which they used it, and it was written into the record, and accepted as part of the record and worked with.

Q. And you used the Downs' appraisal also, which was just what they used, on the Spring Brook now?

A. I used the record, which included everything, the engineers of the complainants, the engineers of the respondents, Mr. Downs, and everything that is in the record of 7,000 pages and 7,000 pages of exhibits. Everything there used.

Q. Dr. Snow, in making the engineering bureau's independent estimates of the value of that property, you took,—we will confine ourselves to the Spring Brook,—you took the inventory of the Downs' appraisal and put your own unit prices on those items of property did you not?

A. Yes, plus additions. The Downs' report—

Q. Plus additions?

A. Yes, very material,—I think in Spring Brook running to about \$5,000,000,—tunnels,—one of the biggest reservoirs in the state, built since,—a lot of things were done, I can't remember now; but the Downs' inventory and appraisal of 1917 was only a part of the whole property.

Q. And that, as far as the inventory went, was also the basis of the respondent's estimate of reproduction value of the Spring Brook property?

A. Yes, I think they took substantially the Downs' inventory and appraisal, as far as it went.

Q. And applied the unit prices to it?

A. Which didn't go half way through the property, not half way through.

Q. Isn't it true that if the Commission had instituted that case on its own initiative, that you with your 40 volumes of supporting engineering data could have gone in before the Commission and testified, with your assistants, as to the reproduction cost of that property?

A. Do you mean without any more field work?

Q. No, I don't say without any more field work.

A. Well, we couldn't do it without more field work. We should have gone all through the property of the Spring Brook Division, which is larger than—

Q. Do you mean to say you would have to make a new inventory of it?

A. Yes.

Q. Did the respondents make a new inventory of it?

A. The respondent made an inventory of the Scranton Division, which included—

Q. I say, talking about the Spring Brook.

A. Well, that is less than half the property.

Q. I am asking you as to the Spring Brook, did they make a separate inventory of it?

A. Yes, they added to the Downs' report.

Q. Property constructed since that time?

A. Yes, and that changed some of Downs' figures.

Q. As to the property that was in existence when the Downs' report was made, they took that inventory as the basis of their report, did they not?

A. They testified to that effect, yes.

Q. And you did the same thing?

A. Yes, I took the record.

Q. Therefore as far as the Spring Brook was concerned your report was on the same inventory basis that the respondents' engineers made theirs?

A. Yes, but I would have gone into the field if the responsibility for that work had been put upon me.

Q. Then you did not place any credence upon the respondents' estimate of value of the Scranton-Spring Brook property?

A. I won't say that. I weighed it all and gave it a value and I have got in the text of my report all the pros and cons of every class of property and every conclusion that I reached for the consideration of the Commission, as explained in the text and in my 45 pages of notes.

Q. Dr. Snow, I am merely trying to get before the Committee an idea of how the report that you made on the Spring Brook portion of the Scranton-Spring Brook property differed from the way the respondents' engineers made their report; now will you explain that just as briefly as you can?

A. All I know about what the respondents' methods were is what the record shows, as I was not in the field with them at all. I think I have explained myself, giving weight to the testimony and the facts and produced a report for the judgment and the consideration of the Commission.

Q. That is not the question I asked you. the question I asked you is in what respect does the report and the method by which you valued the Spring Brook property differ from that used by the respondent's engineers?

A. I think it goes much farther than the respondents.

Q. In other words, your report was more accurate than theirs?

A. Than the respondents?

Q. Yes.

A. I think so, most assuredly.

Q. Therefore your report could have been introduced in evidence just as well as theirs was?

A. I think so.

BY MR. RHODES:

Q. Was it introduced?

A. No, it was not. My report was not made until after the testimony was all closed.

Q. Was it utilized by the Commission?

A. Oh yes, I made it for the use of the Commission.

Q. The Commission utilized the report in the determination of the case?

A. I suppose it must have been used, it was made for that purpose.

BY MR. TURNER:

Q. How long a time would it have taken you to have done the field work?

A. I testified before the Senate Committee that in my judgment I could have, with ample force, I could have made the appraisal of the whole property, not the other, but the Spring Brook, the Scranton, the Oliphant and the whole blamed thing in the time that it took to check the report and go over the record and make my report.

Q. Why did you not do that?

A. I am not a statutory officer, sir.

BY MR. EVANS:

Q. You did what the Commission directed you?

A. My duties are wholly assigned to me by the Commission itself.

Q. Then it would not have involved any additional cost for the Commission to have instituted this case on its own motion so far as your Department is concerned?

A. I don't know what you mean by no more cost.

Q. You have just said in answer to Mr. Rhodes' question that in the same amount of time that it took you to review the record and make the report which you did for the Commission, you could have made a complete inventory and appraisal of the entire property?

A. Yes, Mr. Counsel, with sufficient force, I say, and that big force is more than what I have now.

BY MR. TURNER:

Q. How many more would it have taken?

A. A good many more, sir.

Q. What is your guess?

A. On the basis that we would have stopped all of our other work, which would mean I would have had to have all new men, I think, to do the work in the time I specified, it would take 50 or 60 men constantly employed, and I think in that time I could do it in six months as thoroughly as such a case ought to be prepared, in view of the fact that it may be sent to the Appellant Court, and I understand that more

than that number of men were employed by the respondent and that the complainants, for lack of money, had a very much less staff, and therefore it took very much more time and delayed or extended the proceeding very many months.

Q. Do you know what the respondents' engineering cost in the case?

A. They claimed about \$580,000 sir.

Q. Do you know what was their valuation what was their engineering cost?

A. I am relying on memory, I think they asked for an allowance of \$450,000.

Q. Would it have cost the Commission as much money?

A. No, sir, not on the basis of the proposition I made.

BY MR. EVANS:

Q. I want to be clear on this, what did you mean in answer to Mr. Rhodes by saying that in the same amount of time you spent in reviewing the record you could have made an inventory and appraisal of the property, what did you intend to convey to Mr. Rhodes by that?

A. Just exactly what the words implied. I started in October and I finished my work the first week, the third of July, the following July and my instructions from the Commission, my regular duties as Chief were assigned to the Assistant Chief and I devoted—I was instructed to devote all of my time, and that would be over—that is about over seven months, and the evidence of my time is in the volume now before the House Committee and my own notes, in my own pencil. I think my notes alone cover 25 volumes and I had the assistance of certain members of my staff who were assigned to work with me. Now that was office work and we certainly could not go out in the field and check up in the field with any such force and I know those properties, Mr. Counsel, as Chief Engineer of the Health Department, beginning in 1905, I became familiar with those properties. I trampled all the streams, some of the dams were built during my time in the Health Department, I have personal knowledge of those properties, I handled three great typhoid epidemics up there, and that gave me an insight into the water works, as well as later in the Public Service Commission. I had a very intimate personal knowledge of those properties.

Q. All of which would have helped you in making an inventory of those properties?

A. Most assuredly, and did help me very materially in making my report. Does that answer the question?

Q. I still feel somewhat at a loss to know what your estimate of the additional cost which would have been incurred would have been if the Bureau of Engineering had made a reasonably adequate inventory and appraisal of the property over what it did cost, doing the work that you did?

A. That is an easy calculation if I had my estimate anywhere near right, of 50 or 60 men and seven months in the field, plus their work in the office.

Q. How many men did you use in the work?

A. In making this record I had—there were six or seven of us assigned, one man worked with me all the time and these other assistants that were brought in worked for from a few weeks to two or three months perhaps, and that was wholly on the office work on checking the record.

Q. Would you say \$75,000 would have covered the additional cost?

A. As long as it cost the respondent \$450,000, I would say that we could have done it on the basis I am talking about—

Q. I am not asking what it cost the respondent. You say six men for six months?

A. Yes.

Q. What did you expect to pay 50 men for six months?

A. I think those men could be figured from \$2500 to \$4200 a year, but I don't know how much my judgment would dictate as work in the field. There were something like 6000 test pits dug along the pipe line to determine it was rock or earth material through which the trenches were dug, I don't know how much of that I would have done if I had been in authority in the field, and that would add very materially to the cost.

Q. What is your estimate of the cost, Doctor?

A. We could not have done it for \$100,000, but I would want to reserve the right to change that estimate if it is material to counsel.

MR. TURNER: I think there is some misunderstanding there that we ought just as well clear away at this time. There seems to be a feeling among some of us that have been

discussing it here that Doctor now is referring to the length of time it would take, and he meant to refer to the number of men for that length of time. What he did mean by that, that with a field force it would not have taken any longer to do the work than it took him in checking it up himself.

MR. EVANS: I quite understand. But to me it don't mean anything to say it would take the same amount of time unless you take the same proportion. Obviously if he had had fifty or sixty men digesting the records for him, he could have done it in less time.

MR. SNOW: There are seventy-five separate water companies all now merged and tied together as one property. If you assign one man to each one of these seventy-five water works systems, and kept him on it from the start to the finish, it only gave me a basis for a snap judgment which, I say, if material I would like to modify. I think in the time I took the record with fifty men there would be some economy or saving in the number of men I think I could do it with. I think I could do it with fifty men in that time and of course we would try to get these men who are able to do this work for as reasonable a price as might be for men accustomed to appraising water works. At the present time there are so many men out of employment, and so many engineers out of employment, that we might be able to get men for a lower price. I have seen ties during the years that I have been on the Hill when you could not have gotten fifty engineers for any amount of money. Therefore my estimate of a hundred thousand dollars, I don't like to guess, I can err as easily as anybody else.

BY MR. MEMOLO:

Q. With this handicap that you refer to in the number of men employed, has your Department ever made that known to the members of the Legislature?

A. In 1919 we put in an estimate for three million dollars for adequately equipping the Public Service Commission, and to the satisfaction of the people who complained and wanted service, and I know of no such estimate or request being made to the General Assembly since 1919.

Q. That is the only time you know of?

A. Two years prior to that there were over two millions asked for, but not since 1919 do I recall of any such estimate being asked of the General Assembly.

Q. You are the head of the engineering bureau?

A. I have been the chief engineer of the Public Service Commission since its beginning.

Q. You are appointed by them?

A. Yes sir.

Q. And they have supervision of your Department and give your orders?

A. The office is not a statutory one, but is created and falls under the supervision of the Commission.

BY MR. RHODES:

Q. You say you asked for three million dollars for 1919, how much did you get?

A. I don't recall sir, but not much.

Q. Did you get a million that session?

A. I doubt it, I think the Commission now is receiving about as large a total appropriation as it has ever had, and that seems to be not much over a million now.

Q. Do you mean for the year?

A. No sir, for the biennium period.

COMMISSIONER YOUNG recalled

BY FATHER COX:

Q. You say you have about thirty-five hundred companies to receive reports from each year?

A. I think it is about that.

Q. And you say that only eight of them were investigated because in your opinion they reported excessive earnings?

A. About that.

Q. Don't you think, considering things human, that there should have been quite a number of these companies that would have justified your instituting proceedings in order to get conditions better. You said previously you had no publicity. Now, including this Scranton-Spring Brook Water Company you had publicity that you did not particularly desire. The complaints we have heard here were that there was

no use in going to the Commission; that when they did go to the Commission, they were either given the impression that the Commission was not interested or that you didn't hear them. Which is correct or what was the trouble?

A. These things are not true to the extent that they are represented here. I got that from the newspaper account, of course, I didn't hear the testimony. In every proceeding, disappointed litigants complain. I do not say that there are not municipalities that do not have just causes of complaint about the Commission, and the Commission probably does make mistakes, but the Legislature has provided that when they do the court is the place to correct it. Since this Commission has been instituted, sixteen or seventeen years ago, there have been a lot of cases appealed to the courts for correction. I think in twenty-eight or thirty of them appeals have been taken and I think in five of them we have been reversed, but in every instance in which we were reversed we were reversed because we put the valuation too low and not in a single instance have we been reversed because we put it too high, and that is some evidence that we are looking after the interests of the people. In addition to that we have had a compilation of the railroad cases made which shows that seventy-five per cent. of these cases have been decided in favor of the rate payer and twenty-five per cent. in favor of the railroad, and I have also data with reference to other rate cases which is about similar. Now, of course, in every rate case that comes before the Commission there is a corporation on one side and the consumers on the other. It is not likely that corporations are wrong always. Occasionally they are right, but when we decide against a community a lot of people are disappointed and criticize. We are bound by law just the same as any other governmental agency and we have to follow certain rules in deciding valuations, and we cannot always decide for the public. My observation has been that this Commission leans, if it leans any way at all, towards the public. We are not supposed to do that, we are supposed to be fair to all the parties. That is my own judgment of the matter.

Q. Complaints come from all parts of the State here to us. Now from the records here it appears that in every year there are thirty-five hundred reports made, and certainly it don't seem as though you are as vitally interested in regulating these conditions as you are supposed to do by law.

A. I will agree the Commission has not followed the policy of instituting investigations on their own initiative, there has been more done the last year than formerly. The principal reason is that we have not the help to do it. If we institute the proceedings one community hears of it and another community thinks they are entitled to the same thing, they have a right to the same rate, but we do not have the force to handle it. I want to go further to say there is a question in my mind just how far we ought to go with instituting proceedings on our own initiative. I think it would be an unfortunate position for the public of Pennsylvania, if they would look upon the Public Service Commission solely as an inquisitorial body and not as an unbiased body to try issues between the corporations and the consumer, and I mean by that they would become a solely inquisitorial body and would become biased, and the people would not have confidence in them. I realize that there are many cases in which it is impossible for the complainants to bear the expense of the investigation. If these two things are corrected there won't be the insistence on the part of the public for the Commission to institute proceedings on their own motion, and there won't be the necessity because the communities will be relieved from that expense, and there will be no unjust rate imposed upon them, until it is determined by the Commission and I think these things ought to be remedied and corrected, particularly the imposing upon a community of a rate without it first having been decided by a tribunal as to whether the rates are fair.

BY MR. TURNER:

Q. It may be helpful to some of the members of the committee if you would give us an idea—while there are 3500 cases, all of your time was not taken up with these so-called rate cases, I mean where there were complaints, but there were many other functions of the Public Service Commission, like the issuance of certificates of public convenience to bus lines and others, was there not?

A. Yes, sir; that takes up a lot of our time.

Q. Does the Commission or do members of the Commission have to sit every week in the year?

A. We have a calendar for every week in the year, in Pittsburgh, Harrisburg and Philadelphia, and occasionally in Erie, Scranton, Wilkes-Barre and at other points in the State. In fact, we have a calendar of about 100 cases that come before us every week. Some of these are a matter of form. They are listed, but there isn't much testimony taken in them, such as municipal contracts and things of that kind, but every week we have hearings, from one, two to three days a week, in Pittsburgh, Harrisburg, and Philadelphia.

BY MR. EVANS:

Q. Of the eight rate cases that have been referred to, instituted by the Commission, six have been instituted during 1930, or after January 1, 1930, have they not?

A. I don't know that.

Q. The Scranton Electric case seems to be No. 8,273. All the other cases are subsequent in number.

A. That appears to be correct.

Q. Up to January 1, 1930, the Commission had only instituted two rate cases on its own initiative in the preceding nine years, one of these being a gas case, involving a service charge of \$30; the other the Clarks Ferry Bridge case that you have referred to.

A. Yes, sir; what years were they instituted?

Q. I assume that the Clarks Ferry Bridge was instituted probably in 1929.

A. That is recently, comparatively recent.

Q. The result of the few that you have instituted in 1930 seems to have been an estimated reduction in rates amounting to \$800,000 or more a year.

A. I think about a million dollars is my calculation.

Q. Don't you feel that this was money well spent in the interest of the public in instituting those cases?

A. Yes, sir.

Q. Even if it had cost \$100,000 in the Scranton Spring Brook case, if you had been able to save \$50,000 a year to consumers, it would have been worth it?

A. Yes, it would. We could have done it in that case, if we had the help and the money, but we didn't have it and we couldn't do it.

Q. In other words, your appropriation is not large enough?

A. Yes, sir; we do not have the force of engineers.

Q. Isn't it your opinion, as a matter of fact, Mr. Commissioner, that a great deal more of it could as a practical matter have been done as has been done?

A. That is possibly true, and a great deal more can be done if we get the help to do it. I will agree to that, and I think it ought to be done.

BY CHAIRMAN MOORE:

Q. I asked a question a little while ago and I left it up in the air. I am reading from the record of Mr. Chrostwaite's testimony, page 266, where he says:

"For instance, the borough of Hanover, of which I am solicitor, had a case against the Conewago Gas Company. The company asked permission of the commission to permit them to put in \$20,000 worth of costs, amortizing over a period of five years, making \$4,000 a year. The company lost the case, you understand, but they asked the consumer to pay \$20,000 of their costs. While the Commission did not allow the \$20,000, they did allow \$10,500, amortizing over three years, making the consumer pay to the company \$3,500 a year for losing the case. Now, the amortization over the three year period was practically the same as amortization of the \$20,000 over a five year period. The worst effect of that is, after the \$3,500 was paid on the rate basis and paid by the consumer back about 1918, that they have this \$3,500 still in there and the consumers are now paying a penalty of \$3,500 a year because they won a case against the utility, and they will continue to pay that forever or until they go in and fight another rate case."

A. Does he give the date when that proceeding was had?

Q. I don't recall whether he gave the date. It was the case of the Borough of Hanover against the Conewago Gas Company—I think about 1918.

A. Well, if the committee desires, I will have the record examined to see whether that is a correct statement of the facts.

MR. TURNER: I think it should be; we should have some report on the question of amortization.

THE WITNESS: I don't know of any instance of that kind since I have been on the Commission.

BY MR. RHODES:

Q. What I want to know is whether this amortization question goes into the basis on which the seven per cent. return is determined.

A. It goes into the operating expense and permits them to earn more money. It might affect the rates if it was a large enough amount.

Q. If it remained there indefinitely—

A. It ought not to.

BY MR. TURNER:

Q. Take that map with the rates, can you give us any reason for the wide diversion of the rates there?

A. Well, I could give you some reasons, I don't know that I can give you all of them. Rates depend upon a good many factors. For instance, the density of the population has quite a good deal to do with it. You notice in those rural communities in the northern tier, that is where the highest rates are, and you get into the densely populated communities, the rates drop perceptibly. That is one factor, of course there are many other factors.

BY MR. COOKE:

Q. What do you suppose is wrong with Chester they have a population down there.

A. That seems to be out of line with the surrounding counties.

MR. TURNER: I think there might be some explanation. Chester County has a lot of rural territory, 7.6 has a lot of industrials. Then there is Lawrence County, 5.7 as against Allegheny with 7.1.

A. Lawrence County seems to be favored, that is where I live.

(Remarks by Mr. Turner off the record)

BY MR. EVANS:

Q. Are there any other comments?

A. No.

BY MR. TURNER:

Q. Do you think that is a fair indication taking a map of that kind, and seeking the rates in the county, do you think that is a fair indication that there might be something wrong with the rate schedules.

A. No, I don't think it is. You got to take the conditions that exist in any particular community, and whether it is served by a strong company or a weak one. In some of these rural districts they were served by a local company, which was organized and they probably just had one small generating plant and the costs were high, where they didn't have any power users.

BY MR. RHODES:

Q. What is the matter in the case of Pike, 15.5.

A. It seems to be unusually high. Sullivan, Wyoming and Pike are the highest.

Q. They have a large dam up there, known as Wallerpaupack, which is right on the edge of Pike and Wayne, and they don't have any long distance to go with the current.

A. I don't know what company serves them.

MR. COOKE: It is the Rockland Company, and that is owned without Pennsylvania.

BY MR. MEMOLO:

Q. Mr. Young, do you know whether or not the cost of the rate case in the Scranton Spring Brook Company case was charged to operating expenses or not?

A. It was not allowed.

Q. It was not allowed?

A. No, for the reason that the Commission determined that the rates in the tariff they filed were too high and refused them and for that reason they would not allow them to amortize the cost of the rate case.

BY MR. COOKE:

Q. Does that mean that it is paid by the stockholders?

A. Yes, it would have to come out of their 7%.

Q. There are some of the witnesses who said it cost \$280,000 to fight that case.

A. That is the consumers?

Q. That is, the complainants.

A. I thought you were asking about the company.

Q. It cost them enough to fight it?

A. Yes.

MR. COOKE. It is a good thing they didn't have another charge to pay.

MR. MEMOLO. Well, they would eventually pay it anyhow, it didn't make any difference.

BY MR. EVANS:

Q. Mr. Young, in answer to that question of Mr. Cooke. I think you said in your opinion write-ups of the books of the Company did not affect the rates. Is that true with the companies issuing securities against these fictitious values?

A. Well, in this sense—now, of course, if they issue securities, the Act requires the Commission to take into consideration the security issues in determining the fair value, but fair value is largely determined on the valuation of the property.

Q. Then it does—

A. And the original cost and the reproduction new are the most persuasive factors in determining their value.

Q. Those are the factors that the Commission usually gives most weight to?

A. Yes.

Q. And does it give any weight at all to the market value of the securities?

A. Well, it probably gives some weight, because the Act requires the Commission to consider that, but if the market values of the securities were out of line with the reproduction cost new and the original cost, it would not be persuasive with the Commission.

Q. What control does the Commission have over securities of utilities in Pennsylvania?

A. Well, the Act provides for the Commission to have some control over it. All companies must file a certificate of notification, and they shall not issue securities except for certain things mentioned in the Act.

Q. Suppose the company issues securities on fictitious values, what power has the Commission over the matter?

A. Well, they have a right to conduct an investigation to determine that fact.

Q. Do you know of any cases where they have done that?

A. I don't recall of any.

Q. Are you familiar with the Clarion River Power Case?

A. Well, I have some knowledge of it, acquired since I came with the Commission, of what took place before I came with the Commission.

Q. Did you ever happen to see a report made by the Bureau of Accounts jointly with the accountants of the Federal Power Commission in 1925 of the Clarion Power Case?

A. No, I never saw that report.

Q. Are you familiar with the fact that the Clarion River Power Company, according to reports of accountants of the Pennsylvania Commission and the Federal Power Commission, has issued large quantities of securities on fictitious values?

A. I learned that from discussion that has taken place in the Commission, and also what I read in the newspapers, when this argument took place in Washington recently.

Q. Has any action ever been taken by the Commission with regard to that?

A. No.

Q. Have you any explanation as to why they have not?

A. Well—the report indicates, of the Commission's own accounting bureau, that there are some 5 or 6 million dollars of fictitious value in that company represented by outstanding securities?

A. I have no explanation to give why the Commission has not instituted proceedings, except that that is a project that is under license by the Federal Government, and that this audit that is being had, which shows, or which indicates rather, that the securities issued are in excess of the real value, that is being conducted by the Federal Government, in which our Commission assisted.

Q. Has the Pennsylvania Commission assisted in that since 1926?

A. Well, I don't know when the last date was.

Q. Have they since you have been with the Commission?

A. No, I don't think since I came with the Commission.

Q. Don't you feel it is part of the duty of the Pennsylvania Commission to do what it can to prevent fictitious increase of securities of utilities under its control?

A. Well, I do, and that is the reason why I think the Act ought to be amended, to make it a pre-requisite of the issuance of securities, that the Commission has control of them.

Q. But the Commission has already had that power ever since it was instituted?

A. What power?

Q. To investigate.

A. To investigate after it is done and the securities are out in the hands of the public, but that is altogether a different thing.

Q. That is entirely different?

A. Yes.

Q. They then refer the matter to the Attorney General, for action, do they not?

A. Yes.

Q. As far as you know, the Commission has never done that in a single case?

A. Not to my knowledge, no. We have a securities bureau now, but it does not help the situation the way it ought to.

Q. Do you mean in the Commission?

A. No, in the State.

Q. The State Securities Bureau?

A. Yes.

Q. Mr. Commissioner, are you familiar at all with the regulation of utilities in Ohio?

A. No, I have very little knowledge of the Ohio law.

Q. You are not familiar with the fact that municipal plants can be erected in Ohio without the consent of any state authority?

A. No, I don't know that.

Q. Would you favor such a provision in the Pennsylvania law?

A. Just state that again, Mr. Evans.

Q. Giving municipalities the power to erect municipal utility plants without the Commission's approval?

A. Well, I have never given that any study. I wouldn't like to make an offhand answer to it. My first impulse is it ought to remain in the hands of the Commission to determine whether or not that should be done. For instance, if there is an existing utility there serving the people, it would be doubtful whether it would be wise to permit a municipality to enter into competition and build a plant. I think it would be better to permit them to acquire the existing plant by some means or other rather than build one and enter into competition with an existing plant.

BY MR. COOKE:

Q. Isn't your own county, Lawrence; profiting by having a municipal plant there by very low rates, thereby influencing other rates? I have been told so.

A. Municipal plant?

Q. Yes, sir.

A. I don't know of any municipal plant in Lawrence county.

Q. In that immediate neighborhood there, Grove City, is it, or Elwood?

A. Grove City is in Mercer County. Elwood is in Lawrence County.

Q. Well, has not that a municipal plant?

A. Well, the municipality of Elwood City, I think, owns their own distributing system, but they buy their power from the Pennsylvania Power Company.

Q. Pay a cent and a quarter for it, so I was told, and they have a distribution system, and I was told yesterday, when this map was first shown to us, that the reason why Lawrence had the best rates in the State—

A. Well, that is not the reason, because Elwood City is only a small part of Lawrence County. A large part of the population is in New Castle, and the rest of the county, where they don't have a municipal plant. The greater part of the electricity would be consumed in Newcastle.

Q. I was quite prone to believe that, because somebody told me that the favorite way in Ohio of getting rates reduced was to threaten a municipal plant. They found it a much more direct method than the regulatory system,

A. Well, I wouldn't agree to that, Mr. Cooke.

Q. I am not arguing for it; I am simply stating the—

A. I don't think it is wise to permit the municipality to construct a plant and enter into competition with an existing privately owned plant. It only duplicates cost. Somebody has got to pay for it. I think if the local community desires to own its own plant, it would be better to have a law to permit them to acquire the existing plant and run it as a municipally owned plant.

Q. You know that there were towns in the United States that own their own plants and are tax free; that is, by charging approximately the same rates as the private companies around it, they pay all the expenses of the community?

A. Well, I know there are a lot of municipally owned plants throughout the United States. I don't know what the result of their operation is financially.

Q. I would like to have you, when you go home next time, just make some inquiries and see whether you can not relate that 5.7 rate in Lawrence to the proximity of a municipal plant.

A. Well, if I knew where the party who reported this got his data, I might be able to check up on it.

MR. EVANS: This is taken, as I stated. Mr. Young, directly from the rate sheets on file with your Commission, taking a consumption of 15 kilowatt hours per month, in towns and boroughs under 10,000.

THE WITNESS: Well, the thing that made me question it is this. Now the Pennsylvania Power Company serves Lawrence County. I think all of the county, unless it be a small borough in the northern part. Now, of course, I know what their rate is. It is a flat six cent rate, without any reduction for the amount consumed. They also serve the community around Elwood. They sell their power to Elwood. Of course, they have their distributing plant. Now, they have got it below six cents there.

MR. COOKE: In Elwood.

THE WITNESS: No, in Lawrence County, and I know the rate is a flat six cent rate.

MR. COOKE: I think that takes in the discount. I think somebody said yesterday,—isn't there a discount on that flat rate?

THE WITNESS: There is a discount.

MR. EVANS: I think they said it was a six cent rate less a five per cent. discount.

THE WITNESS: Well, that is probably correct, then. It is a six cent rate, just a flat six cent rate.

BY MR. TURNER:

Q. We had some figures here yesterday that showed rates in Ontario, Canada, 2.7; that is governmentally owned.

A. Well, there is a lot of factors have to be taken into consideration when you deal with any particular situation and of course tax is one thing, and there are many other things. You can not compare the rates in one community with the rates in another with any degree of accuracy.

Q. But that is a long way, between 2.7 and 7.4, for instances, for Green, and 7.1 for Allegheny?

A. Yes, it is quite a difference.

BY MR. CRAWFORD:

Q. Isn't it true that the rural lines, the expense of the rural lines are to a great extent borne by the consumers, before they put them in, don't they ask the consumers to either furnish the poles or a part of the wire?

A. Well, that is under General Order 28 adopted by the Commission, they require a guarantee of a certain amount, before they will extend their lines. In practice I don't know how it works out, whether they furnish the poles and do part of the work or not.

MR. COOKE: They pay one and three-quarters per cent. a month on the cost of a line, which makes it something over 20 per cent. a year on the cost.

MR. TURNER: Until it is paid for.

MR. COOKE: That varies. Sometimes it goes on.

MR. EVANS: We hope to have a set of rural rates later before the Committee. I think we have given Commissioner Young a rather tiresome afternoon. We are certainly very much obliged to you, Commissioner.

THE WITNESS: Is that all?

MR. EVANS: That is all I had for this afternoon. I don't care to keep you any longer.

THE CHAIRMAN: The Committee will stand adjourned until to-morrow morning at 10.00 o'clock in this room. The Committee will now meet in executive session.

# COMMITTEE OF INVESTIGATION ON RESOLUTION No. 10

Pursuant to the call of the Chairman the Committee convened in the House Caucus Room on Friday, March 20, 1931, at 10 o'clock a. m.

There were present:

Messrs. D. Glenn Moore, Chairman.

Martin Memolo.

Elwood J. Turner.

Chester A. Rhodes.

Harry J. Crawford.

Father James R. Cox.

Morris L. Cooke.

Harold Evans, Esq.

John M. Walker, Esq.

J. W. BROWN, sworn.

BY MR. EVANS:

Q. Mr. Brown, you have been a member of the Public Service Commission since March 25, 1926, have you not?

A. Yes.

Q. And your commission expires on July 1, 1932?

A. Right.

Q. You have been a very regular attender at sessions of the Commission and its Executive Sessions, I assume?

A. That is right.

Q. You have taken care of a large proportion of the hearings held in Harrisburg, have you not?

A. I have.

Q. The work that Chairman Ainey used to attend to, but for the last few years has not been physically able to attend to, you have taken care of?

A. Correct.

Q. You also have been a member of the Electric Rate Committee since it was formed on February 25, 1930?

A. Yes.

Q. As a member of that Committee, I assume that you have kept in close touch with the electric situation throughout the State?

A. Well, if you will allow me to explain that, I have not kept in as close touch as under other circumstances I would have, owing to the condition that you have just referred to. Nearly all my time at Harrisburg is taken up with the holding of hearings. I come to Harrisburg on Monday morning. The whole of Monday is taken up with arguments, practically the whole of Tuesday is taken up with Executive Sessions, and then I hold hearings for the balance of the week, and nearly all of the work of the Electric Committee has devolved upon the Chairman, Mr. Young, who has given much time to it, and I have given as much time to it as I could, but I have not given the time to it I should have liked to.

Q. So, in fact, the Electric Rate Committee has been a one-man committee?

A. No, I would not say that. We have assisted whenever we could.

Q. In the minutes of the Electric Rate Committee for March 4, 1930, reference is made to a statement by the chief of the engineering bureau, in which he states, "During the past six years the bureau of engineering has been definitely studying the growth and development of the electric industry in Pennsylvania." He then refers to a map which they have prepared and says, "At present a practically complete statistical rate study of the entire electric industry of the State showing the overall condition which exists in 1929, with the supporting data for each individual operating company." His statement continues, "Included in this work is the following data: Study of domestic rates showing resultant bill or rate for use of 25 k. w. h., 50 k. w. h.\*\* study of power and commercial schedules\*\* study by companies of the number of domestic consumers, k. w. h. sales and revenue from this class as shown in the 1928 Annual Reports. Study showing the area and population\*\* study showing kilowatt hours generated and transfer of energy across State lines. Studies showing comparisons of unchartered territory in 1924 and 1929\*\* a compilation of all electric rates briefed in a single volume." Will you be good enough to have that report submitted to the Committee, so that we may have it?

(Adjourned to Friday, March 20, 1931, at 10 a. m.)

A. Dr. Snow has already been asked to produce that, and he will produce it.

MR. EVANS: Thank you.

Dr. Snow has asked to be permitted to make a statement in connection with that. He has already been sworn, if you will allow, Mr. Commissioner?

THE WITNESS: Whatever you want.

DR. SNOW: Some of that information is in report form and bound, that I can very readily submit. Others are in detached portions in our files. They are all originals, no copies, and we are working with them every day, and what I would like to do is to transcribe and make copies of these that we are using every day, so that our work would not be impeded and the committee can also have them. That would take some time.

MR. EVANS: In order to save time of the Engineering Bureau I would suggest that the Committee direct Mr. Snow to furnish to the Committee immediately such portions of the report referred to as are in the form of bound volumes, and that the engineers or accountants of the research department be authorized to go over the other data in the Commission's offices and advise which of it is necessary for our purposes, and that perhaps will save the time necessary to copy a lot of stuff.

THE CHAIRMAN: That will be so understood.

BY MR. EVANS:

Q. Mr. Brown, in the minutes of the Electric Rates Committee, for August 26, 1930, appears the following, the Committee also referred to the report from P. E. Fickenscher, Chief of the Bureau of Rates and Tariffs, that he had prepared from answers received to letters mailed to all electric companies requesting information as to power contracts, and Mr. Fickenscher reported that he had received answers from all the companies and had divided the replies into three classes, contracts for re-sale, contracts for inter-change of power by the electric companies, and border-line contracts. Mr. Fickenscher was authorized to prepare a report on the data in typewritten form for the use of the Commission." I understand that in accordance with my request Mr. Fickenscher by the first of next week will submit to the Committee a report of that.

A. Yes.

Q. Mr. Commissioner, we were discussing yesterday the question of the purpose served by the annual reports of utilities. What is your conception of the primary purpose of having those reports filed with the Commission?

A. My conception is that the reports are filed for the information of the Commission.

Q. And for what purpose? What is the ultimate result that the Commission desires to attain by having that information at its disposal?

A. My conception of it is that, as Commissioner Young stated yesterday, I think there are approximately 3500 annual reports filed. It would be a physical impossibility for the Commission, as now constituted and manned, to examine all of those reports, but in any case where a utility files a report and anything comes to the attention of the Commission, they have that report to examine and see what it contains and to take any action they see fit.

Q. And is it your thought that it is one of the functions of the Commission to direct the Bureau of Accounts and Statistics to call its attention to any matters in any of those reports which suggest the need of action?

A. I think that would be the proper thing to do.

Q. Has the Commission ever done that?

A. Yes, sir.

Q. Will you refer me to any minute where it has been done, or any specific time when it has been done?

A. Well, I can not give you the specific case or the specific time, but I have a very distinct recollection of the Commission instructing the Accounting Bureau to give us the details of one or two annual reports, in which cases something had been called to our attention.

Q. I think you perhaps misunderstood me. Wouldn't it be advisable in your opinion for the Commission to instruct the Bureau of Accounts that in checking over the annual reports of utilities the Bureau call the attention of the Commission to any matters in any reports which suggest the necessity or the desirability of action by the Commission?

A. I think that might be a good thing, yes, sir.

Q. As far as you know, has that ever been done?

A. I can not say that it has. I do not know.

Q. The Bureau, however, has from time to time, in the case of the electric industry, submitted reports to the Commission, has it not?

A. Yes, sir.

Q. And you have been familiar with those reports as they have been presented?

A. I have seen them, yes, sir.

Q. And they have called attention to the fact that a number of electric companies were earning considerably over seven per cent. over-all return on their depreciated invested capital, as shown by their books?

A. As shown by the book cost—

Q. Yes.

A. —in the annual returns.

Q. Now, one of those reports, I think, it was testified was before the Commission as far back as 1925, showing that situation.

A. Well, I don't know that. I think that is true, however.

Q. Well now, where such an analysis shows that utilities are earning 10, 15, 20, or 30 per cent. return on the book value of their depreciated invested capital, does that suggest to you the desirability that in those cases the Commission should make investigation?

A. I think that it would suggest that something ought to be done, yes, sir.

Q. Now, disregarding the 1925 report, in 1928 such a statement was laid before the Commission, was it not?

A. Yes, sir.

Q. Was any action taken by the Commission in view of that report looking toward investigating any of the companies that were there shown to be earning large returns on their invested capital?

A. I think it was after that report that a conference was held with a large number of companies with the view of having them reduce their rates.

Q. I think Commissioner Young referred to that conference. Were you present at it?

A. No, I wasn't present.

Q. That was one of the conferences in the chairman's office, I suppose?

A. Yes.

Q. Do you think that that is the advisable way of getting at those matters of getting reductions in rates?

A. Well, that is a matter of judgment.

Q. Well, that is what I am asking, your judgment.

A. Well, my judgment is that that was advisable at that time. It saved a great deal of expense to consumers who otherwise might possibly have been compelled to make complaint against these rates.

Q. So far as you know, no action was taken by the Commission directing the bureau of accounts to make any studies, any further studies of any of these companies until 1930?

A. No, I know of none.

Q. Now, in regard to the Scranton Electric rates, that was one of the companies that was under investigation, was it not?

A. Yes.

Q. Did that company reduce its rates as a result of the conference in the chairman's office that you have referred to?

A. I think not.

Q. By the way, when was that conference held?

A. Early in 1928 is my recollection. I don't know the date.

Q. Early in 1928?

A. I think so.

Q. Can you remember anyone who was present at that conference?

A. Well, I don't think I can. I know that in the course of the morning's business I went to the chairman's office for something. This conference was going on, and there might have been 20 people there.

Q. What other members of the Commission besides the chairman were there?

A. I can't tell you that. There may have been others, but I don't know.

Q. Were any representatives of municipalities or consumers in the territories of these companies present at that conference?

A. I am not sure of that. As I tell you, I was not present at the conference. I took no part in it.

Q. Who could tell us in regard to it, do you think?  
 A. Well, I don't know of anybody but the chairman.  
 Q. No one but the chairman?  
 A. I don't know of anybody. There may be others, but I don't know.

Q. Well now, in February, 1930, the electric rate committee did request the Bureau of Accounts to make a special investigation of the Scranton Electric situation, did they not?

A. Yes, sir.

Q. Were you familiar at that time with the fact that the Federal Trade Commission was also investigating the Scranton Electric situation?

A. Only from what I read in the papers.

Q. But you were from that?

A. Yes.

Q. Did that have anything to do with the action taken by the Electric Rate Committee, so far as you were concerned?

A. Not in the slightest. As a matter of fact, I never heard it discussed in the committee.

Q. I didn't ask you that, Commissioner Brown.

A. I say so far as I was concerned, it didn't.

Q. It did not have anything to do with it at all?

A. No, sir.

Q. What had you read in the newspapers about the Federal Trade Commission investigation of Scranton Electric?

A. Well, I won't undertake to tell you now. I read so much about it that I don't know.

Q. There was a lot about it in the papers?

A. Oh, yes, there was a good deal about it.

Q. Now, as a result of this investigation into the Scranton Electric, the Commission did on March 11, 1930, filed a complaint on its own motion?

A. Yes, sir.

Q. Since you have been on the Commission, how many such cases can you remember where the Commission has filed complaints on its own motion?

A. Well, what kind of cases do you mean?

Q. I mean cases involving rates of utilities.

A. Rates? I can only recall what was mentioned here yesterday.

Q. Well, your term of service goes back a little farther than Commissioner Young's. I think he testified that of the eight cases instituted by the Commission on its own motion, only two were instituted prior to January 1, 1930. That is correct, isn't it?

A. Yes, sir, that is correct.

Q. Now these two, were you on the Commission when City Gas Company case was taken up?

A. I think not.

Q. You were, however, on the Commission when the Clarks Ferry Bridge case was before it?

A. Yes sir, that is still before the Commission. That case was carried to the Superior Court and terminated. A case that is heard—there is another case now pending before the Commission.

Q. Not however on the Commission's own motion?

A. Yes sir on the Commission's own motion. There is another case now pending in which I have heard the testimony, and which was closed about two or three week ago. That should be added to this.

Q. Now as a result of this investigation by the Committee hearings were held I believe?

A. Yes sir.

Q. Commissioner Young heard these hearings, did he not?

A. He heard one of them. Commissioner Benn heard the other.

Q. And Commissioner Young closed that hearing on August 26, 1930, did he not?

A. That may be the date, I don't remember that.

Q. Well as a result of that the company filed a new tariff November 1, 1930, which was effective November 1, 1930?

A. It did.

Q. And the company claimed the estimated reduction in revenue from that act of three quarters of a million dollars?

A. Yes sir.

Q. Mr. Young testified that no steps had been taken by the Commission to check the cuts as then made to see whether or not they would probably reduce the revenue by \$750,000.

A. My impression on that is that the commissioner was just slightly mistaken. My recollection is that after the cut of \$750,000 was made we waited until the time had elapsed

in which complaints might be filed. Every one seemed to be satisfied, and if I might add, the newspapers through that neighborhood were very laudatory and expressed themselves as being satisfied, and after that time elapsed, I think I am right, the Commission instructed the Accounting Bureau to examine into it and see what effect that cut had on the rates.

Q. I don't want to suggest your recollection is not correct, Commissioner Brown, but both Commissioner Young and Mr. Margol said no such steps had been taken?

A. I may be wrong about it, but I certainly have that recollection, and I know in that case that the matters on the minutes will show that there was an understanding that if the rates were not satisfactory we would proceed further.

Q. That would be obviously true at any time. The Commission could always start a new case on its own motion?

A. There might be a period of repose there.

Q. Do you think there is a period of repose in the actions of the Commission?

A. I think it is doubtful.

Q. Do you say that in your opinion the Commission cannot change rates until after three years elapse?

A. My opinion is that the period of repose exists.

Q. And the Commission cannot order a change of rates within a period of three years after a rate has been established?

A. I think so.

Q. If that is the law, don't you think it should be changed?

A. I do.

MR. COOKE: Mr. Evans, don't you think it would be well to ask Commissioner Brown where he gets that impression from.

THE WITNESS: The Public Service fixes that.

BY MR. TURNER:

Q. Mr. Brown, if you think that three years is too long a period, what do you think it should be?

A. If I am right I think there should be no period of repose as far as the Commission is concerned. But they should have the right to proceed at any time to inquire into rates.

Q. That might open a very serious question, don't you think?

A. In what way?

Q. It might make the Commission too much of an inquisitorial body?

A. It is just a matter of opinion. Mr. Evans thinks we have the power to proceed under the law as it now stands. I don't agree with him.

Q. Rates could not be juggled up and down?

A. I think not.

MR. EVANS: Mr. Brown, I want to correct something. I did not express an opinion but rather ask of you a question.

BY MR. RHODES:

Q. Mr. Brown, you think that ought to be at the discretion of the Commission?

A. I think so. In the Scranton Gas case they reduced their rates \$750,000. So far as we know everybody seems to be satisfied, but if upon an examination of the entire records by our Accounting Bureau it was disclosed these rates are not reduced enough, we ought to have the power to go out and make them reduce them to a proper rate, and if there is a question of law, which I think there is, that period of repose would prevent us doing that. I think that law should be amended.

BY MR. TURNER:

Q. Would it not take, Br. Brown, a period of experience on the part of the company to tell what was going to be the effect of the new rate schedule?

A. Suppose it would, yes, and it would take some time for the Commission to determine that also, but it ought not to take three years.

Q. I appreciate that. In other words, when they ask for a reduction of \$750,000, a new rate has to be filed?

A. Yes sir.

Q. Then it would take a period of experience to tell whether the rates as filed would bring about a reduction of \$750,000?

A. Exactly. But we didn't ask for the reduction. They set the figure themselves. I think it is for us to determine

whether or not that reduction is sufficient to bring it down to a legal rate, and also whether the rate filed has reduced it to \$750,000.

BY MR. RHODES:

Q. You stated a moment ago you took testimony most of the time in Harrisburg?

A. Yes sir, outside of the time devoted to argument in executive session.

Q. Does that apply to the other Commissioners also?

A. The others go to different parts of the State, some go to Pittsburgh, some to Philadelphia to hold hearings there, and I will say this, Harrisburg being the home of the Commission the volume of the business is heard here.

Q. Is it not possible that too much time is devoted by the Commissioners to taking testimony?

A. If you would sit in these cases you would think that is true, but you cannot cut the litigants off. They have to have their day, and they have to develop their case mostly in their own way. We are not like a court, we cannot confine a witness to the rules of evidence very strictly.

Q. You employ a number of examiners, do you not?

A. We have one in Philadelphia, one in Pittsburgh, and one in Harrisburg, and in addition to that in case of a rush of business, if the business gets too heavy, some of our legal department are authorized to act as examiners. But when they do that they are taken from their other duties.

Q. When a Commissioner takes testimony, is that testimony reviewed by all of the other Commissioners before any action is taken?

A. When a Commissioner hears a case, he reports his conclusions from the evidence he has heard, to the Commission, and the whole matter is discussed by the entire Commission before any action is taken.

BY MR. RHODES:

Q. Every case is taken up in that way?

A. Every case, no case is ever sent out on the individual judgment of one Commissioner, the case is always decided on the action of the entire Commission.

Q. In other words then, no one Commissioner dominates the Board?

(No answer).

BY MR. TURNER:

Q. Do you have stated periods of meetings?

A. Yes, sir.

Q. How often are they?

A. You mean our executive sessions?

Q. Yes.

A. Every week.

Q. How long are you in session?

A. I can tell you better by describing our procedure, if I do not take too much time. We meet at half past one in executive session on Monday to dispose of just things that are emergency matters, that must have immediate attention. Then at 2 o'clock we go into argument, that generally consumed the greater part of the afternoon, nearly always the whole afternoon. As soon as we finish argument, no matter what time it is, we go back to our Executive Chamber and discuss the cases that were argued. That takes up many times until away after 6 o'clock in the afternoon. Then on Tuesday we go into Executive Session and are generally in Executive Session the best part of the day. Every week that happens.

BY MR. EVANS:

Mr. Commissioner, as a matter of fact, the recommendation of the sitting Commissioner is practically always adopted with perhaps some modifications by the Commission, is it not in regard to the decision of the case?

A. Generally.

Q. Can you tell of any case where it was not?

A. Yes, I had a case last week where I made a recommendation where it was turned down.

Q. Prior to 1931, we will say, we do not consider the present situation as normal.

A. I know there have been cases, I can't just recall the names of them.

Q. I think the Commission has been asked to submit a list of them, so we will have that later. Turning back to this question of the three year period of repose, the only provision

I know of in the Act in regard to that is contained in Article II, Section 1, Clause F, which provides: "It shall be the duty of every public service company \* \* \* to make no change in any tariff or schedule which shall have been filed or published or posted by any public service company in compliance with the preceding section. \* \* \* Provided further, that no rate, practice or classification which shall have been determined by the Commission shall be changed or discontinued by the public service company, directly or through any change in classification, rules, regulations, contracts, or practices within a period of three years after such determination without application to and the approval of the Commission, of which application thirty days prior notice shall be given in the said tariff or schedules to the public."

A. Yes.

Q. Do you know of any other provision?

A. No, I know of no other.

Q. Do you still think that the Commission has no power on its own initiative?

A. I say in my own mind it is very questionable.

Q. Now Mr. Commissioner, did not the Commission in the case of the Philadelphia Rapid Transit Company authorize on the company's application an increase of fares within three years after the fares had been determined by the Commission?

A. Well, Mr. Evans, that was before my time on the Commission.

Q. I ask you whether you did not know that they did it?

A. No, I know there was an increase there, but I never went into the proceeding.

Q. Will you point out to me, or the Committee, any language which limits the duty of the Rate Commission?

A. You have read it, I have my own opinion on it, apparently from your questioning you do not agree with me and it will do not good to get into a legal discussion on it.

Q. You know of no other provision in the law on which you rely?

A. No, sir.

Q. Turning back to the Scranton Electric situation, the Bureau of Accounts and Statistics furnished to the Commission a report on electric rates, which has been introduced before the Committee as Exhibit 10, showing, among other companies, the Scranton Electric Company, and showing that that company in the year 1929 had an operating income of \$3,911,538, which amounted to a return of 13.67 per cent. on the tentative rate base of \$28,604,523, that is correct, is it?

A. That is what is shown there, yes, sir.

Q. In your opinion, under those circumstances, was a cut in rates of \$750,000 by that company an adequate reduction in rates, even assuming that its claim is correct, that that amount will be shown by the reduced rates?

A. I don't think it is adequate under those figures, but I don't think those figures are—

Q. What other figures have you to base your judgment on?

A. To make a final judgment you would have to have an appraisal.

Q. I am not asking you about a final judgment, I am asking about a tentative judgment?

A. Oh well, we had no other figures to base our judgment on.

Q. Let us look what this means, Mr. Commissioner: Suppose we take a operating income of \$3,911,538 and subtract from it \$750,000, you still have an operating income, or an income available for return of \$3,161,538, do we not?

A. Yes, sir, as a matter of calculation I suppose that is correct.

Q. \$3,161,000 on a rate basis of \$28,600,000 still shows a return of 11%, does it not?

A. That is a matter of calculation.

Q. You can accept my calculation unless you care to check?

A. No, I will accept your calculation.

Q. You still have, allowing the Scranton Electric Company on its own claims a return of 11% on the tentative rate basis found by the Bureau of Accounts, is that all the Commission could reasonably have required of the Company?

A. No, I don't think so, but as I explained to you when you first called me, my impression is, which you say Mr. Morgal and Mr. Young do not agree with, my impression is

that we were to proceed farther and find out what the effect of this reduction was on the rates, and I certainly think we ought to do it.

Q. Now, Mr. Commissioner, you are accepting the company's own claim that the reduction will result on a reduced revenue by three quarters of a million dollars?

A. Yes.

Q. You certainly don't think that the Company has underestimated the reduction in its revenue, do you?

A. I would not suppose so, no.

Q. You are accepting then the company's own estimate and still that will show a return of 11% on their tentative rate basis?

A. Yes, I understand that.

Q. Do you think that is satisfactory from the stand point of the Commission?

A. No, I told you twice, Mr. Evans, I don't think so, and I think that all appeared in our Accounting Bureau examination, and if it shows too high a return, something else ought to be done.

Q. Mr. Commissioner, we are taking the company's own claim, and taking it at its face value, and still there is 11% return.

A. I don't believe I can make myself any clearer. I will repeat that I don't think we ought to take it as final.

Q. Then you don't think the record ought to have been closed?

A. I don't think we ought to rest on it there.

Q. Do you think the record ought to have been closed in the case?

A. Well, I don't think the procedure makes much difference.

Q. Has the Commission taken any action to institute a new rate case against the Scranton Electric Company?

A. No sir, and in my judgment we ought to first find out what the effect of this reduction is on the rate.

Q. Let us just look at this and see what it means on the company's own claims—

A. I understand it shows a return of 11%.

Q. Yes. That is, 11% over the allowed return?

A. Yes, and if we find that the figures ought to be corrected, they ought to be corrected as I said, by the Commission.

Q. But when the company itself claims that, and you grant the company its claim, don't you think the Commission is entitled to go ahead and demand a further reduction?

A. I don't know what you mean by "grant the company its claim."

Q. If this new rate schedule will reduce its rate schedule by three-quarters of a million dollars?

A. I don't think there is any doubt about that, by reducing their rate \$750,000 will reduce them that much, won't it?

Q. Suppose that is true, that the company's revenue will be reduced by \$750,000, as they claim, is it not still true that the company is earning apparently an excessive return on its rate base?

A. Yes, according to these figures they are earning too much, and as I said to you before, and I will repeat, I think that we ought to examine into it; I don't think we ought to rest on this book cost, but make an examination. There is an appraisal on file here which was made several years ago, and we ought to find out whether their new tariff as filed reduces their rate \$750,000 and brings them within the legal return. Now, if you will let me see those minutes—I gave Dr. Snow my copy—will you let me see those minutes?

Q. Yes, surely. (Handing copy of Electric Rate Committee minutes to Commissioner Brown.)

THE WITNESS: Now, on September 30 the minutes show that, "Counsel Weiss advised the Committee that the Scranton Electric Company has filed a new tariff, and in connection therewith had also filed a supplemental answer to the complaint of the Commission. The matter was discussed generally by the Committee and Mr. Weiss was instructed to submit to the Bureau of Accounts and Statistics and the Engineering Bureau the supplemental answer filed, with instruction to study the same and be prepared to advise the Committee as to the effect of the new rates and the accounting features involved in the answer of the respondent company at a future meeting."

Q. When was the record marked closed?

A. On November 25th. "It appearing from the records in the above stated case that since the filing of the inquiry and investigation by the Commission, and the hearings had thereon,

the respondent filed a new tariff, being P. S. C. No. 9, becoming effective November 1, 1930, making reductions in estimated revenue of approximately \$750,000 and it further appearing that this tariff met with apparent public approval and that no protests and complaints have been filed against the tariff, and that the objections lodged against the old tariff have been met and satisfied. The Electric Rate Committee recommends that the inquiry and investigation instituted by the Commission at the above number be terminated and the record marked closed. The Commission may subsequently institute a new inquiry if the reports of the company show that the new tariff will produce more than a fair rate of return or will result in any other features inequitable to the rate payers."

Q. I appreciate that, Mr. Commissioner, but what I am asking you is whether on the basis of the company's own claim as to what this rate reduction amounts to, and showing that they would still be earning 11%, you don't feel that it was incumbent on the Commission to press the matter any further for a further reduction of rates.

A. Well, I have tried, Mr. Evans, to answer that as clearly as I can. I say that I think after all the accounting bureau has examined this, and has informed us that the company—or what the effect of this reduction will be upon the company, taking into consideration the proper figures, not the book value—

Q. They have already given us that.

A. If it still shows an improper return, I say emphatically that it is our duty to proceed.

Q. Now, what do you mean, Mr. Commissioner, by examination, to see whether the cut is accurately produced—you mean, wait for the annual reports of the company?

A. The annual report will be filed in ten days from now.

Q. Yes.

A. And I think that is one of the things to be examined.

Q. And you think the annual report for the year 1929 which shows the ten months under the old rates, and two months under the new will show what the reductions amounts to.

A. It will help. I am not an accountant, Mr. Evans, they know what to examine.

Q. You think that then the bureau will be prepared to advise you as to whether or not the company claim was substantiated?

A. I certainly think that after they have this annual report, which is filed, and other evidence which they have access to, they will be prepared to advise us.

Q. Now, Mr. Brown, suppose we assume there is an excess of 4% being allowed to the company, if you capitalize that excessive excess it means that you will get a rate basis of \$16,000,000.00 over the book value claimed by the companies, does it not?—You will take my figures for that?

A. I will take your figures.

MR. TURNER: Don't you mean \$16,000,000.00 over the capitalization shown by the company.

MR. EVANS: I mean over the tentative rate base shown by the company's books.

MR. TURNER: \$16,000,000 over that.

MR. EVANS: In order to have the reduced revenue of this company on its own claims, not to exceed 7%, Mr. Turner, it will be necessary that in addition to the \$28,600,000 of book value there, \$16,000,000 will have to be added.

MR. TURNER: Yes, that is right. I was thinking it was \$10,000,000 instead of \$28,000,000.

THE WITNESS: That is right.

BY MR. EVANS:

Q. You are aware, Mr. Brown, that in that \$28,000,000 the company itself has admitted there is about \$5,000,00 of right-ups?

A. I have so heard, yes.

Q. So that if you take that off it means that its actual book value would only be \$25,600,000 and in order to get up to \$44,000,000, to get the return to be local, you have to add \$21,000,000 to the book value in order to get a fair value that would justify these rates?

A. Well, if your figures are correct that is so.

Q. Are you familiar with the Clarion River situation, Mr. Commissioner?

A. I cannot say that I am very familiar with it; I know that in a general way. That was before I was a member of the Commission.

Q. That company has been before the Commission all during the time you have been a member of it, has it not?

A. Not to my knowledge.

Q. Certainly the Clarion River Company has been one of the companies subject to your control?

A. Well, that is the only way it has been before the Commission so far as my knowledge goes.

Q. And you are familiar, are you not, that the reports of the Bureau of Accounts, together with those of the Federal Trade Commission in your files, show that a very large amount of securities of that company have been issued fictitiously?

A. I have seen that stated, yes, sir.

Q. What has been your conception of the duty of the Commission under the Public Service Company Law when it has reason to think that utility securities have been issued fictitiously?

A. Well, the only proceeding, in my judgment, that we could take would be to certify it to the Attorney General's office.

Q. Have you ever done that?

A. No, sir, not that I know of.

Q. In other words, then, the one thing that the Commission could do with regard to fictitious securities, it has not done during the entire time you have been a member of it?

A. It has not.

Q. Have you ever urged the Commission to do it?

A. I haven't.

Q. Do you think the Commission should do it?

A. Well, I think that possibly they should, if it is brought to their attention; but the securities are out and issued and in the hands of the public, and over that we have no control.

Q. They would not get out so fast, would they, Mr. Brown, if the Commission did exercise what control it has had?

A. I don't know that.

Q. What is your opinion?

A. Well, I don't think my opinion is very important on that subject just at this time.

Q. Well, isn't it obvious, Mr. Commissioner, that if companies knew that when they issued fictitious securities, made fictitious increases in their securities, that they were likely to be certified by the Public Service Commission to the Attorney General, that they would be very much more careful about doing it?

A. It might have that effect, yes, sir.

Q. Wouldn't it obviously have it, Mr. Brown?

A. Well, I think that the probability is it would have that effect.

Q. Of course it would.

A. Well, I—if you want my opinion there, Mr. Evans, all right; I say I think it probably would, but I again repeat that they issued these securities and we have absolutely no control over the issuance of them.

Q. Before they are issued?

A. Yes.

Q. But you do afterwards?

A. Afterwards we can do just as I say, if we have reason.

Q. And what I am inquiring about is whether you have ever exercised the power that you have?

A. And I said I know of no case where we have.

Q. Do you agree with the opinion expressed yesterday by Commissioner Young that the Public Service Commission has been remiss in some of these matters?

A. Well, I don't want to just agree with that. I would like to know in what he thinks we are amiss.

Q. Well, suppose we ask you specifically?

A. Yes, sir, I wish you would.

Q. In not instituting complaints on its own motion in rate cases, where it appears from the Commission's records that companies are earning an excessive return, or maybe earning such a return?

A. No, I won't say that under the present state of affairs the Commission is lax in that. I think they ought to do it, but I don't think they can do it as we are now constituted.

Q. Well, Mr. Commissioner, in 1930 you have been doing some of it?

A. Yes.

Q. Has the press of work in 1930 in other matters been less than it was in preceding years?

A. No, I don't think it was.

Q. Then it was perfectly possible in 1929 to do it, wasn't it?

A. Yes.

Q. Or in 1928?

A. Yes, or in 1925, Mr. Evans.

Q. Well, in 1925, I may say that we fully planned to institute a full inquiry into electric rates in the State of Pennsylvania and into the Clarion River situation.

A. Yes, well, it wasn't done.

MR. EVANS: It wasn't done because, fortunately or unfortunately, there was a change in the personnel of the Commission.

BY FATHER COX:

Q. It would not have required much time or attention to have found more than eight cases in five years that it was necessary for you to initiate proceedings on.

A. Well, if you just let me explain a little,—the rate cases are a very, very small part of the Commission's work. We have instituted,—there is a list of what we have instituted on our own motion, and there are not eight cases, but there are dozens of them. Service cases. The very first case that I took part in after I came on the Commission was up at New Milford, a small village where an epidemic of typhoid fever had broken out, and 77 deaths were reported, and they couldn't get the company to move. The Health Department took it up and came to the conclusion, as they expressed it, they didn't have the teeth in their law, and they came down and asked us what to do, and within three weeks we had that company at a hearing and had the whole situation corrected, in a very short time, on our own motion. That is one illustration. Service cases. Getting after our orders to see that they are promptly obeyed, on our own motion. The bus situation all over the state, where, on our own motion, we have proceeded against dozens of violators. The rate cases are not the only thing we have to look after.

BY MR. EVANS:

Q. Aren't nearly all of these cases that you speak of cases where you have gone against the little fellows and not the big fellows?

A. No, I don't think so.

Q. The Milford situation was a little company, wasn't it?

A. It was a little company, but the situation was desperate.

Q. Yes, I appreciate that, but that was not held by any of the big holding companies, was it?

A. Oh, no.

Q. And you cannot point to any cases where, prior to 1930, the Commission on its own motion acted against any utility, in rates or service matters, where that utility was controlled by one of the big holding companies?

MR. TURNER: Mr. Evans, don't you think we are going back over a lot of testimony that we had all day yesterday, and it is all in the report?

MR. EVANS: Well, Mr. Commissioner Brown has just taken up this matter, and I think it would be interesting to know what cases he is referring to.

THE WITNESS: I gave that in reply to a question that in five years we had instituted eight cases.

MR. EVANS: Rate cases.

THE WITNESS: No, it wasn't said, it wasn't confined to rate cases. The question from the committee was in five years you have instituted eight cases.

FATHER COX: We are speaking of the cases that were presented here yesterday, as having been initiated by your Commission. What the cases were they knew here yesterday. It was a question of excessive earnings that should have been investigated. Now, you certainly could, in spite of all your other work, you could certainly find more than eight cases in five years, if you had just looked around a little bit. An office boy could have done that.

THE WITNESS: That may be your opinion, sir.

FATHER COX: Well, you try to claim now that we don't give you credit for enough work. I think we do.

THE WITNESS: I am not asking for credit. I am simply stating the facts, what we do.

BY MR. EVANS:

Q. Mr. Commissioner, may I ask you whether in your opinion the Commission has been remiss in any way in not exercising the control it has over the securities of utilities, in certifying fictitious increases to the Attorney General.

A. I think that could have been done, Mr. Evans. I think that could have been done.

Q. And should have been done, should it?

A. And should have been done, yes.

BY MR. MOORE:

Q. The last year the Commission has been short-handed. Has it not?

A. Very.

Q. And you have had practically only five men active?

A. Yes, sir.

BY MR. RHODES:

Q. It is also true, Mr. Brown, that the commission is burdened with a great deal of detail in small cases that take up a major portion of your time?

A. Oh, a very great deal, a very great deal. Just as an illustration.—

Q. And isn't there some doubt as to whether it would be advisable for the Commission to become an inquisitorial body with power to delve into all things?

A. You say isn't it a question whether it isn't advisable?

Q. Yes.

A. Yes, I think there is a very great question. This week we had a bus case to try, which we didn't think was going to be long or important. It took from nine-thirty till six-thirty in the evening, and they demand another hearing in Pittsburgh, and then will return to Harrisburg for a third hearing. That is what consumes time.

Q. Don't you think a lot of these objections could be taken care of by changing the law?

A. Yes, sir, I do.

Q. And don't you think it would be advisable to provide that the rates shall not be effective until after they are approved by the commission?

A. I have always been of the opinion that that ought to be the law.

Q. Wouldn't that eliminate a lot of these objections?

A. I think that the law ought to be amended to give the Commission power to suspend rates, just as far as they can go without being unconstitutional. You can not do it indefinitely, because that would confiscate property. But just as far as you can go, I think the Commission ought to have power to suspend the rates until they are passed upon and decided to be reasonable or unreasonable. I have always felt that.

BY MR. EVANS:

Q. Mr. Commissioner, in regard to the personnel and the adequacy of the personnel of the staff of the Commission, I think I can fully appreciate the handicaps under which you have been acting with at least two members of the Commission in poor health and the burden that has been placed upon the other members of the Commission. It is true, however, is it not, that since December 31, 1926, the personnel of the various bureaus has been very materially increased?

A. Since December 31, 1926?

Q. Yes.

A. Well some time prior to that time the personnel of the bureaus had been very much cut down and the efficiency of the Commission was reduced. Some time after that we gradually worked back to what we formerly had.

BY MR. TURNER:

Q. Have you any knowledge, Commissioner Brown, of the appropriations in 1925 and 1927?

A. Only in a general way.

BY MR. EVANS:

Q. Mr. Brown, just let me call your attention to the report which the Commission has submitted to the Committee in response to our request, giving a classified list of the employes of the Commission, which shows that in the Secretarial Office there were forty-two employes on January 1, 1926.

Forty employes on December 31, 1926.

Forty-six employes on December 31, 1930.

In the Law Bureau there were:

Seven employes on January 1, 1926.

Five employes on December 31, 1926.

Eight employes on December 31, 1930.

In the case of the bureau of Public Convenience there were:

Twelve employes on January 1, 1926.

Fifteen employes on December 31, 1926.

Thirty employes on December 31, 1930.

A. I will agree with you Mr. Evans, those figures are correct.

Q. In the Bureau of Accidents, I think, we can eliminate that, as it only has an increase of from five to six and that is minor portion of your duties?

A. Yes sir.

Q. The Bureau of Rates and Tariffs has been increased seven to eight.

There were seven employes on the first of January, 1926.

Eight employes on the thirty-first of December, 1926.

Fourteen employes on the thirty-first of December, 1930.

The Bureau of Engineering, the employes have increased from:

Twenty-two employes on the first of January, 1926.

Thirty employes on the thirty-first of December, 1926.

Thirty-two employes on the thirty-first of December, 1930.

And in the Bureau on Accounts and Statistics there have been:

Seventeen employes on the first of January, 1926.

Eighteen employes on the thirty-first of December, 1926.

Twenty-eight employes on the thirty-first of December, 1930.

Q. Has there been a corresponding increase in the work done by the Commission?

A. I think unquestionably.

Q. Can you submit any data that will show that to this Committee?

A. I cannot at this moment, but the data can be submitted readily.

Q. It is a matter of fact that the consolidation of companies reduced the number of reports made to the Commission and it in many ways reduced the volume of work?

A. It may have in that particular branch, but as a general thing the volume of business before the Commission has been increased.

Q. It is also true that whereas certificates of public convenience for taxicabs, and so forth, used to have a two year limitation, necessitating their renewal every two years, now they run for five years?

A. They run for different periods, they are not always for five years.

Q. The period generally has been extended?

A. Yes sir.

Q. That again has reduced the work?

A. It has reduced the volume of that particular work.

Q. Then where has been the increase?

A. The number of cases that come before the Commission to be heard.

Q. There are more contests before the Commission?

A. Yes sir, and all of these things go to the bureaus.

BY MR. TURNER:

Q. The Act of 1929 also put the question of aeronautics in the hands of the Commission?

A. To a limited degree, yes.

BY MR. EVANS:

Q. Does that involve a great volume of work?

A. No, not at the present time.

BY FATHER COX:

Q. Don't you think that this increase in your work is due to the fact that you are not allowing or will not grant certificates of public convenience except to combinations of interests throughout the State? There are some who think that they have a right and will fight a long time, but they are not allowed the certificate after all because the corporations are against it?

A. That is not true. As a matter of fact, the independent operators in this State would say would number ten or twenty to one to any subsidiaries of any corporations, and in every case so far as my knowledge goes in which a certificate has been granted to a subsidiary of a railroad or of a bus line or anything of that kind, the independent operators have been protected in all their rights by an insertion in these certificates.

Q. We were talking about the cities. Why did you refuse a certificate of convenience to another taxicab company in the city of Pittsburgh? Possibly you do not care to answer that here. But I will answer it, because you have opposition from the Parmalee Company, we know that definitely?

A. I do not know that definitely. I didn't sit on the case, but I know we were guided very largely in that case by the

protests which came from the city of Pittsburgh itself. The officials of the city of Pittsburgh came before the Commission and protested vehemently against it.

Q. You don't listen to the people but rather listen to the officials who sometimes are in the employe of the corporations?

A. No sir.

Q. You had information on the other side?

A. Yes sir, we had information from both sides, but the officials of the city came before the Commission and laid before us the traffic conditions there. They laid before the Commission what facilities they already had there and protested strenuously against the Commission granting another certificate.

BY MR. EVANS:

Q. Mr. Commissioner, do members of the Commission specialize in any particular branches of the work of the Commission?

A. I would not say they do.

Q. In other words, Commissioner Young is chairman of the Electric Rate Committee, and you sit and do the bulk of the work here in Harrisburg and he does the bulk of the work of the electric rate committee, that is rather an exception in that regard?

A. That is rather an exceptional case. That committee was appointed and as I tried to explain to you a moment ago, after the executive hearings are over, I go right into the hearings of complaint. Commissioner Young can stay here perhaps a day and he has undertaken that work and has taken on that burden.

Q. Nevertheless the Commission does divide its work? Commissioner Benn hears the cases in Philadelphia with the assistance of Examiner Wolf and Commissioner Shelby hears the cases arising in his general territory along with Commissioner Young and Commissioner Walker?

A. That is correct.

Q. And you hold the hearings in Harrisburg and when any are to be held in Lancaster I suppose you hold them?

A. That is correct, although I have never had but one hearing in Lancaster. We endeavor as much as possible to list the cases for the convenience of the litigants, so they can get to the most convenient point.

Q. Incidentally, you did hear the Scranton-Spring Brook Water Company case along with Commissioner Young?

A. Yes sir, I did.

FATHER COX: I can say this: A certain man whose name I can give you if you wish it, connected with the Parmelee Transportation Company, said that never in the history of the city would another company get a certificate of convenience, and he told that with a feeling behind it that indicated that it came from the Commission; and his name was Vice-President Higgins.

MR. BROWN: I can only say about that, speaking for myself, that I have never been approached or talked to, or ever said a word to anybody from Pittsburgh about applications for another certificate. As far as I am concerned if another one was presented it would receive the same consideration any other application would receive depending upon the convenience and the necessity of the public.

BY MR. EVANS:

Q. Mr. Commissioner, I think some member of the Committee earlier in the hearing asked you whether each member of the Commission reviewed the record of each case decided by the Commission and your reply was that the sitting Commissioner made his recommendation to the Commission and that the entire Commission acted on it.

A. Yes, sir.

Q. But it would obviously, would it not, be impossible in every case for every member of the Commission to read the entire record?

A. Oh yes, that could not be done. The recommendation made by the sitting Commissioner and his reason given for it and the sitting Commissioner explains to the Commission what appears in the record and why he came to the conclusion he did and from his explanation the entire Commission discusses it and, as I said before, there are frequent disagreements, but that is the procedure.

Q. Do you know of any cases where such recommendation by the sitting Commissioner was made and other members of

the Commission disagreed with the recommendation of the sitting Commissioner, and he resented it?

A. I have never known of such a case. I think every member of the Commission feels that it is his privilege to disagree and I have never known it to be resented by a sitting Commissioner.

Q. Were you a member of the Commission when the Yellow Cab Company was sold to the Philadelphia Rapid Transit Company?

A. I don't know when that was, but I rather think I was a member.

Q. You don't remember any question there being raised as to the propriety of a Commissioner dissenting from the views and recommendations of the sitting Commissioner?

A. I can't recall that, Mr. Evans.

Q. You don't recall the incident at all

A. No, I don't recall the incident at all.

Q. Perhaps you were not a member of the Commission then?

A. I was going to say it must have been before I was a member.

FATHER COX: Is the Philadelphia Rapid Transit Company in any way connected with the Parmelee Company so far as you know?

A. No, sir, I don't know anything about it.

BY MR. COOKE:

Q. I would like to ask the Commissioner, to get it clear in my mind, in the list of actions which the Committee took on its own initiative, submitted yesterday, it showed that for the four years prior to 1930 rate cases had been initiated at the rate of about half a case a year; now you had before you, of course, a good many cases, but after all relatively few raised on complaint, now what procedure, what protection, if any, is there for a rate payer there? He is not represented there by the half case a year which you start on your own initiative and complaint that may be lodged, what provision have you for safeguarding those people who simply take it lying down?

A. I know of no procedure, except a complaint be made by the people, but you say they take it lying down—that implies they do not make a complaint.

Q. Yes.

A. The only other protection that I know of that they have is in some way to have the commission's attention called to it and have them proceed on their own motion.

Q. It would be a fair statement, if you add together the complaints, you would have half a case a year that you started on your own initiative, it is a fair statement that 95 per cent. of the rate payers of the State, under existing conditions, have absolutely nothing standing between them and what the various companies decide to do?

A. Well, they have standing between them at any time their right to make a complaint.

Q. But if they do not—lots of us, you know, do not like to make complaints, we are peaceful.

A. Then there is nothing that I know of.

Q. The impression I have always had was that that is what we created the Public Service Commission to do, to stand between the community and the company to see that they both get a square deal and it was developed here it would appear that 95 per cent., which is a very conservative estimate, 95 per cent. of the rates that are paid are paid simply because they are charged by the company; you know of nothing that goes on now except the few cases that you start and those that are raised by complaint?

A. No, sir; I know of nothing else.

Q. I notice on this list of matters that you took up on your own initiative the wiping out of General Order No. 27, covering rural electrification and the inauguration of General Order No. 28, that occurred about a month after, that would be in the latter part of January, 1927—you were on the Commission at that time?

A. I came on the Commission, yes, shortly before that.

Q. That was the first month after the last administration went out, when 27 was abrogated and 28 started. What was the underlying fact there, what improvement in rural electrification service given to the farmers of the State did that bring about?

A. Mr. Cooke, I wish I could explain that to you but I will not attempt to, that was all done, ready for action before I became a member of the Commission.

Q. You had been a member of the Commission for a month...

A. I know, but it had all been attended to, conferences had and everything before I was a member.

Q. You realize that one of the effects of the new order is that the rate payer pays at the rate of 24 per cent. a year for the cost of the line and the company in each instance being allowed to state what the cost of the line was?

A. Yes, I realize that.

Q. But you had nothing to do with it?

A. Nothing.

Q. Now another matter that is always interesting me is the infrequency of dissenting opinions in the Pennsylvania Commission, it is almost unique among the Commissions in the large states, how do you account for that? You have in 17 years as many dissenting opinions as they have in New York State, for instance, in a year, or California in a year.

A. The only way I can account for that is that after a thorough discussion of the matter they come to an agreement.

Q. A band of brothers?

A. No. I don't know what that implies, I don't know what you mean by that.

Q. I mean reach a happy concord.

A. We certainly do reach a conclusion after a thorough discussion and consideration of the matters before us.

Q. You are conscious of the fact that in the 17 years there have only been about three dissenting opinions?

A. No, I never looked it up. I know since I have been a member of the Commission I can only recall two.

Q. Will you tell me those two?

A. One was in the chemical lime case. I think the Bellefonte Central Railroad—I don't recall the other.

Q. Were they important enough to be published in the Commission's report?

A. Yes.

Q. I am glad to know that, because I have been making the statement over and over again there have only been three, there must have been five, because the three I have been referring to were not either of those cases.

Now one question more: Has the Commission made any rules with regard to the charges of holding companies against operating companies?

A. Not that I know of, no, sir.

BY MR. COOKE:

Q. You know that they do make charges that from the standpoint of the layman have no relation to cost?

A. Yes, I know that.

Q. And it has been called to your attention that frequently these charges of the holding company have no relation to the cost of the service?

A. Yes.

Q. Do you know that one or two of the larger holding companies of the country are reported, of their own volition, to have adopted a rule only to charge cost, demonstrated cost, against the operating companies?

A. No, I don't know that.

Q. That might be a good rule for our Commission to adopt?

A. It might, yes.

Q. Do you know that one company, holding company, operating in the state of Pennsylvania, or a large part of it, charges against it advertising that is carried on in other states?

A. I don't know that.

Q. Now, you made the statement that you get 3,500 reports in a year. I wonder whether that is illuminating, that statement, as you made it, is illuminating, and isn't it a fact that a great majority of those are railroad tariffs?

A. No, my understanding is that there are about 3,500 utilities that file annual reports in a year.

Q. Many of those are very very minor, are they not, that is, their tariffs?

A. Well, I suppose there are a good many that are not so large.

Q. So that if you segregated several hundred, let us say, you probably would get 95% of the business?

A. That might be true. I don't know that; I cannot state that.

Q. Well, that is just an approximation?

A. Yes.

Q. That it might be possible to do what the income tax people do, pick out a certain number of them every year,

and without attempting to go over them all every year, pick a few every year and put the rest on notice that it might be their turn next year?

A. That would be possible.

MR. COOKE: That is all.

BY MR. MOORE:

Q. Mr. Brown, I realize, of course, that you have a lot of individual complaints, some of some value and a great many of them of no value: Would you tell us briefly what the procedure in reply to those individual complaints is?

A. You mean complaints that come in—

MR. TURNER: By letter, I presume; someone writes a letter in to the Commission?

MR. MOORE: Yes, by letter.

THE WITNESS: Well, the procedure is for the secretary to reply and acknowledge receipt and ask for further information, and if the information is given us, that we think we ought to send our Bureaus out to investigate, we do so. In many cases we send them out to investigate the complaints and try to rectify them.

Q. That was my understanding?

A. Yes.

Q. But I frequently heard the statement made that they ignore the letters, or simply answer on a form letter, and I wanted you to state officially that that was not true.

A. We sent out men from our Bureaus very very frequently to investigate these informal complaints.

THE CHAIRMAN: I thought that was true.

MR. TURNER: I don't believe in the members of the Committee testifying here, without being sworn at least, but I think I can say from my experience that I have sent in letters of that kind, and quite recently, in regard to a grade crossing matter, and I got a reply from the Commission very quickly and I got some action.

MR. CRAWFORD: My experience has been that those matters were handled very well. I think that is where a great deal of the trouble is, the Commission's time is taken up with these individual small matters, and the larger ones are not gotten to. I know that complaints have been put in against certain companies that have taken the Commission's attention, and that have been reported back to the company with the request for a report, and the matter has been handled very nicely in all cases.

MR. MOORE: My reason for asking that question was because that has been my experience, and I wanted him to say so officially.

BY MR. RHODES:

Q. Mr. Brown, in certain quarters the impression has grown up that the Public Service Commission is the cats paw of the utilities. Now, of course, we are all interested, and I think you are, especially in having the confidence of the public.

A. Absolutely, yes.

Q. Do you have any suggestions to make to this Committee as to how the confidence of the public can be restored in the Commission in case it has been lost, I am not saying it has been lost.

A. Well, that is rather a big subject, but I think one of the important things is if we had the money to have a publicity bureau, let the public know what we are doing, I think that in every case that comes before us the public is entitled to know what has been done and what we are doing. I think that ninety out of one hundred people in this State don't know what the Public Service Commission is and what they are doing, and if we had the publicity to show the people what we are doing, if we would go before the people and tell them that in the course of sixteen years, that this Commission has existed that about \$200,000,000.00, under the direct order of the Commission, has been spent by the railroads for the elimination of railroad crossings, protecting the lives and property of the people, I think that is one of the things that would help to get the confidence of the people, if it has been lost.

BY MR. TURNER:

Q. Why cannot you have that publicity, all the other departments on the Hill have it?

A. We have never had a man for that work, and I don't know why.

BY MR. RHODES:

Q. Have you any suggestions to give us to the modification of the Act of 1915, to improve the functioning of the Commission?

A. Well, as I said a few minutes ago, I think we ought to have the power to suspend rates, and I think we ought to have power over the issuance of securities. Those are the two most important in my mind.

Q. Your opinion is just about what Commissioner Young's was?

A. Yes, but there are other things. I on Wednesday of this week got a lot of bills that were introduced, that I would like to study, and I have no doubt that when I study these the things will be brought to my mind that will be very beneficial to the Commission.

BY MR. EVANS:

Q. Don't you think something ought to be done to reduce the expense of the rate cases to the complainants.

A. I think, that is another thing that could well be enacted into law, although I am frank to say at this time I don't know just what it should be, but I think something ought to be done to reduce the expense of carrying on a rate proceeding or a complaint.

BY MR. TURNER:

Q. A great deal of the cost in a rate proceeding is generally in valuation, isn't it, the engineering expense that goes into valuations?

A. Yes, that is the greatest part of the cost.

Q. Now, if we had some definite plan, or do you have a definite plan of arriving at valuations?

A. Well, we have a plan that is rather flexible.

Q. It is rather flexible?

A. Yes.

Q. Do you think we could arrive at some definite plan of valuation that might save engineering and other expense in valuation cases.

A. Yes, I think there could be a method worked out.

BY MR. EVANS:

Q. What is the plan that you refer to that the Commission now has arrived at on valuations, you spoke of it as a vague plan.

A. Now, I didn't speak of any plan.

MR. TURNER: A flexible plan he said.

THE WITNESS: I said the whole procedure of arriving at valuations is rather flexible, I didn't say the Commission had any plan.

FATHER COX: It seems to me that if there were more decisions in favor of the people and against the companies, but they are so consistently loyal to the companies, if there were more decisions in favor of the people they would be much more popular throughout the State. That would be the best kind of publicity possible, and I think the newspapers would grab on that so ardently that they would be the most favored Commission in the country.

MR. EVANS: I asked Commissioner Young yesterday to produce at a later session of the hearing an analysis of the reported decisions of the Commission, showing how many cases have been decided in favor of the complainants and how many have been decided in favor of the respondents, in various classes of cases, and I think that will give us some information.

MR. TURNER: That ought to be done, that would make better feeling among the people.

MR. COX: If they could show something that has been done, and as Commissioner Young stated yesterday, the record will show 75% of the cases were decided in favor of the complainants, and 25 in favor of the utilities.

MR. EVANS: I think there is some question about that. Commissioner Brown, which we had better get straightened out.

THE WITNESS: I would be very glad to have that compilation made for you.

MR. TURNER: I think that question of Father Cox' leaves some little question there. Do you refer now to contested cases, Mr. Evans?

MR. EVANS: Of course, I do.

MR. TURNER: I am presuming that you do.

MR. TURNER: I think it is fair to say, isn't it; Mr. Brown, that the vast majority of the cases are not contested cases?

THE WITNESS: Oh, yes.

FATHER COX: Of course, in the utility field, they ought to bring out more cases and do something, when they know things are wrong, but they claim the personnel makes it impossible to do all that. Now, if there are cases that come in on these annual reports that ought to be taken up, where there is injustice, that ought to be looked after, and if they need personnel, give it to them. The people have to be protected.

MR. TURNER: That is a matter for the Legislature, Father Cox, not the Commission.

FATHER COX: Now is the time. They are going to propose something to the Legislature. Now is the time to do it.

MR. EVANS: Mr. Brown, I know that I have been very much impressed with the volume of small and unimportant cases, from a state standpoint, which the Commission is obliged to deal with. In your opinion would it be practical at all to relegate a number of these unimportant matters to local control? Now, for instance, I have in mind a great number of taxicab cases involving the question as to whether A or B shall be given the right to a certain stand in some town in some part of the state. My feeling is that that is not a matter of sufficient state wide concern to make it advisable to have the Commission swamped with a lot of that sort of cases.

THE WITNESS: I agree with that. I think if some plan could be worked out that Commissions could be relieved—

MR. EVANS: And that might be relegated, perhaps, to local control of some sort?

THE WITNESS: Of some sort, to examiners, in some way. Of course, I didn't state to the committee, but after hearings, arguments, and executive sessions and hearings in all these contested cases, as Mr. Evans well knows, there are briefs and arguments and reports. Every week, when I go home from here on Friday, my whole Saturday and frequently part of my Sunday is taken up reading briefs and reports. That is part of the work of the Commission. It keeps you going pretty constantly.

MR. CRAWFORD: Mr. Evans, I have in mind, when you spoke about the same thing, something like our grand jury,—let them pick these cases and pick out the undesirable ones or the ones that need not be given expert attention, and sift them before they come to the Commission.

MR. TURNER: That also raises a very dangerous question as to who is going to determine which are the important ones and the unimportant.

MR. CRAWFORD: Well, that is true too.

MR. EVANS: Mr. Walker, my associate, Mr. Commissioner, had the impression that you testified that the Commission sits at a great number of points throughout the state.

THE WITNESS: Oh, no.

MR. EVANS: That is not the case?

THE WITNESS: The Commission sits in Harrisburg, Pittsburgh, and Philadelphia, and about every six weeks we have lists at Scranton and Wilkes-Barre.

MR. EVANS: And occasionally at Erie?

THE WITNESS: At Erie, one this week at Erie, a list. And then occasionally, for the convenience of suitors,—now, for instance, there are two cases, for the convenience of suitors, that are going to be heard at Newcastle this week. A week or two ago there were several heard at Butler. There was a case heard at Clearfield some time ago. This is for the convenience of suitors, when there are a great number of people, instead of bringing them to a distant point, we go there and hear them.

MR. TURNER: One is to be heard at Chester.

THE WITNESS: Yes.

MR. MOORE: Commissioner Shelby is at Erie?

THE WITNESS: Yes.

BY MR. WALKER:

Q. Commissioner Young is from Newcastle?

A. Yes.

Q. And Commissioner Walker from Butler?

A. Yes.

Q. Is there any of them living at Clearfield?

A. No.

Q. Who decides whether or not they shall go into these places and preside in contested cases?

A. Generally the chairman decides that.

Q. The chairman decides that?

A. The Act of Assembly provides that he shall assign the work.

Q. That is done for the convenience of the complainants or the respondents?

A. For the convenience of the complainants. In the last year or two I have gone to Allentown twice, where there were some 20 witnesses to be heard, and instead of bringing them all to Harrisburg. I went to Allentown to hear them.

Q. Just for my own information, in case a complainant municipality would file a petition where they were going to call about 300 consumer witnesses, and they requested the Commission to come into that municipality to hear the case, don't you think the Commission ought to comply with that request?

A. Unquestionably.

Q. And in case, during your term, on the Commission, such a request had been made and refused, don't you think that is unfair to the complainant?

A. I do. I know of none being refused, however.

MR. WALKER: May I cite the case of the Borough of Leechburg v. the Vandergrift Water Works?

THE WITNESS: I think that ought to be done.

MR. WALKER: Recently you went to Warren and heard a case?

THE WITNESS: A Commissioner was sent to Warren, where there were a large number of witnesses. I didn't know of that case you speak of, but I agree with you.

BY MR. WALKER:

Q. And frequently cases in Lawrence and Butler are heard by Commissioners Young and Walker, are they not?

A. Oh, no.

MR. WALKER: I know of several cases where Commissioner Walker has gone to Butler and heard them for the convenience of the citizens of Butler County.

THE WITNESS: I know of two different sittings, but not quite frequently. But I agree with you, if there were a large number of people at that place, the hearing ought to be held there, as we did do at Warren.

MR. EVANS: Do the members of the Committee have anything further to ask Commissioner Brown?

MR. MEMOLO: I would like to ask Commissioner Brown, all of the engineers and technicians and experts are under the special direction of the Commissioner?

THE WITNESS: Yes, they are under the direction of the Commission.

MR. MEMOLO: They are appointed by the Commission?

THE WITNESS: Yes, with the approval of the executive board.

MR. MEMOLO: The executive board of the—

THE WITNESS: The executive board, consisting of the board appointed by the Governor.

MR. MEMOLO: Oh, yes, I understand.

MR. EVANS: But the Commission has exclusive power to discharge the employees without anyone's permission?

THE WITNESS: Yes.

MR. MEMOLO: They have the exclusive power of hiring them and then they are approved by the administrative—

THE WITNESS: By the executive board, yes, sir.

MR. MEMOLO: Don't you think that if this personnel of the Commission, the appointing and discharging were under some other special direction other than the Commission, it would be a whole lot better?

THE WITNESS: Well, I can not at this time see any advantage. I don't see what the advantage would be. The Commission know the needs and they know what special technical men are needed.

MR. MEMOLO: Well, there is just this advantage, Mr. Brown, that there are rumors up in our county, up in Lackawanna and Luzerne Counties, that during that Scranton-Spring Brook water case certain engineers made a valuation of those properties, connected with the Public Service Commission, their employees, and they made a certain valuation there and they were told that they had to raise the valuation. Now, that is only rumor. That is pretty well published up there among the people, the consumers, and so forth?

THE WITNESS: Do you mean that engineers of the Public Service Commission made a valuation and were told they had to raise it?

MR. MEMOLO: Yes.

MR. MEMOLO: Told by whom?

MR. MEMOLO: Well, they were told by the members of the Public Service Commission. This is only a rumor, and it has gone—

THE WITNESS: Well, I can only say in reply to that that we never had our engineers make a complete valuation, and I will say, in further explanation of that, what I said to the Senate committee the other day. They asked me about the valuation, why we didn't take the valuation of our engineers that we employed for that reason, and I will state to this Committee what I stated then, because it was entirely to high, and we would not go up to it.

MR. MEMOLO: Well, the engineers,—these were also rumors,—that the Public Service engineers estimated both of those properties, after they were merged, at \$30,000,000, and the Public Service Commission allowed \$43,000,000.

THE WITNESS: Well, that is not correct.

MR. MEMOLO: Well, all right, but that would exclude any suspicion in the minds of the people, if you didn't have any special control over this personnel, wouldn't it?

THE WITNESS: Well, it might have that effect, but if they were employed, they would certainly have to be subject to somebody.

MR. MEMOLO: Yes, I know, but this would exclude this suspicion, if you wouldn't have any control over them, and if they set a valuation, it would come entirely from another department altogether. That is my thought in the matter.

THE WITNESS: Well, I understand that, but I can not—my mind can not go with you on that. I think they would have to be under the control of somebody. The Public Service Commission knows what work is to be done, and they have to lay it out and order their subordinates to do it, and I can not quite follow the plan you have in mind.

BY MR. TURNER:

Q. Mr. Brown, this question might possibly be answered by Dr. Snow, but my impression from what he said yesterday is that the engineers of the Commission merely checked up the record after the other reports had been made?

A. I think that is correct.

BY MR. WALKER:

Q. Commissioner Brown do you feel that if municipalities were permitted to built their own water, light and gas plants, without permission from the Commission, that that would assist in the regulation of these utilities and give the consumer much better service?

A. No I do not.

Q. You don't agree then with the situation in Ohio?

A. I am not very familiar with the situation in Ohio, but I think, and as Commissioner Young said yesterday, there is a provision for municipalities to acquire their water works, but to let them go ahead and just build regardless of what utilities are already in their community, to my mind would create conditions that would not be healthful.

Q. You do not think that that would contribute to the service given by the utilities, do you.

A. No I do not, because I think it would establish such a condition that neither of them would be able to live.

Q. In case such a condition existed in Ohio and produced lower rates and better service, don't you think it would be well to study the situation in Ohio and to consider it?

A. We are pretty busy.

MR. RHODES: That would be a legislative matter.

BY MR. EVANS:

Q. You spoke, Mr. Commissioner, of the power of municipalities to acquire water works; they have no power to condemn electric plants?

A. No sir, only in water works, under Act of 1874, they have.

MR. TURNER: Mr. Evans, I think, on my own behalf I would like to thank Commissioner Brown for his very frank statements here today, and I think he has been very helpful.

COMMISSIONER BROWN: Thank you. I have the same attitude. Anything I know is at the disposal of anybody. Anything you want to know I am glad to give it to you.

BY MR. RHODES:

Q. Then you don't take the position that your Commission is infallible?

A. Not by any means; not by any means.

JAMES S. BENN sworn

BY MR. EVANS:

Q. Commissioner Benn there are one or two matters that I want to ask you about at this time and later we hope to have an opportunity to hear from you on other matters.

I would like to get your views as to the function of the annual reports of public utilities to the Commission.

A. In my judgment the annual reports, the filing of annual reports, and the filing of tariffs of utility companies was for the, and is for the, purpose of aiding the Commission in so far as they contain information that would be helpful to the Commission in performing its function.

Q. And ultimately to see that the rates of the utilities are not too excessive, and are fair to the utilities?

A. To be helpful in that respect.

Q. Would it not be the primary purpose of the annual report?

A. I think, as you know, it opens up a pretty large subject. There are as has been testified to here something between three thousand and thirty-five hundred annual reports of utilities in Pennsylvania, filed with the Commission yearly. In addition to that there are something between fifteen thousand and twenty thousand tariffs filed with the Commission.

Q. Mr. Commissioner, we had better confine ourselves to the reports.

A. They have a large part in this picture.

Q. My question was directed to the annual reports.

A. It is my pronounced conviction that in matters in which the Legislature, and the Legislature alone, is responsible, that much if not most of the value of the filing of annual reports has been lost. In other words the Legislature of Pennsylvania in its wisdom, as will be shown, or can be shown by the record of the Legislature, at the time the Public Service Law was before the Legislature, made what in my judgment was a very serious omission, and that omission was not to give to the Public Service Commission what of course it should have had, and what of course it should have, power over the issuance of securities by public utilities companies.

The only power that the Commission has of an affirmative nature is one in connection with the certificate of notification filed by utilities companies which is the palest, most anemic and negative kind of power possible, because it is an attempt to lock the stable door after the horse has been stolen, an attempt after the pigeons have started out of the cote to take a gun and search around for a speckled pigeon. It is a very indefinite power. Now, therefore, much of the benefits of the filing of annual reports as far as checks upon utilities in matters of rate-making and in such matters of rate-fixing as are related to security issued and as are related to accounting features involved in annual reports, has been destroyed, or has never been reposed in this Commission by these gentlemen of the Legislature.

Q. Will the Commissioner confine himself, and let us confine ourselves, to the subject of annual reports, and the requirements in these annual reports, that the companies shall state their fixed capitals, their depreciated reserves, their gross operating revenue, their gross operating income, their operating expenses, their operating income. So far as these items are concerned, the real benefits to the Commission are to enable it to make some sort of a check as to whether or not the company is perhaps earning an excessive return and requiring investigation?

A. That is correct, yes sir.

BY MR. TURNER:

Q. But according to the history of the Commission it has practically never been considered a part of the duties of the Commission to inquire into that?

A. No, Mr. Turner, that is not so. I would like to give this Committee the benefit of my observation going back over a period of nearly twelve years.

In the first place, I am a believer in that regulation will never come in this State, or any other State, in that full flower, so to speak of it, until it is largely, predominately, on the basis of accounting, that the books will show, that the reports will show—we will go on in a maze for one hundred years, fifty years, twenty years, on the basis of valuation, vacillating according to the difference in the economic conditions or changes, if you will, in the construction of the law, or the Constitution of the United States by the courts of the country,

federal and state. So I am a believer, speaking personally, I believe that regulation must ultimately, in order to be of the fullest benefit to the public and to the utilities themselves and those who invest their money in utilities, rest upon an accounting basis rather than upon a vacillating valuation basis, and the accounting basis must rest upon a prescribed form of accounts.

MR. TURNER: You mean by that a system such as we have in the Banking Department?

A. A uniform system of accounts, such as are prescribed by the Interstate Commerce Commission and this Commission for railroads, and this and other Commissions for various utilities, electric, water, gas, street railway and so on.

BY MR. COOKE:

Q. Does that include investment?

A. You are now on a large subject.

Q. I just asked you—yes or no—do you believe in including investments?

A. You are asking my personal belief?

Q. Yes.

A. I will be very glad to give it to you, Mr. Cooke. My own belief is that until the law recognizes some—we might call it formula, based upon practical experience, such, for instance, as is embodied in the O'Fallon decision in the Interstate Commerce Commission—

Q. If you were sitting on the Federal Supreme Court bench you would have put investment and reproduction cost in?

A. If I were on the Federal Supreme Court I would have voted to uphold the Interstate Commerce Commission in the O'Fallon case. Until we can get something on the books and in these reports that are filed with the Commission upon which the annual reports will show when the books of the company, or when these annual reports are opened and will show an exact state of facts,—I think that until then regulation will be in a state of uncertainty. Of course it is in its early stages.

BY MR. TURNER:

Q. May I go back again to the question I asked, whether you imply from that suggested that these reports, that there should be some kind of an examination of the books carried periodically, such as made in the banking institutions by the Banking Department?

A. Well, Mr. Turner, I think Mr. Evans will agree with me, it would take a great many years for us to attempt, that is, through a Commission process, to get all of the utilities in Pennsylvania on that basis. I think that that should be done and I think work of that kind should be undertaken.

Q. I was going to ask you as a follow up question whether it was practical to do it or not, that is, whether the task was too big or whether it could be done?

A. I don't believe myself, and my colleagues have not always agreed with me on this and a lot of other questions, but I have advocated, or at least—yes, advocated, the use of a system partially put in by the New York State Commission, which would require not only what is recorded now in their annual reports, but accompanied by statements or appraisals of their property. The objection to that, however, is this, you place it in the hands of the utility and the utility alone to make out estimates and you get it fixed on the books of the utility and get it fixed in the reports filed with the Commission, but otherwise these annual reports based upon book value or fixed capital and so on. I say very frankly in my judgment it is largely a matter of guess work as to what value they are. For instance, book value—and I think Mr. Evans will agree with me, as set forth in the annual reports, has a very unstable foundation upon which to try to rest your feet. I don't believe of the 3500 utilities making reports to us that there are ten per cent. of them that have in their own books the basis upon which to set up an actual—not a reasonable but an actual book cost, original cost or original investment.

MR. TURNER: I do not understand that Mr. Evans does agree with you on that proposition, from the questions he has been asking and the testimony developed here.

MR. EVANS: I don't want to interrupt and of the Committee's questions, but I have asked Mr. Benn to bring certain records with him and we are going to have him later on these general questions. If the Committee wishes to sit long enough I am entirely willing, but if they are going to adjourn, I am anxious to get those matters of record.

MR. TURNER: I will withdraw any further questions.

THE WITNESS: I have lived with these things, gentlemen, a good many years and I have a lot of ideas and I am sorry if I am too voluble about them, but I feel them, it is a part of my life.

BY MR. EVANS:

Q. In connection with the annual reports of the companies, it is important, is it not, obviously that the company shall not be allowed to include as operating expense, items which are not properly so included?

A. Certainly.

Q. You have had a rather particular interest in the utility situation in and around Philadelphia, as you have had most of the hearings with Examiner Wolfe?

A. I have had a particular interest in the utility situation in Philadelphia and throughout Pennsylvania.

Q. You have heard a great many of the cases in and around Philadelphia?

A. Yes, sir.

Q. And among them you have been very familiar with the Philadelphia Rapid Transit situation, have you not?

A. Yes, sir. My services were dispensed with over a certain period when you sat in those hearings.

Q. That was a very short period.

A. It was the period in which most of the testimony was taken.

Q. My remembrance is it was from about August to November, was it not?

A. No; it was I think a little earlier than that, I think something like June.

MR. TURNER: I think the Committee will have to take judicial notice of the fact that Mr. Evans was on the Commission during a certain period. I do not think it is quite fair to come back at him in these questions.

A. I am very glad to say, Mr. Turner, that the relations between Commissioner Benn and Mr. Evans, I think were quite always at least on a very pleasant basis.

MR. EVANS: I can agree to that. We may have differed on questions of policy but it was not a personal difference.

MR. EVANS: Mr. Commissioner, in connection with the P. R. T. situation in the hearings before you recently on the present subway you made a statement which appears, I think on pages 33 and 34 of the record, speaking for the Commission, "We may go further and state that so far as this proceeding is concerned, the Commission will not include in its consideration of other matters anything concerning the management fee and operating expense. Now, is that clear to Mr. Wilson and to the company and to the city and to the other protestants." Later on, on page 34 you stated, "If there has been any doubt in the minds of anybody in this proceeding or any other proceeding, the Public Service Commission will not consider management fee as a part of operating expenses involved," is that correct?

A. Yes.

Q. Now, it is true, is it not, Mr. Commissioner, that in 1925, I think when Dr. Maltbie was auditing the books of the Philadelphia Rapid Transit Company, that company wrote a letter to the Commission stating that they withdrew the management fee as an item of operating expense, and agreed that it be paid out of fair return to the stockholders?

A. I believe that is in the record.

Q. If it appeared in the statement and reports of the Commission that Mitten Management fee had been included as an operating expense, would that thing in your opinion be a proper item of investigation by the Commission?

A. As I recall—

Q. You just answer the question, and then explain. Would it or would it not be a proper matter for investigation by the Commission?

A. Yes. Now, as I recall, the present fare of the Philadelphia Rapid Transit Company was found by the Commission to be a just and reasonable fare in January of 1926. Since that time there have been three annual reports filed, and another one is out shortly. The situation in connection with the company has been a matter of common knowledge, a turbulent one, it has been in the courts and litigation and one thing and another almost incessantly. The Commission's finding, as I recall, and I must speak now from recollection—was that the total operating revenue, or the total available for return would be about 13½ million dollars, \$13,700,000—I may be wrong a few hundred thousand, but I know that since that time I have,

time one of those reports came in, endeavored, although I am not an accountant, and although I confess I am not nearly as good on figures as I would like to be—

Q. I think you are very good.

A. I am not as good as you, Mr. Evans.

MR. TURNER: That still leaves it up in the air.

THE WITNESS: Well, we always agreed with each other as much as we possibly could. To see that the allowable fair return was not exceeded, and my recollection is that the Commission's estimate was exceeded to some extent, a few hundred thousand, but it was under rather than over \$14,000,000 allowable as a fair return on \$200,000,000.

BY MR. EVANS:

Q. In other words, you have kept in touch with the annual reports?

A. When they came in, I would send for them, Mr. Evans.

Q. Now, Mr. Commissioner, in the annual report of the Philadelphia Rapid Transit Company for the year 1925, which you have produced, the company shows on page 305, salary and expenses of general officers, \$264,117.71.

A. Yes.

Q. In 1926 what was the figure shown in the annual report of the company to the Commission for salaries and expenses of general officers?

A. \$1,176,610.

Q. And what is the increase in that over the preceding year—it is given right there?

A. You give it and I will agree.

Q. \$912,493.16.

A. Yes.

Q. Did that indicate to you that Mitten Management fee was being included in that year as an operating expense?

A. Well, this is 1925—

Q. The first was 1925 and the second was 1926?

A. You asked about 1925.

Q. And the 1926 report shows an increase over two hundred and some odd thousand dollars, of \$912,493.16 in the salaries and expenses of general officers.

A. I have no recollection of such—

Q. I say you have the report before you, does that suggest to you Mitten Management fee is being included as an operating expense?

A. No, I won't say that it suggests any such thing.

Q. Will you explain any theory you may have on which salaries and expenses of general officers of The Philadelphia Rapid Transit Company can be increased in one year, from \$264,000 to \$1,176,000 other than the inclusion of the Mitten Management fee.

A. Well, I will not concede that I infer that from that, you may infer it from it, but I have not inferred that.

Q. What do you infer?

A. I don't infer anything. Now, you are an expert in these matters, you have pursued them for years, these particular reports and things of that kind, and I cannot—

Q. Mr. Commissioner, I am nothing compared to you as an expert.

A. If you want to infer that, very well, and if you want me to analyze it to be given to you later, very well, but to confront me here with a report of five years ago and ask me to analyze and infer anything from it, I don't think that is fair.

Q. You don't think it is fair, Mr. Commissioner when you say you have examined the annual reports of The Philadelphia Rapid Transit Company, as they have come in from year to year to ask you whether you don't feel that it was a subject to be investigated, when the report shows that in 1926 the salaries and expenses of the General offices had been increased by over \$900,000.00 over the preceding year.

A. Just a minute. I said the three annual reports that have come in from the Philadelphia Rapid Transit Company since then, and they have been compiled—

Q. You examined the 1926 report and that shows it on its face?

A. I will draw no inference from it.

Q. You draw no inference when you see things like that, in the annual reports of utilities?

A. I draw no inference of the kind that you apparently want me to infer.

Q. Don't you think that is a subject for investigation by the Commission?

A. If the annual—

Q. Won't you answer that question please, yes or no, and then make your explanation about it?

A. It may be—as a matter of bookkeeping it might, Mr. Evans, but if you aren't satisfied from an examination of the annual reports of the company that the rate of fare being charged the carrier did not exceed what the Commission had found to be a just and reasonable allowance, then I think it a matter of bookkeeping in one column or the other is quite immaterial—

Q. Now, Mr. Commissioner, if one item of the operating expenses of the Philadelphia Rapid Transit Company is padded to the extent of \$900,000, isn't that a matter that you have got to take into account as to whether or not the rate of fare is reasonable?

A. Certainly, if it comes before us in a rate case, or if it would indicate to us that the commission should inaugurate a rate case.

Q. In other words, that did not indicate to you anything that required investigation?

A. It did not indicate to me that, within a year after the Commission had adjudicated that thing, in which adjudication you took part, Mr. Evans, and did not vote against it if you will recall.

MR. EVANS: I filed a dissenting opinion, Mr. Commissioner, as you very well know.

THE WITNESS: Mr. Martin wrote that dissenting opinion. MR. EVANS: I filed a dissenting opinion with Messrs. Martin and Scattergood, and you know that as well as I do.

MR. TURNER: Now Mr. Evans, I don't think it is material to this issue whether or not you assented or dissented.

THE WITNESS: As far as the Commission's duties were concerned, were or were not the car riders of Philadelphia being imposed upon in a rate of fare that was just and reasonable, and I submit that the difference of \$9,000 or \$90,000, or \$900,000, in a matter of bookkeeping, as related to the final effect of the rate of fare itself, is immaterial.

MR. TURNER: Mr. Evans, would you, for my benefit, go back to the question you asked a while ago in reference to the allowance or disallowance of the Mitten Management fee? You asked the question, I think, or read something, that it would not be allowed. Where did that appear?

MR. EVANS: This appears in the records of the application of the Philadelphia Rapid Transit Company et al for the approval of a lease for the Broad Street Subway in commission's docket M. C. 5324, at a hearing February 19, 1931, record pages 33 and 34, statement made by Commissioner Benn, in regard to the Mitten Management fee, that I read.

MR. TURNER: That that would not be allowed?

MR. EVANS: That that would not be allowed, and that it never—that the Commission, so far as our opinion,—perhaps I didn't read this,—I will read the whole thing, if you want.

MR. TURNER: I don't want to cumber the record, but I think that is important.

MR. EVANS: "So far as our opinion on the subject is concerned, the management fee as paid, or announced that it was paid, out of the fair return, and therefore became a matter and has been a matter for the stockholders of the company, and not a matter in the operating expense. We may go further and state that, so far as this proceeding is concerned, the Commission will not include in its consideration of other matters anything concerning the management fee as operating expense. Further, if there has been any doubt in the minds of anybody in the proceeding or any other proceeding, the Public Service Commission will not consider management fee as a part of operating expenses involved."

THE WITNESS: Did you object to that?

MR. EVANS: I didn't object to your making that statement.

MR. RHODES: I just want to get that clear in my mind. Assuming that the Commission said that would not be allowed as an operating expense, and assuming that they put it in subsequently, what would the effect be upon the rate?

MR. EVANS: The effect might have been very, very considerable on the rate, Mr. Rhodes. I may state for the benefit of the Committee, and I think Commissioner Benn will verify this, that the management fee amounted to in 1926 and subsequent years, amounted to two per cent. on the gross revenue of the company, and the gross revenue of the company was approximately \$50,000,000, making a management fee of somewhere in the neighborhood of \$1,000,000 a year, sometimes a little more and sometimes a little less.

THE WITNESS: Which this Commission has never recognized, and never will, and no management fee of any company, to my knowledge, has ever been recognized or approved by the Commission, and could not under the law, unless it was established on a cost or a value basis. What do they give for it? Let them establish that upon a limit, and then due allowance could be made by the Commission, but on a percentage basis it is impossible and unconscionable also.

MR. TURNER: Pardon me for interrupting you, Mr. Evans.

MR. EVANS: That is perfectly all right. I am glad to have it done.

BY MR. EVANS:

Q. Now, Mr. Commissioner, merely for the completeness of the record, I wish to call your attention to the fact that in the annual report of the Philadelphia Rapid Transit Company to the Commission for the year 1927 the salaries and expenses of general officers were placed at \$1,259,449.64?

A. Yes, sir.

Q. In 1928 at \$1,155,457.87?

A. Yes, sir.

Q. And for the year 1929 at \$1,187,012.83.

A. Yes, sir.

Q. And those reports have been examined by you from year to year?

A. I made no critical, and I would not be capable of making an accounting analysis of this. I was interested in one thing, to see year by year if the operating income of this particular utility exceeded the figure set by the Commission in its report of January, 1926, and exceeded a fair and reasonable return upon the rate base; yes, sir.

Q. And operating income, Mr. Commissioner, is determined by deducting from the operating revenue the operating expenses, is it not?

A. Yes, sir.

Q. And therefore, if the operating expenses are padded by \$900,000, the operating income will be \$900,000 less than it should be?

A. Oh, unquestionably.

Q. Therefore, by examining these reports and finding that the operating income shown by the report was not excessive, you did not get very much light on the subject?

A. No, I got a by and large answer which satisfied me, at least, that the estimates of the Commission, in which you participated, sir, were not—

MR. TURNER: Now, Mr. Benn, please don't refer to those,—I don't think that that is a fair line.

MR. EVANS: It is perfectly satisfactory to me.

MR. TURNER: I understand that, but I don't think that is a part of this record. Mr. Evans is appearing as our counsel. If he happens to be once in a while in an unfortunate position, that has nothing to do with this proceeding.

MR. BENN: And I think the Committee could not have better counsel either, Mr. Turner.

MR. TURNER: I agree with you on that.

BY MR. EVANS:

Q. Mr. Benn, you testified before the Senate Committee, I believe?

A. Yes, sir.

Q. And you were questioned by Mr. Gray in regard to the operation of the Quaker City Cabs by the Yellow Cab Company or by the P. R. T.?

A. Yes, sir.

Q. And on February 23rd, page 335 of the Senate Record, Mr. Gray asked you: "Don't you know that the concern to whom the Quaker City Cabs Incorporated wanted to sell and applied for leave to sell had actually physically taken over the property of the Quaker City Cabs. Incorporated, and are operating those taxicabs on the streets of the City of Philadelphia?" and you answered, "No, sir." Question, "You don't know?" Answer, "No, sir." A matter of fact, that had been officially called to your attention, had it not?

A. Not that I recall, Mr. Evans.

Q. You were one of the Commissioners who heard the application of the Universal Cab Company—

A. Yes.

Q. For a certificate of public convenience, which the Commission refused? I read you from page 483 of the record, Mr. Barney Graves, vice president and general manager of

the Yellow Cab Company, on cross-examination was asked: "Q. The Yellow Cab Company of Philadelphia is operating at the present time the Quaker City Cab Company, is it not?"

"A. Yes, sir.

"Q. Under what agreement or basis are you operating the Quaker City Cab Company?"

"A. A management agreement.

"Q. And the Yellow Cab Company of Philadelphia is operating that?"

"A. The Yellow Cab Company is operating that, yes, sir.

"Q. Has that agreement ever been approved by the Public Service Commission? A. I don't know."

That was a hearing held at Philadelphia in Room 443 City Hall, on September 19, 1929?

A. Yes, sir.

Q. In view of that, would you care to correct the statement you made to the Senate committee?

A. Not at all.

Q. In other words, you do not call that notice that the Quaker City Cabs were being operated by the Yellow Cab Company?

A. The Quaker City Cab, the P. R. T. applied to us for approval of the purchase of the Quaker City Cab in December of I think 1929. The Commission refused its approval and set forth in a Commission report the grounds for its disapproval. Somewhere, perhaps in June, the Commission had that report ready but it was withheld. Action on it was coming within a week or two afterwards when the Universal Cab application was made and the report of the Commission was withheld. Now that report of the Commission gave the right to the applicant company, if it saw fit, to reapply for permission to purchase on a basis that would be more equitable and fair to the purchaser as well as to the patrons of the Quaker City Cab. Of course we must have known the purpose of this acquisition which was to merge the Quaker City Cab with the Yellow Cab Company, but that was a policy not inaugurated by the Public Service Commission but by Councilmanic action in the city of Philadelphia.

Q. Pending that application for the approval of the acquisition of the Yellow Cab Company, it was unlawful for the Yellow Cab Company to operate the Quaker City Cabs without approval?

A. Yes sir.

Q. And when Mr. Graves testified in September, 1929, that the Yellow Cab Company was operating the Quaker City Cabs without the Commission's approval, so far as he knew, that would be unlawful?

A. Yes it was unauthorized by the Commission.

Q. And the Commission has never taken any steps to this day to prevent that operation?

A. As I very plainly told you—

Q. Just answer that question.

A. The Commission then had in its drawer the decision refusing the purchase of the Quaker Cab, and you know that.

Q. Mr. Commissioner, I want to ask you a simple question, whether from that day to this the Commission has taken any steps to prevent the Yellow Cab Company from operating the cabs of the Quaker City Cab Company?

A. No sir. The testimony as I understand it before the Senate Committee and certainly before Common Pleas Court No. 1, is that the Quaker City Cabs are operated under Mitten Management. And the Quaker City Cab as a corporation could hire you or myself or anyone else they might choose to operate it for them.

Q. But Mr. Graves, the general manager and vice president stated under oath in your presence in September, 1929, that they were doing so.

A. You read the record, if it is in the record, that is correct.

Q. You say if it is in the record it is correct?

A. Yes, sir. In other words, there were two matters pending before us, your matter in which unfortunately we agreed with Mr. Schnader instead of yourself, and this other matter.

Q. And you followed the usual practice of putting out these decisions at the same time, the bitter with the sweet?

A. We did not, sir.

Q. Didn't you put them out?

A. Yes. For the reason I tell you now and for the reason I told you during the pending of the Quaker City Cab case.

Q. I never knew how you decided it?

A. You know now. We decided it according to the proper basis upon which they should be based and I have not, and I think the Commission has no apologies to make for that.

MR. EVANS: Before the committee adjourns I have several letters here which I would like to have noted on the record, as follows:

A letter from E. Leroy Keen, solicitor for the Borough of Lykens, dated March 13, 1931, in regard to the rates of the Pennsylvania Power and Light Company, and so forth.

Another letter from Miss Lena Spickerman of Lykens, Pennsylvania, in regard to the Lykens Water Company, dated March 14, 1931.

Also a communication from the Beaver County Federation of Boroughs dated March 9, 1931, in regard to the actions of the Public Service Commission on franchise ordinances.

Also a letter from the Secretary of Gallitzin Borough in regard to the water situation in Gallitzin, dated March 19, 1931.

CHAIRMAN MOORE: This hearing will now stand adjourned until 2.00 o'clock Wednesday afternoon, March 25, 1931.

The hearing adjourned at 12.30 o'clock P. M.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Wednesday, March 25, 1931, at 2.00 o'clock P. M.

There were present:

Messrs. D. Glenn Moore, Chairman,

Chester H. Rhodes,

Martin Memolo,

Frank L. Bowers,

Harry J. Crawford,

Ellwood J. Turner,

Louis W. Hagmaier,

Bart Richards,

Morris L. Cooke,

Harold Evans, Esq.,

John M. Walker, Esq.,

Arnold H. Hirsch, Esq.

#### APPEARANCES:

William Clark Mason, Esq. and

Frank M. Hunter, Esq.

For Philadelphia Electric Company and  
United Gas Improvement Company.

THE CHAIRMAN: The Committee will come to order.

MR. EVANS: At the opening of the hearing, if the Committee please, I wish to put on the record a letter from Mr. W. K. Myers, Vice-President of Mitten Management, in charge of counsel of the Philadelphia Rapid Transit Company. As the Committee probably may remember, last Friday I examined Mr. Commissioner Benn in regard to the increase in salaries and expenses of general officers of the Philadelphia Rapid Transit Company, from approximately \$264,000 in 1925 to \$1,117,000 in the annual report for 1926. I asked the Commissioner whether that suggested to him that the Mitten Management fee might be included in that item by the company. On page 1217 of the record, Commissioner Benn said he did not infer anything from that fact. The letter from Mr. Myers reads as follows.

Letter from Philadelphia Rapid Transit Co., addressed to Mr. Harold Evans, Esq., dated March 23, 1931, produced and marked Exhibit No. 91.

#### PHILADELPHIA RAPID TRANSIT COMPANY —Under Mitten Management—

Mitten Building

N. W. Cor. Broad & Locust Sts.  
Philadelphia

March 23, 1931.

Harold Evans, Esq., Counsel  
for the Committee of Investigation on Resolution No. 10,  
House of Representatives,  
Harrisburg, Penna.

Dear Sir:

You have indicated to me that the Committee of Investigation on Resolution No. 10 desires the following information:

The annual report of the Philadelphia Rapid Transit Company for the year 1925 shows on Page 305, Salary and Expenses

of General Officers—\$264,117.21 The 1926 annual report of the Philadelphia Transit Company shows Salary and Expenses of General Officers—\$1,176,610.37, or an increase of \$912,493.16 over 1925. The 1926 figure includes Management fee in the amount of \$907,310.63. Since the 1925 figure for Salaries and Expenses of General Officers included no charges for Management fee, this item of \$907,310.63 accounts for almost all of the difference of \$912,493.16 between the 1925 and 1926 figures. In subsequent years the practice followed in 1926 has been continued.

Very truly yours,

(Signed) W. K. MYERS.

MR. EVANS: I offer this in evidence as Exhibit No. 91.

MR. COOKE: About what percentage is that of the net income?

MR. EVANS: Of Mitten Management?

MR. COOKE: That item that he mentions there.

MR. EVANS: Salaries and expenses of general officers would be something over 2% of the gross revenue of the company.

MR. COOKE: The net?

MR. EVANS: I cannot answer that, Mr. Cooke, offhand, I am sorry to say.

MR. COOKE: 5 or 6%?

MR. EVANS: My impression is that the net revenue of the company is somewhere between 30 and 35 million dollars, but I am not sure of that, and I would not like to answer it without verifying the figures.

I understand that the city authorities of Johnstown wish to be heard very briefly.

Is the mayor of Johnstown here?

MR. OVERDORFF: Two members of council.

MR. EVANS: Whoever you want to speak for you, will you take the stand, please?

CALVIN OVERDORFF sworn.

BY MR. EVANS:

Q. Mr. Overdorff, what position do you hold in the city of Johnstown?

A. Superintendent of the Committee on Finance, councilman.

Q. I understand you have some statement you wish to make to the Committee in regard to the utility situation in Johnstown?

A. Well, we don't have any figures here at the present time, but I can quote you from memory some of the figures, but there are some things I would like to call your attention to. We were supposed to be down here, rather the mayor and I were supposed to be down here a couple weeks ago, and the reason we did not come, I have a wife who is an invalid and who was very sick at the time, and the mayor's two children were sick, so that is the reason we did not show up. We, of course, are not satisfied with the rates in effect in Johnstown.

BY MR. TURNER:

Q. The rates of what?

A. Practically all the public utilities, water, light, telephone and the gas, but I want to state that there has been no increase in any public utility since I became a councilman, except a slight increase in street car fare.

BY MR. EVANS:

Q. When did you become a councilman?

A. In June, 1927. I got in in time though to attend some of the hearings before the Public Service Commission on the water rate case and the telephone case, but they were raised and in effect before I went in as a councilman.

Q. Has the city of Johnstown at the present time any matters pending before the Public Service Commission?

A. Why, something, only the return of increased rates which were not allowed in the telephone case, that is the only thing that is pending.

Q. Is there anything further you wish to add to the Committee at this time.

A. Nothing else, unless I could give you some information as to the rates. Now, for our fire hydrants, the City of Johnstown—I think we have about three hundred sixty-seven fire hydrants, and they charge us a yearly rental for each hydrant of \$10.00 plus a mileage charge of \$250.00 a mile, so the total charge, divided by the number of fire hydrants we have, makes the hydrants cost the city of Johnstown approximately \$86.00 per hydrant, fire plug.

Q. Mr. Overdorff, if the City of Johnstown has any matters which it wishes, during the course of these hearings, to bring before the Committee, I am sure the Committee would be very glad to hear from you at any time. I understand you are not prepared now with any details of the situation, but if in the future you find any matter you wish to present, I am sure the Committee will be glad to hear from you.

A. We will be glad to furnish you with the raises that have occurred over a period of years and the fights we had before the Public Service Commission, from which we never got any results, and we just feel at this time that it is foolish for the City of Johnstown to go and hire engineers, and fight those rates, for we never seem to get anywhere, just like bumping your head against a stone wall. I really think it is a State matter as to how the utilities should be regulated.

Q. Is there anything else?

A. I think that is about all I have to say.

BY MR. HAGMAIER:

Q. Mr. Overdorff, do you know a man by the name of McCloskey.

A. Yes, I know him.

Q. Did you read any of the statements regarding the officials of Johnstown made by him when he was here at the hearing?

A. Yes, I read them in the local paper.

Q. Do you wish to make any statement in regard to the statements that he made at that time about you and the mayor and the rest of you fellows?

A. Well, I believe one thing that he said there was, that we were controlled and bossed by the Bethlehem Steel Company, something to that effect. When he said that, I say he is simply a liar; there is no public utility that controls me, or anyone else.

BY MR. RHODES:

Q. Are you an employe of the Bethlehem Steel Company?

A. No, sir.

Q. Any of your councilmen employes of the Bethlehem Steel Company?

A. No, sir.

Q. Is the mayor?

A. No.

BY MR. TURNER:

A. Has there been any protest made by the officials of the city to contest the different utilities in an endeavor to have them reduce their rates.

A. No, there has not, because the water rates, the case was only settled about two years and a half ago, and I believe it stands for three years; I think that is the rule.

BY MR. EVANS:

Q. Does the Bethlehem Steel Company have interest in any of the utilities that you know of.

A. Yes, the water service; they have the controlling interest in the Johnstown Water Company.

Q. Any others.

A. No, I don't think they have an interest in any of the others.

BY MR. MOORE:

Q. You contemplate filing a brief with the Committee, do you not, covering your complaint.

A. Yes.

BY MR. EVANS:

Q. Is there anything further you want to be heard upon.

A. No.

M. Z. SMITH sworn.

BY MR. EVANS:

Q. Mr. Smith, you are a member of the council of the city of Johnstown.

A. Yes.

Q. How long have you been a member?

A. About seven and a half years.

Q. Have you any additional statement that you wish to make to the Committee regarding the utilities situation in Johnstown?

A. Well, I could not add very much to what Mr. Overdorff has said. We certainly would like to fill up our record here, that is one of the things we are here for, after the statement

that has been made that members of city council were owned and controlled by the Bethlehem Steel, which is positively not correct in any way shape or form. We are dissatisfied with our rates, have been—well, ever since the Public Service Commission has existed.

Q. Why have you not filed complaints with the Commission, or have you?

A. We have filed complaints on three different occasions—four, I guess. First was the traction company; next was the gas company; the third was the water company and the fourth was the telephone company, and we might as well have stayed at home so far as filing the complaint is concerned, and we would be in the amount of money that it cost us to fight those cases.

BY MR. TURNER:

Q. What do you mean by that, you didn't win your complaints?

A. We didn't win anything.

Q. Do you have any figures of what it cost the municipality for those contests?

A. The water contest amounted to about \$17,000—or the telephone, I should say, about \$17,000.

Q. What else did you spend?

A. The water company, we have taken their setup only for two years. They had contested the water company previous to that, and we examined the records, and three years later we protested against them, and we took the figures as set up by our engineers just a little over two years. Now, we had not went before the Commission, inasmuch as the setup which they had would have entitled the Johnstown Water Company to 2% additional increase. Now, we have in Johnstown—or we think in Johnstown the whole matter is in the setup, and that it is hard to overcome it, and the utilities can institute a stock certificate sufficient to keep their earnings down at 7%.

Q. Of course, their earnings are not based on the capital or stock?

A. Replacement value.

Q. What other cases did you bring where you spent any money besides the water case?

A. Those are the only ones that have been before the Commission during my term of office.

BY MR. EVANS:

Q. You don't know what the costs of the other two complaints were?

A. The water case, of course, did not mature, and that was not so costly. I would imagine they spent over four or five thousand dollars in that case, because we had the figures for the last two years available to proceed with there.

Q. Is there anything you wish to add, Mr. Smith?

A. No, I have nothing, only we are here willing to furnish our figures and set-ups as we have them.

BY MR. TURNER:

Q. How long have you been a member of council?

A. Seven and a half years.

Q. Are you an employee of the Bethlehem Steel, or any other utility?

A. No sir. I have been employed in my time three months, not by the Bethlehem Steel, but by the Cambria Iron Company.

BY MR. EVANS:

Q. Did you read the account of Mr. McCloskey's testimony before the committee?

A. Yes sir.

Q. Have you anything to say in regard to that?

A. I might say it was misleading. It left the wrong impression on our people to this extent, that the people would think from the statements made that we were a controlled body, and we are here to deny that we are in any way, shape or form controlled by utility corporations.

Q. Do you know of any officials of the city of Johnstown employed directly or indirectly by the Bethlehem Steel Company?

A. No sir.

BY MR. TURNER:

Q. Is your system of telephones a part of the Bell System?

A. No, it is an independent system. We were given notice that we would be given an increase on the business houses, and of course the business people have protested on that and they immediately proceeded to file a claim to prevent this. Mr. Shade, then manager of the Johnstown Telephone Company, said if we didn't withdraw the case he would make a general increase and of course did make a general increase in that particular case. The increases had been paid I think in the neighborhood of two years before the case was heard, and that still remains in the coffers of the Johnstown Telephone Company instead of being returned to the people who have paid this excess rate.

Q. Did the telephone company win their case?

A. Well, they won it and they didn't.

Q. What do you mean by that?

A. Well, they claimed they were giving us a reduction and the Commission left us under the impression it was a reduction, to the amount of \$3700 a year. That is hard to explain unless you see the briefs of the Johnstown Telephone Company and take their set-ups.

Q. By that you mean the schedule of rates?

A. Yes sir. That were shown in this brief, which showed they were making between twelve and thirteen per cent on their set-up.

Q. On their capital?

A. It might be, in my opinion is, it is not capital.

Q. But they were making on their valuation?

A. As I said, according to the figures it amounted to between twelve and thirteen per cent.

BY MR. EVANS:

Q. Do you mean on a fair valuation of their property as a set-up valuation?

A. On the replacement value.

BY MR. WALKER:

Q. Do I understand that the Bethlehem Steel Company does not take any interest at all in local elections there?

A. They didn't in my two campaigns. I rather judge part of them were against me.

Q. Then they do take part in campaigns?

A. The companies, I don't think they do, but there may be some individuals that work for the company that are interested and take it up.

Q. You never heard of officials issuing any orders as to who they wanted for council?

A. No sir.

Q. They control the water company?

A. Yes sir.

Q. When did you have these contests with the water company over rates?

A. In 1926.

MR. EVANS: Mr. Turner has suggested that in order to clear up the matter of the three year period of repose, as it is usually called, that it might be well to put on the record at this point the actual provisions of the act which was under discussion with Commissioner Brown on last Friday. The act merely provides that "No rate, practice or classification which has been determined by the Commission shall be changed or discontinued by a public service company directly or through any change in classification, and so forth, without the application to and the approval of the Commission."

BY MR. MEMOLO:

Q. Mr. Smith, what is your rate on fire hydrants?

A. Mr. Overdorff can answer that better, but I think about eighty-six dollars a year. The total for the city runs between thirty-one and thirty-two thousand dollars a year.

Q. I didn't catch that from Mr. Overdorff?

A. I don't know whether he said that, but he said the rate runs about eighty-six dollars a plug.

BY MR. TURNER:

Q. What is your total income?

A. Of the City? I cannot answer that off hand. Our assessed valuation is about eighty-four million based on fourteen mills, that is, for city purposes.

MR. EVANS: It is our purpose now to take up the situation of the Philadelphia Electric Company and the United Gas Improvement Company of Philadelphia.

Mr. ARNOLD H. HIRSCH, who is associated with me as counsel for the Committee for this purpose, will conduct the examination of the witnesses.

JOHN E. ZIMMERMAN sworn.

BY MR. HIRSCH:

Q. What is your full name, Mr. Zimmerman?

A. John Edwin Zimmerman.

Q. What is your position with the United Gas Improvement Company?

A. I am president.

Q. What is the corporate relationship between the United Gas Improvement Company and the Philadelphia Electric Company?

A. The United Gas Improvement Company owns about 98 per cent of the common stock of the Philadelphia Electric Company.

Q. Do you occupy any position with the Philadelphia Electric Company?

A. I am Chairman of the Board, and Chairman of the Executive Committee.

Q. Do you receive any compensation for it?

A. I do not.

MR. TURNER: Compensation as what?

MR. HIRSCH: As Chairman of the Board of the Philadelphia Electric Company?

THE WITNESS: I do not.

BY MR. HIRSCH:

Q. Have you ever received any compensation as Chairman of the Board?

A. I have not.

Q. Do you receive a bonus or percentage of the earnings of the Philadelphia Electric Company?

A. I do not and I have not.

Q. In other words, your services as Chairman of the Board are gratuitous. Is that correct?

A. My services personally are gratuitous.

Q. Does the United Gas Improvement Company receive any compensation or fee from the Philadelphia Electric Company for your services?

A. It does not receive a fee.

Q. There is no arrangement between the Philadelphia Electric Company and the United Gas Improvement Company for a fee of any character?

A. The United Gas Improvement Company once a year renders the Philadelphia Electric Company a bill for services which it might have rendered and is compensated for those services.

Q. These services include your personal services to the Philadelphia Electric Company?

A. They include merely such time as I may give as Chairman of the Board of the Executive Committee.

Q. Approximately what did this amount to for 1930?

A. I could not tell you.

Q. Do you remember what this bill amounts to?

A. The bill last year was \$150,000 and the year before it was \$100,000, for which services were rendered.

Q. What is the nature of the services which the United Gas Improvement Company renders the Philadelphia Electric Company?

A. It has a legal department; it has a tax department, on which the Philadelphia Electric Company calls. It has special gas experts in its technical department which give services. It has given service in the form of financial services in the issuing of securities and raising money, and it has a research department which the Philadelphia Electric Company can call upon, and out of which have been produced methods of producing gases of great advantage to the Philadelphia Electric Company, and other miscellaneous services which I cannot remember.

Q. Do you know whether the Philadelphia Electric Company pays the salaries of any of the other officers connected with the United Gas Improvement Company?

A. It pays none of them.

Q. Does it pay the salaries of any of the employees in the organization connected with the United Gas Improvement Company?

A. It does not.

Q. Is there any management or supervisory fee which the Philadelphia Electric Company pays to the United Gas Improvement Company?

A. There is none except what I have just explained to you as a bill for services rendered.

Q. Is this bill for services rendered on a sliding scale depending on the total income of the Philadelphia Electric Company?

A. It has nothing to do with it. It is like a lawyer who would render a bill to a client for services. There is no sliding scale, only for the services which are rendered and for what they are worth.

Q. Who determines the worth of the services?

A. The President of the Philadelphia Electric Company and myself, by looking over the time sheets of the work of the men in the United Gas Improvement Company who have been put on Philadelphia Electric Company matters during the year.

Q. How long have the United Engineers and Constructors been doing construction work for the Philadelphia Electric Company?

A. That question is a little bit difficult to answer accurately. I should say that they have been doing the work probably three years, since the United Gas Improvement Company acquired the Philadelphia Electric Company's majority stock, which was early in 1928; since 1928.

Q. Are the United Engineers and Constructors controlled by the United Gas Improvement Company?

A. No; the United Engineers and Constructors is controlled fifty per cent by the United Gas Improvement Company and fifty per cent by the Public Service Corporation of New Jersey.

Q. What is the nature of the work done by the United Engineers and Constructors?

A. They do work as engineers and constructors. They design structures, plan buildings, office buildings, and transmission lines. They construct them, and they do work all over the United States and in foreign countries.

Q. Sometime last year, it was announced in the newspapers that the Philadelphia Electric Company proposed to spend approximately twenty-six million dollars on new construction during 1930. Do you recall the figure?

A. Yes sir.

Q. Of this twenty-six million dollars construction, how much would you say the United Engineers and Constructors were given?

A. About three or four millions.

Q. On what basis does the Philadelphia Electric Company award contracts to the United Engineers and Constructors?

A. On two bases, depending on the nature of the work.

Q. What are those two bases?

A. There is one basis, in the work consisting of the preparation of plans and specifications and the construction of the work, there is a sliding scale charged on the basis of a fixed fee. The sliding scale for the first \$500,000 of work, 10%. For work over \$500,000, 7½%. The estimate of the cost of the job is made. It is checked by the Philadelphia Electric engineers, and once agreed; the estimate is confirmed, and is on a fixed fee, based on those percentages, and if the work costs more than that fee, it does not go up, and if the work costs less the fee is reduced to the percentages; it is reduced by those percentages.

Q. Does it make any difference about the type of construction that the United Engineers and Constructors do, as to whether they get more or less percentage of increase?

A. No; it is based on the cost of the work.

Q. Is there any upper limit as to the cost of the construction before the United Engineers and Constructors undertake it for the Philadelphia Electric Company?

A. "Upper limit"; I do not understand the question.

Q. In other words, when a job of construction is authorized by the Philadelphia Electric Company to the United Engineers and Constructors, is there a limiting feature as to the cost of that construction?

A. It is a limiting feature based on the estimate.

Q. In other words, if the United Engineers and Constructors undertake a one million dollar job, which has been estimated, and perform construction work for two million dollars, they still receive their fee do they not?

A. No; they receive their fee on the one million, not on the two million; and the illustration is an absurd one, because the engineers and the constructors don't do their work that

way. They don't over run their estimates. Their record is just to the contrary. The work has been done on an average of three per cent less than the estimated cost.

Q. Who does the estimating?

A. The estimating is done by the United Engineers and Constructors, and it is submitted to the engineers of the Philadelphia Electric Company. It is checked. A great deal of the work, permit me to say to you, is handed by these contractors to minor contractors. In other words, if there is an office building to be built, the bricklayer, the man for the foundation, the doors, the mill work is all submitted to outside bidders, and they are given the contract to put them in, and the United Engineers and Constructors fix the supervising and assembling fee, which is usually what a general contractor will get.

Q. And if the estimate cost for such construction is \$500,000, or more, you say it is ten per cent for fees?

A. I said that if the job was a \$500,000 job, they would get a fee of ten per cent, which is \$50,000, out of which the United Engineers and Constructors has to meet all its administrative expenses, taxes, and other expenses.

Q. Who pays for the services of the engineers which the United Engineers and Constructors put in the field to supervise such construction?

A. The client.

Q. In other words the ten per cent fee is clear profit to the United Engineers and Constructors?

A. It is not, and the record will show that it is not.

Q. You have just said—

A. The fee of the United Engineers and Constructors, if you want to know it, since that is the direction you are pursuing on this work is between three and three and one-half per cent.

BY MR. TURNER:

A. That is the net profit?

A. Yes, sir.

BY MR. HIRSCH:

Q. How did you arrive at the three and one half per cent, if ten per cent is the total fee?

A. There are a lot of costs and expenses the United Engineers have to spend. Out of that it has all its administrative expenses, all their offices, all their buildings, their taxes, their heat, their lights, their rents, and everything has to come out of that.

Q. But is it not a fact that all the field men which the United Engineers and Constructors sent out to supervise the work have their salaries paid by the Philadelphia Electric Company?

A. Of course, they do. They are men on the construction like any other contract.

Q. Since the United Engineers and Constructors are controlled by the United Gas Improvement Company, which also controls the Philadelphia Electric Company—

A. I didn't say that the United Engineers and Constructors were controlled by the United Gas Improvement.

Q. On a fifty per cent control?

A. A fifty per cent interest.

Q. The Philadelphia Electric Company could not very well object to any estimates that the United Engineers and Constructors prepared, could they?

A. They nevertheless do. They are perfectly independent of the Engineers.

Q. But is it not true that you as Chairman of the Philadelphia Electric Company, as President of the United Gas Improvement Company, which has a direct pecuniary interest in the construction company, assist in the approval of such estimates, prepared by the United Engineers and Constructors?

A. I do not. The Philadelphia Electric Company and the President of the United Engineers do that. I don't get into those details.

Q. And the President of the Philadelphia Electric Company could not very well object to any over estimate on the part of the United Engineers and Constructors?

A. He would do that, if it was submitted to him.

Q. Would his objection carry any weight?

A. Absolutely, totally, 100% weight.

Q. You said a few minutes ago that the United Gas Improvement Company controlled 98% of the stock of the Philadelphia Electric Company?

A. Yes; but we do not conduct our business in the way you want to infer. The Philadelphia Electric Company has its own staff, its own president, and its own organization and it conducts its business as an independent organization in that respect.

Q. Is it not true that the higher the cost of construction, the higher the electric company fixed its base for rate making purposes?

A. Of course.

Q. And quite obviously the consumers, who have no control whatever on these expenditures, must pay the higher rates to the Electric Company?

A. Yes, but I object to the form of that question, what you are trying to infer from that, that you have no right to, and that is that these construction costs are padded.

Q. Do you agree with me that a wholesome change in the Public Service Laws of this state would be to prohibit utilities from awarding any construction contracts in excess of say, \$200,000, except on a competitive basis?

A. No; I do not agree with you.

Q. And contracts awarded with the approval of the Public Service Commission?

A. I do not agree with you at all. There is a certain class, in fact a very large class of work that is best done by this way, and I think it is illustrated by the fact that the United Engineers and Constructors in the years it has been in existence have done a billion dollars worth of work, and every bit of it was done this way, and sixty per cent of the work it does today is on open orders, and seventy per cent it does today is for outside clients, and the work they have done for outside connections, they have been awarded on this basis, rather than a lump sum basis you are talking about.

Q. Who does all the architectural work for the Philadelphia Electric Company?

A. I believe Mr. John T. Windrim.

Q. Is he a member of the board of directors of the Philadelphia Electric Company?

A. He is.

Q. From a public utility standpoint, do you think it good practice to give a director the exclusive right to do this work?

A. Do you select your lawyer by going out and getting him on a competitive basis?

Q. I am asking you a question, Mr. Zimmerman.

A. I think it is all right to select your architect, not for the considerations that you say, but the best man that your judgment tells you. Mr. Windrim was the architect long before my time, and as far as I know he has done good work and performed good service.

Q. Do you not think that such dealings with a director of a company breeds suspicion on the part of the public?

A. No; I don't think so.

Q. Do you think, Mr. Zimmerman, in order to prevent abuse of a public trust, which all utilities enjoy, it would be—desirable to have a public observer on the board of directors of these utilities?

A. That is a question which, I think, I am hardly prepared to answer offhand.

Q. What do you think of the present law that permits utilities to earn a fair return on the fair value of the property?

A. What do I think of it?

Q. Yes?

A. I think it is all right.

Q. Do you think that the present seven per cent return, as generally decided by the our Commission is satisfactory or not?

A. No; I think it should be greater.

Q. What do you think it should be?

A. I think it should be anything up to eight per cent.

BY MR. EVANS:

Q. While Mr. Hirsch is waiting, may I ask you, do you know what percentage of the total of Philadelphia Electric construction contracts are let on competitive bidding?

A. No. I don't, Mr. Evans I couldn't tell you. The vast amount of work—you see, the Philadelphia Electric's expenditures in the last five years have run pretty near, I think about thirty millions a year. Now, a large proportion of that work, a very large amount of it is done by the Philadelphia Electric's own people.

BY MR. HIRSCH:

Q. Mr. Zimmerman, I have here an advertisement appearing in the Philadelphia newspapers on January 29, 1931, describing a forty million bond issue of the Philadelphia Electric.

A. Yes sir.

Q. It is called the First Refunding Mortgage Gold Bond 4% series, due in 1971?

A. Yes sir.

Q. Can you identify it? It appears under your name as chairman of the board.

A. It looks right.

Q. Is it a fact that this forty million dollar bond issue can be considered as representing the value of so much construction and improvement?

A. My recollection is that this \$40,000,000 bond issue was sold to take up certain other issues getting rates of interest higher than 4%. I think it says so here, doesn't it.

Q. What I am trying to get after is, does it really represent, whether past, present or future, does it show construction and improvements put in Philadelphia Electric Company property?

A. It represents—it is a mortgage on the Philadelphia Electric Company's property.

Q. But the money that is derived from such issues, is converted into property, plant, improvements, isn't that correct?

A. Not necessarily; not the money from this.

Q. I don't mean that particular issue, but I mean that the \$40,000,000 is represented by property?

A. Is represented by property.

Q. By property, that is correct?

A. Yes.

Q. Since the Commission allows a utility to earn a 7% return on the value of such property, upon which the Philadelphia Electric Company pays only 4% to the bondholders, the stockholders immediately become heirs to 3% profit on \$40,000,000, is that not correct?

A. If that is in the rate base, yes.

Q. This would therefore represent an annual profit of \$1,200,000 to the stockholders at the expense of the rate payers, isn't that correct.

A. I would say that was pretty nearly nonsense.

Q. You have agreed with me that the law allows a 7% return—

A. On the value of the property, and you are—

Q. \$40,000,000 represents the value of the property?

A. It represents a piece of the value of the property. There are other factors besides the amount that that bonded debt represents that are factors in the value of the property. You are talking about the value of the property—

Q. But the \$40,000,000 which you receive from any bond issue, whether it represents stock, or bonds, that \$40,000,000 is converted into property, which is in the possession of the Philadelphia Electric Company, isn't that correct?

A. Yes.

Q. You have agreed that the Commission allows a 7% return on the value of such property?

A. Yes.

Q. Since you pay 4% interest to the bondholders, there is a 3% margin which the stockholders make, amounting to \$1,200,000 each year?

A. Not at all, because that 40,000,000 dollars, that may be used to create that property, and the value of that 40 million might be 50 million.

Q. In which case you would allow the stock a greater profit. In other words, if that \$40,000,000 in valuation amount to \$40,000,000 worth of property, it means there is a still greater margin of profit that the \$1,200,000 a year, isn't that true?

A. I don't think so.

Q. Since the U. G. I. Company controls 98% of the common stock of the Philadelphia Electric Company, the profit of say \$1,200,000 each year passes into the treasury of the U. G. I. Company, isn't that correct?

A. The United Gas Improvement Company through the ownership of the stock of the Philadelphia Electric Company, that is represented by value, shows an investment of the U. G. I. in the Philadelphia Company, and is part of the value of the property of the Philadelphia Electric Company, and whatever the U. G. I. may get, comes to it by way of dividends on that stock.

Q. Can you tell me which bankers usually underwrite the security issues of the Philadelphia Electric Company?

A. Yes. Drexel and Company.

Q. Are those bankers represented on the Board of Directors of the U. G. I.?

A. Yes.

Q. Referring to the \$40,000,000 bond issue, what brokerage was paid to these bankers for floating the issue?

A. You are asking me now to go on my memory, and I cannot answer that accurately. I think I can answer it approximately; I think it was 3%, 3 points.

Q. That is, 3 points below the par value of the bonds?

A. No, there was 3%, or a 3 point commission to the bankers. The bonds, as I recall, were sold to the bankers at 90, and they were sold to the public at 93 or 93½.

Q. That means a profit of about \$1,200,000 to the bankers?

A. No, not necessarily.

Q. It was over that?

A. The bankers have expenses like other human beings who are in business.

Q. Was there any brokerage to the bankers in addition to the discount commission?

A. Not a cent.

Q. Is the Board of Directors of the United Gas Improvement Company controlled by bankers?

A. It is not.

Q. How many directors on the Board of the United Gas Improvement Company?

A. I think there are 14.

Q. I shall read you a list of your Board of Directors, and I would like you to tell me which of those men are bankers.

A. Yes.

Q. E. T. Stotesbury of Drexel and Company; J. P. Morgan?

A. Banker.

Q. Howard Stanley, a partner of J. P. Morgan?

A. Is a banker.

Q. Edward Hopkinson, Jr., a partner of J. P. Morgan and Company?

A. He is a partner of Drexel and Company, he is a banker.

Q. Thomas S. Gates, he was formerly with J. P. Morgan and Company?

A. He is not on the Board any longer. He is president of the University of Pennsylvania.

Q. He is not on the Board?

A. I beg your pardon, he is now. He is president of Pennsylvania University.

Q. He was formerly with J. P. Morgan and Company?

Q. L. K. Thorn, president of Bonbright and Company?

A. Yes, he is a banker.

Q. Effingham B. Morris, Jr., Chairman of the Girard Trust Company?

A. You have said it.

Q. Morris W. Stroud, formerly of Stroud and Company?

A. No. Mr. Stroud is not a banker. Mr. Stroud is a retired gentleman.

Q. What were his former connections?

A. Mr. Stroud was president of the American Gas Company.

Q. Richard B. Mellon, president of the Mellon National Bank, Pittsburgh?

A. Well, you have said it.

Q. Clarence H. Geist?

A. He is not a banker, he is a man that has been interested in utilities for many years, and I would say Mr. Geist was a public utility man.

Q. Is it not possible, Mr. Zimmerman, under the present system of utility regulation in this State for the bankers who have received this \$40,000,000 bond issue at a discount of say 50%?

A. I don't know. I should think it would be extremely dangerous to do it, I don't think they would have any lawyers that would advise them to do any such thing.

Q. Can you state how it could be prevented?

A. Well, I think, while I am not a lawyer, I don't know whether the laws of the State as they now exist would prevent them from doing it. If they do, why, I should think we needed no further enactments, and if they don't, we may need some more enactments.

Q. I show you an exhibit, showing a 7% return on the fair value of the utility's property to the common stockholder under our present laws. Will you take a look at that? (Handing exhibit to witness)

A. Yes.

Q. Mr. Zimmerman, the exhibit I have shown you is an example of an electric utility investment, I assume the value of the property at \$100,000,000, and a fair return of 7% under the laws of the State as interpreted by the Public Service Commission, \$100,000,000 of property at 7% return would entitle the utility to a \$7,000,000 rate of return. If the company raises this money by means of \$75,000,000 of bonds at 4½%, the interest would amount to \$3,375,000. Then if the utilities float a preferred stock issue of \$50,000,000, at 6%, that would amount to \$3,000,000, or a total for the bonds and preferred stock of \$4,275,000. \$10,000,000 is raised by means of common stock, which would mean, therefore, that the \$2,725,000 be distributed among those common stockholders, would return 27.25%. Is that not the reason why the utilities are floating so many bonds today and issuing preferred stock to the public?

A. No, sir, not necessarily, by any means, and furthermore, you can make these figures anything you like, depending upon the proportions you take of preferred stock and common.

Q. You announced before that you thought eight per cent would be a better return to the utilities, and according to this example that would make you 37.55% instead of 27.25%.

A. Well, I could make other illustrations from that that will show you 11% on the common stock. That is simply a mathematical problem, depending upon the proportion you take of the cost of each security.

Q. Isn't it a fact that since the United Gas Improvement Company acquired control of the Philadelphia Electric Company the public was never asked to subscribe to the common stock.

A. Yes, that is perfectly true—well, except the minority outstanding there is roughly say two per cent of 10,000,000 shares, that would be 10% of 10,000,000 would be 1,000,000, 2% would be 2,000,000, about 200,000 shares outstanding in the hands of the public, and they have the same rights as all the stockholders.

Q. I have here a little circular—

MR. TURNER: Before you leave that, where would the cost of operation come in this.

MR. HIRSCH: That is taken out of the return; they are allowed 7% return over and above the cost of operation, that is clear.

BY MR. HIRSCH:

Q. I show you a little circular which the Philadelphia Electric Company has been recently sending out to various customers asking them to subscribe to \$5.00 preferred stock. I shall read a portion of it. "In answer to the present widespread desire for investments that are both conservative and attractive the Philadelphia Electric Company is shortly to extend to its customers and employees the right to purchase the issue of 20,000 shares of \$5.00 dividend preferred stock without nominal or par value, recently authorized by its board of directors.

Shares may be purchased from any employee, or at any office of the Company, by the payment of \$100 in cash, per share—or on the convenient term payment plan of \$10 per share with order and \$10 per month for nine months. Fully paid subscriptions will begin earning dividends May 1, 1931. Another section, "Money realized from the sale of this five per cent preferred stock will be used to provide actual physical property necessary to the improvement and expansion of electric service in the city of Philadelphia and electric and gas service in the suburban areas embracing either wholly or in part the counties of Delaware, Chester, Montgomery, and Bucks." I note that the issue which you are giving the public carries dividends at the rate of five dollars per share, whereas in my example I used preferred stock dividend of six per cent.

A. Yes. But what has that got to do with it?

Q. Furthermore, in the example I have given I used four and one-half per cent interest on bonds, whereas the recent issue of the Philadelphia Electric Company bonds was four per cent, which shows that the net return as figures is conservative and that if the actual figures were used, in all probability the net return would be much greater.

A. I don't agree with your conclusions for an instant. They are fallacious in every respect. You cannot apply that example to the Philadelphia Electric Company unless you put down the entire capital stock. You take but fifteen millions. Just to show you there is no comparison, prior to the sale of preferred stock, prior to the sale of the bond issues to the stockholders of Philadelphia Electric, the stockholders subscribed \$20,000,000 of common stock, which went into the improvement of the property.

Q. This being 98 per cent of the stockholders?

A. Yes sir, and the balance for the public.

Q. In other words, two per cent went to the public?

A. Two per cent of the stock, \$400,000 worth.

Q. It is interesting to know why the huge United Gas Improvement Company never has acquired the other two per cent of the stock. Has any effort been made to obtain it?

A. Yes sir.

Q. Is it not true, Mr. Zimmerman, that as these utilities are adding to their property, they are issuing more and more senior securities in the nature of bonds and preferred stock?

A. Are you asking me that question as a general question of industry, or as it particularly refers to the United Gas Improvement Company?

Q. As it applies to the United Gas Improvement Company?

A. We are not. Just the contrary.

Q. I think you have not got the whole question. It is not true that as these utilities add to their plant for which they are raising the money by means of greater quantities of bonds and preferred stocks it will produce a return so that the common stockholders will obtain a much higher return on the money they have invested?

A. No, I don't agree with that.

Q. In the annual financial reports of the Philadelphia Electric Company, in a statement to the Philadelphia Stock Exchange, I have observed the following statement: "It is the practice of the company to set aside each year from the surplus and reserve, or both, an amount of money which in the judgment of the management, based upon experience, will care for current retirement, and in the course of time will provide an increasing reserve to provide for future major retirements." Is that the practice of your company?

A. Yes, so far as I know.

Q. I have observed in your financial reports you have "Depreciation, amortization, replacement and renewals, and so forth," and here is an additional clause which covers further reserves; Is this the means of removing a certain amount of surplus that might otherwise be used in reduction in rates to consumers?

A. No sir, of course not.

Q. Since this statement has it that the amount depends upon the judgment of the management, what is to prevent that judgment being used for the purpose of absorbing all the available surplus of the electric companies which might be used for the reduction in rates?

A. That would be a dishonest judgment. The judgment is not exercised that way. The best answer to that is the history of the company and the reserve set up, instead of referring to circulars filed with stock exchanges. The records are available as to the reserves set up and I think will show a consistent history.

Q. Were you active politically in the last election?

A. What do you mean by that?

Q. Did you urge any of the officers or employees of the Philadelphia Electric Company or the United Gas Improvement to take an interest in the campaign?

A. No sir, they had to exercise their own free consciences in that matter.

Q. Did you instruct any officers and employees how to vote?

A. I did not, and you have no right to ask me that, and I resent it.

Q. Did you write or send any letter to the stockholders?

A. I did. Would you like me to read it to you?

Q. Yes sir, if you have it with you?

A. I think I have it with me. Maybe I am speaking too quick. Here it is:

"THE UNITED GAS IMPROVEMENT COMPANY  
1401 Arch Street, Philadelphia.

Office of the President.

October 30, 1930.

To Our Stockholders:

I enclose earnings statement for the quarter ended September 30, and for the twelve months ended the same date. Similar statements will be sent you at the end of each quarter, except for the quarter ending December 31, which figures will be included in the annual report.

I particularly desire to call your attention to attacks of a political nature now being directed against your company and some of its subsidiaries, which are so false and misleading

that you should combat them with all the influence at your command. It is the duty of every individual citizen to see that proper men are elected to public office, and it is not only the right but the duty of every stockholder to protect his property by challenging statements made for the purpose of arousing the ill will of the voter against his corporation.

The good will and friendliness of the public which it serves are essential to the successful operation of any utility. To attempt to break down the confidence of the public in these utilities in order to serve selfish political ambitions is neither fair nor decent.

The average revenue per kilowatt hour sold in Philadelphia for electricity for domestic, commercial and power uses is about 5% lower than the average revenue per kilowatt hour sold for such uses throughout the United States. The policy of your companies for many years has been that of voluntarily reducing rates, thereby sharing with the public the reductions in cost obtained by increased sales and greater efficiency in operation and management.

The Philadelphia Electric Company has made six voluntary reductions in rates within the last six years, resulting in a saving to consumers of \$6,000,000. The charge attributed to Mr. Pinchot that industries are leaving Philadelphia because of excessive power rates of the Philadelphia Electric Company can be briefly answered by quoting the following statement of the Philadelphia Business Progress Association:

'Claim can be made with all due conservatism that the Philadelphia area enjoys more advantages with respect to power than any other important industrial center of the country.'

and the further statement of that Association that:

'Based on bills for average month of twenty-five working days of ten hours each, to consumers of 1000 H.P., the cost of power in Philadelphia is less than in Cleveland, Cincinnati, Boston, St. Paul, Minneapolis, Brooklyn (which enjoys the lowest rate in Metropolitan New York), Baltimore, Chicago, Milwaukee, Detroit, St. Louis, Kansas City, Louisville and Norfolk.'

John E. Zimmerman, President."

Q. Now Mr. Zimmerman, as you stated, that Philadelphia Business Progress committee did provide a great deal of your information relating to a comparison of the rates between the Philadelphia Electric Company and the electric companies in other cities?

A. I quoted it from the Philadelphia Business Progress Committee. I confined myself to quotations taken from the reports they prepared.

Q. Can you tell me how much money the United Gas Improvement Company contributed to the Philadelphia Business Progress Association when it was organized?

A. I don't remember?

Q. Was it something like a hundred thousand dollars?

A. No I don't think it was anything like it. If you want the figures I can get them for you.

Q. Is it not a fact that William H. Taylor of the Philadelphia Electric Company was the Chairman of the Committee that raised the money that put into being the Philadelphia Business Progress Association?

A. I think so, but you can find out from him.

Q. Is it not a fact that the Philadelphia Electric Company contributed \$75,000 to the Business Progress Association of Philadelphia?

A. I don't remember the amount. It contributed something, but I don't remember the amount.

BY MR. RHODES:

Q. What was the purpose of that association?

A. The purpose was to advance the interests of Philadelphia as an industrial center and to invite industries to come to Philadelphia, and to point out, as I understand, the advantages of the city as a big industrial center, and to get more industries in.

BY MR. HIRSCH:

Q. Did you personally make any financial contributions to either party during the last campaign?

A. I did.

Q. What was the amount?

A. A thousand dollars.

Q. Was this amount charged to any expense account of the Philadelphia Electric Company?

A. It was not. And that is a question I have a right to resent. You must not judge others by your own self.

MR. TURNER: Now, Mr. Zimmerman, you don't think you ought to—

THE WITNESS: My dear sir, I think I have a right to resent that kind of a question.

MR. TURNER: It is perfectly proper for you to resent it, but I don't think you should take advantage of the position of counsel.

BY MR. RHODES:

Q. Mr. Zimmerman, can you give us the capital set-up of the Philadelphia Electric and the U. G. I.?

A. Yes sir.

Q. I do not think that was brought out.

A. I would be glad to give you anything you want.

Q. I would like to know what is the amount of your bond issue, and the amount of your capital stock and your common stock.

A. I have a statement.

Q. I would like to have it.

A. Yes sir. Do you want me to give you the capital stock first?

A. Yes.

A. The 5% dividend preferred stock is \$12,680,000; the common stock is \$135,160,000. There is an eight per cent cumulative preferred stock of the Philadelphia Power Company. Of course, I am giving you this from a consolidated balance sheet, I mean to say that it not only represents the Philadelphia Electric, but what we call the Philadelphia Electric System, and then there is the Susquehanna Electric which in turn controls the Conowingo. There is \$12,000,000 of that eight per cent preferred, and then there are funded debts that total \$159,376,000, and of the Susquehanna Utility there is the preferred stock, in round figures \$600,000?

Q. Do you have that in a form which we can put in evidence?

A. It is right here in the annual report of the Philadelphia Electric. I would be very glad to leave it.

MR. RHODES: I would suggest that that be offered in evidence.

THE WITNESS: Do you want the U. G. I.?

MR. RHODES: If you have it that way. You do not have to read it if you have it in such form that you can leave it with the Committee.

THE WITNESS: Unfortunately, all I have is the galley proof of the U. G. I., which will go out in two or three days.

MR. TURNER: It will possibly save time if you will read it into the record.

MR. EVANS: If the Committee please, I would suggest that we reserve an exhibit number for it, and allow Mr. Zimmerman to send it to us, if that is satisfactory.

THE WITNESS: That is satisfactory; yes.

BY MR. HAGMAIER:

Q. In your judgment, do you think the Public Service Commission laws in the state of Pennsylvania need revision?

A. I do, yes sir; and I should be glad, if the Committee would permit, to express my thoughts in that respect.

BY MR. EVANS:

Q. Just before you get out of the more general line, may I ask you what has been the dividend rate of the Philadelphia Electric common stock from 1925 to 1929?

A. You want exact—

Q. I mean in percentages, roughly.

A. As far as I remember, from 1925 to the close of 1929, and the early part of 1929, the dividend was eight per cent on a par value of \$25 a share, which would be \$2 a share. Subsequent to that time there was, of course, the increase in the Philadelphia Electric system by consolidation of the Philadelphia Electric through the merger act into the Philadelphia Counties Gas and Suburban Electric Company, and we had then a situation where the Philadelphia Electric Company had stock of a par value of \$25, the Philadelphia Suburban had stock of no par value, and we consolidated them into the new Philadelphia Electric Company with a stock of no par value. Just prior to the consolidation of the two, the dividend on the Philadelphia Electric stock was increased to match the

dividends that the Philadelphia Suburban were going to get on their stock. Do you see what I mean? They were putting them together. After that the Philadelphia Electric paid subsequent dividends on its common stock, the amount of which I don't remember off hand; I can give that to you. It was the stock of the Consolidated Corporation.

Q. Would you give us those dividends for 1929 and 1930?

A. Very glad to.

Q. And so as to show whether or not there is any change in the dividend per share from 1927 to—

A. Very glad to.

BY MR. HIRSCH:

Q. Mr. Zimmerman, you just said that in order to match the dividends which the Suburban County Electric Company had been paying—

A. Per share?

Q. Per share on their stock with that which the Philadelphia Electric had been paying on their stock, the electric company increased its dividends in order to match that dividend?

A. What I meant, when we took the dividends prior to the consolidation, the Philadelphia Suburban was getting a certain percentage of the earnings by way of dividends, we will say eighty-four per cent. Now, we formed the consolidation, and the stockholders of the Philadelphia Suburban and the stockholders of the Philadelphia Electric got the stock of the Consolidated Corporation. So, it was taken out in the same proportion of the earnings that the Philadelphia Suburban was taking prior to the consolidation. In other words, if it was only taking eighty-four per cent we brought the other up to eighty-four per cent.

Q. That was very generous to the consumers to have boosted the dividend rate?

A. What has that to do with it? What have dividends to do with it? The question is whether the earnings made on the property were reasonable or unreasonable, and the dividends have no bearing on it at all. The dividends might be 100%. The question is the return on the value of the property. You asked me to express my views?

MR. HAGMAIER: Yes.

THE WITNESS: I think that the Commission Act, as we have it in Pennsylvania today is one of the best acts taken as a whole that I know of. I think I am fairly familiar with the acts of other states. I have had occasion to be a witness before other Commissions and taking it all in all I think the Pennsylvania act is a good act. I do not think it needs certain reinforcing in this respect, and I think the two principal points in which it needs that reinforcing is, one, that there should be some power in the hands of the Commission for a suspension of rates where there is an application for an increase in rates. Then, to go hand in hand with that, there should be a mandatory provision that the Commission shall give its decision within a certain time.

Now, I went through the war and I went through with utilities that had black figures in the earnings which all ran into red, and some of those utilities couldn't get relief from the Commission. In other words, there was no mandatory provision in the Commission Act that relieved, and the application was made for the increased rates, and the increased rates would not be granted; we would go on for a year or two and in some instances, we had very serious difficulties.

Another thing in which the act needs strengthening is in connection with the issue of securities, I think in that respect it should be strengthened. I think it should not be made too wide in the powers given to the Commission, but I think full and reasonable powers should be given them to control the bond issue of securities. So, at this time, as nearly as I can understand the law of the state, together with the law of the Public Service Commission—and the teeth have been put into the act; it is a very dangerous thing, if not practically impossible, for any officer of a public utility to issue securities unless he receives the proper consideration in cash for them. The utilities have been under regulation since 1913; that is practically eighteen years, and in that eighteen years, they have been required, under the Commission Act to reflect all their costs of additions to the property and everything else in the cash costs in their books, and in those two respects, I think the act should be strengthened.

BY MR. COOKE:

Q. We have asked other witnesses who have been here what they think of the annual report. Would you be kind enough to tell us what you think? What is your general impression as to what should be done with that?

A. Mr. Cooke, I don't know that I have any impression as to what should be done with that.

Q. Just carrying out the—

A. Just carrying out the requirements of the act, to file the report. I think what is in your mind probably is the study of those reports by the Commission?

Q. I was just wondering what you considered to be feasible. And now, I assume there has got to be some vising of your operations other than what is precipitated by complaints. I was wondering whether there was any orthodox way in which the Commission, representing the Legislature, can get that under supervision.

A. Of course, I think it is merely a question of personnel. I don't see any reason, why these public utility corporations should not be required to file the proper data and reports, provided that the Commission had a large enough organization which could scrutinize those reports, and determine what profits are being made, but that will not do, unless they have simultaneously the valuation of the property. Now, if in 1913, when the Commission first went into force, instead of trying to do what they have been doing here and the Federal Government have been trying to do, to get at things by retroactive legislation—if in 1913, the act had said the book value of these utilities would be recognized as such from now on; you say, reflect thereon, the capital, the money costs to date, you would to do what they have been doing here and the Federal Government have a situation that a great deal of your owed property, because seventeen years, in the passage of time it has been marked off, it has gone, and you would have on your books today the actual cost.

MR. TURNER: That is what I was going to ask you, whether their capital reports, whether they do not reflect the valuation, as I understand from the testimony which has been before the Committee?

A. That may be or may not.

Q. That may or may not; isn't that one of our troubles?

A. That is one of our difficulties, but we should all remember—I am just pointing out this retroactive legislation. We should all remember that the utilities of the state for seventeen years have run their properties on the law of the state, and the law as it is today in the state is a question of what is value, and the law of the land as announced by the Supreme Court is value. Now, all the securities which have been sold to the public and everybody else, of course, they have been sold with the knowledge that that was the law at the present time; and so I say that if we are going to make any amendments to the act, don't let us try to pass things in a retroactive sense.

BY MR. COOKE:

Q. And now, apparently seventeen years or more ago you would have been willing to get the same sort of fixture; what would be your reaction to include prudent investment from now on and let the law of the land apply to what has gone over the dam.

A. Mr. Cooke, I would be in favor of that in that sense, but if we established today—we took the book value of these companies and from now on we would reflect thereon purely the money that you have put in. I have a little quarrel with you about the word prudent, for this reason; it is extremely easy—if I can point out to you; you know these problems—I sit down, for instance, today and I get the best technical advice I can get on the deciding whether I shall spend \$500,000 or \$1,000,000 on certain things.

We ought to use our best judgment, and in exercising our judgment we say that shall be done. Two or three years afterwards when we are able to apply hindsight to it, we see it was not very wise. Now, on the prudent investment theory, would that be thrown out.

MR. COOKE: Oh, certainly not.

THE WITNESS: That is all right. That is the thought I meant to convey.

BY MR. COOKE:

Q. As I understand it, the only reason for putting in the word prudent is to guard against our getting together and putting something over, but if you use your judgment—

A. That would be different.

Q. And that is the only way that I can see how we will ever get out of this mess that we all admit we are in now.

A. Of course, there is a question there, Mr. Cooks, you have thought of this thing, and I have thought of it, and I think we have to bear in mind a bit, and that is that after all the purchasing power of the dollar enters into this thing. In other words, let me illustrate that: If 20 years ago the dollars had a purchasing power of 100 cents, and a dollar today only has the purchasing power of half that, and you get 7% on your dollar, the purchasing power of that 7% that you get today is half of what it was then, and that is the reason for this par value established by the Supreme Court, I think. Now, you can either do it by altering the base, or recognizing inflation and deflation of the dollar, or you can do it by keeping the base constant and changing the rate of return with the value of the dollar.

Q. I believe if you use prudent investment, you have to change the rate of return?

A. That is all right.

Q. What it seems to me, the whole country is looking for, is how to do it. If you had been in the room here last week and had seen this multiplicity of valuation of the same property—I know how you personally feel about that, that is not the type of work that would please you, you are too much of an engineer—but we have to get out of that, and the only way I can see out of it is to plug in and say we will avoid that sort of thing, and let the company and the public thresh it out.

MR. EVANS: Is this a copy? (Referring to copy of Electric Company report on counsel table) Are you going to leave this with the Committee, or are you going to furnish that later?

THE WITNESS: I think Mr. Rhodes asked for a copy of the Hyde Gas Improvement Report, and that will be sent as soon as it is prepared.

Annual report to the stockholders for the fiscal year ending December 31, 1930, of the Philadelphia Electric Company, produced and marked Exhibit No. 92.

MR. EVANS: I offer the annual report of the Philadelphia Electric Company for the year 1930 as Exhibit No. 92.

WM. H. TAYLOR sworn

BY MR. HIRSCH:

Q. What is your full name, Mr. Taylor?

A. William H. Taylor.

Q. What is your position with the Philadelphia Electric Company?

A. President.

Q. When did you first become president of the electric company?

A. On the 14th of February, 1928.

Q. Was that immediately after the United Gas Improvement Company acquired control of the Philadelphia Electric Company?

A. It was shortly after, I don't know how immediate.

Q. Whom did you succeed as president?

A. Mr. Walter H. Johnson.

Q. When you first assumed office as president of the Philadelphia Electric Company, did you find the organization an efficient one?

A. I found the organization efficient, and made up of men who are highly skilled in their business.

Q. Approximately how much construction work did you award to the United Engineers Construction during the year 1930?

A. Mr. Hirsch, I could not answer that exactly, I can say approximately in my opinion it would be in the neighborhood of possibly \$4,000,000 maybe \$4,500,000.

Q. Can you say whether most of this work was done of the 10% basis referred to by Mr. Zimmerman.

A. I could not answer that off hand.

BY MR. HIRSCH:

Q. Could you estimate what the average fee you gave the United Engineers Construction for the service they rendered your company during the year 1930.

A. No, not without referring to the books and the records.

Q. Does the Keystone Paving and Construction Company do much work for the Philadelphia Electric Company?

A. They do some, not a great deal.

Q. On what basis do they do work for your company?

A. They do work on the basis of cost plus and percentage.

Q. What is that percentage?

A. Fifteen per cent.

Q. Can you say approximately how much construction work this company did for the Philadelphia Electric Company last year?

A. They have been doing each year for the last two or three years in the neighborhood, I suppose, of an average of \$500,000 worth of work.

Q. And all that work is on a cost plus 15% basis?

A. Yes, on a cost plus 15% basis, for the reason, that it is a very special kind of work, and it is a work that requires a certain type of labor; it is work that cannot possibly be let out on any sort of a lump sum contract.

Q. Do you know who controls the Keystone Paving and Construction Company?

A. It was controlled by the late Isaac D. Hetzel.

Q. Do you know who is in control since his recent departure?

A. No, I don't.

Q. Is this the same Isaac D. Hetzel who was a member of city councils of Philadelphia, for a number of years?

A. The same man.

Q. He was a member of the Public Utility Committee of City Council, was he not?

A. I don't know that.

Q. Does the Philadelphia Electric Company itself perform any underground construction work.

A. The Philadelphia Electric Company on underground construction work lets out the laying of the conduits, the installing of the terra cotta conduits, and the manholes, the cutting open of the streets and the paving and back filling. Its own electricians install the cables and other electric appliances or devices necessary for a complete underground construction.

Q. Does the Philadelphia Electric Company do its own maintenance work in connection with their underground conduits?

A. It does its own maintenance work in connection with the electric work and a large maintenance job involving the renewal of conduits or something of that kind requiring the cutting open of the streets, would probably be let to a contractor.

Q. Is there any other contractor besides the Keystone Paving and Construction Company that you have ever awarded any contract to for your underground construction?

A. I don't know.

MR. TURNER: I presume these questions all go to the time since Mr. Taylor has become president?

MR. HIRSCH: Yes, sir; that is the time I refer to.

MR. RHODES: When did Mr. Taylor become president of the company?

MR. HIRSCH: It was answered on February 14, 1928.

BY MR. HIRSCH:

Q. Is there any overhead construction or substation work which your company does itself?

A. The company does a great deal of overhead construction work; in fact, we do the bulk of all of that kind of work by our own forces. Our whole arrangement in regard to doing work ourselves or contracting out work is based on this; we try to keep a force of men who are available for both maintenance or construction work, a force, that, due to the usual and daily routine operations of the property, enables us to keep a practically constant force. We also like to do our own work, what we call "hot" work; that is, work that may involve the close proximity or work on charged electric wires, because of the better control of the safety of men. When it comes to a matter of a large construction job, where in the ordinary course of events, in order to undertake it or perform it, we would have to increase our force and,—well, increase our force to taking on an entirely new gang, which would involve taking on the overhead, a foreman, and superintendent, and things of that kind,—we prefer to give that job out to an outside contractor, and that is the method we pursue.

BY MR. HIRSCH:

Q. Mr. Taylor, does your company pay the United Engineers and Constructors Company any fee or commission for any construction which your company does itself?

A. I does not. It pays for nothing except what the United Engineers and Constructors perform for us.

Q. Is anything charged on such construction for a supervisory fee to the United Engineers and Constructors?

A. You mean on work we do ourselves?

Q. That is right.

A. Absolutely nothing.

Q. Has a fee or commission ever been paid to the United Engineers and Constructors for such work?

A. No.

Q. Who does the purchasing for the Philadelphia Electric Company?

A. At the present time the purchasing is done by the Purchasing Department of the United Gas Improvement Company, and that is one of the services that the United Gas Improvement Company renders to us. I think Mr. Zimmerman failed to mention that. Up I think until sometime during the latter part of 1929 or sometime in 1930, I am not exactly clear on that, the Philadelphia Electric Company maintained its own purchasing department at a cost of about \$90,000 a year. It seemed foolish to have two purchasing department operating in the same city for the same interests, so it was arranged that the Philadelphia Electric Purchasing Department would be merged with the Purchasing Department of the United Gas Improvement Company in one purchasing agency, and that relieved the Philadelphia Electric Company of that expense to that extent.

Q. What items do they purchase for your company?

A. The Purchasing Department purchases everything practically, I think with no exceptions at the present time, and also negotiate the contracts.

Q. Do you pay the U. G. I. any extra fee for the purchase which they make for your company?

A. We do not. We pay only the invoice price for material and the contract price on contracts, there is no fee, no percentage and nothing added.

Q. Do you pay the bills directly to the vendors of this equipment?

A. We do.

Q. In other words, when a purchase of coal or electric apparatus is made for the Philadelphia Electric Company, the order is sent to the U. G. I. and they in turn order the equipment and have it shipped to the Philadelphia Electric Company.

A. No. The Purchasing Department of the U. G. I. acts as the Purchasing Department of the Philadelphia Electric Company. Mr. R. Z. Zimmerman is the Purchasing Agent and is listed as the General Purchasing Agent of the Philadelphia Electric. Whatever services they render, they render as agents for Philadelphia Electric.

Q. And the bills that cover such merchandise equipment are sent directly to the Philadelphia Electric Company?

A. I don't know whether they come directly to the Philadelphia Electric or the Purchasing Department first, but they come to the Philadelphia Electric for payment, the original bills as submitted by the vendor.

Q. You know of course, Mr. Taylor, that the purchase of transformers and other electrical apparatus, the makers of this equipment allow a certain discount on quantity purchases each year. Are these discounts passed along to the Philadelphia Electric Company?

A. Any discount earned at the end of the year under that sort of an arrangement would be apportioned to the Philadelphia Electric and other companies for which Mr. Zimmerman might act as purchasing agent proportionate to their purchases.

Q. Who receives these discounts, the Philadelphia Electric or U. G. I.?

Q. Approximately how much coal does the U. G. I. purchase for the Philadelphia Electric each year?

A. The Purchasing Department purchases practically one million tons in round figures, they do it as agents for the P. X.

Q. Approximately what would one million tons of coal cost to the Philadelphia Electric.

A. Something, at the present time, about \$4,500,000.

Q. And what fee does the U. G. I. get for that purchase?

A. Nothing, it is a service rendered.

Q. How do they arrive at a basis of payment to the Philadelphia Electric for the purchase of such a large quantity of coal?

A. I don't understand the question?

Q. What is the basis of payment to the U. G. I. when they purchase that quantity of coal for your company?

A. That doesn't enter into the transaction at all except with the purchasing department. They enter into a contract direct with the seller of the coal acting, for us, and the contract is made in the name of the Philadelphia Electric. There is no intermediate.

Q. Is there any service fee charged on a contract which U. G. I. makes for you?

A. Absolutely not.

Q. Do you know or would you know whether the shippers of coal give the U. G. I. Company any rebates on your purchases of coal?

A. I don't know. I cannot say that I know, but I am certain that they don't. The U. G. I. doesn't do business that way. Mr. Hirsch.

Q. Who looks after the disposal of your discontinued equipment?

A. The Purchasing Department.

Q. Of the U. G. I.?

A. The Purchasing Department of the U. G. I. is also the Purchasing Department of the Philadelphia Electric.

Q. And for such purchases the U. G. I. Company makes an annual charge depending on the quantity; is that correct?

A. An annual charge on the disposal.

Q. On the purchase and disposal of equipment?

A. They make no charge whatever except what is included in the fee at the end of the year for service rendered.

Q. In arriving at that fee, at the end of the year, is any one from the Philadelphia Electric called into consultation with the U. G. I. to determine the size of that fee?

A. They certainly are. I am called in and pass on the bill as to its reasonableness, and whether it is a bill that is satisfactory.

Q. Does the U. G. I. likewise purchase your electrical appliances?

A. This joint purchasing department purchases all—makes all purchases for Philadelphia Electric, with the exception of possibly some miscellaneous minor material that may be bought directly on the job or at some of our division headquarters. It would be very small stuff and emergency stuff.

Q. Who is the head of the purchasing department of the U. G. I.?

A. I. C. Zimmerman.

Q. Does he receive any salary from Philadelphia Electric.

A. He does not.

Q. Does the U. G. I. receive any compensation for the services rendered by Mr. I. C. Zimmerman?

A. Not from Philadelphia Electric.

Q. Is that likewise included in the annual fee, which the U. G. I. received from the Philadelphia Electric.

A. The U. G. I. does not receive any stated annual fee for any fixed amount. It renders during the year certain services, and among those services is this purchasing department. It also renders other services. At the end of the year a resume is made of what these services have been during the year and an agreement reached as to an amount which will—I won't say compensate the U. G. I. for the work they have done, because I don't think the amount paid does; but it will be mutually satisfactorily, and in that respect the U. G. I. has leaned over backwards, so that it could not be accused of asking for more than what would be a fair return.

Q. Do you think the U. G. I. is losing money by rendering such service to the Philadelphia Electric?

A. The U. G. I., in my opinion is not being compensated for the services rendered, at what the service would cost, if provided by our own or outside agencies. Whether it is preferable or not I don't know.

Q. You sell a great deal of your electrical appliances on the instalment plan, do you not?

A. A great deal of the appliance sales are sold on the instalment plan.

Q. Do you have a special fund set aside for this purpose?

A. I don't have any special fund set aside. The accounts of the merchandise department show the operations of that department and all those transactions are segregated.

Q. If there are any losses in this fund, or sustained by the appliance department they are passed along to operating expense, are they not.

A. They are not.

Q. How are those losses taken care of?

A. These losses, if any, are included in what is known as the non-operating accounts, or non-operating revenues or expenses, and it is the usual practice for public service commissions and others in dealing with the rate of return, the rate based on earnings of a company to exclude these non-operating revenues or expenses from any consideration in arriving at a rate; so that if there are any losses in the department it comes out of the stockholders accounts and does not enter into the rate base.

Q. Are you operating your appliance department at a profit?

A. At the present time or for the year 1930, the appliance department, has been operated at a loss. For 1929, I think it just about broke even. Everybody knows that in 1930 we have been going through a very strenuous business depression. We had to decide whether we should lay off or discharge some three hundred and fifty or four hundred men because of the fact that people were not buying appliances at the rate at which they had previously been buying them, and that our volume of sales was not equal to what it had been in several prior years. We either had to decide to throw these men out of work and put them on the unemployed list, or keep them employed and endeavor to sell as much as we possibly could. In following that policy for the year we show a small loss relative to the volume of business done.

Q. Are there not many reputable electrical appliance people in Philadelphia covering the territory served by you?

A. A great many.

Q. And may I ask whether in the sale of these electrical appliances you have included a proper portion of your salary and other executives who devote part of their time to it?

A. I don't recall offhand; in fact, I don't know whether any of my particular salary is included in that; but I would say that the accounts represent every charge that we can think of that might properly be applied against the appliance department.

Q. Where these appliances required servicing, like mechanical refrigerators, isn't it a fact that the cost of such servicing is borne by some other departments in your company?

A. These appliances are sold—both of the appliances of that type are sold with a guarantee attached. The guarantee, may run for three months, for six months, or a year, or maybe longer in some cases. Any appliance that is sold with a guarantee is serviced at the cost of the merchandise department during the guarantee period. After the guarantee period, it takes its place in our system just the same as any other appliance that may have been sold by a department store, or an electrical dealer, or a contractor, or anybody else.

We service any appliance for anybody regardless of who sold it. That is part of the electric service that is rendered. We make a charge for this service to some extent, but a great deal of it, necessarily—I won't say a great deal, but some of it necessarily, can't be charged for, because if a customer calls us up and tells that the refrigerator is not operating properly, and we go there and find that it takes about a five minute adjustment; it takes a matter of turning a few valves or adjusting a few gadgets on this refrigerator, the time is so short that the customer can't see why that service should not be rendered to them, and we don't attempt to make a charge in a case of that kind, but if we furnish any material or labor we try to charge the cost of that work.

BY MR. TURNER:

Q. That cost, when you make any charges, is borne by the appliance department or by the general operations?

A. After an appliance has been moved out, has been moved away from the merchandise sales department, after its guarantee period has expired, it has the same standing as an appliance sold by a department store or electrical dealer or anybody else. In other words our consignees—after the guarantee period is over then it is serviced by the company at or near cost as it is possible. And now, if that particular department does not break even on these service costs, and there will be a certain amount of free work included on appliances we have sold, and appliances that have been sold by anybody else; that becomes an operating charge that is known as the utilization account.

Q. If your charge for the installation of appliances would not amount to the actual cost of that installation, that would have to be borne by the appliance department?

A. If the appliance—at the end of the year the appliance department, the merchandise department, if it has been operated at a loss, that is a loss to the stockholders, and would not be considered in arriving at a rate base.

Q. Charged to that specific department itself?

A. That is right.

BY MR. HIRSCH:

Q. When you purchase these appliances, they come out of the general fund of the company, do they not?

A. The cash is provided by the company; there is no identification of a dollar in our treasury.

Q. In other words, your appliance itself has been bought by the money contributed by the rate payers, is that correct?

A. No, I don't think so.

Q. Well, does not the money paid by the rate payers go into the general fund of your company?

A. That goes into it, and so does the money contributed by the purchasers of securities.

Q. Approximately how much did the Philadelphia Company lose in 1930 in the appliance department?

A. I don't remember in exact figure, but it was in the neighborhood of \$100,000 on some \$4,000,000 worth of sales.

Q. When there are profits made in the appliance department, where do they go?

A. They follow the same course that losses would take.

Q. Would they go to enrich the stockholders?

A. They go through the non-operating revenue account, and would become a direct charge to profit and loss, just the same as losses, if any, are a charge against profit and loss.

Q. Suppose you sustain a loss of a million dollars a year in your appliance department, how would you make up that loss?

A. I would not have it, I would shut the department up first.

Q. You certainly would not charge it against the stockholders account, would you?

A. If we lost a million dollars, or two million dollars through that account, it would be a loss to the stockholders, it would be a charge against profit and loss.

Q. Where you have a combined district office and appliance department, do you charge any rental for the use of that district office, using the room?

A. We do, we charge the merchandise department with a proportionate part of the rent.

Q. Is that based on the value of the space occupied?

A. It is necessarily an allocation, and is based on our judgement as to what proportion of the cost is incurred by the merchandising department. For instance, Mr. Hirsch, I might explain it this way: Regardless of the fact, taking one of our district offices, regardless of the fact whether we do any merchandising there or not, we would have to maintain an office in order to take care of the customers who come in and make contracts with the company, and also to pay bills and transact the multitude of business affairs they have with us, that office would have—we would have to have that office, regardless of whether we have merchandise sales there or not, now when we expect merchandise there occupy some of the floor space, they are charged rent for that. The wages and salaries of the people employed on the sales floor to handle sales, or make sales, are also charged against the merchandise department.

BY MR. EVANS:

Q. Mr. Taylor, do you charge the appliance department with a rental charge, which would be approximately the market rental of that space?

A. Yes, in our judgement that is the market rental—not necessarily in square foot area, but we make a compromise, what would be our costs—well, our cost would be a certain amount if we had an appliance department, the charge against the merchandising department would be a certain allocation of the space, I won't say it would be exactly the number of square feet, because it is almost impossible to determine that. All the space occupied by the merchandise department is also used as a passage way for people coming into the office, parts of the office, and we exercise our best judgment as to what is a fair allocation of costs to the merchandise department.

BY MR. HIRSCH:

Q. Does your report for 1930 show a loss of \$100,000 in the appliance department?

A. Our report for 1930—what report do you refer to.

Q. Your reports that you are preparing for the Public Service Commission.

A. I don't know whether the report of the Public Service Commission would show that item as a segregated item or not. Our reports to the Public Service Commission will show none operating revenue, I am sure, and the loss in this department that we are telling about would be included in that.

Q. Isn't it possible, Mr. Taylor, under such an arrangement, which depends upon your own judgment as to the rental to be charged against the appliance department and the proportion of the salaries of the supervisors and officers of the company get, or receive, isn't it possible when the appliance department is faced with a loss, to charge the rental, and change the proper segregation of salaries so that it will come out of operating expenses.

A. Why, that would be possible, but that is not the way we do business.

Q. Isn't it a fact, Mr. Taylor, that the other dealers of electrical appliances have been strongly opposed to the electric companies activities in this direction?

A. Why I would think at the present time it is quite the opposite. I think the association of contractors and dealers, jobbers, and others who are selling merchandise, appliances, in the City of Philadelphia, are banded together in what is known as an electric association, and I think that at the present time there prevails a real spirit of harmony between this association and the utility company, so much so, that they are operating together; they are co-operating in various plans for the improvement of the industry in general, we expect to have a joint refrigerator show there shortly where all the manufacturers, will set up their machines and that will probably be followed by an electric range exhibition and all these various dealers, distributors will participate in that with us.

Q. Do you charge the proper advertisement expense to your appliance department?

A. I think we do.

Q. Or is a great deal of your advertising charged against good will advertising and put into operating expenses.

A. Is very easy to identify advertising from its nature as to whether it is advertising of merchandise or whether it is promotional or good will advertising, and any advertising is allocated to the proper division. If it is merchandising it is charged against merchandise.

Q. Who does the allocating, Mr. Taylor?

A. It is done by the department that has charge of the advertising.

Q. Approximately how much do you expend for advertising in a year.

A. Well, that would be a guess on my part right now Mr. Hirsch, I would say in the neighborhood of possibly \$550,000.

Q. Is that for appliances?

A. Not for appliances, I thought you meant general advertising.

Q. No, I mean for appliances.

A. A much less sum than that. We try to regulate the appliance and merchandise advertising to approximately 3% of the gross sales.

Q. Where your company engages in the sale of coke in Delaware County and other places on the installment plan you render bills to the purchasers of such coke on the same form that you render your electric and gas bills.

A. I don't know. I haven't seen one of the coke bills.

Q. In other words, where you have an electric consumer purchase coke from your company and he receives his monthly electric bill, doesn't he also in that same bill have an added charge for the coke he purchases?

A. He may or may not. I can not answer that, as to what their practice is on the selling of coke or the billing of it, whether they would add that on to the gas or electric bill or not. I don't think so. My impression is that that is billed separately, but I am not positive on that point.

Q. Have you ever been active in politics, Mr. Taylor?

A. Never.

Q. Were you active politically during the last campaign?

A. I was not.

Q. Did you urge any of your officers or employees to take an active interest in the campaign?

A. I did not.

Q. Did you ask or instruct any of your officers or employees to assist financially or otherwise in the election?

A. That would be a personal matter with them. I don't interfere with their personal affairs.

Q. Did you personally make any financial contribution to either party during that election?

A. I did.

Q. What was the amount, Mr. Taylor, of your contribution?

A. One thousand dollars.

Q. Whom did you pay that to?

A. To, I think the initials are—Montgomery,— well, it is Montgomery, R. L. Montgomery, treasurer of the Liberal Party.

Q. Did you discuss your contribution with Mr. J. E. Zimmerman before you made it?

A. I did not.

Q. Was your contribution charged to any expense account in your company?

A. It was not. It was a personal expense of my own.

BY MR. EVANS:

Q. Mr. Taylor, Mr. Morgal, the Chief of the Bureau of Accounts of the Public Service Commission, the other day testified that in their analysis of electric company accounts they usually included non-operating income, because most of it was usually income from the sale of appliances, and they had found that the property devoted to the sale of appliances was usually included in the plant account of the company as reported to the Public Service Commission. Is that the practice of the Philadelphia Electric Company?

A. Well, in the Philadelphia Electric Company—I don't know how Mr. Morgal would treat the matter,— but we try to compensate in every way for the expense of the merchandise department—

Q. Well now, maybe I didn't make my question clear. In your reports to the Public Service Commission is property devoted to the sale of appliances included in your plant account?

A. Yes, to a certain extent.

Q. I mean if a district office, for instance,—

A. If we own the district office, then that district office would be in our property account.

Q. Property account,—though part of it might be used for the sale of appliances?

A. Yes; and we charge the merchandise department a rent for that which we think compensates the company for the use of that property, just as if we were renting from an outside person.

Q. But if you were looking at your annual report and taking a seven per cent. return on your property account, that seven per cent. would include the property devoted to appliances?

A. Yes. That would be small proportionately.

Q. Can you state, in round figures, what percentage of the construction contracts of the Philadelphia Electric Company are let on a competitive bidding?

A. The great bulk of the work—I think the greater part of the money spent for construction purposes is spent by the company itself, work done by its own forces. The part that is given out is both given out by competitive bidding,—well, in fact, it eventually is given out by practically all competitive bidding, for when we use the United Engineers and Constructors, to for instance, build a building for us, that work is in turn let through sub-contractors who bid competitively for the work. In that case the United Engineers and Constructors simply are acting for us, as a clearing house, and take charge of the construction, and relieve our regular operating forces from a burden and from a type of construction that they are not particularly familiar with. That is, I am referring now to buildings. By doing it this way, we don't have to provide a large overhead organization, we can keep our organization down to a basis where we can practically give constant employment to a certain number of people, and we aim to keep ourselves in that position and not be in the position of having large quantities of floating labor or temporary labor from time to time, as well as the staff of engineers and constructors and people of that type who would be necessary. We don't like to be in the position of taking a lot of people on and having to lay them off, and we try to regulate it about along that line.

Q. Approximately how much did the company spend for construction in 1930?

A. I think approximately around twenty million dollars.

Q. And of that, four to four and a half was given to the United Engineers?

A. That would be my recollection of it now, Mr. Evans.

Q. And about how much of that would go to the Keystone Paving and Construction Company?

A. I don't remember the exact figures, but the last time I checked it up the average for the Keystone Paving and Construction Company was in the neighborhood of about \$500,000 a year. Now, I might explain a little bit about the work of the Keystone Paving and Construction Company. It is all underground construction work. Most of this underground is installed in narrow city streets. It is installed in locations where it is almost impossible, if not impossible, to get, or to prepare plans and specifications in complete detail, because we can not always tell what we are going to meet when we open the street up. The streets in Philadelphia are, I presume you know, down town, narrow; they are badly congested, with not only electric conduits and construction, but gas and telephone and what not, and water and sewers; so that no contractor can bid on a lump sum basis or on a competitive basis for that kind of work, unless he is going to pad his bid for contingencies to such an extent that we could not consider it at all. Therefore work of that nature has to be taken on a basis of the actual time and material plus a percentage. Sometimes we will open up a street and we may get a section partly open and we find an obstruction that will make us change our plans entirely. Now, to avoid that and let the work by lump sum contract to the man would mean that we would have to spend so much money in preliminary investigation and exploration, digging, and things of that kind, that the eventual cost of the work would be exorbitant.

Q. Well now, those two items then comprise roughly somewhere around \$5,000,000?

A. About \$5,000,000.

Q. Now, of the remaining \$15,000,000, how much would have been done by the company directly?

A. The company would have controlled or done itself all the balance; that is, the company itself may have let out some work to sub-contractors, but it itself would have controlled and done the work, that is handled the work.

Q. Can you say whether the work let out to sub-contractors is all done on competitive bidding?

A. The work that is let out to sub-contractors, I would say, is very largely,—that small work would be very largely let on competitive bidding.

Q. Fifteen million dollars seems to me a large sum. Can you give us any idea at all as to how that \$15,000,000 was spent in 1930, for what purposes?

A. I would rather give you the details, Mr. Evans. I could tell you in a very general way, but for me to attempt to segregate that,—a large amount of that, for instance, goes into the purchase of meters, to take care of new customers,—transformers,—all kinds of equipment.

Q. That goes into construction, not equipment, does it?

A. It goes into construction. That is, it is a capital charge. When I am speaking of this twenty million dollars, that means capital improvements of whatever nature that may have gone into the property.

Q. Well now, you spoke, or Mr. Zimmerman spoke, on the question of Mr. Windram being the company architect. He has been the company architect for a long time?

A. Yes, sir.

Q. On what basis is he compensated?

A. He is compensated on the exact architects scale. The architects, you know, have a regular system of prices for various classes of work. He gets exactly the same compensation that the Institution of Architects set up as a proper charge.

Q. For instance, you build a generating station, does he get the architect's commission on the total cost of the plant?

A. He would get his architect's commission to the extent that the scale of prices of the architects association award to him from this scale, to the extent to which it applies. Mr. Windham does not do the engineering on a basis of that kind, but comes in on the architectural features of the building, therefore his compensation is based on the same scale commensurate with the work he does.

Q. Do you know roughly what his compensation amounts to?

A. I do not.

Q. You spoke about having succeeded Walter H. Johnson. Is he still in the compensation of the company?

A. He is on service annuity.

Q. What is his compensation?

A. \$40,000.

Q. He performs no services for that?

A. He performs some services, but very little, mostly in an advisory capacity. He has spent, I think he was with the company some forty-two years and under the pension plan of the company he was entitled to retire on service annuity.

BY MR. TURNER:

Q. Did he pay part and the company part?

A. No, on that plan the company pays it all.

BY MR. HAGMAIER:

Q. Who does that include?

A. All employees, everybody.

BY MR. EVANS:

Q. There was no special arrangement made with Mr. Johnson?

A. I had nothing to do with the negotiations that had to do with the U. G. I. acquiring the stock of Philadelphia Electric and I knew nothing about the arrangement at that time.

Q. Now, turning to your contracts for supplies purchased through the U. G. I., the joint purchasing department, do you happen to know whether these contracts for coal are let on competitive bids?

A. They are, and the competition is keen. And that applies to all the large purchase contracts.

BY MR. COOKE:

Q. Are you familiar with your rural electric service?

A. Yes sir, to some extent.

Q. Do you carry any—does the rural construction go into plant account and therefore into the figure of a rate basis?

A. It does.

Q. Under this new system of rates brought in by General Order No. 28 of the Commission, until within the last few months the charge to farmers was on the basis of two per cent. per month on the cost of construction of the line. I understand that has now been changed to one and three-quarter per cent.; is that right?

A. It is one and three-quarter per cent. quite generally over the State. The Philadelphia Electric we have never adopted the two per cent. charge and I think our charge is one and one-half per cent. except in a small territory we have through the Southern Pennsylvania Power Company, and that takes the one and three-quarter per cent.

Q. How long does the farmer pay that; I suppose there is a distance charge or line charge?

A. He would pay that indefinitely until such time as the loading on the line would reduce it to a vanishing figure.

Q. I don't want to go into fractions, so I will take the two per cent. that has been generally charged throughout the State?

A. That by the way, Mr. Cooke, is simply a minimum charge for which the farmer or the rural customer gets energy to the extent of the minimum charge. It is not in the way of a service charge or an added charge.

Q. He is practically paying a very considerable percentage of the cost of the line in doing that?

A. No, in doing that he is simply agreeing to take service of so many kilowatt hours, or service to a certain amount per month to put him on the basis of the city dweller where the density of the customers per mile of line is very much greater.

Q. That juice costs a half cent.

I don't want to be captious about that, but if he pays two per cent. a month for twelve months, that is twenty-four per cent. a year, and in four years he pays the cost of the line, and if you leave the juice out of that and that doesn't stop at four years as it runs indefinitely, so all you give him in addition to that is the juice which you make at a fraction of a cent, and the customer charges, such as reading the meter?

A. I don't think that is right.

Q. I am not trying to be critical?

A. I will try to explain it. You take in the city or in the towns we have a certain density in the number of cus-

tomers per mile of line which results in our being able to give a rate of say, seven and a half or six cents, or whatever the rate may be. Now when we get into the rural areas and have to extend the line for a mile we will say to pick up three customers, it would obviously be unfair to give the same rate we do in the dense areas where we have to extend lines a third of a mile for each customer.

Q. Your density for all the lines built during the last four years has been in excess of twelve per mile?

A. I am simply using an illustration. Where there are twelve per mile, then the monthly minimum to a customer is reduced in proportion. For instance, if we have three customers to a mile and their monthly rate is \$6.00 apiece, and they increase that number to twelve a mile, then the monthly minimum will be decreased proportionately to each customer. And cost is not just the cost of the kilowatt hour at the station, it is the cost with the service which involves very many other things. As I said before, it is not an added charge, it is simply that the customer agrees he will use a certain number of kilowatt hours per month, and if he doesn't use it he agrees to pay for it.

Q. Have you gone into that thoroughly enough to know whether you are personally satisfied with the system?

A. I think it is an excellent system and is working out fine and the farmers are taking on that service at an accelerating rate.

Q. What percentage of the farmers in the State do you think have it?

A. I could not say that.

Q. Possibly fifteen per cent?

A. I do not think so.

Q. I imagine your territory would be higher. I understand the percentage of all farmers in the State is in the neighborhood of fifteen per cent?

A. I have not noticed any figure on that recently.

BY MR. TURNER:

Q. Mr. Taylor, it was testified to here that fifty-one per cent. of the domestic users were within the fifteen kilowatt per hour basis. Now do you know whether that is correct or not, from your experience in your company?

A. I could not answer that, Mr. Turner, because we have no analysis in the city of Philadelphia that would disclose whether that would be true or not. It doesn't look quite reasonable to me, but I have no definite information on it now.

Q. We have charts here on fifteen, forty and eighty kilowatt users per month?

A. I would say the percentage or the average consumption in our case is somewhat over forty kilowatts per month, that is, domestic.

BY MR. EVANS:

Q. In order to make our records correct, would you be good enough to produce the actual figures for the amount of the contract of the Philadelphia Electric, the construction work of the Philadelphia Electric done by the United Engineers and Contractors, say for the years 1928, 1929 and 1930?

A. Yes, sir.

Q. And also the amount of the purchases made through the Purchasing Department of the U. G. I. for those three years, and third, the amount of fees paid for each of those years by the Philadelphia Electric to the U. G. I., also the fees paid to the United Engineers and Constructors on your construction work?

A. That is, on the construction work they have done for us, and what it has amounted to.

JOHN E. ZIMMERMAN recalled

BY MR. EVANS:

Q. Mr. Zimmerman, Mr. Turner has raised the question of whether or not U. G. I. is controlled locally in Pennsylvania or whether its control is largely in the hands of non-residents of Pennsylvania. Can you state what the facts are in regard to that?

A. It is controlled in Pennsylvania, Mr. Evans. The U. G. I. has in round figures, twenty-three and a quarter million shares of stock—23,250 shares of stock—

BY MR. TURNER:

Q. Are they the voting shares?

A. Yes, sir. A majority of the stock is held by residents of Pennsylvania. I have covered that in my annual report, which

has just gone out; also, the majority of individual stockholders. My recollection is there are about 78,000, or thereabouts, common stockholders, of which 48,000 are residents of Pennsylvania. Do you mind if I read this (indicating)?

Q. No, sir. Go ahead.

A. Pennsylvania leads in the number of preferred and common stockholders, there being residents in that State 17,321 preferred and 46,745 common stockholders, 78.8 and 60.2 per cent., respectively, of the totals. The residents of the State also hold the largest number of shares, 526,377 preferred being 68 per cent. of the total, and 12,343,565 shares of common, being 53.1 per cent. of the total.

BY MR. EVANS:

Q. Well, now, Mr. Zimmerman, generally it is true, I think, that a company such as the U. G. I., is controlled practically by its large stockholders. Have you any information as to the number of non-resident stockholders, say, that hold over a thousand shares apiece?

A. Yes, sir. The largest stockholder of U. G. I. is the United Corporation, which is a Delaware corporation, and which has six million shares out of the twenty-three million and a quarter shares. That is roughly, say, about 24 or 25 per cent.

Q. Are there any other large holdings.

A. No. I don't know who the other largest stockholders are, but of course to-day there is a great deal of stock held in investment trusts; a great number of investment trusts; but those holdings are not large holdings, they are spread out.

BY MR. TURNER:

Q. What percentage do your employes hold, do you know that.

A. Now, I don't.

BY MR. EVANS:

Q. Could you, without too much difficulty, give us a statement of the resident and non-resident stockholders, owning one thousand shares or more of the stock, or would that be a very difficult thing to obtain.

A. It would be quite an undertaking. There is also a lot of stock in street names, in the hands of brokers.

Q. As a practical matter is it not true, Mr. Zimmerman, that the United Corporation and the Morgan and Drexel interests, for all taxable purposes control the United Gas Improvement Company?

A. No, I don't think so. I am not under anybody's control.

Q. Now, I didn't say control the officers, but I say control the company.

A. I am president of the company, I am director of the company and I am controlled by nobody's interests.

BY MR. COOKE:

Q. You are not still operating under the idea that it takes 51%.

A. Well it takes 51% to get a majority of the directors. The majority of the stock is held in the State of Pennsylvania, scattered all over the State.

BY MR. EVANS:

Q. Mr. Zimmerman, in your experience is it not true that in the case of any interest, or group of interests controlling 20% of the stock of a company, such as the United Gas Improvement Company, that they practically control the company.

A. No.

BY MR. HIRSCH:

Q. The United Corporation is controlled by Morgan, Bonbright interest, is it not?

A. No, the corporation is controlled by the stockholders of United Corporation, and the United Corporation stock has an enormous distribution. The bankers of the corporation happen to be the Morgan and Bonbright companies.

MR. EVANS: If the Committee please, since the question has been raised, I should like to have a list of stockholders of the United Gas Improvement Company, holding 1,000 shares or more of stock as they stand on the books of the company today, with their residences.

A. I will be very glad to furnish it. That is 1,000 shares or more? You had better make a date of record, say December 31, 1930.

MR. EVANS: That is perfectly all right. Whatever date is easiest for you.

THE WITNESS: I think we have some of that now.

MR. EVANS: That is all, thank you, Mr. Zimmerman.

HORACE P. LIVERSIDGE sworn

BY MR. EVANS:

Q. What is your name, Mr. Liversidge.

A. Horace P. Liversidge.

Q. What is your position with the Philadelphia Electric Company?

A. Vice-President and General Manager.

Q. How long have you been Vice-President and General Manager?

A. Approximately four years.

Q. What was your position prior to that time?

A. Vice-President and Assistant Chief Engineer.

Q. Would you say that the Philadelphia Electric Company had a very efficient organization during the time you were Vice-President and Assistant Chief Engineer?

A. I always considered it did, yes.

Q. The Electric Company performed most of its own construction during that period, is that not true?

A. Yes, except large construction jobs which were given out to independent construction organizations.

Q. Can you mention any of those large construction organizations which performed your work.

A. Stone and Webster was one.

Q. During that time, is it not true, that your company designed most of its own engineering structures.

A. Yes.

Q. Who does the designing today?

A. Well, we have an engineering department headed by a Vice-President. The small and miscellaneous extensions to our plant are designed by our engineering organization. Special jobs, large special constructions, those are designed by United Engineers. I might add to that, in collaboration with our engineering department. We practically have the entire say in the details of the designs, usually agreed upon, because of our intimate familiarity with our operating problems. That has worked out in a most satisfactory manner.

Q. Does the United Engineers Constructors assist in the design of structures which they themselves do not erect?

A. No cases that I can recall in which that has been done. However, if we felt, because of our press of work, or of the special character that the United Engineers organization could better do it, I know we would refer it to them, whether they did the construction work or not.

Q. Have you been referring much work to them in that connection?

A. No, I think very little has been referred to them.

Q. Your company has recently awarded a contract for the erection of a large gas holder in Conshohocken, is that correct?

A. Yes.

Q. Who assisted in the design of that structure?

A. The design of the structure, if I recall it, was entirely United Engineers, in collaboration, however, with our own engineering and operating organizations.

Q. To whom was the contract awarded for the erection of that gas holder?

A. United Engineers.

Q. And what were they paid for that work?

A. That I could not answer offhand.

Q. Where the United Engineers design a structure which they themselves do not erect, what is the basis of pay to them for such service?

A. That would be included and charged to special services, as part of the charges made at the expiration of the year. These special services, however, would be indicated by special orders issued by the Philadelphia Electric Company for that work, and a record of the actual time and miscellaneous things which entered into that charge.

Q. Is it a fact that before the control of the Philadelphia Electric Company passed into the hands of the United Gas Improvement Company, the Philadelphia Electric Company maintained a large organization to do such work itself?

A. Yes, quite a large organization.

Q. What caused the Philadelphia Electric Company to discontinue the organization and turn over the work to the United Engineers Constructors?

A. Well, long before we turned over any work to the United Engineers Constructors, we had learned our lesson insofar as large jobs were concerned. For instance, a large generating plant, while we had the ability to design it, and we had the organization to construct small jobs, this job and special construction projects required a very large increase in organization. We learned then that while we might secure the satisfaction of having done that job ourselves, that it always tended to disorganize to a certain extent the specific functions that meant more than any thing else to the company, that of operating the company. And for that reason we gave a generating station to an outside contracting organization, and it was our policy before the combination of the Philadelphia Electric Company with the United Gas Improvement Company to give these major jobs to outside special construction organizations, for the specific reason that it was a logical and an economical thing to do.

Q. Is it not a fact that before the control of the Philadelphia Electric Company with the United Gas Improvement Company to give these major jobs to outside special construction organizations, for the specific reason that it was a logical and an economical thing to do.

Q. Is it not a fact that before the control of the Philadelphia Electric Company passed to the United Gas Improvement Company the Philadelphia Electric Company performed its own substation work?

A. Yes, all, I believe.

Q. And now who does that work?

A. Part of that work is done by United Engineers and Constructors; part of it is done by our own construction organization. We have in the neighborhood of six hundred men in our engineering and construction organization. We must maintain an organization for specific jobs, emergency cases, and miscellaneous extensions to plant, which are small but are coming to us day by day. Special jobs such as a new substation building and so forth would be given to the United Engineers and Constructors. An extension to an already existing substation, which might or might not be in operation, might, if we were not too pressed with work, and had the organization available, be done by Philadelphia Electric Company. And we have had a certain flexibility in that work, so as to maintain an even balance and keep our organization operating at maximum efficiency and using the maximum number of men which could be kept on that basis.

Q. Isn't there a certain amount set aside on every construction job which the Philadelphia Electric does itself to pass into the United Engineers and Constructors, even though they do not do anything in the work?

A. I just don't understand the question, Mr. Hirsch.

Q. Where the Philadelphia Electric Company performs its own construction, doesn't the agreement with the United Engineers and Constructors call for their getting a certain commission on that work?

A. No.

Q. Mr. Liversidge, you are familiar, I think, with the policy of the company in regard to installing equipment in department stores and such, are you not?

A. Reasonably, yes.

Q. It is true, is it not, that about a year ago Lit Brothers were expecting to construct an isolated plant?

A. Yes.

Q. And that the Philadelphia Electric Company submitted an estimate to Lit Brothers by which, if Lit Brothers would invest approximately \$150,000 in equipment, you would serve them under rate E, and that you thought that you could save them money over an isolated plant?

A. Well, I don't remember those figures, but in the early part of 1930 —

Q. Well, have you got those papers with you, Mr. Liversidge?

A. They would be part of the records.

Q. Perhaps we can take it up tomorrow, if you have.

A. Yes, I have those papers with me.

Q. Then suppose we go into that tomorrow, and then we can take it up more briefly. Has the Philadelphia Electric Company any fund from which it makes contributions to either corporations or other consumers?

A. Contributions for what, Mr. Evans?

Q. Well, for instance, charitable consumers that they make contributions to.

A. None that I know of.

Q. You never heard of their making any contributions—

A. Oh, yes.

Q. And from what fund are they made?

A. They would be taken from the general account.

Q. And to what item are they charged?

A. Well, I couldn't answer that specifically.

Q. Can you find out and let us know tomorrow?

A. Yes. May I just add, Mr. Evans, that as a utility doing business in a large community, we have always recognized our part as a citizen in that community, and contributions for those things which are helpful to the community, when others have joined in such contributions, we have felt that we should at least join, as a business interest of the community, and as a citizen we have done those things.

Q. Are those contributions that you are referring to always confined to strictly charitable institutions?

A. Well, I would not call the Philadelphia Progress Committee, for instance, a charitable institution. We made a contribution to them.

Q. How much did you contribute to the Philadelphia Progress Committee?

A. I don't recall the exact amount.

Q. Well, approximately?

A. Well, in the order of fifty thousand.

Q. You could get that figure for us, couldn't you?

A. Yes, I can do that.

Q. The United Engineers and Constructors have an architectural department, do they not?

A. I believe they do.

Q. It would be quite easy for you to have your buildings designed, from an architectural standpoint, by them, as well as to have the engineering features superintended by them, wouldn't it?

A. Well, they have tried to sell us on that point at various times. We have just not yet reached the point where we believe that their architectural ability would meet our, probably, aesthetic ideas.

Q. Isn't it true, Mr. Liversidge, that your buildings are very much standardized in design?

A. To a certain extent we have tried to maintain as near a standard design—

Q. And to a very large extent?

A. You must understand that there are no two properties exactly alike in size, even for similar use, and with the general changes in requirements we learn each time we erect a building that we could do differently in the next. The exterior appearance probably would look somewhat alike.

Q. What would be the additional charge which the United Engineers and Constructors would make for architectural design as well as their other services for which you now pay?

A. I presume that they would charge the standard architect's fee.

Q. You have never discussed that with them?

A. No.

Q. Will you let us know the amount paid to Mr. Wyndrin for architectural services during the past three years, annually?

A. Yes.

BY MR. HIRSCH:

Q. If the United Engineers and Constructors simply determined to do the architectural work for the Philadelphia Electric Company, or any other construction there is not much serious opposition the Philadelphia Electric Company could offer to such an attempt, is there?

A. Well, Mr. Hirsch, the Philadelphia Electric organization have always been permitted to maintain its independence, and there has not been a contract let, or there has not been a job given out, in construction of any kind, that has not met the entire satisfaction of the Philadelphia Electric organization; and when it comes to a question of architectural treatment, that, I am positive, will continue to be in our power to decide, as we see fit.

Q. Of course, while they have permitted you to enjoy such latitude, it is because of generosity on their part, rather than a legal right to do so; isn't that true?

A. No; it is good business sense.

Q. Well, there is nothing to prevent them from simply insisting that the United Engineers and Constructors are to do all of your construction work?

A. Nothing, but we haven't done business that way.

Q. If the United Gas Improvement Company felt that during 1931 they wanted a greater income, they could simply insist that the United Engineers and Constructors do all the work for the Philadelphia Electric Company, couldn't they?

MR. TURNER: Mr. Hirsch, it seems to me we are going far afield. We are dealing in questions here that affect the utilities, their practices, and what they have done in the past, and so forth; what might be the effect in the future doesn't seem to me to be exactly germane to what we are trying to get at here.

MR. HIRSCH: You see, Mr. Turner, the point here borders on the relationship between the holding company and the operating company.

MR. TURNER: Well, I think that is obvious.

MR. MASON: Mr. Chairman, I would like to ask counsel whether they are going to ask from Mr. Liversidge or Mr. Taylor anything more tomorrow except the detail, which we can furnish from others who will be here, as we have to have somebody running the public utility in Philadelphia; it can not be done from this room. Everybody is here at the moment.

MR. TURNER: Wouldn't it be better if you would take that up with Mr. Evans after the session?

MR. MASON: I just saw the Chairman look at the clock and I thought if you did want anything from them we could cover it this afternoon in the next ten minutes and we could finish up with Mr. Liversidge and possibly Mr. Taylor. There are only those two.

MR. TURNER: Mr. Evans, I would like to ask Mr. Zimmerman if he would not just answer a couple of questions again.

JOHN E. ZIMMERMAN recalled

BY MR. TURNER:

Q. Mr. Zimmerman, the consolidation or the purchase by the P. G. I. of the Philadelphia Electric stock; has that resulted in economies, do you feel, to the companies?

A. Yes, sir; very decidedly.

Q. That took place some time along in 1928, did it?

A. Yes.

Have those been reflected in any way in any reductions to the consumers?

A. Yes, there have been numerous,—quite a number of rate reductions since then. The straight rate reductions; that is to say, the reductions made each year since 1924, have aggregated something over six millions, or an average of about a million a year; and if you take the cumulative effect of those rate reductions for that period on the Philadelphia Electric and the other U. G. I. properties in Pennsylvania, the total rate reductions have been about nineteen millions.

Q. Do you feel that those have been reflected from the ability to handle the two properties together?

A. Yes, sir. We can demonstrate that in a good many ways. We can demonstrate it just simply in one respect, in the reduction that has taken place in the operating ratios of these companies; and we can demonstrate it in other ways.

I would like to say, for instance, if you want a specific illustration to that effect; the United Gas Improvement Company maintains a research department, which devotes a great deal of its time to research in chemistry and physics of gas practices. By certain developments of that research department, which have been patented, we have been able to reduce, to effect economies in the cost of gas last year to the Philadelphia Gas Works and the U. G. I. gas properties of about two millions a year. In the Philadelphia Gas Works alone the effect of those processes was to reduce their costs about a million a year.

BY MR. EVANS:

Q. Well, Mr. Zimmerman, that had nothing to do with the Philadelphia Electric?

A. Yes, because the Philadelphia Electric Company runs a very large gas business.

Q. Well, since their consolidation with the Suburban Counties; but they didn't prior to that time?

A. No, not prior; but they have gotten the benefit of this process.

Q. Well, taking the Philadelphia Electric Company as it existed in 1928; what benefits have accrued to it from its consolidation with the United Gas Improvement Company?

A. The benefits that have accrued to it have been through more efficient practices, by strengthening the organization, which the U. G. I. has been able to do, by advice and other matters.

Q. In other words you don't think that Philadelphia Electric was an efficient organization?

A. I think we made it more efficient.

Q. In directing economies in the purchasing department, would that be an economy to the Philadelphia Electric?

A. Yes, sir, decidedly, we consolidated these two department and by our mass purchasing it has resulted in our being able to buy things so much cheaper.

BY MR. HIRSCH:

Q. Is it not a fact, Mr. Zimmerman, that before the advent of the U. G. I. in the life of the Philadelphia Electric; the electric company had made more successive reduction of rates each one amounting to over one million dollars between the years 1922 and 1926 and then no reduction, no general reduction in rates was made effecting the consumer in Philadelphia until June 15, 1929? In other words there is a lapse of over three years, between March 1, 1926, when the Philadelphia Electric made its general rate reduction to June 15, 1929, when they made their next general rate reduction?

A. No the Philadelphia Electric was taken over by the U. G. I. in the early part of 1928 and there were rate reductions made subsequent to the date.

BY MR. COOKE:

Q. Was there more than one?

A. Yes. Do you want—

Q. They reduced the rate when they went from eight cents to seven and one-half cents which was announced as approximately a million dollars a year. Has there been any other reduction except that?

A. That was the last one.

Q. The last one, is the one about which there is some controversy?

A. We can demonstrate that that was over a million dollars. My recollection is that was either one million, five hundred thousand dollars or one million, seven hundred and fifty thousand dollars.

Q. Not inside the city of Philadelphia?

A. That was the whole Philadelphia territory.

Q. Yes. The bills on that last reduction, which announced as approximately a million dollars inside the city of Philadelphia, I think I am right, it was nine cents on each bill.

A. That was only some—

Q. That applied in the first step.

A. I can give you the amounts if you want them.

Q. I have figured them over and over again and again, nine cents on every bill of twenty-five kilowatts, fifty kilowatts, up to one hundred kilowatts, it is a reduction of nine cents to the domestic consumers inside the city. I think you will find the only reduction you made since the consolidation that has affected the City of Philadelphia is the one that came about May, 1929.

A. No; there was a reduction made in September, 1929.

Q. That is the one I have reference to.

A. There was one made before that. I can tell you that.

MR. EVANS: Let us have it. It is quicker than—

(Discussion off the record)

THE CHAIRMAN: This meeting will stand adjourned until 10.00 o'clock tomorrow morning in this room.

(Adjourned until Thursday, March 26th, 1931, at 10.00 o'clock a. m.)

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Thursday, March 26, 1931, at 10.00 o'clock A. M.

There were present:

Messrs. D. Glenn Moore, Chairman

Bart Richards

Chester H. Rhodes

Martin Memolo

Ellwood J. Turner

Louis W. Hagmaier

Harry J. Crawford

Morris L. Cooke

Harold Evans, Esq.

John M. Walker, Esq.

Arnold H. Hirsch, Esq.

#### APPEARANCES:

William Clark Mason, Esq. and

Frank M. Hunter, Esq.

For Philadelphia Electric Company, and United Gas Improvement Company.

MORACE LIVERSIDGE recalled

MR. EVANS: It has been called to my attention that either through my mistake, or through a typographical mistake, Exhibit No. 7 has never formally been offered in evidence. I now offer it in evidence.

BY MR. EVANS:

Q. Mr. Liversidge, you are familiar, are you not, with the negotiations which the Philadelphia Electric Company has had with Lit Brothers, the Philadelphia department store, with regard to its service since January 1, 1930?

A. In a general way, yes.

Q. On January 1, 1930, Lit Brothers were receiving service from the Philadelphia Electric Company, were they not?

A. Complete.

Q. And what electric service were they receiving?

A. They were receiving both electric service and a steam service.

Q. And was it a. c. service or d. c. service?

A. The service was supplied both from our direct current system and our alternating current system.

Q. Do you have any information as to what proportion was a. c. and what was d. c.?

A. Not exactly, but the larger proportion was direct current.

Q. About that time the charge for the steam service was increased, was it not?

A. Yes.

Q. And Lit Brothers complained about that increase in those steam rates?

A. Yes, they did.

Q. The Philadelphia Electric Company then after that complaint was made began to negotiate with Lit Brothers in regard to possible changes of their equipment so as to receive a. c. current exclusively?

A. Well, our first negotiation with Lit Brothers was to supply them completely with alternating current.

Q. That came as the result of their complaint about their increase in steam rates?

A. Well, I could not answer that directly. I might say that Lit Brothers were served both direct current and alternating current, on what we know as Rate "D", wholesale light and power. In order to serve them at a lower cost, we were in a position, providing certain changes were made, to serve them with our Rate "E", wholesale power, untransformed rate, on the basis of our primary rate "E" service. We could show to them a considerable saving as against their rate, miscellaneous supply at low voltage, combining both direct and alternating current service, and the original negotiations were started on that basis.

Q. Now, Mr. Liversidge, on or about January 28, 1930, the Philadelphia Electric Company submitted a list and preliminary estimate of the cost of adapting its plant to the use of alternating current, did it not?

A. Yes.

Q. And in that preliminary estimate Lit Brothers were required to expend the sum of \$150,000 for equipment?

A. Well, I am not just familiar with that figure. Mr. Evans, I don't recognize any of these figures.

Q. Mr. Liversidge, are you prepared to say that the Philadelphia Electric Company did not submit such an estimate?

A. No, I don't want to take the time of the Committee explaining a situation which had developed because of the policy of the Philadelphia Electric Company in changing its entire supply in the downtown area of Philadelphia from direct current service to alternating current service.

Q. Before we get into that, Mr. Liversidge, I want to get the matter of these estimates clear. Who would be familiar in your organization with a preliminary estimate such as this?

A. Those estimates are made on the authority of our commercial department by our engineering organization.

Q. And if I want to ask someone how this estimate was made, who would be the proper person to testify in regard to it in your organization.

A. Our commercial manager.

Q. What is his name?  
 A. M. C. Huse.  
 Q. About this time you became aware that Lit Brothers were complaining that they could not make satisfactory terms with you, and that they would install an isolated plant.

A. They had that in mind for over a year.

Q. Had you known of it for over a year?

A. We had.

Q. So that when you submitted this estimate assuming that it was submitted, one of the reasons for submission of that was to keep Lit Brothers from installing an isolated plant.

A. Mr. Evans, I know nothing about the submission of such an estimate. I have before me a signed proposal of March 29, 1930.

Q. Yes, Mr. Liversidge, you don't mean to indicate that you think that was the first negotiation that passed between Lit Brothers and your company, do you?

A. The first official notification that I have any knowledge of.

Q. I did not say whether it was official or unofficial, but isn't it true that the practice of your organization is to submit preliminary estimates before entering into final contracts such as this.

A. That is always possible in negotiations of that kind.

Q. Now, I show you another paper, headed reported of comparative operating expenses, Lit Brothers, dated February 25, 1930, in which the cost to Lit Brothers of making the necessary changes is now stated to be \$92,000. Are you familiar with the estimate of which that is a copy?

A. No, I am not familiar with this at all. May I add that I see here an estimate of 3,269,136 kilowatt hour for direct current, 424,818 kilowatt hours for power, direct current and 422,500 kilowatt hours for alternating current power. That does not agree with the figures which entered into the first official proposal that I am familiar with of March 29.

Q. And Mr. Huse again would be the man that would be familiar with this estimate if it was furnished.

A. He would.

Q. Now, are you familiar, Mr. Liversidge, with the fact that a third estimate reduced the cost to Lit Brothers to \$70,000, or thereabouts, was submitted by your company to Lit Brothers subsequently February 25, 1930.

A. No, Mr. Evans, as a matter of fact it would be impossible for me to follow preliminary estimates leading up to a final definite proposal.

Q. Mr. Taylor was subpoenaed to produce these contracts and the preliminary estimates leading to Lit Brothers contract. Now, I appreciate that you may not have had time to gather them together, but we, at least, asked you to bring them with you today.

A. I have here a preliminary estimate as of September 10, 1930, which covers—

Q. That was subsequent to your actually entering into the contract with Lit Brothers, was it not?

A. That was subsequent to our actually entering into the contract for the supply of primary power to Lit Brothers. There is involved in this estimate which was the subject of further negotiations, the costs of change over of the customers' equipment in order to adapt it to receiving alternating power from our system, rather than direct current that had been served to the down town area previous to that date.

Q. So that estimate was not a preliminary estimate leading up to the contract, which was called for by subpoena?

A. No.

Q. As a result of these negotiations you finally entered into a contract with Lit Brothers, did you not on or about March 29, 1930?

A. Yes; on March 29, 1930, we entered into a contract for the supply of power and our rate E power service.

Q. I am now referring to the contract entered into for the equipment necessary to change over Lit Brothers to a. c.?

A. Yes. We made a proposal in that contract in a letter of March 29, in which we gave the estimated cost to be paid for by the consumer of \$67,000 for the primary receiving equipment.

Q. And under that estimate the Philadelphia Electric Company was to expend a total about \$283,000, in order to make the change at Lit Brothers, and Lit Brothers in turn were to refund about \$67,000 of that amount of the Philadelphia Electric?

A. The original—

Q. Would you say whether that is correct or not?

A. Will you repeat.

(Question read)

THE WITNESS: No; that was not in the letter of March 29.

Q. The letter of March 29 provides for certain work to be done by the Philadelphia Electric Company at its own expense and certain work to be done by the Philadelphia Electric Company on Lit Brothers premises at its expense.

A. That is correct.

Q. What was the total cost of all the work to be done, Mr. Liversidge, approximately?

A. At that time we did not have a correct estimate of the amount.

Q. What, under a subsequent estimate, did that turn out to be?

A. \$283,500.

Q. And under this contract Lit Brothers were to pay \$67,000 of the total cost, were they not?

A. Lit Brothers were to pay \$67,000 of the total cost, which was the cost of the primary receiving equipment.

Q. So that the Philadelphia Electric Company was proposing to expend the difference between \$283,000 and \$67,000 out of its own funds?

A. Exactly.

Q. Out of this amount, approximately was to be expended for equipment on Lit Brothers premises, the title to which was to vest in Lit Brothers?

A. Practically the entire amount.

Q. Practically the entire amount?

A. With one exception, that in the agreement Lit Brothers agreed to provide a building at a cost to us of not exceeding \$12,500 for such transforming equipment which we installed at our expense, in order to change over their direct current supply to alternating current supply.

Q. Subsequently it was agreed that Lit Brothers should do the work or contract for the work and that the Philadelphia Electric Company should pay them the sum of \$283,000 on account of the contract price?

A. Yes; excepting \$67,000.

Q. And the \$67,000 by a subsequent agreement was to be refunded to the Philadelphia Electric Company in annual payments over a period of five years, commencing one year after the service was put into operation?

A. Exactly; with interest at six per cent. on unpaid balances.

Q. So that the Philadelphia Electric Company at the present time has expended \$283,000 for this equipment, the title to which vests in Lit Brother, and the only thing that the Philadelphia Electric Company has is the agreement of Lit Brothers to refund \$67,000 of that amount over a period of five years?

A. Less \$12,500 because they had to provide a space for the transforming equipment.

Q. For the transformers. So that the actual amount to be refunded is \$54,500?

A. \$228,500.

Q. No; I say that the actual amount that Lit Brothers are to refund?

A. It would be \$55,000; the difference between \$7,000 and—

Q. And didn't you say \$12,500?

A. \$12,500.

Q. That is \$54,500?

A. \$54,500.

Q. Is the new service in operation at the present time?

A. Not entirely complete.

Q. To what accounts have these sums totaling—

A. \$228,500.

Q. It is \$283,000. To what accounts have they been charged?

A. That portion, \$54,500, was paid to us. The difference between that and \$283,500 was charged to utilization account on customers promises, and it was an operating expense.

Q. Has the \$54,500 actually been paid, or is Lit Brothers to repay it?

A. No; they will repay it.

Q. They will repay it.

A. Yes.

Q. When is that account charged at the present time? Is not the whole \$283,000 charged to utilization?

A. No; that is practically an advance, the \$54,500.

Q. Where is that amount charged at the present time?  
The Philadelphia Electric is to pay it and it is to be refunded?

A. Exactly.

Q. To what account is it charged?

A. I can't answer that, Mr. Evans.

Q. You don't know?

A. It is a suspense account.

Q. It is true, is it not, that in all such cases as this the Philadelphia Electric Company, where it is confronted with this possibility or probability that the customer will install an isolated plant, makes the best terms possible with that customer in order to retain them on the Philadelphia Electric lines?

A. Mr. Evans in negotiating—

Q. Just answer the question and then explain, if you will, because it is much clearer in the record.

A. Yes.

Q. Now, then, will you make any explanation.

A. I would like to modify that answer, however, by saying, that our proposals are strictly based on the tariff of rates.

Q. However, there is no tariff on rates covering the amount which the company will expend in the way of equipment on the customer's promises is there?

A. None whatever.

Q. So that so far as that item is concerned one customer may receive very much more from the Philadelphia Electric Company than another customer situated in the same position?

A. I can't answer that statement, except by making an explanation, Mr. Evans. I would ask that you refer to the costs of changing the customers' equipment in the area effected by our change over policy in litigation.

Q. I am speaking of the general class of patrons where the Philadelphia Electric Company is confronted with the probability that a customer will install an isolated plant, and what I want to find out is whether or not you have a schedule filed with the Commission, which states what you will do for those customers, so that every one may be treated alike?

A. Yes; we have that.

Q. Will you call my attention to it in your filed schedules as to rate E.

A. Primary power service, requires that the customers purchase and own the receiving equipment. We deliver service and meter on primary side of that equipment. The cost of that equipment is a matter of negotiations in which the Philadelphia Electric Company have taken the position that it will do all in its power to assist the customer in obtaining an installation of equipment that will meet his requirements and that will satisfy our requirements as to reliability of service at the lowest possible cost.

Q. And will prevent the installation of an isolated plant?

A. That has no bearing on the subject. We desire to sell all customers in our territory.

Q. Is it not true that the Atlantic Refining Company threatened recently to install an isolated plant in Philadelphia?

A. No, not threatened.

Q. Suggested the possibility of an isolated plant?

A. They have an isolated plant and have had one for years.

Q. And have they been persuaded to abandon that plant?

A. Part of that power is being supplied by us and they are increasing their demand.

Q. To what extent do you furnish equipment to the Atlantic Refining Company for this purpose?

A. I am not familiar with that detail.

Q. You filed with the Commission a rate to take care of that particular situation, did you not?

A. Do you refer to the high load factor rate of four mills?

Q. I understand you did put into effect a rate which applied to the Atlantic Refining Company and a few other consumers?

A. I think you refer to the high load factor rate of four mills, about 60 per cent. load factor on rate E primary power service.

Q. Do you know how many customers are taking service on that schedule?

A. I cannot say.

Q. Who would know?

A. We would have to refer to our records. I don't think that we have them here. We hoped there would be a great many more and hope there will be in the next few years.

Q. I want to be entirely frank with you as I believe you do with me, but I think we both realize there is a problem as to how far charges of this sort can be charged to operating expenses so the domestic consumer can bear his share of the cost. You agree with me there is a problem there?

A. No, I don't believe there is a problem, because I think your consuming our energy rate and cost of supplying electric energy with the cost of equipment purchased and owned by the customer on his promises.

Q. Let us look at the problem this way. What do you estimate will be your annual net return from the services you render to Lit Brothers?

A. Well, I cannot answer that.

Q. Surely, you must have taken that into account in your estimate, did you not?

A. The annual rate of return on the revenue?

Q. The annual return in dollars and cents?

A. I have no figures.

Q. Assuming Lit Brothers had installed an isolated plant and you lost some of the customers, would that have had any particular adverse effect upon the domestic consumers in Philadelphia?

A. Well, if you carry that question far enough, it undoubtedly would have a very serious effect.

Q. I am asking you about this one case?

A. It would be small.

Q. And infinitesimal?

A. I think so, Mr. Evans.

BY MR. TURNER:

Q. If they did not, does it have an effect on the customer?

BY MR. EVANS:

I was just coming to that, Mr. Turner.

Q. Then the question is whether or not the expenditure of this sum of money is an advantage to the domestic consumer in order to prevent Lit Brothers from installing an isolated plant?

A. Sure it was, Mr. Evans, sure it was.

Q. Now I don't want to have any confusion, Mr. Liversidge. I am not discussing with you now the question of transfer from these D. C. to A. C. current, but I am discussing with you the question of the effect of Lit Brothers installing its own isolated plant. So one thing the Philadelphia Electric Company would have lost on that, in dollars and cents, would have been whatever revenue they derived from Lit Brothers?

A. Exactly.

Q. And you think that revenue represents a fair return not only on the property of the Philadelphia Electric Company devoted to that service but also on the \$228,500 of equipment which you have given to Lit Brothers?

A. Mr. Evans, there is no relation whatever between that \$228,500 and our contract for the supply of Rate E. Primary Service.

Q. The \$228,500 has been charged as an operating expense?

A. Exactly.

Q. And therefore it is taken into account in fixing your rate for all consumers?

A. Yes.

Q. So it is an item that affects all consumers?

A. But it has no bearing whatever on return or on the residential customers of the supply of primary service for Lit Brothers for which they paid \$67,000 for primary receiving service. They are entirely separate.

Q. Let us get at it this way. What was your approximate gross revenue from Lit Brothers?

A. I think the estimate is approximately \$45,000 annually.

Q. So that under that estimate it would take five years of that revenue to pay for the equipment that you have furnished Lit Brothers?

A. Yes.

Q. So that for the next five years you in effect are serving Lit Brothers free of cost?

A. Mr. Evans, I cannot answer that in that way. But in answering it, I want to say that the relation between the expenditures for the supply of primary service which gave them a rate showing a saving over the operation of their own plant had no bearing whatever on our expenses on the customers' property of \$228,500, because that expenditure was only a part of a very large expenditure which the company entered into in its program of changing the downtown district from direct current to alternating current.

Q. I don't want to reiterate. But if you had lost Lit Brothers as a customer through their installation of an isolated plant the company would have had its operating expenses reduced during the past year by \$228,500, or \$283,000, not taking account of the offset?

A. That is a fact.

Q. And the revenue which you will receive from Lit Brothers will amount in your estimation to \$45,000 a year?

A. I think so.

Q. So for the next five years the amount you have charged to operating expenses or furnishing this equipment will offset the revenue you receive from Lit Brothers?

A. No.

Q. Will you explain why not?

A. The very fact that we spent \$228,500 and thereby were able to continue supplying that customer with an annual revenue of \$45,000, permitting our shutting down several plants in the city of Philadelphia.

Q. But you could have shut them down if Lit Brothers had gone over to an isolated plant?

A. Had we any assurance that they were going to a private plant?

Q. I think you had so much assurance that you made very generous terms to them, did you not?

A. We have no different terms with Lit Brothers than we made with any other customers under the same conditions.

Q. It is true that John Wanamaker had an isolated plant?

A. Yes sir.

Q. And it is true you transferred the Seeds Building from an A. C. to a D. C., a small building, and charged them \$10,000 for their equipment.

A. I am not familiar with that.

Q. Let us be perfectly frank. It comes down in the last analysis to the question as to how much the company is justified in paying and charging to operating expenses in order to prevent an isolated plant from being installed?

A. No, Mr. Evans, that has no bearing on the question.

Q. You mean to tell this Committee that the Philadelphia Electric Company does not take into account at all the question whether or not a customer is going to install an isolated plant in negotiations such as we have been discussing?

A. That has no bearing on our estimate. We try to give the customer the very lowest cost under our rate applicable to them, and give the service, and where it is primary service we try to give them the benefit of our advice and engineering in order to get the lowest possible cost of equipment. I must again say the cost we are discussing here is an entirely different problem, and if I had time I would like to explain a little of the background leading up to what is now one of lowest large customers on our direct current system.

Q. In order that this situation may be perfectly clear, will you produce at a later date from your commercial department the three primary estimates made to Lit Brothers for the change there, the first calling for an expenditure by Lit Brothers of approximately \$150,000, that being dated or about January 28th or January 29th, 1930. The next is dated February 25, 1930, calling for an expenditure by Lit Brothers of \$92,000 for receiving equipment?

A. This is our preliminary estimate for the cost for making these changes, which is as follows; I will read it if you wish.

Q. We won't take the time. The third, the estimate made between February 15th, 1930, and March 30th, for the expenditure by Lit Brothers of the sum of seventy or seventy-odd thousand dollars?

A. I will be very glad to.

MR. MARTIN: I would like to say to the Committee, if Mr. Evans has the documents that we would otherwise have in our files, we cannot find them now. We have not been able to find them on our subpoena. If these are the documents that we were subpoenaed to bring here, it is a simple matter to put them in evidence.

MR. EVANS: I think that is all, Mr. Liversidge, that I have to ask you on this phase.

MR. MASON: Before you stop, as I suggested yesterday, go in into these contracts and the detail of them, it seems to me that you ought to give Mr. Liversidge an opportunity to explain the real reason for that expenditure, that it was made as part of the general policy, and a similar expenditure made for similar customers under similar circumstances.

MR. TURNER: Had not you better come up here and talk to the Committee for just a moment.

BY MR. RHODES:

Q. Mr. Liversidge, can you tell the Committee approximately how much of this type of expense was added to operating cost by your company in the past year?

A. In round numbers, \$1,000,000.

Q. And that \$1,000,000 was charged to operating cost?

A. Operating cost.

(Discussion at Bar by counsel and members of the Committee.)

BY MR. TURNER:

Q. Mr. Liversidge, go ahead under Mr. Evans' direction or questioning, or if you want to, you may make the explanation without that.

MR. TURNER: Do you care to ask the questions, Mr. Evans, or would you rather just let Mr. Liversidge make the statement.

MR. EVANS: I would like just in order to clear up any possible misapprehension to state that the copies of these preliminary estimates, which I have before me, came to me through Lit Brothers, and the concern that was to install the isolated plant for Lit Brothers, and was in no way obtained from the files of the Philadelphia Electric Company. I think that is only fair.

MR. MASON: They are just as acceptable to us under those circumstances as otherwise.

BY MR. EVANS:

Q. Mr. Liversidge, in the Central Philadelphia District, you have in the past served your customers with direct current, have you not?

A. Yes, Mr. Evans.

Q. And you have desired to get rid of that direct current system?

A. Yes.

Q. And one of the reasons which has prompted you to make those changes of equipment at the company's expense on customer's premises is your desire to make that change as easy as possible for your customers, is it not?

A. Yes.

Q. And you estimate that by getting rid of your direct current system in the Central City District, you save something like a million and a quarter annually in operating expenses, do you not?

A. Yes, based on the loads as of 1931, with the increase and as the demand in the territory increases.

(Discussion between Mr. Evans and the witness at the instruction of Mr. Evans off the record.)

BY MR. EVANS:

Q. Will you make your explanation just as brief as you can, since we are pressed for time?

A. I would just add that Lit Brothers is one of the large installations on our direct current system which had not been changed over. In 1924 we faced the situation, in reviewing our ten-year budget, in which we saw that by changing from direct current to alternating, in ten years we would be able to satisfactorily meet the increased demand in that territory at a lower cost for investment in plant, and also included in that change-over cost, the cost of all equipment on consumer's premises after the change-over was completed, and we were serving the territory on alternating current instead of direct current at the expiration of a ten-year period. We would then be operating on an annual operating saving of approximately \$1,250,000. We faced the situation then, in 1924, in which we were able to do one of two things. We could use direct current supply at a greatly increased cost of investment to serve that territory, or change to alternating current and include in the cost of change-over all consumers' equipment. We saw that we would be able to serve the territory during a period of ten years at a lower cost of investment on alternating current than on direct current, and would thereby gain an additional saving because of low operating cost on our alternating service, and we took the cheapest, from an investment standpoint, and the cheapest from an operating standpoint. Those savings have been reflected in our rate reduction. That was the policy established in 1924, and is almost completed.

BY MR. TURNER:

Q. And those savings and reductions in costs that you speak of, were they reflected in the consumer's rates.

A. All consumers. Now, in the Lit case we have reached a point where we desired to change the equipment to alter-

nating current, and at the same time wished to serve them on a primary rate, giving the customer a lower rate than he had received under our rate D. We entered into negotiations with them, first on our standard terms of rate E in which the consumer bought and paid for the equipment to transform the primary service of \$67,000 and we entered into an agreement at the same time to change over all the equipment on the customer's property at our expense. We did exactly the same thing, in so far as change over was concerned with all consumers connected and served by our direct current system in the downtown area during our change over period of ten years. Two things were involved, gentlemen. First the delivery of primary service on our standard rate, and at the lowest estimated cost for changing that equipment which would be designed and installed. Second, the agreement to change all the equipment from direct current to alternating current supplied at our expense. The two had no bearing whatever on our final agreements and contracts, for the entire job, and that is a matter of record. There was no discrimination and no deviation from the practice that we have followed as far as all customers are concerned in the two separate jobs in our service for primary power which the customer paid for and owned the primary receiving equipment, and second the change of equipment on the customer's property so as to permit us to supply all alternating current rather than direct current.

BY MR. EVANS:

Q. Now, Mr. Liversidge, do you state that there are no cases outside of the D. C. district in which you have furnished equipment on the customer's premises, title to which is vested in the customer, in order to retain that customer.

A. Not to my knowledge, Mr. Evans.

Q. You know of no case where you have installed equipment on any customer's premises outside of the D. C. district at the expense of the Philadelphia Electric Company?

A. Title vested in the customer?

Q. Yes.

A. Not to my knowledge.

Q. Suppose title does not vest in the consumer, do you know then of any changes?

A. I certainly can't recall, Mr. Evans.

Q. In your opinion, Mr. Liversidge, in the interest of effective regulation, should not agreements for the installation of equipment be filed with the Commission, so that they shall be open to public inspection?

A. The detailed contracts of the cost of that equipment, you mean, Mr. Evans.

Q. I mean, you have stated a general policy to the Committee?

A. Yes.

Q. Suppose that general policy had been filed as a schedule affecting rates with the Public Service Commission, would that then be desirable from your point of view?

A. On change over costs, Mr. Evans?

Q. Yes.

A. Well, I think it was a matter of routine, Mr. Evans. I don't see what could have been changed. It was a matter of public knowledge and there was no discrimination insofar as the treatment of all customers affected by the change over policy was concerned.

Q. If it appeared that your original proposition to Lit Brothers was that they should expend \$150,000 and you later reduced it so that they only expended \$67,000, does not that indicate that it was a matter of bargaining rather than a matter of fixed policy?

A. Mr. Evans, to answer that, I must say that every original proposal has certain elements, in which the engineering, and design and requirements of the customer are given consideration. A job may originally be considered from the standpoint of the very best practice in equipment, the very best practice in engineering—

Q. That does not answer my question.

A. I think I must make this statement—

Q. Please answer my question, and then make any explanation you want, and it will be much clearer on the record.

(The question read).

THE WITNESS: No.

BY MR. EVANS:

Q. That is your answer. Do you want to make any further explanation?

A. Yes, Mr. Evans, I might say that in all such cases, as explained before, matters of design, questions of the requirements of the consumer, all those enter into what is ultimately developed as to the cost of that equipment, and the costs vary considerable, so that we may start with a certain figure, changes in the demand, changes in location of equipment, changes in the type of equipment may bring about a number of estimates before we finally reach a mutually satisfactory decision and price for the equipment.

Q. And whether or not that was the case will appear probably from your preliminary estimates, when produced?

A. I am quite sure.

MR. EVANS: In order to expedite this matter, I ask that the Philadelphia Electric Company, produce the three preliminary estimates referred to, and that they be given exhibit numbers as follows when produced: Estimate dated January 29 or 28, 1930, exhibit number 94; estimate February 25, 1930, exhibit number 95; and the subsequent preliminary estimates, exhibit number 96; that the contract of March 29, and the four amendments thereto be produced as exhibit number 97.

That is all I have from this witness, unless you have some questions.

BY MR. COOKE:

Q. I would like to ask Mr. Liversidge one thing. I understood you to say that the Philadelphia Electric Company assumes responsibility for seeing that customers get the advantage of the best rates. Did you mean to say that?

A. Well, I meant that we assume the responsibility, but we are continually analyzing the various rates and the requirements of the consumers, and trying to see that they secure the best possible rates, Mr. Cooke.

Q. The reason I ask you is because I am on the board of the Germantown Hospital, and we recently discovered that if we owned our transformers, which I understand have since been acquired by the payment of \$1900, that we would get this desirable rate E. Now, that installation has been in some years; I can't tell you how many, but it is some years; and as I understood you to say, if the meter had originally been put on one side of those transformers, rather than on the other, we would have jumped from the rate E paid to the rate that we are now paying; under rate E. I never knew that your company assumed the responsibility for seeing that the customers got the best rates.

A. No; we don't assume the responsibility, Mr. Cooke, but we do attempt to analyze the various requirements, the bills, the bills of the larger customers that might fall in the rate E class.

Q. I don't know whether I have a right to do it, but I would like to know whether if it can be established that conditions have not changed at all in all those years, whether we have not got a claim against the company for whatever we have been over paying under the rate E.

(No answer).

ROBERT L. YATES sworn

BY MR. EVANS:

Q. You are vice-president of the Skinner Engine Company of Erie, Pa., are you not?

A. Yes sir.

Q. Your company is engaged in the manufacture and installation of isolated electric plants; is it not?

A. That is right.

Q. Will you briefly state to the Committee the negotiations you had with Lit Brothers for the installation of an isolated plant in their store in Philadelphia in the year 1930?

A. We were advised on November 30, 1929, that the president of the Lit Company, felt that he was not getting proper rates on steam and current, and we were advised to get in touch with them, which we voluntarily did early in December, 1929. Upon agreement with them, we had our service engineers survey the plant, so as to make an estimate as to the savings that we felt we could effect in the plant. We do not manufacture boiler equipment, on the power equipment, but our survey had to cover both. In December, 1929, we then made what we call a Guaranteed Savings Proposal to Lit Company, wherein we agreed to furnish our equipment at

a certain price; at one dollar; and take the balance of the contract price monthly in the savings that we could prove by the operating run in their plant. Our proposal was made on December 26, 1929. That was carried along in different conferences until the middle of February, 1930, when we were advised that they were ready to make contract with us; in fact, I personally was there, and was told that I could leave for home, and that the matter could be concluded and would be concluded within the next two or three days with our Philadelphia representative.

Mr. Evans, do you want me to—

Q. I will ask you a question. During the course of the negotiations did Lit Brothers furnish you with the copies of the preliminary estimates, as submitted to them by the Philadelphia Electric Company?

A. Yes.

Q. I show you one dated January 28 or 29, 1930, and ask you whether that is one of those estimates that you referred to?

A. I believe that it is; yes sir.

Q. And that calls for the installation of equipment by Lit Brothers to what amount, Mr. Yates?

A. \$150,000.

Q. And what are the items making up that \$150,000?

A. Shall I read them?

Q. Yes; if you will, please.

A. Estimated costs of services switches, connections, and so forth, \$13,000; service transformers and connections, \$16,000; motor generators, \$34,000; switchboards, \$15,000; changes to lighting circuits, appliances and so forth, \$48,000; mains to tie in present scattered service single service points, \$24,000; total \$150,000.

Q. Did Lit Brothers subsequently furnish you with a copy of the preliminary estimate of the Philadelphia Electric Company dated February 25th, 1930?

A. Yes sir.

Q. In that estimate, what is the cost of the equipment to be installed and paid for by Lit Brothers?

A. \$92,000.

Q. And what does the equipment consist of?

A. Service switches and connections, and so forth, \$13,000; transformers and connections, \$16,000; means to tie in present scattered service to single point service, \$38,000; substation construction, \$25,000, making a total of \$52,000.

Q. Did you subsequently see any other estimate furnished by the Philadelphia Electric Company to Lit Brothers?

A. Yes sir.

Q. And what was the cost of the equipment to be furnished Lit Brothers on that estimate?

A. I was talking to one of the officials of Lit Brothers and he told me at the time that the reduction had been made to \$79,000.

Q. Did you at any time attend a conference between the various parties in regard to negotiations between Lit Brothers and the Philadelphia Electric Company?

A. Yes sir, I was in one conference.

Q. What was the date of that conference?

A. Approximately?

Q. Yes, approximately?

A. It was the latter part of February, about February 26th.

Q. Will you state who was present at that conference as representing the Philadelphia Electric Company?

A. I think their names were Mr. Gaskell and Mr. Dyre.

Q. Do you know what position Mr. Gaskell held with the Philadelphia Electric Company?

A. I do not.

BY MR. EVANS: Mr. Liversidge, will you be willing to state what position Mr. Gaskell holds?

BY MR. LIVERSIDGE: He is an engineer in the power sales department.

BY MR. EVANS:

Q. And Mr. Dyre is also?

MR. LIVERSIDGE: He is a sales engineer.

BY MR. EVANS:

Q. At that conference, was the proposition of the Philadelphia Electric Company discussed?

A. Yes sir.

Q. And what was the proposition at that time submitted to the Philadelphia Electric Company; how much equipment was Lit Brothers to furnish?

A. The amount at that time was \$79,000. Just what the total of the equipment was, I did not read the report over. I was shown it very quickly.

Q. Who was present at the conference on behalf of Lit Brothers?

A. The President of the Lit Company.

Q. What is his name?

A. Mr. R. J. Goerke, and also a gentleman from Memphis, Tennessee, and one of our own engineers, Mr. Bradt, and myself.

Q. What did Mr. Goerke tell the representatives of the Philadelphia Electric Company?

A. That he could not consider taking on their service unless it could be put in for nothing, that is, at no cost to him.

Q. Unless that was done, he would install an isolated plant?

A. That was the premise.

Q. He didn't say that?

A. I cannot say he did.

Q. You reached the point in your negotiations with Lit Brothers where you were told that the contract for an isolated plant to be furnished by you would be signed within a day or two, did you not?

A. Yes sir.

Q. And the contract was initialed by the officers of Lit Brothers?

A. It was.

Q. Was that contract ever entered into?

A. No it was not.

Q. Were you ever advised by Lit Brothers that they had entered into a contract with the Philadelphia Electric Company?

A. Yes sir.

Q. And about when was that, if you remember?

A. Well, it was sometime prior to the execution of the final contract, and I judge we were advised early in March.

R. Z. ZIMMERMAN sworn

BY MR. HIRSCH:

Q. What is your full name, Mr. Zimmerman.

A. Richard Z. Zimmerman.

Q. What is your position with the United Gas Improvement Company?

A. Vice-president in charge of purchases.

Q. How long have you held that position?

A. Since April 1st, 1929.

Q. What position do you hold with the Philadelphia Electric Company?

A. General Purchasing Agent.

Q. Do you receive any salary or compensation?

A. No.

Q. As General Purchasing Agent of the Philadelphia Electric Company, do you receive any compensation?

A. I receive no compensation.

Q. Does the U. G. I. Company receive any fee for your services?

A. I don't know of any fee outside of what has been stated before, that is, a bill is rendered to include our services.

Q. You mean a bill is rendered by the U. G. I. Company to the Philadelphia Electric Company and that includes your services as Purchasing Agent?

A. The services of the Purchasing Department as a whole.

Q. Are there any members of the purchasing department of the United Gas Improvement who receive a certain portion or all of their salaries from the Philadelphia Electric Company?

A. None.

Q. Is there any bonus or special compensation that you receive at the end of the year, depending on the earnings of the Philadelphia Electric Company?

A. No.

Q. What is the nature of the purchases you make for the Philadelphia Electric Company?

A. We make all kinds of purchases of materials used in operation.

Q. Can you specify some of the major items that you purchase?

A. We purchase coal, we purchase transformers, meters, wire, cable.

Q. How long has the United Gas Improvement Company been making such purchases for the Philadelphia Electric Company?

A. We merged the purchasing department in August, 1930.  
Q. Can you say approximately the total of your purchases for the Philadelphia Electric Company since that date?

A. Since that date?

Q. Yes sir.

A. No, I cannot. I can give you the total for the year.

Q. Can you give us that figure?

A. The total for the year of 1930 was \$21,673,000.

Q. Since the departments were merged on August 16, 1930, would you say that that total represents the purchases since August 16, 1930?

A. I should not say so.

Q. Did you not say—

A. Until August 16, 1930, their department was operating separately.

Q. Were you not purchasing agent for the Philadelphia Electric Company prior to August 16, 1930?

A. Yes sir.

Q. What was the nature of your duties?

A. The nature of my duties was the supervising of all purchases, and I particularly gave attention to the purchase of coal.

Q. Then is it a fact that during 1930 you personally supervised the purchase of approximately \$21,000,000 in equipment and merchandise for the Philadelphia Electric Company?

A. Yes sir.

Q. And for such supervision you received no compensation?

A. No.

Q. Can you tell me how the United Gas Improvement Company arrived at the figures for their compensation for such services?

A. No.

Q. Did you personally submit any estimate of the value of your services rendered?

A. I was asked an opinion on it, yes.

Q. What was your opinion?

A. I don't recall the figure.

Q. Would you say it ran in excess of \$100,000?

A. No.

Q. About how much coal did you purchase each year for the Philadelphia Electric Company?

A. 1930 we purchased about 1,219,000 tons.

Q. Can you give us the average cost per ton?

A. I think I can give you the cost delivered, yes. The total was \$5,099,803.

Q. Who received the bills for this coal after it had been shipped to the Philadelphia Electric Company?

A. The bills for the coal were received by the Philadelphia Electric Company.

BY MR. COOKE:

Q. Is it anthracite or bituminous?

A. Bituminous mostly.

BY MR. MOORE:

Q. What was the price per ton?

A. It varies.

Q. On an average?

A. I would say the average would be somewhere around \$1.79 or \$1.80 at the mines.

BY MR. HIRSCH:

Q. Are these bills made out in the name of the United Gas Improvement Company or the Philadelphia Electric Company?

A. They were made to the Philadelphia Electric Company.

Q. The United Gas Improvement Company orders this coal from the shippers, do they not?

A. They order it for the Philadelphia Electric Company.

Q. Do they use the name of the Philadelphia Electric Company as the ones who order the equipment?

A. All orders are issued by the Philadelphia Electric Company.

Q. Don't you use the stationery of the United Gas Improvement for making such orders?

A. What stationery do you mean?

Q. Do you issue orders to shippers on some letterhead or do you call them on the telephone, or how do you issue these orders?

A. These orders—most of the coal is bought on contract, signed by the Philadelphia Electric Company. The orders

issued are Philadelphia Electric Company orders. Now, whether there is some correspondence at times that occur on United Gas Improvement Company letterheads, that may be.

Q. Well, just how are these orders placed, over the telephone or by telegram?

A. Well of course we do use the conveniences we have. We do use the telephone sometimes and orders issued confirming all purchases.

Q. When these orders are issued confirming purchases, who signs these orders?

A. I sign them as general purchasing agent.

Q. For the Philadelphia Electric Company?

A. Yes sir.

Q. Is there any discount which the shippers allow the United Gas Improvement Company for quantity purchases?

A. Of what kind?

Q. Of coal?

A. No sir.

Q. Is there any quantity discount that you receive on the purchase of transformers and other electric apparatus?

A. Yes.

Q. When is this discount given to you?

A. Well, some are semi-annual, usually annually.

Q. To whom are those discounts or credits sent?

A. To the companies making the purchases.

Q. And would you say they are sent directly to the Philadelphia Electric Company?

A. Yes.

Q. Is there any percentage of those discounts which the United Gas Improvement Company retains?

A. None.

Q. Does your department in the United Gas Improvement Company supervise the disposal of salvaged equipment for the Philadelphia Electric Company?

A. Yes, it comes under the salvage department.

Q. What commission does the United Gas Improvement Company receive for this work?

A. None.

MR. HIRSCH: Does the Committee have further questions?

BY MR. RHODES:

Q. Are you related to the president of the United Gas Improvement Company?

A. I am his half brother.

BY MR. WALKER:

Q. Mr. Zimmerman, might I ask you about these coal contracts. Do you contract for your annual supply of coal?

A. In the majority of cases we do, that is, in the large plants.

Q. And is there any certain company to whom that business is generally given?

A. It is competitive. In other words, we receive bids. We receive as high as 75 bids, and we select the coal very carefully for the quality of service that we expect from the companies, and they are all rated.

Q. And does it so happen that certain companies have received these contracts since you have been general purchasing agent?

A. Yes, there happens to be—let me see—I was going to say two of them.

Q. And who are those companies?

A. The Sterling Coal Company and the Madeira Hill Company.

Q. You said it runs a little over \$5,000,000 delivered, is that right?

A. Yes.

Q. Can you give me an approximate figure per ton delivered; your figure of \$1.75 was at the mine?

A. I can give you the tonnage. I think it comes around \$4.20, something like that; it is a matter of division there. The cost varies according to the delivery point, the freight rate changes. If it is going to a certain plant, you go down to the pier rate, which is lower than the others.

Q. Can you give me any approximate estimate of the percentage of the coal that is purchased from the Madeira Hill Company?

A. In 1930 we purchased 200,000 tons.

Q. From the Madeira Hill. And the Sterling Company?

A. Yes, I can give you approximately—I think it will vary—the contract years are from April 1 to April 1.

Q. About what percent do you purchase from the Sterlin outfit?

A. The Sterling Company has furnished us for the contract year beginning 1929, they furnished 200,000 tons, and we always have a 10% more or less clause in those contracts. In 1930 to '31, the contract called for \$250,000 tons.

BY MR. HAGMAIER:

Q. It does not always pay to buy cheap coal, does it?

A. No, it does not, and for one reason, I might add, you have got to remember that we furnish a decidedly favorable type of business to them. In many cases it becomes a back log to them. In other words, we take the coal every day, and they get paid promptly, that is a great asset to them, and because of that, I think sometimes we can get better prices.

Q. You have certain specifications, according to the amount of ash, do you?

A. That is right, yes.

BY THE CHAIRMAN:

Q. Where are the Sterling Mines, what counties, do you recall?

A. Wait a minute—I want to get the right county. They are nearby Spangler.

Q. Cambria County?

A. That is in Cambria County.

BY MR. WALKER:

Q. Do you happen to know what mines furnish the Madeira Hill Coal.

A. The Madeira Hill, usually comes from their Brookwood and Spangler mines. At times we receive some Rock Hill coal.

BY MR. HIRSCH:

Q. Another question, Mr. Zimmerman. How long have you been general purchasing agent for the Philadelphia Electric Company?

A. Since April 1, 1929.

Q. And during that time you was also vice-president in charge of purchases for United Gas Improvement Company?

A. Yes.

MR. HIRSCH: That is all unless the Committee has further questions.

F. X. MONVILLE sworn

BY MR. HIRSCH:

Q. What is your full name?

Francis X. Monville.

Q. What is your occupation?

A. Superintendent of buildings.

Q. What company?

A. In the Electric Realty Corporation.

Q. Who controls the Electric Realty Corporation?

A. The Philadelphia Electric Company.

Q. What is the nature of the work done by the Electric Realty Corporation?

A. It acquires all real estate, properties, which I have anything to do with; also maintains, operates the buildings exclusive of stations and sub-stations.

Q. Do the profits made by the Electric Realty Corporation go into the general income of the Philadelphia Electric Company?

A. I don't know.

Q. Is the United Gas Improvement Company interested in any way in the Electric Realty Corporation?

A. No.

Q. When you arrange for the purchase of a building do you retain title in the name of the Electric Realty Corporation or do you act as agents and resell to the Philadelphia Electric Company?

A. I don't know, because that is not my phase of the work.

MR. TURNER: I do not quite catch who the Electric Realty Corporation is.

MR. HIRSCH: A subsidiary of the Philadelphia Electric Company.

MR. TURNER: Owned entirely by the Philadelphia Electric Company?

MR. HIRSCH: That is the question I asked, and I tried to find out whether the United Gas Improvement Company had an interest, and the witness said he didn't know.

MR. TURNER: I am asking the other question. Does the Philadelphia Electric Company own the Electric Realty Corporation?

THE WITNESS: Yes.

BY MR. TURNER:

Q. Entirely?

A. Yes.

MR. COOKE: Then why does he not know whether the profits go to the Philadelphia Electric Company, it is a subsidiary.

A. It would be a natural deduction that they do.

Q. You assume that they do.

A. Yes.

MR. TURNER: We cannot deal with an assumption, we ought to deal with the facts. If he don't know we can get that easily enough.

BY MR. HIRSCH:

Q. Do you know whether or not the Electric Realty Corporation is owned privately by any officials of the Philadelphia Electric Company, or the United Gas Improvement Company?

MR. TURNER: The witness said he did not have the information, and it seems to me if you want that you better call the proper authority to tell us.

BY MR. HIRSCH:

Q. Can you tell me, Mr. Monville, or tell the Committee, who in the Electric Realty Corporation can tell us who the real owners are.

A. Yes, I would say our President, Mr. Taylor.

Q. Is he here in the room today?

MR. MASON: Mr. Porter can answer that question. Mr. Porter is here Mr. Hirsch. Mr. Taylor went back as he was relieved by the Committee.

THE CHAIRMAN: Mr. Taylor was excused.

BY MR. HIRSCH:

Q. Do you have any connection with the Utilities Realty Company?

A. Yes.

Q. What is your position in that company?

A. General manager.

A. Who owns the Utility Realty Company?

A. The United Gas Improvement Company.

Q. What is the nature of the work done by the Utilities Realty Company?

A. Owns and operates certain buildings of the United Gas Improvement Company.

Q. Do they own and operate any buildings owned by the Philadelphia Electric Company?

A. No, sir.

Q. Do they supervise the maintenance of any of the buildings owned by the Philadelphia Electric Company?

A. No, sir.

Q. Who pays your salary, Mr. Monville?

A. Both the Electric Realty Corporation and the Utilities Realty Company.

Q. Approximately what percentage of your salary is paid by the Electric Realty Corporation controlled by the Philadelphia Electric Company?

A. Over two-thirds.

Q. And the United Gas Improvement Company pays you as general manager of the Utilities Realty Company the other third, is that correct?

A. Yes, that is correct.

Q. Approximately how is your time divided between these two realty companies.

A. On a nine hour basis, approximately, two hours per day for the Utilities Realty Company.

Q. And would you say the other seven hours you devote to the Electric Realty Company?

A. Yes.

Q. Are not many of your duties in both of these realty companies common ones?

A. Yes.

Q. Can you mention those that are really common?

A. The supervising of the physical maintenance of the buildings, both in the Electric Realty Corporation and the Utilities Realty Company; the general upkeep; the general maintenance of buildings; the cleaning; the motive power; the elevators and so forth.

Q. Do you employ the help of both companies.

A. Yes.

Q. Do those persons that you employ do the cleaning; clean both the buildings owned and operated by the Utilities Realty Company and the Electric Realty Corporation?

A. In their respective companies.

BY MR. TURNER:

Q. Do both companies occupy the same buildings at any place.

A. No, sir.

BY MR. HIRSCH:

Q. Do both these realty companies have any property in common?

A. No sir.

Q. Is there any fee which the Utilities Realty Company, controlled by the United Gas Improvement Company receives from the Electric Realty Company?

A. No, sir.

Q. When a building is purchased or about to be purchased, does the Utilities Realty Company have anything to do with it?

A. No, sir.

Q. In the maintenance of your building at 1000 Chestnut Street—your main office building—who pays the help for doing that work?

A. The Electric Realty Corporation.

MR. TURNER: That is the Philadelphia Electric Company?

MR. HIRSCH: Yes.

BY MR. HIRSCH:

Q. In the maintenance of the office at Broad and Chestnut Streets, occupied by the United Gas Improvement Company, does the Electric Realty Company assume any of that expense?

A. None.

Q. Then, would you say that the Utilities Realty Company, controlled by the United Gas Improvement Company, is engaged exclusively with the ownership and maintenance of buildings of the United Gas Improvement Company only?

A. Absolutely.

BY MR. COOKE:

Q. Did I understand you to say that the U. G. I. paid a part of your salary or does that portion come from the Utilities Realty Company?

A. I said that it came from the Utilities Realty Company.

MR. COOKE: I misunderstood you then. I thought you said that the U. G. I. paid you a portion of your salary.

Q. The U. G. I. owns the Utilities Realty Company?

A. Yes, sir.

Q. The U. G. I. does not pay you any portion of your salary direct?

A. No.

Q. It comes through the Utilities Realty Company; is that correct?

A. It comes through the Utilities Realty Company; yes, sir.

EDWARD PORTER sworn

BY MR. HIRSCH:

Q. What is your full name, Mr. Porter?

A. Edward Porter.

Q. What is your position with the Philadelphia Electric Company?

A. Vice-President and Controller.

Q. How long have you occupied that position?

A. Since September 12, 1928.

Q. What was your position prior to that date?

A. General Auditor, United Gas Improvement Company.

Q. As Vice-President of the Philadelphia Electric Company, do you still perform any services for the United Gas Improvement Company?

A. No, sir.

Q. Do you occupy any position in the Electric Realty Corporation?

A. Vice-President.

Q. Can you say who the owners of the stock are?

A. Yes, sir; the Philadelphia Electric Company.

Q. The Philadelphia Electric Company owns the stock as a corporation or is it owned in the names of certain individuals in the Philadelphia Electric Company?

A. The stock, with the exception of the directors' shares, is in the name of the Philadelphia Electric Company.

BY MR. TURNER:

Q. You mean by that that certain individuals for the purpose of holding directorships would have to have a share of stock?

A. Yes, sir; one share of stock.

Q. One share?

A. Yes.

Q. And the other stock is owned by the Company?

A. By the Company.

BY MR. HIRSCH:

Q. Do those directors receive a special fee or compensation?

A. No, sir.

Q. What is the nature of the work done by the Electric Realty Company?

A. It is a general real estate company, holding, buying and selling real estate, as the policy may require. It also owns some office buildings and also does maintenance work for office buildings.

Q. Do the profits of the Electric Realty Company go into the general income of the Philadelphia Electric Company?

A. It is hoped that they will. Up to this time there have been none.

BY MR. TURNER:

Q. They have lost?

A. Yes.

Q. They have run into the red?

A. It is in the red by reason of the fact that purchases of real estate, which require a heavy investment, we may have to hold for some time, and, of course, they are borrowing money to carry it, and that runs into quite a sum.

BY MR. RHODES:

Q. What is the realty company's capitalization?

A. \$50,000.

BY MR. TURNER:

Q. What is the par value of the stock per share?

A. \$100.

BY MR. MASON:

Q. As a matter of fact, if Mr. Hirsch will ask Mr. Porter the question as to how those directors' shares are endorsed, he may find they have gone back into the company.

BY MR. HIRSCH:

Q. Are they engaged in any other real estate transactions other than real estate properties for the electric companies, in the operation of its properties?

A. The Philadelphia Electric and its subsidiaries.

Q. In other words, a loss sustained by the Electric Utilities Company, it comes out of the operating expense of the Philadelphia Electric Company?

A. Well, no. That is carried on the books of the Electric Realty Company. Following your thought there, if there would be any profit, it would accrue to the Philadelphia Electric Company through the non-operating revenue accounts as a dividend.

Q. Any deficits, therefore, must be made up in the Electric Utility Company, how are they taken care of?

A. The deficits are carried through borrowed money.

Q. Are the moneys borrowed in the name of the Electric Utility Company or in the name of the Philadelphia Electric Company?

A. In the name of the Electric Realty Company.

Q. Does the Philadelphia Electric Company endorse any of those notes?

A. No; that is covered by notes of the Electric Realty Company in favor of the Philadelphia Electric Company.

Q. Does the Electric Realty Company lease any buildings to the Philadelphia Electric Company?

A. Yes, sir.

Q. And the amount charged on those leases is determined by the Electric Realty Company?

A. That is correct.

Q. Was your company organized as a convenience for the purchase and disposal of real estate?

A. Originally, yes sir; that was its purpose.

Q. What is its purpose today?

A. Why, it is still that.

BY MR. TURNER:

Q. On what basis are those rentals worked out?

A. They take the company's investment in the given building, and they add six per cent to that, plus the cost of taxes, depending on how the rental may be made. They aim to come out with six per cent and taxes.

Q. Who does the repairs and maintenance?

A. That would be paid by the Philadelphia Electric Company.

Q. By the tenant?

A. Yes.

BY MR. COOKE:

Q. Couldn't the Philadelphia Electric own those properties just as well?

A. Well, they could, but with the policy of the company now in changing, that is, if we take a location for an office, it may develop that the selection is not a proper one, the population or business may change. If the Philadelphia Electric Company has that, it is usually under mortgage and it requires a lot of trouble to get it released, and they found it easier to dispose of a building that is free that way in case they want to take some other location.

Q. The properties owned by the Realty Company are all taxed for local purposes, are they not?

A. Yes.

BY THE CHAIRMAN:

Q. How are their losses absorbed?

A. They remain with the Electric Realty Company.

BY MR. TURNER:

Q. How can they carry them on a \$50,000 capitalization?

A. The Philadelphia Electric Company is continuing to put up the money.

BY MR. COOKE:

Q. You have properties that are used and useful and some that are not used and not useful?

A. That is right.

BY MR. RHODES:

Q. These properties held by your Realty Company, that are not utilized in the actual operation of the company, they would be tax free if the company had the title themselves?

A. No; they pay taxes on them.

Q. I know, but supposing the Electric Company had these properties or some of them in their name, would they then be tax free by virtue of the nature in which they are used?

A. I am not sure about that under the law. I guess I would have to get the lawyers to answer that for you.

Q. You pay taxes now, don't you?

A. Yes.

BY MR. HIRSCH:

Q. The property that is owned by the Electric Realty Company as I gather it, is both that which is used and useful in utility operation and that which is not used and useful in utility operation; is that correct?

A. That is correct.

Q. When the Electric Company values its properties for rate making purposes, do they include all the properties owned by the Philadelphia Electric Company?

A. No; none of that is included.

Q. Does the Electric Realty Company own the building at 1000 Chestnut Street?

A. No sir; title to that is vested in the Philadelphia Electric Company.

Q. What about the building at Ninth and Sansom Streets?

A. That likewise is with the Philadelphia Electric Company.

Q. Can you mention the names of any of which are owned by the Electric Realty Company, and which are leased by the Philadelphia Electric Company?

A. Yes; the offices on South Broad Street, and one in Frankford.

Q. Do you pay taxes on those offices?

A. Yes sir.

Q. Isn't it a fact that you are exempt from taxation in a number of these offices, because they are presumably used in utility operation?

A. I can't answer that. I will have to refer you to the legal fraternity to answer that.

Q. And do you know whether the bills are paid to the city for taxes, on any of those buildings?

A. Yes; we pay the taxes on those.

Q. Do you pay the regular taxes that all similarly situated properties have to pay?

A. Yes sir.

MR. COOKE: Are you speaking about the properties owned by the utility company?

MR. HIRSCH: Yes.

MR. COOKE: Or by the Realty Company?

MR. HIRSCH: Yes; by the realty company.

MR. COOKE: Properties owned by the realty company would necessarily have to be taxable, because that is not a utility company; is that not right?

BY MR. HIRSCH:

Q. And many of these buildings are used as district offices for the collection of bills, are they not?

A. That is right.

Q. And on those offices, you do pay taxes to the City of Philadelphia?

A. Yes; we pay taxes.

Q. Does the office at 1000 Chestnut Street pay taxes to the city of Philadelphia?

A. I can't say that positively.

BY MR. HAGMAIER:

Q. Pardon me just a minute. Didn't you say a minute ago that the building at 1000 Chestnut was in the utility or in the realty company?

MR. HIRSCH: Philadelphia Electric.

MR. HAGMAIER: Then, they would not pay taxes there?

MR. HIRSCH: They would not pay taxes.

My next question is, don't you sell a great deal of appliances at 1000 Chestnut Street?

A. Yes; that is pretty active.

Q. In other words, you carry on a general merchandising business there, in addition to general offices?

A. Yes.

Q. Don't you think that that subjects the other appliance dealers in your territory to a rather great disadvantage, because you don't have to pay taxes on that property, and they have to pay taxes on similarly situated property?

A. I don't know how to answer that.

MR. RICHARDS: Mr. Hirsch, may I interpose a question?

BY MR. RICHARDS:

Q. You do pay taxes on that portion of the building which is used for the sale of appliances? Isn't that the custom in a great many parts of the state; that they pay taxes in whatever portion of the building is used for a sales room; or is that the custom in Philadelphia? I am asking for information. I know it is the custom in some parts of the state.

MR. HIRSCH: Perhaps the witness can answer that.

A. I don't think that that is true. I would have to look that up about the taxes on the building at Tenth and Chestnut Streets.

Q. Do you know whether anybody here today can answer that question as to whether or not you do pay taxes on the property at Tenth and Chestnut Streets.

MR. MARTIN: We do. That building is not exempt, because exemption is only extended to buildings used for manufacture, for transportation lines and rights of way. That building itself is operated as an office and is a building in a different class.

BY MR. HIRSCH:

Q. Is there any relation between the Electric Realty Company and the Utilities Realty Company?

A. There is not.

Q. Have you taken an active part in politics?

A. No.

Q. How much did you contribute in the last campaign?

A. \$500.

Q. Did anybody approach you to make that contribution?

A. No sir.

Q. You just did it on your own volition?

A. Yes sir.

Q. Was that charged to any expense account in the electric company?

A. No sir.

Q. To whom did you pay that?

A. To a man by the name of Harvey, Treasurer of the Democratic party.

Q. Did you make payment by check or by cash?

A. By check, my personal check.

Q. You took it over there yourself?

A. I mailed it to him.

Q. And no one made a suggestion to you as to the amount of money you should contribute?

A. No sir.

BY MR. RHODES:

Q. Are you familiar with the property owned by the Company?

A. In a general way.

Q. Does the Philadelphia Electric Company like all other utility companies purchase a lot of real estate that it does not use at the present time but holds for future use?

A. Yes, sir.

Q. And sometimes these real estate holdings are held for five or ten years before they are utilized?

A. Yes, sir.

Q. In that case they are exempt from taxation, are they not?

A. No, sir.

Q. If you went out and acquired a lot of property contemplating the use of it at some future time, is not that property exempt?

A. No sir, it is in the name of the realty company.

Q. If it is purchased by the utility company?

MR. MARTIN: The amount that is used and useful for right of way is allocated to the non-taxable property, and that which is excess land, the local authorities insist on taxing.

BY MR. RHODES:

Q. If the Board of Directors by resolution declare that they will use the land for power purposes later, is it not exempt?

MR. MARTIN: If it is taken by eminent domain as part of a prominent right of way, it is. We are speaking of transmission lines. That of course is dedicated to the public use so far as the local taxes are concerned, but where a large area such as a whole farm is acquired by purchase and only a part of that, say 100 or to 200 feet is dedicated to the right of way, the excess is usually taxed by the local authorities and very seldom is the question made a matter of dispute.

BY MR. RHODES:

Q. Mr. Porter, has not your company in its history from your knowledge acquired large areas of land that were to be devoted to the construction of a dam for the generation of power?

A. Yes, sir; it has done that.

Q. And the acquisition of these properties run over a period of years?

A. Yes, sir.

Q. And when your properties are acquired with that end in view, have they not been exempted during that time?

A. No, we pay taxes up until the time they go into use.

Q. Up to the time the property is ready for the generation of power?

A. Yes, sir, until it goes into actual operation.

BY MR. HIRSCH:

Q. Mr. Porter, in Chester where your company manufactures its gas and has coke as a by-product, don't you arrange to dispose of that coke from the plant where the gas is manufactured?

A. Yes.

Q. There you conduct a merchandising business on a property that is used for manufacturing purposes?

A. In a way, yes. You would have to store that coke anyhow.

Q. You really conduct a merchandising business in coke on a manufacturing property which is exempt from taxation?

A. It would be if we owned the property.

Q. Do you now deny you own that property?

A. There is one large section where we do store coke that is rented.

Q. In other words, if you do conduct a large merchandising business on coke on your property used for the manufacturing operation, that business would be exempt from local taxation?

A. I presume it would be.

Q. Is that not rather discriminatory against the other dealers?

A. I could not answer that.

MR. MASON: I would suggest that this line of inquiry, are we investigating the question of whether or not the appliance companies are interested in the rate situation. Is it not going pretty far afield?

MR. TURNER: Under this resolution we are to investigate the acts and conduct of all utilities. The scope is wide and we can go almost anywhere.

BY MR. RICHARDS:

Q. Here is a question. The matter of the sale of appliances by power companies: I am wondering what the custom of the companies in the east is. For example, when an electric range is sold by a private merchant, in the western part of the State, the power companies turn over to the merchant the cost of the installation which runs in the neighborhood of \$40.00.

A. I could in a general way answer that. At the present time the company does refund that installation cost to the contractor.

Q. To the electrical contractor who sells the range or whatever the appliance may be?

A. Yes, sir.

Q. There is no unfair advantage taken?

A. No, we are very anxious to have the dealer make the sale and we will pay him for making the sale.

Q. That is not under an order?

A. No, that is the company policy.

W. H. JOHNSON sworn.

BY MR. HIRSCH:

Q. What is your full name?

A. Walter Howard Johnson.

Q. Where do you live?

A. City Avenue and Greene Hill Road, Overbrook, Philadelphia, Pennsylvania.

Q. What is your occupation?

A. My occupation, I am on the service annuity of Philadelphia Electric Company and also retained by them in a consulting capacity.

Q. Before you went on the service annuity, with whom were you associated?

A. I was with the Philadelphia Electric Company as President.

Q. How long were you with them?

A. Forty-two and a half years in active life.

Q. When did you become President?

A. I should judge—I resigned in February, 1928. I judge I was President six or seven years prior to that. When Mr. McCall was taken sick I succeeded him.

BY MR. TURNER:

Q. It has been testified here you receive \$40,000 a year. How much of that is from service annuity?

A. \$30,000, that is received by all of the employees of the company, and the custom was established many years ago.

Q. The balance of \$10,000 is a retainer?

A. Yes, sir, based on my forty-two and a half years of experience, they thought it was worth \$10,000 to retain me. The others is made up of two per cent of the average of the highest ten years in the company employ, multiplied by the number of years. That is where I get the thirty thousand dollars and that is where all the other men on service annuity get their money.

Q. When did you resign as president of the Philadelphia Electric Company?

A. February 15, 1928.

Q. Was that the day the U. G. I. Company acquired control?

A. Well, yes, but they had some stock—I should say yes. That is the answer to that.

Q. Mr. Johnson, when did the U. G. I. Company first open negotiations with the Philadelphia Electric Company to acquire control?

A. That is a long time ago. The last thing occurred sometime in the summer I think of 1927.

Q. Would you say around July, 1927?

A. Yes, approximately.

Q. That was while you were president of the Philadelphia Electric Company?

A. Yes, sir.

Q. Were there any discussions concerning an exchange of stock prior to that date?

A. Not in this last deal.

Q. Did the U. G. I. Company ever make any attempt to acquire control before July 1927?

A. No, at least I don't recall. I recall, there might have been unofficial conversations.

Q. And these unofficial conversations you think extended over a period of a number of years?

A. A good many years ago, none of them occurred while I was president. In other words, these conversations occurred while Mr. Joseph B. McCall was president, no doubt.

Q. What was your capacity at that time?

A. I have come up from Secretary to Manager and Assistant to the President, and then Second Vice-President, and then Senior Vice-President, and then President, I have gone the whole gamut.

Q. Do you know in July, 1927, who made the approach concerning the exchange of stock, whether it was the U. G. I. Company or the Philadelphia Electric Company?

A. At that time, they—you are a little swift. These are matters of negotiation, and finally there was a Committee appointed of our Board of Directors to meet and consult with a similar committee of the United Gas Improvement Company, and the result of that was a proposition which both sides agreed to submit. We agreed to submit it to our stockholders and recommend it, the Board believed in it and the stockholders believed in it, and turned in their stock.

Q. As far as you can remember, where did the suggestion originate, that is, with the United Gas Improvement Company or the Philadelphia Electric Company?

A. I think the first suggestion came from the United Gas Improvement Company.

Q. You don't remember the individuals at that time?

A. No, the suggestion would come from Mr. Thompson, who was then president.

Q. Do you know how Mr. Joseph B. McCall who was then president of the Philadelphia Electric Company, felt about any merger with the United Gas Improvement Company?

A. Why he was quite favorable on proper terms, and we got those proper terms.

Q. Those proper terms were gotten after his decease?

A. Yes, I think so. Yes.

Q. It is not a fact that Mr. McCall was absolutely opposed to any merger with the United Gas Improvement Company?

A. That is not correct. He was opposed to a lease of many years.

Q. What kind of lease do you refer to?

A. Well, a suggested lease of the Philadelphia Electric Company.

Q. What benefits did you think would accrue to the Philadelphia Electric Company by United Gas Improvement Company control?

A. Well, we thought it would be advantageous, and that is why we recommended it to our stockholders.

Q. In what way do you think it would be advantageous?

A. Oh, in every way.

Q. Can you mention any such way?

A. Well, first of all, it is a metropolitan business, a Philadelphia proposition. The Philadelphia Electric Company could in joining hands with the United Gas Improvement Company help bring about a big forward going concern, which was in every way an advantage to Philadelphia and the stockholders of both companies.

Q. When you say it was an advantage to Philadelphia, do you mean to the rate payers?

A. Yes, I do, in every way. It was a big thing for Philadelphia too.

Q. Well, you mean a big advertisement in effect for Philadelphia?

A. Yes, a great big corporation—

Q. Well, is that the only consideration in the United Gas Improvement Company's acquisition of control?

A. Yes, it was advantageous that they get that control. I cannot go back now three or four years and rehearse and think out the lines of conversation, Mr. Hirsch. I would be very glad if I could, but memory does not serve that way.

Q. The Philadelphia Electric Company was a very powerful company financially, was it not?

A. It was.

Q. That was before the United Gas Improvement Company acquired control, isn't that true?

A. Correct?

Q. What would you say with respect to the financial positions of both companies before the United Improvement Company secured control?

A. Why, the Philadelphia Electric Company was an able going concern, and the United Gas Improvement Company was an able going concern. One more or less was a holding company, and the Philadelphia Electric Company was an operating company.

Q. Isn't it a fact that the bankers felt that the Philadelphia Electric Company was a bigger money maker than the United Gas Improvement Company?

A. I could not answer for that. I don't know what the bankers thought of it.

Q. And isn't it a fact that the Philadelphia Electric Company could borrow money on better terms than the United Gas Improvement Company could at that time?

A. I don't think so.

Q. Do you know whether the United Gas Improvement Company had any experience before in the management of a property so large as the Philadelphia Electric Company?

A. I could not answer that, but I think so.

Q. Can you mention any properties that they owned nearly so big as the Philadelphia Electric Company?

A. Well, they have always—I always understood that they had a very substantial interest in the Public Service Company.

Q. Now, was that prior to this acquisition of stock.

A. Oh, yes. They always had a big heavy interest, the way I understood, and in—

Q. But they really never managed that company.

A. I could not answer that. Then they had Connecticut properties,—oh—they had a number of large properties.

Q. That is true, they had a number of large properties, but did they have any one property that was so large as the Philadelphia Electric Company.

A. I cannot answer that.

Q. Did you personally participate in the negotiations which led to the exchange of stock.

A. Why, of course, I did, I was President of the Company, and I had recommended to my board, I had to recommend it to the stockholders.

Q. Isn't it a fact that Mr. McCall opposed a merger because he did not believe it would benefit the consumers?

A. No.

Q. Would you know that of your own personal knowledge.

A. Why, yes. As senior vice-president he naturally would discuss those matters with me.

Q. Isn't it a fact that he fought bitterly against the merger, and that the United Gas Improvement Company insisted until he passed away.

A. No, he didn't—there was no proposition made. He did oppose the terms upon which the conversations were carried on, but that was just because he didn't think we were getting enough for it.

Q. Well, when he thought you were not getting enough for it, do you mean from the standpoint of the consumers or the stockholder.

A. The stockholder.

Q. After negotiations were commenced immediately after McCall passed away, isn't that true.

A. No.

Q. Well you said a few minutes ago that negotiations were commenced in July of 1927, isn't that correct?

A. That is correct.

Q. When did Mr. McCall die?

A. Oh, I should guess a year and a half before that.

Q. On January 29, 1927, would you say?

A. Yes, about that time.

Q. After he died you succeeded to the head of the electric company, is that correct?

A. Before he died. He took the chairmanship of the board, I was acting president for sometime, then he took chairmanship of the board and I was made president.

Q. And shortly after that action negotiations were commenced which finally led to the exchange of stock.

A. No, I was made president for a year or longer, before I had any idea that this thing was to take place.

Q. What happened to bring this matter to a head?

A. Why, the desire of the U. G. I. to get control of the Philadelphia Electric Company.

Q. Were you really convinced that a merger was a good thing for your stockholders?

A. Yes, and it has been proven.

Q. Did you think it was a good thing for the rate payers?

A. Yes.

Q. Has that been proven?

A. I think so.

BY MR. MEMOLO:

Q. In what way has it been a benefit to the consumers?

A. Why, they have kept on making reductions as economies have increased, and profits, they have turned round, and they have been sharing it with the company, the same as we did really when we ran things.

Q. There has been a reduction in the rates since the merger?

A. Yes, since the merger.

BY MR. HIRSCH:

Q. Isn't it a fact that the Philadelphia Electric Company was considered one of the first five large utilities in the United States?

A. Correct.

Q. Before the merger?

A. Correct, yes.

Q. Isn't it a fact that the Philadelphia Electric Company had among its employees some of the foremost engineers and executives in the utility business?

A. Correct.

MR. TURNER: I assume Mr. Johnson will admit that.

BY MR. HIRSCH:

Q. Then when you say you anticipated great economies and benefits to both stockholders and consumers, you were interested in a general way by what good would be derived therefrom, is that correct?

A. I think that is fairly well stated, yes.

Q. Were any specific figures presented to you to show where a saving might be affected to the benefit of the rate payers?

A. No.

Q. No figures like that were ever prepared?

A. No, of course not. You had to wait until the change was made, and you saw what economies resulted from it; you could not anticipate that kind of thing.

Q. Do you know which men were on that Committee that arranged for these negotiations which led to the merger and acquisition of stock control?

A. Mr. McAllister, Mr. Lloyd—

Q. Mr. Lloyd was with J. P. Morgan and Company—Drexel and Company?

A. Yes, Mr. Ingersoll.

Q. A banker, is he not?

A. An attorney and railroad man, and a Democrat.

MR. TURNER: I think it would only be fair to tell the witness there is only one Democrat on this Committee, so he is gaining no advantage.

THE WITNESS: I rather gathered that. Then Jeremiah J. Sullivan, Jr., acted as secretary of that committee.

Q. He was also a banker, wasn't he?

A. Oh, no; he was looking after his father's interest. You see, the old gentleman was getting pretty well along in life, and Jed got out of the stock brokerage business and devoted all of his time to looking after his father's affairs.

Q. Isn't it a fact that Drexel and Company had a great deal to do with the terms of the merger?

A. There was no merger.

Q. Well, exchange of stock?

A. The approved—I would like to say right here—I don't know whether I get your drift or not,—Mr. Lloyd and Mr. Newhall were very very careful to differentiate between bankers and board of directors. They were very careful.

Q. They were on this board, were they, on this committee?

A. They were on this board. Newhall wasn't. Mr. Lloyd was on this committee, and they were very careful to differentiate between the two positions they occupied, and in this matter Lloyd acted as a director and recommended that we go before the stockholders, which we did.

BY MR. TURNER:

Q. Were they then on the U. G. I. board?

A. No; they were not.

Q. Was there any interlocking of the two boards?

A. Not at that time. I don't know whether there is today or not. There wasn't at that time.

Q. I am speaking of that time.

A. No, there was not any, sir.

BY MR. HIRSCH:

Q. What did Mr. Newhall have to do with the negotiations?

A. Nothing, except as one of the directors he voted for it and approved it.

Q. Was he on the board of either company?

A. He was on the board of the Philadelphia Electric Company at that time.

Q. Mr. Thomas Newhall was on the board of directors of the Philadelphia Electric Company?

A. Correct.

Q. Was Mr. Lloyd also on the board of directors of the Philadelphia Electric Company?

A. Yes.

Q. And isn't it a fact that Mr. Newhall is a member of Morgan and Company?

A. He is of Drexel—Yes, I think he is of Morgan too.

Q. And isn't it a fact that Mr. Lloyd is a member of Drexel and Company?

A. Yes, and Morgan too, I think.

Q. Who were the representatives of the United Gas Improvement Company in these negotiations?

A. I don't know. Mr. Arthur Thompson naturally would be one, and I think Mr. Samuel T. Bodine. I don't know who else was on that committee.

Q. Do you think you can locate any records showing this committee that was appointed to represent the Philadelphia Electric Company and to represent the United Gas Improvement Company, who arranged for the terms of exchange of stock?

A. Why, it is a matter of record.

Q. Who has those records?

A. Why, the U. G. I. would have those records. They would have their own records. And probably the Philadelphia Electric Company,—it may have been copied into the report that was submitted. And I am not quite certain but what there was a circular letter that went out stating those things. I am not sure.

MR. RHODES: Mr. Hirsch, I am just inquisitive to know what that would show anyway, regardless of who the members of these respective committees were; what difference would that be?

MR. HIRSCH: It would show how many bankers represented Drexel and Morgan and who was really behind the exchange of stock.

MR. RHODES: Do you think the personnel of the committee would disclose that?

MR. HIRSCH: It very likely would.

BY MR. HIRSCH:

Q. Is it not a fact, Mr. Johnson, that about the time these negotiations were taking place Mr. Arthur Thompson was president of the United Gas Improvement Company?

A. He was.

Q. Mr. Arthur Thompson was considered a Mellon man?

A. Well, I don't know how to answer that. Mr. Thompson was—it was reported that he was close to the Mellons.

Q. Is it not a fact that the Mellons put Mr. Thompson in as president of the United Gas Improvement Company?

A. No, I don't think so.

Q. Wasn't there, and isn't there now, a Mellon on the board of directors of the United Gas Improvement Company?

A. I couldn't answer that. There was at one time. I don't know now.

Q. Do you happen to know whether there is a Mellon on the board of directors of the Pennsylvania Railroad?

A. No.

Q. Isn't it a fact that during the time of these negotiations the United Gas Improvement Company and the Pennsylvania Railroad joined hands and threatened to discontinue certain large power contracts with the Philadelphia Electric Company if they did not agree to the terms of the exchange of stock?

A. Absolutely no. Ridiculous.

Q. Were you promised anything of value if you approved this agreement arrived at by the committee?

A. I was asked if I would stay with them until I was 70 years of age, and having passed the years of 65 years of age, 65 and a half, I said no, I am through, I want to go on my annuity.

MR. RHODES: Mr. Hirsch, when you ask if anything of value was offered to Mr. Johnson, by whom?

THE WITNESS: Well, I would answer it for anyone.

MR. RHODES: Well, I wouldn't see any relevancy to the question unless it was some specific offer.

THE WITNESS: They wanted me to stay with them and I said no.

MR. RHODES: Who wanted you?

THE WITNESS: Mr. Thompson and the board, and I said no, I take by annuity; and that is when they said well, we want to retain you, and I said first rate, I will be glad to be retained, and I named that modest sum of \$10,000.

MR. RHODES: You would not consider that an inducement to you to approve this proposed sale, would you?

THE WITNESS: No, I would not.

BY MR. HIRSCH:

Q. Well, Mr. Johnson, you now receive \$400

A. Yes.

Q. Who pays that money to you?

A. The company pays it.

Q. Which company?

A. The Philadelphia Electric Company.

Q. Do you have any agreement covering your services as consultant to the electric company?

A. Yes, sir.

Q. How long is that for?

A. For life.

Q. And that agreement specifies an extra compensation to you of \$10,000 each year as consultant?

A. Yes; and that is less than I would have earned if I had stayed with them.

Q. Wasn't your salary as president of the electric company \$30,000 a year?

A. Oh, no. No; the salary of the president was \$60,000 and I gave up \$20,000 to be free and go on the annuity plan.

Q. Have you been rendering any services to the electric company since you have gone on the annuity?

A. Oh, yes.

Q. What kind of services?

A. Oh, any time they want me I am right there. I have my office. Mr. Taylor is quite human, and he asked me to retain my present office and stay close at hand. I am right in the executive suite with him.

Q. How often do you appear at the executive suite of the electric company?

A. Oh, I get down there when I am in town every day for a little while, sometimes all day.

Q. And you perform actual service for the electric company?

A. Surely, when I am called upon. I am a consultant.

Q. Were there any threats made to you while you were president of the electric company to approve the deal between the U. G. I. and the Philadelphia Electric Company?

A. Absolutely no, not in any shape or form.

MR. RHODES: Any purport? I don't just get the purport of that question.

BY MR. HIRSCH:

Q. Were any suggestions made to you, Mr. Johnson, that if you would not agree to the terms of this deal between the United Gas Improvement Company and the Philadelphia Electric Company, you would be forced on the annuity?

A. No. I went on the annuity of my own accord. Asked for it, having arrived at the age.

Q. And you personally wrote the letter to the stockholders asking them to exchange their stock for that of the United Gas Improvement Company?

A. Why, I personally signed it, and personally wrote it, I guess; but it was criticized by everybody, as we always do. We never send out those things without having them visaed and criticized by other people.

Q. Who prepared the original draft of that letter?

A. I don't know.

Q. It was given to you and you signed it?

A. I may have done it myself.

Q. Did you honestly believe that the United Gas Improvement Company would introduce economies in the Philadelphia Electric system?

A. Why, surely; two big properties getting together, there is bound to be a resultant economy, especially with corporations both of them splendidly managed, like the U. G. I. and the Philadelphia Electric.

Q. But no figures whatever were ever presented to you to show what the possible economies might be?

A. No.

BY MR. EVANS:

Q. You were at one time president of the National Electric Light Association, were you not?

A. Yes.

Q. And did you ever hold any office in the Pennsylvania Electric Association?

A. No, not an office.

Q. What is the Pennsylvania Electric Association?

A. An association of all the electric companies in the State of Pennsylvania.

Q. What committee were you a member of?

A. I was on the sub-committee of the Public Policy Committee.

Q. And were you ever chairman of that Public Policy Committee?

A. I was chairman of the sub-committee.

Q. Of the sub-committee, and what is the purpose of the Public Policy Committee?

A. Oh, generally of that nature, looking after the various properties and being where you could be helpful to the various companies?

Q. And what were the duties of the sub-committee of which you were chairman?

A. We did all that.

Q. What else did you do?

A. What have you in mind? We had other duties whenever they were necessary.

Q. And did you have anything to do with legislative matters?

A. I certainly did.

Q. What years were you chairman of this sub-committee of the Public Policy Committee?

A. Let me see, the last legislature was 1927 and that was the last year that I was chairman.

Q. How long prior to that had you been chairman of that committee?

A. I couldn't answer—but a few years.

Q. Did this sub-committee, of which you were chairman, expend funds?

A. Surely.

Q. For what purpose?

A. Oh, all purposes, in keeping track of bills, for people appearing before committees—attorneys.

Q. In other words, it was spent in connection with legislative matters?

A. Yes, entirely—no; not entirely, because there would be, conferences and accounting and conferences on engineering, and that would all come out of that expense.

Q. And did you attend any of the sessions, sessions of the Legislature?

A. Never.

Q. Can you tell the Committee, approximately how often you were in Harrisburg while the Legislature was in session, say 1925, 1926, 1927?

A. In 1925, I don't think I was in Harrisburg more than twice, in 1925 or 1927. There was no occasion for me to come.

Q. How about 1926?

A. Well, there wasn't any Legislature then, was there?

Q. Wasn't there a special session in 1926?

A. Was it 1926? Then, I don't remember being here.

Q. To whom did you pay the money in connection with this legislative service, to which you refer?

A. To various people.

Q. Can you name any of them?

A. No; not now. It is all—to the best of my recollection that would be paid to attorneys and other people—

Q. What were the services that they were to render to your association?

A. —and then we would pay for this matter of record, that anybody could subscribe to. We had that.

Q. What services did the attorneys, you referred to, render to your association?

A. To help us every possible way on bad bills.

Q. And when you asked their assistance, I suppose, it was expected that they would use their influence against the passage of what you considered bad bills?

A. Yes; just the same way if I engaged you as an attorney, you are supposed to use your very best efforts to accomplish the result, and that is the way they would do it.

Q. And you paid them also for appearing before legislative committees, to oppose what you considered bad bills?

A. Yes.

Q. And, also, I suppose to use their influence with their friends in the Legislature?

A. I should judge so.

Q. Did you also expect to use their influence with the voters at home to urge members of the Legislature to work against these bad bills?

A. We did that ourselves, sent out circular letters to all the companies, calling their attention to these bad bills, and urging them to see their representatives and senators, and urging them to vote against them, as they were bad bills, inimical to our interests, and some of them I have facetiously called "pinch bills."

MR. TURNER: Mr. Chairman, perhaps the Committee should take judicial notice of what he means by "pinch bills."

BY MR. EVANS:

Q. I think it would be interesting on the record to have what you mean by a "pinch bill"?

A. Well, just to devil the life out of you.

BY MR. RICHARDS:

Q. Did they tell you?

A. No; they didn't tell me anything, but I suspected something like that.

BY MR. EVANS:

Q. Have you any particular bills in mind?

A. Not now.

BY MR. COOKE:

Q. How did you classify the Giant Power bill in 1925?

A. Inimical to our interests. It wasn't practical; absurd.

Q. You were opposed to that?

A. Yes; and worked against it.

BY MR. TURNER:

Q. That might be a "pinch bill" of another kind. And did you maintain a lobby here during those sessions?

A. Not in the sense of a lobby. We had to have somebody here, who was probably looking after us, but not in the usual sense of a lobby.

BY MR. RHODES:

Q. Can you give us the names of any of these attorneys who were in the Legislature during 1923 and 1925?

A. Oh, surely we could. Baker and Berne Evans were our attorneys.

Q. Just what were they supposed to do?

A. Look after our interests.

Q. Interview representatives and senators?

A. Well, I don't know. To look after our interests, that is the best I could say, Mr. Rhodes.

Q. Can you name any besides those two.

A. Yes; Mr. Connelly was one of our attorneys.

BY MR. COOKE:

Q. Mr. who?

A. Mr. Connelly.

Q. What is his name?

A. John P. In his day Harry Walton was one. It is a little difficult. You see, it is four years I have been out of that work, and it is a little difficult, but those are the outstanding names that come to me.

BY MR. EVANS:

Q. It is not your custom usually to pay your attorneys in cash?

A. No.

Q. Did you make any of those payments in cash?

A. No.

Q. Then your association presumably can produce cancelled checks for them?

A. Why, if they saved them. I don't know, they probably could if they saved them.

Q. But you never disbursed any of the money in cash?

A. Me?

Q. Yes.

A. Of course, I did.

Q. That money was not disbursed to attorneys?

A. It might have been. There might be some occasion when I had money to spend, and we would want somebody to appear before the committee and we didn't want their names in the check book.

Q. Oh, you didn't want their names in the check book? Why didn't you want their names in the check book?

A. I don't know.

BY MR. EVANS:

Q. Did you want yours in the check book?

A. I didn't care.

Q. It was done out of consideration for the attorneys?

A. There might be others, I don't know. I could not tell you. But every penny—there was not a dollar paid out by myself or anybody else that was not done legitimately and honorably.

Q. I am trying to get at the reasons for paying it out in cash. In what amount would you make these cash payments?

A. I don't know.

Q. Do you have any knowledge of how much you would disburse during a session of the Legislature?

A. I think that the whole amount that I had for the two years in handling that end, there were others, there was a president and a treasurer, I think that would run something like ten or twelve thousand dollars. That is my recollection.

Q. In addition to bad bills I suppose you were also interested who were appointed to the Public Service Commission, were you not?

A. No.

Q. You had no interest in that?

A. We had an interest, but that was about all we could do.

Q. These appointments in 1925 were before the Senate for confirmation. Were you interested in those?

A. I really don't know what I did in 1925, but if I was in active business I would be interested naturally.

Q. Wasn't some of this money you did spend to influence the question of the confirmation of Public Service Commissioners as well as opposing bad bills?

A. Not a penny.

BY MR. TURNER:

Q. You mean spent for attorney and others to lobby?

MR. EVANS: Yes. In other words, you spent money on attorneys to lobby against bills which you considered bad bills?

A. Yes, sir.

Q. You never used your influence in any way against the confirmation of what you considered a bad appointment to the Public Service Commission?

A. No.

Q. Now, Mr. Johnson, Mr. Long testified before the Federal Trade Commission that at your request he from time to time made certain payments in cash to you—January, 1925, \$2500. Do you have any remembrance at all of what you used that for?

A. Not the slightest.

Q. It was paid, out, however, to people whose names you don't think it wise to disclose?

A. Correct.

Q. Is that your usual custom, Mr. Johnson, in paying out money for what you consider perfectly honorable transactions, in cash so the names will not appear?

A. There might be reasons for it. I don't know now. When I did it I thought it was the right thing to do or I would not have done it.

Q. What reason have you to suggest?

A. The only reason I could suggest would be that they didn't want their names mentioned. There might have been other reasons at the time which I don't recall now.

Q. Mr. Long testified that on April 24, 1925, he turned over \$2500 in addition to you in cash. Have you any remembrance what that was used for?

A. No sir.

Q. On April 25, 1925, \$2500 in cash. Have you any recollection as to what that was used for?

A. No, I have not.

Q. So altogether during the 1925 session you got \$3250 in cash which you disbursed?

Q. Now Mr. Long also testified that at your request on March 3, 1926, he turned over to you \$2500 in cash. Did you disburse that also?

A. Oh yes.

Q. And again you disbursed it to people whose names are not to be disclosed?

A. Correct.

Q. And for purposes which were not to be disclosed?

A. I don't know about that. I would not go that far.

Q. There is no record, is there, of the purpose?

A. Yes, they were appearing in our behalf.

Q. There is no record of the purpose for which you disbursed this money?

A. No, I didn't catch the question.

Q. Mr. Long also testified on March 18th, 1927, at your request he gave you \$7,500 in cash?

A. That must have been cleaning up a lot of things, I don't know.

Q. What did you clean up, Mr. Johnson?

A. Whatever was hanging over.

Q. Cleaning up has a suggestion of dirt?

A. It doesn't apply here, Mr. Evans.

Q. But you have no recollection of any sort of any individual to whom you paid any of this cash during any of that period, 1925, 1926 and 1927?

A. No, I have not.

MR. RICHARDS: I would like to have him tell us if any of these unnamed persons were members of the Legislature or officers of the State who were retained to represent them during the session.

A. O Lord no.

Q. The reason I asked that was to clear up any question in regard to these bad bills. I can only speak for myself—

MR. COOKE: Mr. Evans, I would like to know whether the Philadelphia Electric Company was the only company that provided Mr. Johnson with these sinews of war?

BY MR. EVANS:

Q. I understand this money was furnished to you, Mr. Johnson, by Mr. Long not as an officer of the Philadelphia Electric Company but as an officer of the Pennsylvania Electric Association?

A. Yes sir.

Q. How did they raise their money?

A. By assessments.

Q. Where was this money to be charged on the accounts of the utilities, as an operating expense?

A. Assuredly.

Q. Mr. Johnson, with your experience in utility matters, do you think it is in the public interest for utilities to spend money such as this without any record of the purpose for which it is paid or to whom it is paid during the session of the Legislature?

A. It is so small an amount, it is insignificant. If it was a big amount of course it would not be right.

Q. Are you prepared to say, Mr. Johnson, that this is all the money you handed out in cash?

A. Absolutely.

Q. How do you happen to remember that?

A. Because that is all that he says I got.

Q. Mr. Long didn't testify as far as I know, this is all the money he turned over to you?

A. Yes he did.

Q. What position did Mr. Long hold at that time?

A. He was Vice President and Controller.

Q. Of what?

A. Of the Philadelphia Electric Company.

Q. What position did he hold in the Pennsylvania Electrical Association?

A. He was appraiser.

Q. Who were the other members of the sub-committee of the public policy committee to which you refer?

A. I think Tripp of Harrisburg and Cope of Pittsburgh.

Q. What is Mr. Tripp's name?

A. George B.

Q. He was formerly connected with the Harrisburg Light & Power Company?

A. Yes sir.

Q. What is he connected with now?

A. Some utility holding company with headquarters in Chicago.

Q. What is Mr. Cooke's full name?

A. Charles, but he is dead.

Q. Do you know whether or not they also disbursed sums of money?

A. I don't know, but if they did, they got it from me or Mr. Long.

Q. From you or Long?

A. Yes.

Q. Do you know whether the Pennsylvania Electric Association still has a Public Policy Committee?

A. I could not answer that, but I should think so.

Q. Do they still have a sub-committee of the Public Policy Committee that attends to Legislative matters?

A. I could not answer that.

Q. Do you presume so?

A. Either in name or fact, I don't know which. I presume so.

Q. You mean in fact whether or not in name?

A. Whatever it is, whatever I should have said, that is what I mean.

MR. EVANS: I think that is all.

BY MR. RHODES:

Q. I think I understood you to say that you did not think it would be ethical or proper to spend large sums of money for these purposes which you described, is that right?

A. Yes.

Q. Well, if it is not ethical to spend large sums of money for such purposes, is it any more ethical to spend smaller sums of money for them?

A. Oh, a small sum—

Q. If it is not ethical to spend large sums, is it any more ethical to spend smaller ones?

A. Well, that is quite true.

Q. Well, it seems to me if the purpose for which it is spent is not proper for large sums of money, certainly it would not be proper to spend any sum of money for it.

MR. TURNER: Mr. Rhodes, Mr. Johnson's answer was in reply to Mr. Evans' question as to the placing of these records upon their books, he meant as to the names, not as to the spending of the amount of money.

BY MR. EVANS:

Q. Do you consider that the spending of \$7,500 is an inconsiderable item in such an affair as this?

A. Why, of course it is, if you are cleaning up, I don't know what for. I cannot remember now.

THE CHAIRMAN: We will take a recess now until 2 o'clock this afternoon.

March 26, 1931, 2.05 P M.

NEVIN E. FUNK sworn.

BY MR. HIRSCH:

Q. What is your full name, Mr. Funk?

A. Nevin Ellwell Funk.

Q. What is your position with the Philadelphia Electric Company?

A. Vice-president in charge of Engineering.

Q. How long have you occupied that position?

A. Since about August, 1929.

Q. What was your position with the electric company prior to that time?

A. Assistant general manager.

Q. In charge of any particular phase of the electric company's business?

A. Engineering and operation, under the general manager, and any other duties that he chose to assign me.

Q. Were you in charge of the operation of all your plants?

A. Yes.

Q. You were evidently familiar with the elements that go into the cost of operation?

A. Yes, I should be.

Q. At the hearing yesterday, did you hear Mr. William H. Taylor, president of the electric company, state that since the

United Gas Improvement Company acquired control of the Philadelphia Electric Company it was operated more efficiently?

A. Yes, sir.

Q. Did you also hear Mr. John E. Zimmerman, chairman of the board of the Philadelphia Electric Company, make the statement, toward the end of the hearing yesterday, that as evidence of the increased efficiency of the electric company since U. G. I. acquired control, the operating ratio of the electric company has decreased? Is that correct?

A. Yes, sir.

Q. The operating ratio therefore would be an index of the efficiency of the electric company?

A. Yes, sir.

Q. And the lower the operating ratio the greater the efficiency?

A. Yes, I would say so, in general.

Q. In other words, Mr. Zimmerman made the statement yesterday that the operating ratio has been going down ever since the United Gas Improvement Company acquired control of the Philadelphia Electric Company; you heard him make that statement?

A. Well, a statement similar to that. I don't know whether that is exactly it or not.

Q. For the purpose of the records, will you define what operating ratio means?

A. It is the ratio of your expenses to your total income.

Q. That is, you would say it is the ratio of the operating expenses to operating income?

A. Yes.

Q. That would not include non-operating income?

A. No.

Q. Do you agree with the statement made by Mr. Zimmerman and Mr. Taylor?

A. Well, what statement do you mean? They made a great many of them.

Q. That the electric company is now operating more efficiently than it was when the United Gas Improvement first acquired control?

A. I think that is true.

Q. I have here copies of the annual reports filed by the Philadelphia Electric Company with the Public Service Commission showing the operating ratios for the year 1925, 1926, 1927, 1928, until October 31, 1929, when there was a merger with some subsidiary companies. Will you look over this report, on page 311, for the year 1925, and read what the operating ratio is there indicated?

A. 61.809.

MR. RHODES: What are these exhibits?

MR. HIRSCH: These are the annual reports filed by the electric company with the Public Service Commission.

BY MR. HIRSCH:

Q. I have here the annual report for the year 1925. Will you read the operating ratio there?

A. 61.218.

Q. I have here the annual report for the year 1927. Will you read this operating ratio?

A. 59.947.

Q. I have here the annual report for the year 1928. Will you read this operating ratio?

A. 63.805.

Q. I have here the report for the year ending October 31, 1929. Will you please read that operating ratio?

A. 64.586.

Q. On October 31, 1929, the electric company merged with several subsidiary companies; is that correct?

A. Yes.

Q. Therefore any reports filed by the electric company with the Public Service Commission subsequent to that date would not show the true condition of the company itself at the time the United Gas Improvement Company acquired control; is that correct?

A. I don't know just what you have said.

Q. In other words, any report filed with the Public Service Commission after October 31, 1929, would show a joint report including these subsidiary companies?

A. That is true.

Q. Now, do you remember,—or, as was testified here yesterday, the United Gas Improvement Company acquired control of the Philadelphia Electric Company on February 14, 1928; do you recall that date?

A. Yes.

Q. Now, I shall read you the operating ratios as you have just read them from these annual reports, for the year 1925 you stated that the operating ratio was 61.809 per cent; for 1926 it was 61.218, showing a decrease, under Philadelphia Electric Control, prior to the acquisition by the United Gas Improvement Company; for 1927 there was still a further reduction to 59.947 per cent; in other words, there was a drop between 1925 and 1927 from 61.809 to 59.947. Do you agree with those figures, Mr. Funk?

A. I think those are the ones I read.

Q. Now, the United Gas Improvement Company, as was stated here, acquired control on February 14, 1928, when, according to the statements made by Mr. Taylor and Mr. Zimmerman, a reduction in operating ratio would be expected on account of their experience and expert supervision, which they expected to render to the Philadelphia Electric Company; isn't that correct?

A. I don't know whether they made that statement in that form or not.

Q. Didn't they make the statement that when they acquired control of the Philadelphia Electric Company the increased efficiency of the organization since they acquired control was reflected in reduced operating ratio?

A. Something like that was said, but I don't know whether those are the exact words. I would like to amplify that if I may. You asked me if the operating ratio reflected the efficiency. I said, "Yes, in general." That means if the conditions are generally the same. You, of course, said that the hydro came in in 1928, and that made a very big difference in the ratio of expense—the operating expense to the total capital, because that hydro came in, and part of it is operating expense and part of it is fixed capital, as I recall it, so, it would not be the same situation in combined hydro and steam plant, as you see, with the steam system alone. Let me say it this way. Suppose the company purchased all its power, it would have no capitalization for the steam plant at all, and its operating expense would be reflected in the capital cost of somebody's else's steam plant, and therefore the operating ratio would be very much higher. So, with the Conowingo system coming in—

BY MR. COOKE:

Q. Supposing you reduced your rates?

A. If you reduced your rates, it would change your operating ratio too.

Q. Your operating ratio would go up, wouldn't it?

A. Your operating ratio would go up if you reduced your rates.

Q. The statement was made here by Mr. Zimmerman, that the operating ratio—there was a definite statement that the operating ratios of the Philadelphia Electric Company had been decreased ever since the United Gas Improvement Company acquired control. Did you hear that statement made here by Mr. Zimmerman yesterday?

A. I don't know. Read the testimony.

MR. TURNER: Pardon me, Mr. Funk. Mr. Hirsch have you the particular page on which Mr. Zimmerman testified? That you could take that, it might be a better help in answering the questions.

MR. HIRSCH: But Mr. Funk agreed with the statement that was made.

MR. TURNER: Have you the particular page on which Mr. Zimmerman testified?

MR. HIRSCH: No; I don't have that.

MR. TURNER: We won't hold you up. We will see if Mr. Walker can find the page.

MR. HIRSCH: Would it be acceptable for the Committee for him to state that Mr. Zimmerman made that statement?

MR. TURNER: If he made the statement.

THE WITNESS: I said, I don't know just what he said.

BY MR. HIRSCH:

Q. Mr. Zimmerman made the statement yesterday that after the United Gas Improvement Company acquired control of the Philadelphia Electric Company they had succeeded in reducing the operating ratios.

MR. RHODES: I think the record speaks for itself. I don't think it makes any difference what Mr. Zimmerman said with relation to this witness. This witness is on the stand. Let him testify what he knows.

BY MR. HIRSCH:

Q. As a matter of fact, when the United Gas Improvement acquired control of the Philadelphia Electric Company in 1928, the operating ratio increased from 59.547 to 63.805, and the year following that, for ten months, the operating ratio increased still higher to 64.580%.

A. Was that the report of the Philadelphia Electric Company or was it a combined system report that you handed me?

Q. This is a report of the Philadelphia Electric Company. That is what it is entitled, the Philadelphia Electric Company.

A. Well, then, that doesn't include the Conowingo as a capital charge. It includes the whole charge for Conowingo as an operating expense, and the operating ratio would have to go up, and if you take the system reports instead, you would find a different story. I think Mr. Zimmerman was talking about the system, and not a part of the system.

Q. There is nothing in the report filed with the Public Service Commission which would show any increased efficiency to the Philadelphia Electric Company since the acquisition by the United Gas Improvement Company.

A. Probably an intelligent analysis would show that it did.

Q. Then, you think the statement made by Mr. Zimmerman yesterday was not exactly correct?

A. I think Mr. Zimmerman was talking about the system, and I believe that his statements were correct. If you talk about a part of it, maybe the statement wasn't correct, but that is not what he said.

Q. In talking about the improved efficiency of the Philadelphia Electric Company as a result of its acquisition by the United Gas Improvement Company, and Mr. Zimmerman, in proof of that, stated that the operating ratios had been decreased ever since the United Gas Improvement Company acquired control, and the reports as filed with the Public Service Commission, show that instead of being decreased, the operating ratios actually increased.

A. Mr. Hirsch, the Philadelphia Electric Company owns the power project, and if you combine the power project with the Philadelphia Electric Company, you would probably find the operating ratios have decreased. I would like to say, right now that you are asking me about something I am not 100% familiar with or following it right along. I am an engineer officer of this company and not a financial officer.

Q. You have testified a few minutes ago that you were familiar, as a result of your long experience in the operating department, with all the elements that go to make up operating expenses.

A. When I speak of that, I speak about what is usually called operating expenses; the general physical operation of the property.

Q. Isn't the operation ratio made up of those elements that you say you are familiar with?

A. Truly. It is also made up of some other things.

Q. What are those other things?

A. Taxes are one of them, and reserve for renewals and replacements and others. I am not an accountant, and I don't have all the information that is in there, but the things that are in the Public Service law to be filed and accounted for are filed in strict accordance by our company so far as I understand, and if those are in the operating ratio, they are in the costs, and if they are not in the operating ratios they are not in the costs.

Q. And now, when these reports are filed with the Public Service Commission—they are a matter of record—I note that in 1925 there was under the heading of "Other General Expenses" an item also entitled "General Expense; \$956,479.56"; is that correct?

A. I do not know.

Q. Isn't that the report of 1925?

A. That is what it says in this, but I don't know what it is for.

Q. You don't know?

A. No.

Q. That is the reason for the question?

A. Well, I shouldn't know.

Q. In other words, under the heading of "Other General Expenses" of the Electric Company is this huge sum of \$956,479.56; and that, as a matter of fact is 4.66% of the total operating expense; is that correct?

A. Yes; that is about 4.6%.

Q. Now, for the year 1926, you had under the same heading "Other General Expense" without being specified for which those expenses were used, \$1,082,152.51; is that correct?

A. Yes.

Q. Can you give us that percentage of the total operating expense?

A. 4.81.

Q. And you don't know what this item includes?

A. No sir.

Q. For the year 1927, under "Other General Expenses," without having specified it, there is lump sum of \$1,350,148.37; is that correct?

A. Yes.

Q. Can you tell us what percentage of the total operating expense that is?

A. 5.7.

Q. 5.7% of the total operating expense?

A. Yes sir.

Q. In other words, during the year 1925 this unknown item represented 4.66% of the total operating expense; in 1926 it represented 4.81%, and in 1927 it represented 5.7%. They were the three years immediately preceding the acquisition of the Philadelphia Electric Company by the U. G. I. Company; is that correct?

A. That is true.

Q. In other words, the average of the years 1925, 1926 and 1927 of the ratio of the other operating expenses to total operating expenses is 5.06?

A. That is right.

MR. HIRSCH: I don't know whether that is the correct measure or not because if the operating expenses are going up, these general expenses may increase with the total income, so the ratio between the total income and this expense would be a better figure. That is in my mind.

Q. For the year 1928, the first year, the U. G. I. acquired control of the Philadelphia Electric Company, we have under their "General Expenses" without being specified, \$1,684,460.80; is that correct?

A. Yes.

Q. Can you give the percentage of this figure to the total operating expense?

A. 6.03.

Q. In other words, the ratio of this item "Other General Expenses" to total operating expenses increases from an average during the three preceding years of U. G. I. control, that is, the years of 1925, 1926 and 1927, increases from an average of 5.06% to 6.03%; is that correct?

A. That is correct.

Q. Can you account for that? If the U. G. I. has introduced the economies they allege here?

A. It all depends on what is put in that general account. I think the general account is subject to a lot of other subdivisions which we keep and which it is easy enough to get if you want them.

Q. Has the Public Service Commission ever asked for a break-down of that huge amount?

A. I cannot tell you. You are asking the wrong man.

Q. From the evidence shown in these reports filed by the Philadelphia Electric Company with the Public Service Commission would you say the U. G. I. Company introduced any economies?

A. You mean without considering the Conowingo Dam proposition?

Q. These are your reports filed with the Commission?

A. For what company?

Q. We are talking about the Philadelphia Electric Company?

A. The Philadelphia Electric Company owns the other company. You just choose to take part of this thing because it suits your purposes instead of taking the whole story.

Q. In other words, to follow that line of reasoning, the operating expenses actually increased since the U. G. I. Company control because of Conowingo?

A. I could not tell you exactly without analyzing, but I note that Conowingo is in the operating expense.

Q. Was not the Conowingo Dam a distinct benefit to the electric company system?

A. Sure, but if you put the operating cost into the capital cost, you automatically increase it.

Q. How can you increase capital charges in the cost of operation?

A. Because the Philadelphia Electric Company is buying the power complete from the Hydro Company. Supposed the system is completely owned by myself and I would rent it to you to operate and you paid me the rental for that property, the whole thing is operating expense and you have no capital expense at all.

Q. Every kilowatt hour you receive from the Conowingo proposition represents a saving in your coal?

A. That is right.

Q. So as you get more power from Conowingo you are effecting greater savings in your operations?

Q. Well, if Conowingo power was cheaper than steam power, that should really tend to decrease your operating expenses?

A. Not necessarily; not when you put the capital cost in.

BY MR. RHODES:

Q. You don't put capital cost in operating expenses?

A. If you buy power from somebody else who owns a generating station, you have to pay his current charges on the investment—

Q. You mean rental?

A. No, suppose it is a power bill. You have a standby cost which is supposed to cover part of the rental, that is part of your power rate; and suppose I was an operating company here, with a distribution system, and I bought all my power from somebody else, I would have to pay for the investment in that plant, and if I did that, which is a proper charge, that would appear in my operating expenses, because that is my operating bill. I would not have any expenses for generation at all, that would be purely operating expenses, and would not be in the capital account at all. You could run your operating ratio up to 80%, depending on how much stuff you put in that, including capital charges with the operating charge, so it is easy enough to get a very high ratio and still in effect be pulling the ratio down, that is, operating more efficiently.

BY MR. EVANS:

Q. Is it not true that the Philadelphia Electric Company pays less for Conowingo power, including all the items which you have referred to, than it would pay for an equal amount of power generated in steam stations?

A. Pays less?

Q. Yes.

A. Yes, that is true.

Q. And it is that power that is sold to its customers?

A. That is true.

Q. Therefore the Conowingo power goes to increase the operating revenue of the company, does it not?

A. The operating revenue, no, because you sell more power—but it don't sell power from the steam stations that the water power replaces.

Q. It sold more power since Conowingo came into operation than it did before, did it not?

A. Yes, that is true.

Q. And it saved operating expenses on its steam stations?

A. That is true.

Q. In other words, the net operating revenue of the company has been improved by the operation of Conowingo?

A. The net operating expenses?

Q. Yes—the net operating revenue.

A. The net operating revenue?

Q. Yes.

A. No, I cannot say it has been improved at Conowingo, because when we put in steam stations, we would have to sell steam power too.

Q. Has not Conowingo been a profitable investment for you?

A. Excuse me. I am thinking about gross revenue, you are talking to an engineer and not an accountant. I made a mistake. You are talking about net revenue, after the expenses are deducted from gross income?

Q. Yes.

A. Yes, that is true.

Q. And therefore the operation of Conowingo did improve your operating ratio, didn't it?

A. In general that sounds reasonable, but I do know this—

Q. Isn't it obvious, Mr. Funk?

A. No, not necessarily, I don't think it is obvious.

BY MR. HIRSCH:

Q. Approximately what does your Conowingo power cost delivered to the Philadelphia Electric Company System?

A. It varies between 4½ and 5 mills, depending upon the amount of water that is flowing, but that does not take into consideration the cost of the steam stations, having to stand by the system to protect against water failure.

Q. In your report of 1927, the year preceeding Conowingo's opening, you have here under grand total of operating expenses, cost per kilowatt hour sold to the Philadelphia Electric Company, can you read that figure?

A. 1.428 cents.

Q. In other words, the year preceding the opening of Conowingo when you were generating all of your current by steam and your cost of power per kilowatt hour sold was 1.428 cents per kilowatt hour, is that correct?

A. Yes, that is right.

Q. And you just testified Conowingo power cost the Philadelphia Electric Company delivered to its system between four and a half and five mills, is that correct?

A. Not into the system, but to the system. That does not include the step-down substations, transmissions lines, or anything to get it into useable position in the system.

Q. Would not that show a remarkable economy by the introduction of Conowingo power in the Philadelphia Electric Company system?

A. Not immediately, no.

Q. Approximately how much power do you get from Conowingo annually.

A. It would average about 1,250,000.

Q. Approximately what percentage is that of the total power sold by the Philadelphia Electric Company or?

A. For the year 1930?

Q. Yes.

Q. Well, now, that is not taking the water supply in 1930, but what the average would be for the year 1930, and as I recall the total output figures, I think that is about 45% of your current from Conowingo and it cost between four and a half and five mills per kilowatt hour, and the other 55% at a cost for operating expenses alone of 1.428 cents, is that correct?

A. No. That is not correct. I think you have got all the distribution, the sub-stations, and everything else in there—your steam stations cost, you have got to take that alone—your steam station cost is 1.476 mills part of the Conowingo cost which the total system cost.

Q. According to your own reports filed with the Public Service Commission by your company for the year 1927, it shows the total operating cost per kilowatt hour sold at 1.428 cents, is that correct?

A. That's right, not for the whole system.

Q. What would you add to that cost in order to determine your total overall cost per kilowatt hour sold? That would include your capital charges.

A. I can't tell you that.

Q. Would you say the figure would approximate two cents per kilowatt hour?

A. In 1927? I should think it was more than 2 cents, the total.

Q. You think it would be more than 2 cents?

A. Yes, in 1927, I think it was actually more.

Q. Approximately how much power do you think you were obtaining from Conowingo the first year it went into operation?

A. I don't remember the figure, but I think it was something like 800 million.

Q. Would you say that is approximately 42 per cent. of the total kilowatt hours sold by the electric company?

A. I don't like to quote exact figures on that. It was somewhere around that figure. I don't remember.

Q. What do you think has been the net effect of Conowingo power on the total cost of power to the Philadelphia Electric Company? In other words, do you think it reduced the total average cost by one-half a cent per kilowatt hour?

A. You mean including investment in generating stations as well?

Q. Everything.

A. No, it could not, to start out with, because when you build a big hydro station, you can not build it one unit at a time; you have to develop the entire plant to start off with. Maybe I am a little strong in saying the entire plant, but a big proportion of the plant; because it costs so much for the water rights and the dam and the transmission lines and the rest of the things that go in to make the water power plant,

that you must be able to use a large amount of power from it to make it an investment that is profitable. As soon as you put a large amount of energy into the system, like that, that is already carrying the load, you have a large amount of excess capacity, and that excess capacity is investment that must earn. Now, it is the only way that any company can get a big hydro plant into operation, or you must be over capacity for a few years, so its immediate tendency would not be to reduce cost.

Q. But isn't that reflected in the figure that you have quoted of between 4½ and 5 mills per kilowatt hour?

A. No; that is only for the hydro itself. The steam plants are standing there, and that will be taken off of that; but the investment is there. The investment is not immediately thrown into the same system, because those plants are going back into the same system, because those plants are going back into service again as soon as their load builds up.

Q. When Conowingo power was brought into the Philadelphia Electric system, did you have any other expenses involved in the original Philadelphia Electric system?

A. To make that power available, you mean?

Q. Yes.

A. Yes, we had to build a 300,000 kilowatt substation at Plymouth Meeting, stepping down from 220,000 volts to 60,000 volts, and we had to build about 14 miles or so of 66,000 volt transmission line from Plymouth Meeting in to Westmoreland substation, to change it to 13,000 volts for general distribution.

Q. What would you say the total extra expense to the Philadelphia Electric Company in order to make Conowingo power available to all the consumers in your territory,—what do you think that total extra expense to your company has amounted to?

A. You mean the investment?

Q. The investment?

A. I can't tell you.

Q. Do you think that investment would have affected the cost of Conowingo power to the extent of one mill per kilowatt hour?

A. I don't believe it no.

Q. Therefore with that total extra investment that the Electric company was forced to assume in order to make available Conowingo power, can we conclude that we would add one mill to the 4½ to 5 mill estimate and say it would cost about 5½ to 6 mills per kilowatt hour total? Is that correct?

A. Mr. Hirsch, we can conclude anything, but I think that the facts can be determined.

Q. Well, what I am trying to get after is the total net effect on the Philadelphia Electric costs of supplying power to the customers in its territory of the introduction of Conowingo power. Would you say it amounted to 5 mills per kilowatt hour?

A. The reduction?

Q. Yes.

A. No, I don't think there is any immediate reduction, because you have the entire investment in your steam stations there for the first year. Your benefit is going to come as the load grows, so that you have only sufficient capacity to safely carry the total load, and not a large amount of excess capacity.

Q. But that investment has already been paid for, it has already been made years ago.

A. Just one minute. Richmond station was built in 1925. That is a brand new station and one of the best stations in the country and that would hardly be years ago. It is a station that is running continuously at a very high load and producing energy cheaply. You can not throw that away you can not throw your other stations away.

Q. But isn't it true that they are the costs which go to make up your 1.428 cents per kilowatt hour operating expense?

A. No; that does not include any investment cost.

Q. All right, then, to include the investment cost of the various generating plants you have, we will use your figure of a little over 2 cents per kilowatt hour, to include those investments.

A. Well now, suppose you figure that you have your steam stations at a certain total amount of investment, and that stays the same, that cost is the same. The only thing you are going to save during the first year of operation of a hydro plant coming in is the amount of fuel that the water that is flowing through those wheels saves. The amount of energy that makes. You won't save a thing on investment cost, except the small amount that your load has grown over what the

steam stations could have furnished if no hydro had come in and you would have put extra steam stations in.

Q. Isn't it a fact that all the rates that you had before Conowingo was introduced into the Philadelphia Electric system,—weren't those rates predicated on your steam station as it existed before the opening of Conowingo?

A. Certainly. It must have been. That is all we had.

Q. Therefore you have those costs and that system in operation, and you introduced 42 per cent. of your power at 4½ to 5 mills; don't you think that should have materially reduced your over-all cost of power?

A. Not for the first few years, no; because you have to pay for the steam stations that are standing there idle. Now I have said that three times. I don't think I ought to have to say it again.

Q. One more question, Mr. Funk, before I take up the next phase of examination. Would you say that the introduction of Conowingo power into the Philadelphia Electric Company system early in 1928 had a tendency to increase the cost, the overall-cost of power?

A. Well, I would say yes and no on that. I don't know. You would have to figure it out. It might have a tendency to increase and it might have a tendency to decrease. It just depends on the ratio of excess capitalization you have in some stations. Mr. Hirsch, those things have to be figured on a long term plan. If you tried to do a major hydro project or just what you begin with in the first year, you will never develop any water power.

Q. I have here a copy of a contract between the Philadelphia Electric Company and the Delaware Power and Light Company, dated April 1, 1930. Can you explain the basis of the charges for current under that contract?

A. I can. Do you want me to go ahead with it?

Q. Yes; just explain the details.

A. The Delaware Power and Light Company, Wilmington. To explain this contract, I will have to make a short statement on steam station operations.

Q. Pardon me, I am just interested in the basis of billing.

A. The billing depends upon steam plant operation. If I can't explain that, I can't explain the contract.

Q. Will you try to do it, briefly?

A. I will try to do it as briefly as I can. In a steam station—the costs are divided into two elements, one—let me say three elements: one is constant, dependent on the size of the plant; one varies, dependent on the demand on the plant, and one varies, dependent on the energy that the plant generates, so that your total average cost of any plant is made up of the three elements. The one that varies with the kilowatt hours we call the increment energy cost, which is lower than the average cost. A steam plant having an average cost of eleven mills can have an increment cost of 1.2 mills. If you have a station with two different generators, one here and one there (indicating), and this one here is more materially efficient than this particular station is more efficient for the greatest number of hours under this one for the least number of hours—

MR. EVANS: May I suggest that gestures do not go on the record.

THE WITNESS: Excuse me, I didn't realize that gestures didn't go on the record. The most efficient station runs the longest hours, and the least efficient station runs the shortest hours. Suppose we draw a company line between those stations, there is no reason why that station should not be operated in exactly the same manner, producing the best efficiency for the customers of both systems.

BY MR. HIRSCH:

Q. May I interrupt. Doesn't the Delaware Heat and Light Company receive all its power from the Philadelphia Electric Company now?

A. It does.

Q. Can you figure out this bill and tell me approximately what rate they are paying the Philadelphia Electric Company?

A. For that particular month it was just a little under 5 mills.

Q. In other words for the month of September 30 to October 31, 1931, the total rate which the Delaware Heat and Light Company paid to the Philadelphia Electric Company was under five mills per kilowatt hour; is that correct?

A. Yes. May I finish my story?

Q. Just a minute. In the report of 1929, you show an operating expense of the Philadelphia Electric Company per kilo-

watt hour, not including any capital charges, of 1.186; is that correct?

A. That is the one you choose to pick out. Yes; but the generating cost up here (indicating) is—Now, wait a minute. The generating cost is 2.44 mills.

Q. But you don't sell power generating costs alone, do you?

A. No.

Q. You must include other items?

A. But we don't include the entire distribution system and sub-stations.

Q. You couldn't figure that basis of charge to every other customer, could you?

A. No; our rates are not the same to all customers.

Q. You don't include all your operating expenses in arriving at your rates for all your customers?

A. All the expenses that are applicable to that particular customer. We certainly would not include the secondary wiring for domestic households in a rate for a 13,000 volt customer.

Q. Isn't it a fact that you are supplying the Delaware Power and Light Company with a large quantity of electricity, exclusively, and they are paying on the average of a half a cent per kilowatt hour?

A. That is true for that bill, but that bill requires analysis to show the truth.

Q. Isn't it a fact that the cost of operations alone as shown in the reports—the last report filed with the Public Service Commission—the operating expenses alone, without including any of the capital charges, are 1.186 cents per kilowatt hour; is that correct?

A. That is the average cost for all energy delivered at two hundred and twenty volts, and one hundred and ten volts, and from there all the way up to 66,000 volts, but the actual costs that should be applied against anyone is entirely different. We deliver to the Delaware at 66,000 volts, and you are trying to speak of 220 volts.

Q. Is there any other customer of the Philadelphia Electric Company who receives such a low rate?

A. No; that is the only contract on this.

Q. Is the Delaware Light and Power Company a subsidiary of the United Gas Improvement Company?

A. Yes.

Q. The Delaware Light and Power Company operates in Wilmington, Delaware, does it not?

A. And the adjacent territory, yes. If the Committee please. I don't want to leave that lay there. I think Mr. Hirsch has shown a wrong interpretation of that contract. I would like to continue with what I have to say.

MR. EVANS: That is only fair.

THE WITNESS: We arranged with the Delaware—well I think you remember where I stopped on that. We try to operate the Delaware Power and Light Generating Station the same as if it were one company. Now, we made a contract so that they pay the amount of capacity of their station cost depending on their own generating equipment, the same as anybody else. They just pay for an amount of energy equal to the amount of capacity which they take from our system; and no demand cost or investment cost, and then pay the increment energy cost. The thing has been divided up so that they could operate their plant and they choose economically and our system could operate economically. Right now that plant is shut down, just as we shut down anyone of our old plants at such time when the load demand don't require it. If need be they must start their plant up on definite notice and take the capacity when they can in replacement for the steam plant. It is operated just exactly as if there were no state line there or no company line. All the contract tries to do is to put the right dollar in the right pockets. That is all.

Q. Do you know how long that plant has been shut down?

A. It has been shut down less than a year.

Q. There are no plans to continue operations in that plant, are there?

A. No; I wouldn't say that. It all depends. We have excess capacity, and we don't operate it.

Q. And therefore, under the present conditions and for approximately a year they have been taking their exclusive power from Philadelphia Electric Company; is that correct?

A. That is true; yes.

Q. Do you mean they are on the same foundation as any other customer who takes his exclusive supply from your company?

A. No, because we have a firm demand to other customers.

Q. What do you mean?

A. We must supply what they are buying.

Q. They are buying all the power from your company?

A. We furnish all their power but we understand and they understand—we gave them permission to shut down their plant because they said it would not pay. Indeed, the fact is that if we should tell them tomorrow that they had to start up, they would start up and pay for the whole amount.

Q. Who negotiated this contract on the part of the Delaware Power Company and on the part of the Philadelphia Electric Company?

A. I negotiated for the Philadelphia Electric Company.

Q. Who represented the other party?

A. That is what I am trying to remember. I think Mr. Hutchings of the U. G. I. Company, who is now dead.

Q. He represented the Delaware Power Company?

A. I think he did.

Q. Are you interested in politics, Mr. Funk?

A. Of course I am. I am no politician but I am interested in politics as everybody should be who is a good citizen.

Q. Did you contribute to the last campaign?

A. I did.

Q. How much?

A. \$500.

Q. To whom?

A. To Robert L. Montgomery, treasurer of the Liberal Party.

Q. Did you take it to him in person?

A. No sir, I sent him a check.

Q. Did anybody in the Philadelphia Electric Company approach you about making this contribution?

A. No sir.

Q. Did you discuss that contribution with anybody?

A. I did not.

Q. It is a coincident that several other members of the Philadelphia Electric Company made a similar contribution?

A. It may be a coincident but I had no conversation with anybody before I made mine.

Q. A few officers of the Philadelphia Electric Company testified that they contributed \$500 apiece and I wondered if the matter had been discussed in conference?

A. I discussed it with no one.

Q. Was the amount of your contribution charged to any account?

A. It was not, no sir.

BY MR. EVANS:

Q. Has it been your practice to make such contributions?

A. I have made some before.

Q. In what amount, Mr. Funk?

A. I don't think I made any contributions for several years. I made a contribution to the Republican Party when President Hoover was running for President, that I sent down to Washington but I don't recall who to.

Q. Have you ever made a contribution before of over \$100?

A. I think I have, yes.

Q. You don't remember that?

A. I don't remember. I know I made many contributions.

Q. You are not a regular five-hundred-dollar contributor?

A. No sir, I thought this time maybe there was some chance of Mr. Hemphill, feeling the way he did about the prohibition situation and the law, which has tended to make a good many rich criminals in our country, possibly it was a good time to get something started.

BY MR. RHODES:

Q. Then you are a wet?

A. Well, I don't drink wet. I am different from some people, I vote wet and drink dry, instead of like a lot of fellows voting dry and drinking wet.

BY MR. RICHARDS:

Q. I would like to ask a question. I would like to know if you have the information, what the difference is in the cost of production per kilowatt between steam and water power; which is cheaper? For instance, I am interested in the situation in my own section?

A. That varies all over the map. A great deal depends on the amount and flow of water in the river and the variations in that flow. A big difference is found in your production cost

by steam where your construction is low as compared with the low production by water where your construction investment is high. Like everything else, there are a great many variables that affect some total average cost when you get into the thing and you cannot take up any set of figures and say that in this hydro plant the production cost is low or that steam plant production cost is high. In other words, you cannot give a general answer to hardly any engineering question. There are so many things that affect the construction cost and the operating cost that it is impossible to give an answer that would apply generally.

MR. RICHARDS: I am asking for this reason, I would like to know for my own benefit. These power rights that are being bought up or have been bought up, I would like to know whether they are to be utilized or utilize the water to produce energy and whether the power so produced is cheaper than produced by coal.

MR. FUNK: The progress in the steam production rate is getting to a point where it is making it rather difficult to build a lot of hydro plants.

MR. RICHARDS: In my own private estate we have a number of very small streams and the power rights have been bought up and in the prosecution of the case against the people who have the right, we were advised that the steam production is cheaper than water production especially when you have a small stream that runs through a part of the country that should be preserved for its scenic beauty.

MR. FUNK: I am sorry I cannot give a definite answer on it. You have to have all the facts before you can arrive at a conclusion in a matter of that kind.

BY MR. RICHARDS:

Q. You think it would take a considerable body of water to make the production cheaper than by coal?

A. Yes. But you might have a small stream with a steady flow or which was away up in the hills maybe high which would let you have a short dam and you could store a great pondage of water back of it so that you could catch the flow at all times of the year and let it fill up and then in the dry season you would be able to draw it off again.

MR. RICHARDS: I think you have answered my question in this particular case I am thinking about.

BY MR. HAGMAIER:

Q. You said the Philadelphia Electric Company sold the Delaware Power Company at very low rate. Do you feel that your company have lost money in that?

A. Absolutely not. The 20 cents a month for each kilowatt they take, the total kilowatts, was made 20,000 to 25,000, plus 3 mills for all kilowatt hours they take. Then pay us I think \$1.38 a month every kilowatt demand which they have a right to have under the contract. Under the contract just before this one they paid us a rental on the transmission lines from Chester to the Delaware State line of about \$56,000. When the deep water plant was put in, the Delaware Power installed transmission cables under the river which are the longest in the world. We pay half the annual charge on these cables and get the power from deep water and relieve them of the carrying charges from Chester to the Delaware State line. We are getting the power back. So we are paying the charges from the deep water station.

Q. It is costing them more when you take everything into consideration?

A. Yes sir. Some of their costs do not appear in here at all. For instance, the cost of getting the power from the generating station to the sub-station.

BY MR. CRAWFORD:

Q. Do I understand that this ready to serve charge, that you stand ready at all times to furnish power.

A. At the present time while we have excess capacity we have permitted to shut this generating station of their own down, because we have excess capacity.

Q. You don't agree in your contract to carry that load at any time.

A. No, we agree to give them credit for I think it is 10,400 kilowatt capacity for that plant, and they have to pay for the amount their load is above 10,400 kilowatts, and then if we need the capacity they start that plant up again and operate it.

Q. That is it will then turn power over to you?

A. They just cut down the power they take from use.

Q. A ready to serve charge is generally different than a stated charge, is it not?

A. Yes, that is true, but that is a little bit different from that, they are supplying part of the readiness to serve charge themselves in the capacity of their own plant.

Q. You have no obligation to serve.

A. We have no obligation to serve beyond that figure.

BY MR. HIRSCH:

Q. Isn't it a fact, Mr. Funk, that today and for the past year you have been actually been supplying them at a loss.

A. No.

Q. Do you mean to say that your total cost of power is 5 mills per kilowatt hour?

A. No, that is more than the operating cost though.

Q. According to your filed reports with the Commission operating this line with over twice that amount?

A. Mr. Hirsch, I told you time and again that you are taking into consideration the maintenance of the meters, the maintenance of the entrance boxes, the two hundred twenty volt secondary transformers, the step down transformers, the lines, the regulators, sub-stations, thirteen thousand volt transmission lines, and everything else in your costs..

Q. How can you segregate the cost for one customer and say that is our cost when the Commission has frequently stated that it is a very difficult thing in a complicated system such as the electric companies to segregate costs, and say it costs us just so much to make current and to supply specific customers.

A. But you can figure in your generating cost provisions have been made in the accounts and you can segregate those costs.

Q. The cost to the Philadelphia Electric Company alone is over 4 mills per kilowatt hour.

A. There are some hydro costs in this too.

Q. I thought you said before that hydro really was not so much cheaper than steam power.

A. The total cost—Let me tell you this: If we sold them the whole amount of energy at \$1.38 for the demand, and about, say, 4 mills for the energy, they would keep that plant running down there, they could not afford to shut it down.

Q. Isn't it a fact, Mr. Funk, if you had an industrial consumer who used the same quantity of electricity that the Delaware Electric Power Company is using that their rate would be almost twice as high?

A. They would not have any generating plant of their own able to work that way.

Q. That does not answer the question. Take the amount of power shown in these bills, if some other industrial consumer used twice as high, is that correct?

A. Correct, but the conditions would be different.

BY MR. RHODES:

Q. Mr. Funk, in this case you sell to consumers who purchase from a 66,000 volt transmission line?

A. Yes, with his own sub-station.

Q. Now, in the other case, where the purchaser takes from the 220,000 volt line, that is entirely different, is that true?

A. That is true.

Q. And the costs are different?

A. Entirely different.

Q. One is a wholesale consumer and the other is a retail consumer?

A. Retail.

Q. If you had an industrial concern that would take it on the same basis as this other company, you could sell at the same rate?

A. On the same basis, yes.

BY MR. HIRSCH:

Q. You have no other consumers that get the rate or this figure, do you?

A. No.

BY MR. EVANS:

Q. Are you able to state whether the rate at which you are selling power to the Delaware Electric Power Company, if that is the correct name, including all expenses and a return on the capital invested in that service, is netting the Philadelphia Electric Company a reasonable return?

A. Yes, the contract is figured out for the \$1.38 as the base—I don't remember the exact figure, \$1.38 or \$1.33, it is fix-

ured out for a 7% return, and that is on the amount of capacity that we are sitting aside for them.

Q. So that the total cost of generating and delivering energy at the point of service, the energy that is delivered does not exceed five mills per kilowatt hour to the Philadelphia Electric Company?

A. Yes, that is true—no, it is less than that. May I just make an example. If you take \$1.38 a month and 20 cents for just one kilowatt, and say that they do make and furnish their own energy, that would make \$1.58 for demand charge. If they used 50% load factor, that would be less, a little less than 50 of the 300 kilowatt hours at 3 mills, that would be 90 cents—that don't sound right—\$1.59 and 90 would make \$2.48, and that divided by 300 would make it 825 mills, so that the best rate on this is 825 mills, and the reason it is down to 5 mills is because they are getting just the energy they would get on their capacity if they started themselves.

Q. Now, Mr. Funk, there is no regulation of rates in Delaware, is there?

A. None, no.

Q. So that the—

A. May I change that answer a little bit. I think I made a mistake. There is some regulation by the town of Wilmington, I don't know what it is. I am not familiar with the legal feature, but I do know that the Commissioners or the Council down there have some control over rates, but there is no State Commission.

BY MR. HIRSCH:

Q. Just one question, Mr. Funk. In your report for 1929 you have here cost of generating one kilowatt hour by steam power .604 cents?

A. Is that steam power? It doesn't say that. It says by combined method.

Q. I have here the report filed by your company with the Public Service Commission for the ten months ending October 31, 1929, showing a cost of generating one kilowatt hour by the combined methods is 3.8 mills; is that correct?

A. Yes, sir.

Q. Would that seem to indicate that the cost of steam power is less than the Conowingo power?

A. No, I don't think so. Conowingo power is in there.

Q. Well, if Conowingo power is included in these figures—

A. I have to assume that it is in. I don't know what is in these accounts, but I assume it is, if it is a Philadelphia Electric Company report.

Q. This report shows that the combined cost of electricity to your company by steam and hydro is 3.8 mills; that would appear to indicate that in view of the fact from your testimony the cost of Conowingo power is about 5 mills, it would make the cost of steam power about one-half the cost of hydro power?

A. Now, because I think you will find that some of the capital costs for the hydro are not included in there. You see, some of the capital costs for hydro are income deductions that don't come in the operating costs and others go in the operating costs. I don't know how it is. Remember this, that the Philadelphia Electric Company owning the project company and the project company selling to the Philadelphia Electric Company, the over-all picture you get is the combination rate of the Philadelphia Electric Company and the Hydro Company. Now, when you start to talk about one company like that, I really don't know what you are talking about. I just have to assume that in that record you are taking something that on its face value indicates that it is true, which may be far from the fact.

Q. Isn't it a fact, Mr. Funk, that the matter of this rate with the Delaware Electric Company is a matter of negotiation between you and the purchaser?

A. Yes.

Q. It is a matter which you negotiated?

A. Yes.

Q. And the terms which you finally agreed upon are terms which you are both satisfied to accept; is that correct?

A. No, I wouldn't say in this particular case that was the way it was arrived at. I figured out what the cost of the generating stations, the transmission lines, tying them together, the 66,000 volt transmission system, would be, and got a capital charge for that demand rate, and figured out what the increment system charge was including the Conowingo development, putting the Conowingo plant on the basis of

a steam plant; that is, I transferred from capital charges about \$3,400,000 into operating charges for report purposes only,—it is not put in that way in our cost, see,—and developed that 3 mills and 20 cents for operating costs; the actual average buss bar cost for the year 1930, I think, was something like a quarter of a mill, but there is no investment cost,—I mean a quarter of a cent,—but there is no investment cost for Conowingo in that straight operating cost.

Q. Isn't it a fact, Mr. Funk, that there is a possibility of selling power to the Delaware Electric Company at below cost and thereby taxing the operating expense to the detriment of the other power users?

A. Not under this contract, no.

Q. Did the Public Service Commission have any thing to do with the negotiations of this contract?

A. No.

Q. Was the contract filed with the Public Service Commission?

A. I believe the contract was filed with the Public Service Commission.

Q. Do you know when it was filed with the Public Service Commission?

A. No, I can not tell you that.

Q. Do you know whether the Public Service Commission has commented on the terms of the contract?

A. I don't think they have.

Q. Wouldn't it be possible to pass on some of the surplus profits of the Philadelphia Electric Company to the Delaware Electric Company in the form of a special low rate, since the Delaware Electric is also controlled by the United Gas Improvement Company?

A. Not with this contract.

Q. Isn't it possible that the Delaware Electric Company is retaining that big steam plant in order to keep up its high valuation for rate making purposes, although it is not operating it?

A. Now, Mr. Hirsch, you are asking me about a company concerning which I have no knowledge whatsoever.

Q. There is no regulation down there anyway?

A. Well, I don't know anything about it.

MR. HIRSCH: Does the Committee have any questions?

BY MR. RHODES:

Q. Mr. Funk, don't you think, from the standpoint of public policy and to eliminate any possible suspicion, it would be advisable to have this type of contract approved by the Public Service Commission?

A. This contract, I am pretty sure, has been filed with the Public Service Commission; but I don't know, I wouldn't want to swear to that of my own knowledge; I don't know.

Q. Wouldn't it be a good contribution to the public service company law that contracts of this nature would have to be approved by the Public Service Commission, especially where they are between companies that are inter-related?

A. I would say I can see no harm in it, if the thing would not be too rigorous. Now might I just take a few minutes?

Q. The Public Service Commission has never been accused of that, have they?

A. No; but what I mean, if the law was not made too rigorous. You see, a thing like this, between ourselves and the Public Service Company, we have some good generating stations and some that are not so good, and they have good ones and some that are not so good, and during the day it varies from hour to hour; we may sell them some power at a little above our buss bar cost, and the way we actually do it is to have their increment cost, what it costs if we put it on our station, and split the difference between us. It is only a small amount of saving, and it costs nothing to get. Now, if you couldn't make those little trades that are done by the load dispatchers. They have a procedure set up on the load dispatchers.

Q. That was not my thought, my thought was that if the Commission could possibly approve of those contracts taking into consideration all the different factors entering the deal involved?

A. I see no harm.

BY MR. HAGMAIER:

Q. The Delaware Company in selling at that rate, is not for the domestic user?

A. No; I don't see how it could be.

Q. But you see it gets out among the people and they have only the one idea—

A. That is perfectly true. We are doing the same thing every day between the more efficient and the less efficient generating stations, but you certainly should not stop that performance.

Q. No; not so long as the general public does not suffer.

A. If you could make the same amount of energy and burn less coal, and then take the dollar that is not burned and split it up so that it goes into the right pockets—

BY MR. TURNER:

Q. Of course the question is to get it into the right pockets?

A. That is perfectly true. If you have a contract with a higher average cost—a station with an increment cost of 3 mills and an average cost of 4 mills, you couldn't provide power at 3½ mills because their average cost is 4 mills, and is above the three and one-half mills their increment cost. If they are making fifty per cent. of the load with their station running, they have to turn out more kilowatt hours. The preparedness operating costs of a station are higher than the increment costs. So, if you were to put up a thing on the average base, you would just stop the older stations from shutting down. We have a contract with the Public Service Company. It is an old contract and will soon run out, and they couldn't operate their old Burlington station on account of the old contract, which is standard type of contract.

Q. How many of these contracts come up with your company in a year?

A. Any like this (indicating)?

Q. Yes.

A. The most of these contracts we have had at one time were two. We had one with the Counties Electric Company.

BY MR. HIRSCH:

Q. Wasn't that Counties company controlled by the U. G. I also?

A. Yes sir; but if you had been present when Jim Hutchings was trying to get a smaller rate than this, you wouldn't have thought so.

BY MR. RICHARDS:

Q. The only suspicious thing I see in this transaction is that you are selling electric power to your own companies. If you were selling that to the public, it would be a different proposition. You have in your investment for rate making purposes the cost of this dam, which added to what you have already to supply other than this Wilmington company would permit you to make a higher rate, because your base would be higher, but you add to this cost permitting you to make a higher rate, but decrease your earning power by selling it to yourself at a low cost, practically less than cost?

A. No; it is not practically less than cost.

Q. Or at cost?

A. No; it is more than cost.

Q. It wouldn't make any difference what it was.

A. Let us look at it this way. Supposing we don't do this thing, then it would pay to run their generating station down there—

Q. It would make no difference if the generating stations were both owned by the same company, because your rate making in Delaware is not affected by your cost, but by the cost of your plant. That is the only difference I can see.

A. No; but the only thing is this, if we did make a contract of this kind and took into consideration the fact that it has generating station capacity there, then they couldn't afford to buy it, and they can run their own station. They have about 13 kilowatts at \$1.38 so that it would mean the same rate base we have now.

Q. But you have both generating stations there, the one which makes a difference! It makes a difference if this other one was shut down. You can shut down one or the other. You can get the current. You get money for it in one and in the other you don't.

(No answer).

BY MR. EVANS:

Q. Isn't it especially true where the purchasing company is beyond the control of the Commission which controls you?

A. No; I don't think so. Theoretically that might be true. I don't know. I don't know; honestly I don't.

LY MR. RHODES:

Q. The commission approval of these contracts certainly wouldn't do any harm.

A. I don't see how it could.

Q. It would take away the suspicion that might exist, just as Mr. Crawford has said, when you are selling the power practically to your own company?

(No answer).

BY MR. TURNER:

Q. If you sell this current at cost to the Delaware corporation, that does not add anything to the cost of the consumers of the Philadelphia Electric Company, does it?

A. No; it reduces their cost somewhat, because you are using equipment that would otherwise be idle.

Q. If you were selling at cost?

A. If you were selling at cost, it would not hurt anybody.

Q. If you were selling at a loss, it would cost the consumers or the consumers of the Philadelphia Electric Company more money wouldn't it?

A. That is right.

BY MR. CRAWFORD:

Q. But if you use the cost of that dam and the acreage which you acquired for your water rights to make up that rate base, then it would cost more?

A. That is worked into the \$1.38, but that is for the part that we are supplying above it. I checked that up to see just what it was. It is about 8.25 mills if they would take all their power from us and throw their plant away. That is the thing that Mr. Hirsch says. It is really 8.25.

BY MR. HIRSCH:

Q. But as a practical matter, they discontinued the plant for the past year?

A. They discontinued their plant because we had excess energy.

Q. And it enables them to keep that low rate? The Philadelphia Electric Company will have a surplus capacity for a number of years?

A. Yes; until about 1932.

Q. In other words, until 1932 they can afford to keep this very low rate; is that not true?

A. That is true.

Q. And is it not possible that in 1932 you may have sufficient excess capacity in your plant to enable you to continue until 1933?

A. That may be possible; yes.

BY MR. TURNER:

Q. If the Delaware Electric Company, had not been an electric company, would you have made the same arrangement or agreement with them as to the rate?

A. Certainly, as far as I am personally concerned, I would. I think the thing is correct.

BY MR. CRAWFORD:

Q. I think it is good business on the part of your company, because it builds up your plant, but it don't look very good.

A. That may be, but some things that are correct, are economically correct always don't look good. It is not necessarily a fact that a thing always looks good to be economically correct.

MR. HAGMAIER: That is what I saw, the general public gets the erroneous impression because it looks so ridiculously small.

BY MR. EVANS:

Q. Mr. Funk, are you familiar with the date when the United Gas Improvement Company acquired control of the Delaware Power Company?

A. I am not.

(A gentleman in the audience offers the information either January 1st or March 1st.)

MR. EVANS: Mr. Chairman, may I offer in evidence a statement of the power bill submitted by the Philadelphia Electric Company as Exhibit No. 98. The company agrees to furnish photostatic copy of the contract of the Delaware Power and Light Company, to be known as Exhibit No. 98, and which will be offered in evidence when furnished.

IRA A. CRAIG sworn.

BY MR. HIRSCH:

Q. What is your full name, Mr. Craig?

A. I L. Craig.

Q. What is your position with the Philadelphia Electric Company?

A. I represent the Philadelphia Electric Company in rate matters.

Q. You are an employee of the Philadelphia Electric Company?

A. I am.

Q. How long have you been with the Philadelphia Electric Company?

A. Since July 1, 1928.

Q. That was shortly after the United Gas Improvement Company acquired control?

A. That is right.

Q. What was your position prior to that time?

A. I was an employee of the United Gas Improvement Company in promotion and sales department.

Q. Are you still performing any work for the United Gas Improvement Company?

A. I am not.

Q. Do you have charge of all rate matters for the Philadelphia Electric Company?

A. I have in consultation with others that are interested.

Q. Do you look after filing any of these rates that are negotiated with certain customers with the Public Service Commission?

A. I do.

Q. Can you say whether the contract between the Philadelphia Electric Company and the Delaware Power and Light Company was filed with the Public Service Commission?

A. It was furnished to the Public Service Commission with a letter of transmittal. I don't know whether you would call that filed or not. It was not filed as a tariff.

Q. When was that letter sent to the Public Service Commission?

A. June of this year, at their request.

Q. In other words, while this contract is dated April 1, 1930, it is not until June of this year that you furnish the Public Service Commission with a copy?

A. That is correct.

Q. I mean June of 1930?

A. Yes sir, that is right.

Q. What were the circumstances which led to your sending this contract to the Public Service Commission?

A. The Public Service Commission asked our company to file with them all contracts which we had with other companies, including any large power consumers, and in response to that we sent this contract along with other contracts, and informed them that our large consumer contracts were covered by the tariffs on file, but offered to supply those if required.

Q. Did the contract which you had with the Counties Gas and Electric Company contain the same rate as the Delaware Power and Light Company?

A. Yes, sir.

Q. Was the contract submitted to the Public Service Commission for their record?

A. To the best of my knowledge it was not.

Q. Are there many contracts which the Philadelphia Electric Company enters into with other companies that are not filed with the Public Service Commission, covering rates which are not published?

A. By other companies I assume you mean other large utility companies?

Q. Any company?

A. Many contracts made pursuant to tariff revisions which are not filed with the Public Service Commission.

Q. Are there many of these cases that are not filed with the Public Service Commission?

A. I do not know of any such case.

Q. The rate in this agreement between the Philadelphia Electric Company and the Delaware Power and Light Company is not contained in any of your published tariffs?

A. It is not.

Q. And of that the Public Service Commission had no record or copy until June of last year, when you say you sent them a copy?

A. They would not.

Q. Prior to the date that Conowingo went into operation, as was testified here, March 1, 1928, the power rates contained a coal clause, did they not?

A. They did.

Q. And that coal clause was based on your total generation of power by means of steam?

A. It was.

Q. When did you make the first change in that coal clause in order to take care of the power which you were receiving from Conowingo.

A. A modified coal clause was filed April 1, 1929, I believe.

Q. In other words, between March 1, 1928, and April 1, 1929, a period of thirteen months during which you were receiving, as was testified here, 42% of your power from Conowingo, no change whatever was made in the coal clause, is that correct?

A. That is correct.

Q. Will you explain what the nature of the coal clause is which existed prior to March 1, 1928?

A. I don't know that I can recall the figures for you, but it was a provision—if you have them I will be glad to refresh my recollection and give you the figures.

Q. Here is a copy of your tariff of rates, as in effect March 1, 1926, which your company used for general distribution to the public. Will you explain the coal clause as contained in this tariff?

A. The clause referred to reads: "The current charges under this contract shall be increased one twentieth of one mill per kilowatt hour for each 5% increase per ton above an actual cost of coal to the company of \$4.00 per ton of 2240 pounds an initial point of delivery. The determination of the actual cost of coal delivered shall be made for a period of three months, and all current charges based upon such determination shall be applicable to all bills rendered covering current consumed during the next succeeding three months. The initial point of delivery above referred to is the yard of the generating station of the company."

Q. In other words, that coal clause means, Mr. Craig, that if your cost coal delivered is \$5.00 a ton for a given period you add 1-10c per kilowatt hour to the kilowatt hours consumed—

A. To the current charge, and the rates take the coal clause as it reads.

Q. Now, why did you make the change on April 1, 1929?

A. It was deemed to be good policy to adjust the coal clause to modern operating efficiency, and to give credit for the fact that certain of the company's sources of energy had become water power energy, and therefore did not require coal in its generation.

Q. During this period between March 1, 1928, when Conowingo went into operation, and April 1, 1929, for thirteen months when you were receiving 42% of your power from Conowingo, doesn't that mean that the consumers who paid the old coal clause actually overpaid 42% on the basis of that clause?

A. It does not mean that at all.

Q. Well, isn't it a fact that the coal clause was based on your generation of power by means of steam.

A. It was.

Q. And since you didn't burn coal, 42% as much coal, and the consumers continued to pay 42%, isn't it a fact that they overpaid during that period?

A. I don't think it is.

Q. Why don't you think it is.

A. In the first place that was an experimental period. The Conowingo capacity was not in full operation, the equipment was untried, there were known to be extraordinary expenses likely to be incurred, and such expenses were incurred due to failure of equipment, due to test and experiments with equipment to determine its best operating condition. Therefore, that Conowingo power was operated at not normal cost, at a starting period cost, which would naturally be expected to be greater than the cost that would prevail when the operation straightened out.

Q. Are all of your customers on the coal clause basis?

A. Not all of our customers, our power rate customers are.

Q. Therefore the power rate customers were made to suffer for the period of initial operation of Conowingo, is that true?

A. I have just said I didn't consider it true.

Q. Well, no other rates were changed during that period?

A. Nor were the power rates changed.

Q. But isn't it a fact that since the power customers were really entitled to a reduction on account of the quantity of power you were receiving from Conowingo, that they therefore actually paid more money than they should have paid?

A. I cannot concede the basis of the question, that the power consumers were entitled to a reduction.

Q. Well, you said that you did make a reduction during that period because it was an experimental period, and that the deduction is—you desired to keep that surplus money to provide for any contingencies, is that correct?

A. I said that not knowing what the results of the Conowingo operation would be, it seemed well to keep the things in their present status, and that is very good practice in any industry.

Q. And these rates were different that they may have been had you made a change on April 1st of 1929 to March 1st, 1928, is that true?

A. I am not certain, the difference was slight, but whether it is up or down, I am not certain.

Q. Obviously Conowingo was no liability to the Philadelphia Electric Company when it went into operation?

A. It was expected to be for some period of starting-up time.

Q. Was it actually?

A. You would have to refer that question to our engineering department.

Q. On April 1, 1929, when the coal clause was added, didn't the Philadelphia Electric Company have a certain surplus which you had accumulated from the power users by this coal clause?

A. I would not say so.

Q. The other consumers continued to pay the same rates, and when I say that, I mean other consumers, those that are not affected by the coal clause, they did continue to pay the same rates between March 1, 1928 and April 1, 1929, is that correct?

A. I would have to check that, I am not certain whether there were any rate reductions during that period or not.

Q. Well, assuming there were no reductions, as I think we shall bring out in the evidence, it seems that the contingency was borne by these power users having this coal clause, isn't that correct?

A. I do not consider it so.

Q. Have you any reasons to support your answer?

A. I gave you the starting-up period statement, which is a condition the company had to meet at the time.

Q. As a matter of fact, it was testified here that the Electric Company received between March 1, 1928 and April 1, 1928 42% of its power from Conowingo, is that correct?

A. I have not checked that relationship; I assume that it is.

Q. And during that period no change whatever was made in the coal clause compensation for this quantity of power being obtained from Conowingo?

A. That is correct, nor was there any due in my judgment.

Q. Can you tell me what rate reductions were made by the Philadelphia Electric Company in the city of Philadelphia between March 1, 1926 and June 15, 1929?

A. I shall have to refer to some papers, when I get them. As of March 1, 1926, there was a reduction in Philadelphia to residence, commercial lighting, and to power customers.

Q. What general reduction in rates was made after March 1, 1926?

A. I assume that you mean in what was then the Philadelphia Electric Company.

Q. Philadelphia Electric Company territory.

A. There was a reduction on December 1, 1928 in power rates—

Q. I am asking for general rate reductions affecting all classes of consumers.

A. Another reduction April 1, 1929, in power rates, which is a class of consumer.

Q. May I ask—

A. Another reduction on June 15, 1929, to residence customers—

Q. In other words, Mr. Craig, between March 1, 1926, and June 15, 1929, no reduction in rates were made to residence consumers; is that correct?

A. That is correct.

Q. May I go back before March 1, 1926, Mr. Craig, and can you tell me or can you state the preceding reductions in rates?

A. There was a reduction on May 1, 1924, residence lighting, commercial lighting, and power service. The next one was the reduction of March 1, 1926.

Q. Was there not a reduction on March 1, 1923?

A. It is my impression that there was one on May 1, 1923, not on March 1. I can find that out for you, if you wish.

Q. Yes, I would like to have that.

A. There was a reduction on May 1, 1923.

Q. Was there a reduction in rates on May 1, 1922?

A. There was.

Q. In other words, there was a reduction in rates affecting all customers on May 1, 1922, May 1, 1923, May 1, 1924, and March 1, 1926. Is that correct?

A. Not to all classes of consumers, but there was reductions to residence service.

Q. And then there was no reduction for residential consumers between March 1, 1926, and June 15, 1929; is that correct?

A. That is correct.

Q. Isn't it a fact that your business continued just as prosperously between 1926 and 1929 as it had in the preceding three years?

A. I have no knowledge of the operating results of the company during that period.

Q. It was testified here by Mrs. Johnson that sometime in July, 1927, negotiations were opened with the United Gas Improvement Company which eventually led to the acquisition of the Electric Company by the United Gas Improvement Company. Do you know whether or not those negotiations had anything to do with the delay or rather stoppage of the reductions in rates to the residential consumers?

A. I don't know whether they had anything to do with it or not.

Q. But it is true that for over three years, March 1, 1926, to June 15, 1929, not one reduction in residential rates was made; is that correct?

A. We have previously stated that it is.

BY MR. EVANS:

Q. Mr. Craig, as a rate expert, do you consider that a coal clause is a proper way to take account of contingent expenses in connection with the operation of Conowingo?

A. There could be many variations of opinion on that subject.

Q. I am asking you for yours.

A. I would say that a very proper point of view is that the Conowingo project was developed by the company, after a careful study of its existing costs, which included generation by coal, and that if the company were thereafter able to benefit by economies so gained in comparison with the generation of energy by coal, it would be not at all improper to retain a coal clause feature.

Q. Now will you answer the question?

A. I think I have.

Q. In your opinion as a rate expert, is it a proper method of taking care of contingent expenses in a hydro electric generating station to use the coal clause?

A. Not a proper method of taking care of contingent expenses, but those are different from the other questions.

Q. In other words, the coal clause is designed to take care of one element in the rates only, and that is a possible increase in the cost of generation due to the increase in the cost of coal; isn't that correct?

A. Not entirely.

Q. What other purpose does the coal clause have in proper rate making?

A. We would have to go back to the conditions under which the coal clause was initiated. That was a time when there were widely fluctuating prices of coal and labor and all other materials. It was not possible to follow them with rate changes. It was originally the opinion of some commissions that rates should be filed for every changed condition. The changed conditions occurred so rapidly that the development of the coal clause appeared to be the logical solution, and coal clauses as of the time were considered to take care of coal fluctuations, and might in part, but not accurately, take care of other fluctuations of cost.

Q. Can you state roughly what, in the Philadelphia Electric system as it existed in 1926, what part of the cost of generation was represented by coal clause?

A. No; I have not made a study of those figures.

BY MR. HIRSCH:

Q. Isn't that a loss of approximately 30%?

A. It appears on record in the reports. I would not like to guess at it.

Q. Is it not a fact that the Public Service Commission in this state, as in other communities where electric companies file tariffs, have disallowed the coal clause, claiming that it was not an emergency, the war is over, and that prices had become more or less stabilized.

A. I am not familiar with such decisions.

BY MR. EVANS:

Q. Aside from the fluctuations in the price of coal, in your opinion, is it fair to put other items of fluctuating cost, which applies equally to all consumers, upon only one class of consumer?

A. The—

Q. Answer my question and then explain. Is it or is it not?

A. What was the question?

(Question read.)

THE WITNESS: It is not fair, but it was expedient.

BY MR. EVANS:

Q. From the company's standpoint.

A. It was not expedient to increase a resident customer's bill by 3.78 mills or some such a factor as that. The coal clause was such a small portion of the cost of the service, to that class that it was more expedient to do it, Mr. Hirsch.

Q. Is it not a fact that on April 1, 1929, when you changed the coal clause you increased the rate base from 4 to 5 dollars?

A. That is correct.

Q. Is it not also a fact that before you made such a change in the coal clause, most of the power consumers effecter also paid a certain increment on power bills, because your price of coal was above \$4?

A. If I may, I want to check your previous question. I am not certain that I understood your question.

MR. EVANS: Read the question, Mr. Stenographer.

(Question read.)

THE WITNESS: I would have to refer to the tariffs. My impression is that is the correct answer. The tariffs would show.

BY MR. HIRSCH:

Q. Do you have a copy of the tariff with you?

A. Not of that date.

Q. Isn't that a fact—

MR. EVANS: If that is not correct, you may make a correction later, Mr. Craig.

BY MR. HIRSCH:

Q. Is it not a fact that prior to April 1st, 1929, your cost of coal was over \$4 and all the power consumers affected thereby paid an increment on power bills?

A. I believe that prior to that time coal was costing us more than \$4, and that power consumers did pay by the addition of the coal clause some additional clause.

Q. And wasn't this increment, which the power users paid under the coal clause a source of irritation to them?

A. I wasn't with the company at that time, but generally, having had experience with the application of the coal clause, we didn't find it so.

Q. Wasn't that the reason you increased your rate \$5, so that instead of adding an increment, you subtracted a certain credit on the power bills, so that they won't appear—be so obnoxious to the power users; is that correct?

A. That was not the reason.

Q. But that was the chief effect just the same, was it not?

A. I shouldn't say that was the effect.

Q. If the coal clause is based on \$5, as it is today, and previously was based on \$4, is it not true when coal is around \$4.50, as it is today, you give the power users a slight credit?

A. As the coal cost is working today, it gives the power users a slight credit.

Q. If the rate is still on that base, the power users would pay an increment, instead of a credit; is that not so?

A. Before answering that question, I would like to check the current tariff and see what is the base price of coal. It is my impression that the present coal clause is \$4, and not \$5.

Q. I show you a section of your tariff in effect April 1, 1929.

A. The statement there speaks for itself. I think it would be well to read it into the record.

Q. Will you read this into the record? (Indicating).

A. The adjustment as changed is based upon the cost of 16.20 cents per million B. T. U., which is equivalent to a fuel cost of \$5 per ton of 2,240 pounds, with a B. T. U. content of 13,772 per pound.

BY MR. TURNER:

Q. Just one question before you get through with Mr. Craig. Mr. Evans, there has been some question raised, not particularly in these hearings, but after the session the other night of the Legislature, in reference to the penalty charges. I was wondering while we had Mr. Craig, if you could not ask him some questions with reference to the penalties, the whys and wherefores, and what is the effect of them.

MR. EVANS: Very well.

BY MR. EVANS:

Q. What is the penalty clause of the Philadelphia Electric Company?

MR. TURNER: That is, to the domestic consumers.

MR. EVANS: Yes, I mean the domestic consumers.

THE WITNESS: The penalty clause as it appears in the tariff, to domestic consumers, is an increase of 5% on the amounts to those consumers who delay their payment from the period fixed for net payment.

Q. It is generally about ten days after the presentation of the bills?

A. Always ten days; perhaps a little more but generally ten days.

Q. What is the penalty clause to domestic consumers of U. G. I. Company?

A. If you have reference to the Philadelphia Gas Works, my recollection is it is 3%.

BY MR. TURNER:

Q. Do you give a discount or is it added as a penalty?

A. It is a penalty added to the net amount of the bill which results from the rates applied to the bill. The bill could be stated gross—different companies use different systems.

Q. These penalty clauses are to enforce prompt payment of the bill?

A. That is one of their purposes.

BY M. EVANS:

Q. What other purposes do they serve?

A. They serve the purpose of collection some additional money as revenue from these customers who defer their payments, and that we deem a fair thing to do because they are the customers that are responsible for our having to maintain a collecting department which entails a rather heavy expense on us by doing so.

Q. Does it not more than cover that cost?

A. I would not know without a check-up on that. I have not seen one.

BY MR. HAGMAIER:

Q. Do you think the same result could be accomplished by allowing a discount instead of adding a penalty?

A. The same results could be accomplished. At one time it was in effect that we had a rate which was 11 cents a kilowatt, less a discount of 1 cent for prompt payment. But whenever anyone who is not friendly to the company went out and wanted to quote rates, they spoke of it as an 11-cent rate and consequently this expedient was adopted to avoid that.

BY MR. EVANS:

Q. Are you familiar with the system used by the Philadelphia Gas Works and the Philadelphia Electric Company, respectively, in collecting these penalties?

A. I am not familiar with the affairs of the Philadelphia Gas Works, that of course is not a utility reporting to the Commission.

Q. Were you familiar with the practice of the U. G. I. Company when it operated the Philadelphia Gas Works?

A. I was not.

BY MR. TURNER:

Q. The claim is made that the telephone companies charge no penalty and therefore why should the gas and electric companies make a charge?

A. The telephone companies for one thing render bills in advance, and if you don't pay it for the month for which the advance demand is asked they will discontinue your service, whereas the electric company must wait until it gets the reading of its meter, therefore, it is billing for services delivered whereas the telephone company is billing for services to be delivered.

Q. Would it be practical for the electric company to operate, except for the determining of the amount of the bill, would it be practical to operate on the same basis as the telephone company? And discontinue the service if you don't pay your bill?

A. That would represent a loss, as it would represent a charge for service delivered, and with the telephone company it does not represent a loss as it is a pre-demand for service to be delivered. They are different systems entirely, one requires a deposit in advance and the other is in effect a discount.

MR. JOHN E. ZIMMERMAN: I think scientifically the discount is better than the penalty. If you didn't have the penalty, the customer who doesn't pay his bill, that feature would have to be spread over the entire business, and the customer who does pay his bill would be discriminated against in favor of the one who does not. Why should the customer who pays his bill pay for the cost of the collection from one who does not pay it.

BY MR. TURNER

Q. Has there been any study made of the returns to your company from this collection and the loss the company has to bear?

A. I think that is all available, Mr. Turner, and if this committee would like to have it, we would be glad to furnish it to them so they can see what the cost is. The intent of the company is to cover just the cost. It may be that it covers a little more than the cost, it might be possible to come down from five to four, but the object is not to secure a profit but to try to cover the cost of these collections.

MR. TURNER: I suppose you are familiar with the fact that the House passed a bill the other night for a six per cent. interest only to be added for the failure to pay bills. That seemed to be the feeling that the rate of penalty charged was so great that it amounted to such a large percentage of the amount of the bill?

MR. ZIMMERMAN: I think that was a confusion in the mind of the framer of the bill. I think he had in mind the object of the penalty was to collect interest on the total amount, whereas the three per cent. charge is on the face of the bill. It is only an attempt to cover the cost of collection eventually and to collect that money from the man who owes it.

MR. TURNER: It is not operated the same as the Department Store, where the cash customers pay for the charge accounts?

MR. MOORE: Any excess over the cost would be negligible, would it not?

MR. ZIMMERMAN: I think it would.

MR. MOORE: And the delinquents would be the one that would pay it?

MR. ZIMMERMAN: Yes sir.

BY MR. EVANS

Q. Mr. ZIMMERMAN, as long as you are connected with both companies, is there any reason why the one rate is 3% and the other 5?

A. I don't know that there is, Mr. Evans. I think the penalty of the Philadelphia Gas Works is a penalty fixed by the City of Philadelphia in an ordinance in early years and it has always been carried that way, and the lease now provides for the penalty in it.

BY MR. HIRSCH:

Q. Would that penalty come in this operating income where you have the consumer's discount, and so forth, \$138,-408? Would these penalties come into that item?

A. I don't know, Mr. Hirsch. You would have to ask the accounting office as to that.

LEON B. EICHENGREEN, sworn.

BY MR. HIRSCH:

Q. What is your full name, Mr. Eichengreen?

A. Leon B.

Q. What is your position with the Philadelphia Electric Company?

A. Manager of the gas department.

Q. How long have you been with the Philadelphia Company?

A. August, 1928.

Q. What was your position prior to that time?

A. Manager of gas operations of the United Gas Improvement Company.

Q. Were you a contributor to the last political campaign.

A. \$500.00.

Q. Did you discuss that with any person before you made that contribution?

A. I didn't.

Q. Was it charged to any expense account of the Philadelphia Electric Company?

A. It was not.

Q. To whom did you contribute this money?

A. Mr. R. L. Montgomery.

Q. Did you pay it by check?

A. By check, yes.

Q. Did anyone advance you \$500.00 before you made the contribution?

A. They did not.

Q. What is your salary, Mr. Eichengreen?

A. \$13,200 a year.

Q. And you had no discussion whatever with any of these other men who testified they gave \$500.

A. I didn't.

Q. It was just a coincident that you all selected the same figure.

A. It appears that.

Q. Did you ever contribute to any other political campaign?

A. I think not.

BY MR. EVANS:

Q. What was your salary last year, Mr. Eichengreen?

A. \$12,000.

BY MR. HIRSCH:

Q. Was this increase in salary given to you to compensate you for the \$500 contribution?

A. It was not.

MR. HIRSCH: That is all, thank you.

JAMES M. BENNETT, sworn.

BY MR. HIRSCH:

Q. What is your full name?

A. James M. Bennett.

Q. What is your position with the Philadelphia Electric Company?

A. Manager of the public relations department

Q. How long have you occupied that position.

A. Approximately three years.

Q. Where were you before this time.

A. United Gas Improvement Company.

Q. Are you doing any work for the United Gas Improvement Company today?

A. Yes.

Q. Who pays your salary?

A. The Philadelphia Electric Company.

Q. And you donate your service to the United Gas Improvement Company?

A. I don't receive any money for the service to the United Gas Improvement Company.

Q. Approximately how much of your time do you put in with the United Gas Improvement Company?

A. I cannot answer that, it varies.

Q. Would you say fifty per cent. of your time?

A. No.

Q. But you do perform services for the United Gas Improvement Company, and you are paid by the Philadelphia Electric Company, is that correct?

A. Yes.

Q. What did you contribute to the last political campaign?

A. \$500.00.

Q. To whom did you make your check payable?

A. R. L. Montgomery, treasurer of the Liberal Party.

Q. Did you have any conversation with anyone before you made your contribution?

A. No.

Q. Were you urged to make the contribution?

A. No.

Q. Were you compensated for making the contribution by anyone in the electric company.

A. No.

Q. Was the contribution charged to the expense account of the Philadelphia Electric Company?

A. No.

MR. HIRSCH: Thank you, that is all, Mr. Bennett.

ALBERT M. BOYD sworn.

BY MR. HIRSCH:

Q. Mr. Boyd, what is your full name?

A. Albert M. Boyd.

Q. What is your position with the Philadelphia Electric Company?

A. Manager of personnel, claims and safety department.

Q. How long have you held that position?

A. Since October, 1928.

Q. What was your position before that time?

A. I was manager of the gas distribution department of the United Engineers and Constructors.

Q. Are you doing any work for the United Gas Improvement Company today?

A. None whatever.

Q. What did you contribute to the last political campaign?

A. \$500.

Q. Did you have any conversation with any of these men who proceeded you here on the witness stand about the amount of your contribution?

A. I did not.

Q. Did anybody in the electric company or in the United Gas Improvement Company urge you to make the contribution?

A. They did not.

Q. Was this contribution charged to any expense account of the electric company?

A. It was not.

Q. Were you given an increase in salary to compensate you for this contribution?

A. I was not.

BY MR. TURNER:

Q. Were these contributions made after or before Mr. Zimmerman made his.

A. I don't know when Mr. Zimmerman made his, or if he did make one.

BY MR. EVANS:

Q. Mr. Boyd, to whom did you make your contribution?

A. The treasurer—Montgomery, I believe the treasurer of the Liberal Party. I had numerous circulars coming to my house, had been a member of the association against the prohibition amendment, and I had been quite completely circularized in that respect.

Q. Has it been your custom to make contributions to political parties?

A. Not regularly, no.

BY MR. HIRSCH:

Q. Have you been contributing to the association against the prohibition amendment?

A. From time to time, yes.

Q. Have you contributed sums over \$100?

A. No, I have not.

Q. In other words, this is the first large contribution you have made for any such purpose?

A. That is right.

ALBERT R. GRANGER sworn

BY MR. HIRSCH:

Q. What is your full name, Mr. Granger?

A. Albert R. Granger.

Q. What is your position with the Philadelphia Electric Company?

A. I am regional vice-president.

Q. How long have you held that position?

A. Three years.

Q. You were with the Philadelphia Electric Company before that time?

A. 38 years.

Q. What did you contribute to the last political campaign?

A. \$500.

Q. Was that charged to any expense account in the electric company?

A. No.

Q. Anybody approach you to make the contribution?

A. No.

Q. Did you discuss the matter with any other person in the Philadelphia Electric Company before you made the contribution?

A. No.

Q. To whom did you pay it?

A. R. L. Montgomery.

Q. Paid it by check?

A. I did.

BY THE CHAIRMAN:

Q. Were you circularized by the association against the prohibition amendment?

A. I attended a dinner at which Mr. Curtis gave \$10,000, and I felt the same way he did, and I felt that I could give my little bit.

BY MR. EVANS:

Q. You have been in the habit of making political contributions?

A. Yes, 25 years.

Q. Not to the Democratic Party?

A. Never.

MR. HIRSCH: I have no more witnesses.

MR. EVANS: Mr. Zimmerman, will you take the stand again, please.

JOHN E. ZIMMERMAN sworn

BY MR. EVANS:

Q. Mr. Zimmerman, you have had broad experience in the operation and management of public utilities, I know. And I want to ask you whether, from the standpoint of effective regulation, you think it desirable that management and purchasing contracts between affiliated utilities should be made subject to regulation?

A. I don't think that the management contracts should be. I think if there were any purchasing inter-company transaction, that they should be.

Q. I think that all of the companies that I know anything about, the charge which you have testified to made by the Electric Company is the lowest that I know anything of. I think you said that in the total amount it did not exceed from one hundred to 150 thousand dollars.

A. It was \$150,000 in 1930 and 100,000 in 1929; that is right.

Q. You are aware, are you not, that in some other utilities these fees run into very large figures charged against the operating company?

A. Very large figures.

Q. Are you familiar with the litigation in Massachusetts over the Worcester electric light rates?

A. In a general way, yes.

Q. It was true, was it not, that the Massachusetts commission in that case fixed a maximum five cent rate for domestic consumers?

A. That was one of the tariffs, yes. They have two tariffs. They have a five cent tariff and they have another tariff.

Q. But for domestic consumers, every domestic consumer can get the five cent rate?

A. I believe so.

Q. And the company fought that out in the courts, and the court found that by taking the property devoted to the domestic service, this rate yielded a fair return on the fair value of that property, did they not?

A. I don't believe that I remember that, Mr. Evans. My recollection of it was that that case was referred to a master, and that the master found a valuation, as I recollect, of about ten or twelve millions,—I think the commission found a valuation of ten or twelve millions and I think the master found a valuation of twenty-two millions. Am I right about that? There was a very startling difference, and yet the master's

report had been taken to the court, and the Worcester company, as I recollect, withdrew the case and accepted the rates that the Commission had fixed.

Q. And the master, however, in his report stated that taking the property devoted to the domestic service, and even taking the basis of reproduction cost, the rate was not confiscatory?

A. That I don't remember. But of course,—I don't know what you are trying to prove, but you can go ahead.

Q. Are you familiar at all with the Washington, D. C., system of regulated reductions in rates?

A. In a general way, yes.

Q. As I understand that system, the company, when its return exceeds seven per cent. on the value of its property, applies fifty per cent. of the excess to a reduction of rates. Is that substantially correct?

A. That is about substantially correct.

Q. And that has resulted, has it not, in a Washington domestic consumer rate of about 4.7 cents per kilowatt hour?

A. I think that is the average.

Q. Do you think that is a desirable system of regulation?

A. I doubt it. You see what has happened now. Although this thing was arrived at on the basis that you say, now as I understand it the District of Columbia Commission wants to take away from the company the participation that they have in the profits. And the other aspect of the case is that that works fine so long as rates are going down, on that basis; but if costs went up and you had to put the rate up to the consumer, you know how difficult it is to increase rates, even if there is justification. That would be the doubt in my mind as to the seriousness of the thing. It is a thing that would have to be thought over very carefully. As you know, it is very difficult to raise rates. It is easy enough to put them down.

Q. Mr. Zimmerman, you were at one time a partner in the firm of Day and Zimmerman, were you not?

A. Yes.

Q. And you managed electric utilities in Pennsylvania and elsewhere?

A. Yes.

Q. In one of those systems that you managed you introduced a very complete system of cost accounting, did you not?

A. Yes.

Q. And that system has been in effect since that time?

A. Well, I am afraid not. As near as I can find out, our successors gave up a good deal of it.

Q. Well, as long as you managed it it was?

A. That is right.

Q. In your experience as a utility manager, did you feel that that system of accounting was a valuable adjunct of utility management?

A. Yes, I did.

Q. And it enabled you also to adjust rates more or less on the basis of the cost of service, did it not?

A. Not fully. What the cost system that we worked up enabled us to do was to allocate to the different classes of customers, the different types, the operating costs that belonged to that class. If it was a domestic consumer, for instance, we could allocate to that domestic consumer, that subdivision, the operating costs that belonged to it. We never quite solved the problem of how to allocate capital costs. We went into that. I suppose Mr. Day and myself spent nearly two years on it. And it became a frightfully complex problem, and we never finished it, on the allocation of capital costs.

Q. It has not been a popular thing with the electric utilities, generally speaking?

A. No, they haven't followed our steps in that respect, except with some modifications, considerable modifications.

MR. EVANS: Regulation might perhaps be easier if they had. That is all.

BY MR. TURNER:

Q. Mr. Zimmerman, yesterday afternoon, after you left the stand, some of us asked you some questions pertaining to the cost to the public in rate cases and whether there could not be some way worked out by which some of that cost might be borne by the State, or otherwise. I wonder if you would mind giving us your reactions on that. We suggested, for instance, if a municipality came in,—there is a bill now in the legislature to create some sort of a revolving fund whereby the expense of rate cases could be born

A. That might be one way of solving it. Some other states, some other commissions, I think, have attempted to solve it by collecting from the utilities themselves a certain amount of money for that purpose.

Q. By tax or—

A. Yes. Not by a tax, but by asking each company to pay so much, as I recollect. They had something similar to that in Maryland. Whether it is in effect now or not, I don't know. A way also, of course, would be for the commission to have what is usually called People's Counsel, who is the defender either of the municipalities or the complainants who come in. Now I don't think that has very great value unless the commission is very fully staffed. I think the commission has to be,—for instance, take our Pennsylvania Commission,—I think that it has to have a very much larger staff and abler staff in certain respects.

Another thing in connection with it is this: that I think that some precaution should be taken that a case is not initiated on the filing of the complaint of a single complainant. We all know that there are certain cranks in the world. In the Philadelphia Electric Company we have 650,000 customers. It is inconceivable that there is not always somebody who feels—even if you give them their electricity for nothing—he still has a complaint. Now, having a complaint of that character filed with the Commission and to go through all that, it seems to me is not justified.

Now, if it were arranged so that the Commission would have to take cognizance of the complaint and the complaint came in signed by so many complainants—we will say, 100 or 150 complainants, or was signed by a borough or its authorities—that would relieve them of all these petty matters.

MR. TURNER: Thank you. I thought we would like to get that on the record.

BY MR. HIRSCH:

Q. Where would you draw the line: at the residential consumer or the power user?

A. No; I think I would draw the line at the residential consumer. A power consumer, I would draw the line there. I don't think. I principally have in mind the residential consumers. The majority of complaints come from residential consumers.

Q. Most residential consumers do not hire lawyers, do they, to represent them? They just file their informal complaint with the Commission?

A. That is true, but I said if they had 100 or 150 complaints, then the Commission would have to go into complete hearing of the case, and if you had the Commission properly staffed and the proper personnel, I don't see that there is anything further needed for those domestic consumers to get justice.

Q. Where you have a rate complaint, where the electric company spends, say, a half million dollars, to defend certain rates and they lose, do you think it is fair to charge that money into operating expense?

A. Yes.

Q. In other words, doesn't that make the consumer pay two ways; that is, the consumer has to pay to hire a lawyer or lawyers, and then if he wins the case, he may really lose, because the electric company may have spent a half million dollars? In other words, it comes out of his pockets both ways?

A. Yes; but it is taken over a spread of years. It is not usually charged in one year.

Q. Do you think, however, that the burden of proof should be shifted to the electric company?

A. I think the burden of proof should be on the electric company.

BY MR. HAGMAIER:

Q. In the little bill I have, it is my idea that the complaint would come through—as a rule, it would cover certain boroughs or townships, and it would be up to those authorities. You couldn't take every individual that came in, and the State should assume that expense. Every municipality is a part of this State and, therefore, I believe it is up to them to defend these cases.

MR. EVANS: Mr. Hagmaier, that would be very hard on some of us that live in some municipalities.

BY MR. HIRSCH:

Q. Don't you think that the chief engineer of the Commission and the rate expert should be put on a parity with the

Commissioners themselves, in view of the fact that most of the Commissioners may be laymen, and they leave almost the entire decision in the hands of certain engineers and rate experts—don't you think that those men should be elevated to the standing of the Commission?

A. No; I don't think so; not at all.

Q. Isn't it a fact that the chief engineer and the rate expert of the Commission have a tremendous amount to say about the final decision of the cases?

A. They are supposed to prepare them for the Commission, and then the Commission is supposed to consider all the relative facts that are in back of them to reach their decision, and I don't think those men, who are technicians in a sense, should be part of the consideration in reaching those conclusions.

BY MR. EVANS:

Q. Yesterday you spoke of the improvement in the operating ratio of the Philadelphia Electric Company since it was taken over by the U. G. I. There have been introduced today, among the annual reports, statements showing that the operating ratio, as shown in the annual reports of the Philadelphia Electric Company to the Commission, at the bottom of page 311, those reports were:

In 1925 .....	61.809 per cent.
In 1926 .....	61.218 per cent.
In 1927 .....	59.947 per cent.
In 1928 .....	63.805 per cent.
For 10 months of 1929 .....	64.586 per cent.
and for the last two months of 1929 ....	61.608 per cent.

I understand from Mr. Mason that you feel that these statements of operating ratios, as contained in the annual reports to the Commission, do not fairly represent the fact. Will you be good enough, if you feel that way, to submit an analysis of these reports to the Commission, so it will make it plain why they do not correctly show the operating ratios?

A. Yes; I have it here. I think probably there is a little confusion in the term of "operating ratios" we are both using. Operating ratios have been taken out of there—the total operating ratios. By that I mean it includes not only operating expense but Federal taxes and State taxes and renewal and replacement charges, and where you have operating ratios that really is an appropriation account.

Now, when I made that statement, I had in mind what we call the purely operating expenses; the things we can control. We can't control the taxes, either Federal or state. So, it was what we call the regular operating expenses, which is everything, excluding those items I have mentioned, and I state that, Mr. Evans, for this reason, in 1928 the relationship of those operating expenses to the gross receipts was 43.7%.

Q. I have examined the statement from which you testified, and I have not been able myself to reconcile it with the annual reports that have gone to the Commission, because these are the only things we have to work with. I thought if you could submit a statement, which would reconcile the annual reports to the Commission, we would have them here, and it would then put the situation perfectly plainly before the Committee.

A. I would be very glad to, but all I wanted to express was the justification for my statement. I, as executive officer of the U. G. I. and executive officer of the Executive Committee of the Philadelphia Electric, have to judge from the results that are submitted to me, and there are the results (indicating) which I think myself are extraordinarily startling, because if you will look at the statement you will see that the gross receipts of the Philadelphia system in 1928 were fifty-six millions; in 1930, sixty-five millions. That is an improvement of very nearly ten millions, and yet the operating expenses only increased \$10,000.00. In other words, the operating expenses in 1928 were \$24,662,000, and in 1930 they were \$24,778,000 a difference of 100; so that the difference between \$56,000,000 of gross in 1928 and the \$65,000,000 of gross in 1930 is \$9,000,000, and practically all of it was carried to net.

Q. It is also fair to state, is it not, that during that period Conowingo—

A. Conowingo had some bearing on it in '28.

Q. But not nearly as full a bearing as in '30.

MR. EVANS: When the reconciliation which Mr. Zimmerman has agreed to furnish is submitted it will be introduced and will be known as Exhibit No. 100.

Reconciliation of ratio of operating expenses to total expenses (to be prepared by Mr. J. E. Zimmerman) to be filed and known as Exhibit No. 100.

EDWARD PORTER recalled

BY MR. EVANS:

Q. Mr. Porter, you are familiar with the accounts of the Philadelphia Electric Company?

A. Yes sir.

Q. Were these reports filed with the Public Service Commission?

A. Yes sir.

Q. Now, the item of General Operating Expense on page 310 of these reports, there appears the item "Other General Expenses," which from an examination of the report seems to have shown a considerable increase from 1925 to 1928. Will you be good enough to submit to the Committee analysis of that item as shown on the report to the Public Service Commission, for the years 1925, 1926, 1927, 1928, 1929 and if possible for 1930? I assume you are about to file your reports. I would like to have you show in each case the total operating expenses and other general expenses at the per cent. that they bear to the former. Also, we should like an analysis of the other general expenses for each year, showing to each payment of \$10,000 or more in that account in any one year was made?

A. That would take in the Philadelphia Electric Company?

Q. Yes?

A. The merger came in in 1929.

Q. I think if we have it for each year, 1930 may show considerable change on account of the merger, but if we have the data for each of these years it will give us the entire picture.

When that is introduced it will be identified as Exhibit No. 101 and made a part of the record.

Members of the Committee may remember that when Mr. Roushenbush was testifying from his charts, he was asked to prepare an exhibit showing the supporting data for the residential electric light rates in Pennsylvania. Mr. Roushenbush has prepared that exhibit, and it is now offered as Exhibit No. 13-A, which is a statement of the residential electric light rates in Pennsylvania, New York, Ohio, Massachusetts, West Virginia and Maryland, for the year 1930, and Ontario for the year 1929.

The hearing adjourned at 5.10 o'clock P. M. to reconvene on Friday morning, March 27, 1931, at 10.00 o'clock in the House Caucus Room.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Friday, March 27, 1931, at 10.00 o'clock A. M.

There were present:

Messrs. D. Glenn Moore, Chairman,  
Martin Memolo,  
Ellwood J. Turner,  
Louis W. Hagmaler,  
Harry J. Crawford,  
Morris L. Cooke,  
Harold Evans, Esq.,  
John M. Walker, Esq.,  
Father James R. Cox.

OTTO M. RAU sworn

BY MR. EVANS:

Q. What is your occupation?

A. Consulting engineer.

Q. How long have you been in the electric industry?

A. About 30 years.

Q. Will you briefly state to the Committee your experience?

A. Originally with the New York Edison Company, and from there with the Milwaukee Railway and Light Company in various capacities up to manager of the Light Department for 20 years, and then with the Emergency Fleet, in charge of the Philadelphia Power District; after that with Day and Zimmerman, as assistant to Mr. Zimmerman in the utility management department; after that with the Philadelphia

Rapid Transit in their Power Department, and after that as consulting engineer.

Q. In the course of your experience have you had occasion to investigate the subject of electric rates?

A. I have.

Q. And on numerous occasions?

A. Yes.

Q. Mr. Moore, Chairman of the Committee, has just handed me a letter addressed to him from Stephen J. Domokos, in regard to the reduction of rates by the Philadelphia Electric Company. Have you had occasion recently to examine other similar complaints in regard to this so-called reduction?

A. I have.

Q. About how many such complaints have you examined?

A. I should say about 200.

Q. And as a result of that have you made a study of the effect of the new rate schedule of the Philadelphia Electric Company, which I think was effective on September 1, 1930?

A. I have, yes.

Q. Now, Mr. Rau, will you explain briefly to the Committee what the rates of the Philadelphia Company for domestic consumers were prior to September 1, 1930?

A. The residence rates at that time, or during that time, were 8 cents per kilowatt hour for the first 36 kilowatt hours used during the three month period. 6 cents per kilowatt hour for the next 180 hours used during the three month period, and 3 cents for all used in excess of the above. The minimum charge was \$2.25 for a three month period.

Q. Now, what were the rates which were made effective September 1, 1930?

A. 75 cents for any part of the first 10 kilowatt hours per month; 6 cents per kilowatt hour for any part of the next 38 kilowatt hours, and 3 cents for the excess, with a minimum charge of 75 cents.

Q. Now, compare these two rates, what were the differences between them?

A. The first difference was that the billing was changed from a three month period to a one month period; the second change was in the first step, which was 8 cents for 12 kilowatt hours, or 36 for the three months, was changed to 7½ cents for the first 10 kilowatt hours. The third change was from the minimum of \$2.25 for a three month period to 75 cents minimum for a one month period.

Q. Now, take up these three differences, will you first explain briefly to the Committee the result of billing monthly instead of billing quarterly?

A. The monthly billing requires, of course, three payments, as against one payment previously. The inconvenience, if you can call it that, is that it took more time to do it; the next point that is brought out is that if you mailed the bills it would cost you four cents more under the one condition than it did under the other.

Q. In other words, you mailed in three checks, or three bills, instead of one in the quarterly billing?

A. That makes a difference of four cents, if the payments are made by mailing, and if the payments are made requiring carfare, it would cost you 30 cents more.

Q. In other words, three round trips instead of one round trip?

A. Three instead of one.

Q. Now, have you any information from your experience in the industry as to the relative proportion of consumers that pay their bills in cash and those who pay by check?

A. More from experience than perhaps any other way, I should say about 75%.

Q. Pay in cash?

A. Pay in cash.

Q. And I assume that most of those who pay in cash actually go to the office and pay, and don't send cash by mail?

A. Yes, cash payment at the office. I don't think there is much cash send by mail.

Q. Now, then what is the second difference between the old rates and the new?

A. That is in the change in the rate from the eight to the seven and a half, and from the twelve to the ten kilowatts.

Q. Now, take that up in detail. If the consumption is less than ten kilowatt hours for one what would the old rate have been on a quarterly basis.

A. On a quarterly basis 75c.

Q. And on the new rates?

A. 75c.

Q. So there is no change there.

A. No change there with the exception that the 75c of course, was accumulated for three months.

Q. Then suppose your consumption is ten kilowatt hours per month, what then would your old rate have been?

A. 80c.

Q. On the monthly basis?

A. On the monthly basis.

Q. What would the new rate have been?

A. 75c.

Q. So there is there on the new rate a savings of 5c.

A. Yes.

Q. For the month?

A. Yes.

Q. Or 15c for the quarter on the monthly basis.

A. Yes.

Q. If your consumption is twelve kilowatt hours for the month what would your old rate have been on the monthly basis?

A. 96c.

Q. And the new rate.

A. 87c.

Q. And there is a saving there of 9c a month.

A. 9c.

Q. Or 27c for the quarter.

A. For three months.

Q. Now, any consumption over that, what is being savings to the consumer?

A. The saving will always be just the 9c; no matter how much they use.

Q. Even if you consume 100 kilowatt hours, a month your saving will only be 9c?

A. 9c.

Q. Now, if you state these in percentage figures, what is the per cent of savings for the use of ten kilowatt hours per month?

A. 6¼c.

Q. And if you use less than that, of course, there is no saving, you have already stated that?

A. Yes, there is no saving.

Q. Now, if you use twenty kilowatt hours per month, what is the percentage of saving?

A. 6¼%.

Q. And fifty.

A. 2½%.

Q. And if you use one hundred kilowatt hours per month?

A. 2%.

Q. Only 2% saving. Now, in connection with that is this saving actually received or does the change in billing from a quarter to a monthly period largely offset it?

A. To a large extent. 2% would practically be offset by the inconvenience you would have between a monthly and three monthly payments.

Q. And how about the relation in consumption from month to month.

A. That affects more particularly the minimum charge. If your consumption during the same months vary materially your bill really would be higher than it is under the new rate; higher under the new rates than it was under the old.

Q. What was the third difference that you spoke of between the old rates and the new?

A. That is in the minimum charge. The application of the minimum on a monthly basis, instead of a three month basis, has the possibility of increasing bills up as high as fifty cents a month.

Q. Now, will you explain that giving an example to the Committee as to how that works?

A. Well, assume that a consumer uses five kilowatt hours in the first month, his bill under the new rate would be seventy-five cents. Under the old rate, he would get no bill because there would be two or more months before he would get it. And, we will say, that he used 25 kilowatt hours, under the new rate he would get a twenty-five cents, under the old rate he would get nothing. In the three months, we will say that he used twenty-five hours, and he would get a bill for \$2.40 under the old rate and his total payments under the new rate would be \$2.85, or a forty-five cent increase.

Q. So, in a case such as that, the new rates show an increase to the domestic consumer, instead of a decrease?

A. In fact, the minimum charges on the difference between the one month and the three months would have that effect on a great many customers.

BY MR. TURNER:

Q. That is what I was going to ask you, whether that is purely a special case because you can put a combination of figures together to do almost anything, or whether that would be something that would run through a number of customers.

A. Take for instance my own case, I was down in Florida a little over a month, just shortly, and in that case, of course, I lost my seventy-five cents. If it had been accumulated, I would not have paid that, my monthly consumption would have offset it. So, it cost me seventy-five cents more.

Q. What is the seventy-five cents?

A. The minimum charge.

Q. That is a sort of ready to serve charge?

A. Yes. If it is paid on a three months basis instead of a one month basis, the consumption in that one month makes it up what we lack, and that affects a great many consumers, particularly if you go away on a vacation. Your consumption might be low for that one month.

BY MR. EVANS:

Q. In going over these complaints, that you have spoken of, what have you found, Mr. Rau, were the chief causes of complaints, or the chief basic reasons for complaint?

A. Principally the change from the one to the three month billing.

Q. From the three to the one month billing?

A. From the three to the one month billing; yes.

Q. And you have explained what the effect of that may be to the resident consumers?

A. Yes.

Q. What is another cause of complaint that you found?

A. Principally, pertaining to the same thing, the inconvenience of paying three times instead of once, and the expense incurred in doing that to a great many people, the little saving that they effected created a loss on the actual out of pocket cost for the service over what it was before.

Q. Turning from the domestic consumer to the commercial service, there also has been a reduction in rates there, has there not?

A. Yes; there has been a reduction in the rate that was in force in 1929 of eight cents on the first forty-eight hours used to seven and one-half cents for the first forty-eight hours used. That is a direct reduction of a half a cent. In the next step it was six cents for the next forty-eight hours. There was no change. That is the same. In the third step it was three cents per kilowatt hour, if they used in excess of thirty-six hours per month, of two and one half cents. That was another straight reduction of a half a cent.

Q. So far as the commercial consumer is concerned there is that much benefit to him?

A. There is a direct benefit to him; yes.

BY MR. COOKE:

Q. Could that reduction from three and one-half to two and one-half apply to a considerable number of consumers?

A. The rate on which those reductions applied, are rates for the smaller merchants and the smaller shop users. As soon as you get into that last set you become what is called a high load consumer, and there is another rate which the Philadelphia Electric Company has of reducing the cost under those conditions considerably below this particular rate.

Q. So that cut from three and one-half to two and one-half does not effect—

A. Does not affect a great many.

BY MR. EVANS:

Q. Take a customer who has a one kilowatt hour demand and uses fifty kilowatt hours per month, what is the actual saving per month to him under the new rates?

A. The saving is about six per cent.

Q. And what in cents?

A. Twenty-four cents.

Q. On the retail power service, there would also be a reduction, would there not?

A. Yes; the retail power service, is a change from seven and one-half cents per kilowatt for the use of the first forty-eight hours to seven cents for the use of the first forty-eight hours, or a reduction of one-half cent in that first step.

Q. And that was the only change in that rate?

A. That was the only change in that rate.

Q. And that was a straight benefit to the consumer?

A. A straight benefit to the consumer.

Q. What, in general, would you say that the percentage of reductions in the new rates to the retail lighting and to the retail power consumer as distinguished from the domestic service, would be?

A. I should say that the consumers in that class who use service under those two rates would probably effect a five per cent saving on the average.

Q. And now, there were some changes, I think, also in the Philadelphia Electric System outside of Philadelphia. The ones you have spoken of so far have been entirely the changes in the city of Philadelphia, have they not?

A. Yes.

Q. And what change—

A. I want to say those only applied when I spoke of the five per cent., that applied to the retail light and power service. On the domestic, I don't believe there has been any actual reduction; the one is off-set by the other.

Q. Turning to the territory outside of Philadelphia, what change was made there?

A. In the tariffs for the territory outside of Philadelphia there is quite a number of them due to the various districts in which the Philadelphia operates, but the principal change that was made was from what was originally called meter capacity. In other words the capacity of the customer was based on the side of the meter that was installed. The new rates regulate the capacity on a basis of demand, and that is arrived at in two ways: one by calculating the demand and the other by measuring the demand.

Q. Was this reduction applicable to the domestic consumers, or to commercial consumers?

A. Mostly commercial.

Q. Mostly commercial consumers?

A. Yes.

BY MR. COOKE:

Q. In what counties would that be?

A. Oh, Norristown and all that district. What used to be the Philadelphia Suburban.

MR. TURNER: Delaware County?

MR. COOKE: No I don't think it is.

BY MR. COOKE:

Q. And that is not Delaware County, is it. Delaware County is different? Delaware was formerly Philadelphia Electric territory?

A. Delaware County is now in that new rate, in that district; yes.

Q. But that does not effect—there were no cuts in that territory on the domestic consumer?

A. I don't think there were any. Principally, this change from the demand basis to the meter basis, formerly based on a metered demand.

Q. That raised a great many people?

A. It sure did.

Q. Tell us about that.

A. I think I have here an example of it. I have here one example. That was in the Norristown station. The capacity rating was a half kilowatt at the time that the meter capacity was the basis.

BY MR. EVANS:

Q. Who was this consumer. I think we might put it on the record.

A. Ralph M. Richards.

Q. And his capacity rating under the old rate was what?

A. One-half a kilowatt.

Q. And what change was made?

A. Shortly before the new rates were put into force, before they were anticipated to be put in force, a check was made by the company to ascertain what these various demands would be. In making that check, a great many customers were changed over by changing the size of the meter from what they were to what they finally concluded should be the demand on the basis of this calculated method. This particular party's meter was changed before—at least his rating was changed before the rate went into effect, and was billed on a two kilowatt basis.

Q. Instead of a one-half?

A. Instead of one-half.

Q. What effect did that have on his bill, so that the Committee can understand it clearly? If you increased his capacity rating from one-half kilowatt to two kilowatts, would that increase his bill?

A. It increased his bill on the basis of hours used at the new kilowatt rating. For instance if he is using forty-eight hours of his capacity, then it would be forty-eight against one-half of forty-eight or the number of kilowatts at the first step in the rate.

Q. He would only have used on the old basis twenty-four kilowatt per month?

A. At the high.

Q. And under the new it would be ninety-six?

A. Ninety-six.

BY MR. TURNER:

Q. And that directly comes on—

A. Very general.

Q. Very general?

A. I discussed this situation frequently, particularly in the Stonehurst district at 69th Street, which is just beyond the Philadelphia rates, and in that section I would say that there were fifty customers affected by it.

BY MR. COOKE:

Q. Was there any way to make the billing retroactive?

A. No; they just started in on this new method, which was applied before this new rate was put in force. Taken from the company's standpoint that was done to check up whether the meter capacity was correct or not, and with a meter capacity installation it is more favorable to the large consumer, because a meter has more lee way and pulled figures. You take it and your capacity is so much, but if you have a meter that is a half kilowatt capacity, it may greatly over load it for a short time, by the demand, and have no effect on it.

BY MR. COOKE:

Q. As a matter of fact, a great deal of this grew out of the lack of care of the previous management of the property?

A. No, it is desirable from a company standpoint to put in the smallest size meter that will carry the load. The meter is more active and is less costly and is more profitable.

BY MR. EVANS:

Q. To take up this particular case of Mr. Richards, did he make any complaint on this increase from his capacity rate from one-half to two kilowatts?

A. Yes, he complained to the company about it and they showed him that his calculated demand was correct. This party then took it up with the Public Service Commission but received no other results from his appeal to them. He must have made a very strong demand on the company and probably would not pay his bills and insisted that it was wrong, and they decided to make a test on his installation, so they put a demand meter in there and the capacity was—— of a kilowatt and he is now billed on that basis, so that this complaint was really ultimately settled.

Q. The demand meter actually shows what the customer's maximum demand is?

A. Yes, and it actually showed that a one-half kilowatt meter was the proper one to install for that particular case.

Q. Have there been other instances where this same situation has been found in your investigation?

A. The ones that came to my personal attention were those at the Sixty-ninth Street section, in connection with the complaint and letters and they cover a vast territory, but practically all of the complaints are on this same trouble that the rate between what it was and what it now is under the new rate is so extensive that the bills were larger than they were formerly.

Q. In other words, this is in the territory outside of Philadelphia?

A. Yes sir.

Q. Any reduction in the energy charge has been offset by this change in method of assessing the demand?

A. Correct.

Q. Is there any question the Committee has to ask, Mr. Evans?

BY MR. HAGMAIER:

Q. Do you really think the monthly billing is a hardship on people? Don't you think it is better and an advantage to

the small consumer to have the bill every month than to have it every three months?

A. No, I really don't think the small domestic consumer would rather have his bill monthly than every three months, and as for the company it shows a convenience.

M. CLYDE SHEAFFER recalled

BY MR. EVANS:

Q. Mr. Sheaffer, you have already been sworn?

A. I have.

Q. Will you tell the Committee briefly the position you hold in the Department of Revenue and the duties of that position?

A. Supervisor of the Corporation Tax Bureau which has charge of the imposition of the corporation taxes for the State of Pennsylvania.

Q. And as Chief of that Bureau, it is your duty to assess the capital stock tax on corporations in Pennsylvania?

A. To see that they are assessed.

Q. You have charge of it?

A. Yes sir.

Q. You have been subpoenaed to produce the capital stock tax reports of the Philadelphia Electric Company for the years 1925, 1926, 1927, 1928, and ten months of 1929. Have you those reports with you?

A. I have photostatic copies of the original reports except that certain copies of information not material to the capital stock tax has not been photostated. For instance, the corporate loan schedules have not been attached to the report. These reports show the ownership of bonds.

Q. You already have produced photostatic copies of other reports of electric companies at a previous hearing?

A. I have.

MR. EVANS: I offer in evidence the 1925 capital stock report of the Philadelphia Electric Company as Exhibit No. 102.

I offer the 1926 report as Exhibit No. 103.

I offer the 1927 report as Exhibit No. 104.

I offer the 1928 report as Exhibit No. 105.

And I offer the report for ten months of 1929 as Exhibit No. 106.

Q. Mr. Sheaffer, taking up one of these capital stock reports on one of these electric companies, will you be good enough to explain briefly to me and to the Committee the method used by the Department of Revenue in assessing capital stock tax? Take for instance, I have here the Pennsylvania Power Company, 1929 report. In the first place, what information does the company have to give on that report in order to furnish the Department with a basis of assessing these taxes?

A. First, the company's officers appraise the stock in pursuance of the Act of Assembly at the valuation which they think it should be given for tax purposes. On the inside of the report the company gives their receipts and their expenditures as well as a copy of the general balance sheet. On page 3 they are asked to give the earnings for a five year period as well as the dividends paid, as well as the average earnings and dividends paid. In this particular case the company has not given the invested capital which represents the difference between the amount the company thinks the assets are worth and the indebtedness. Upon this information, the Tax Department of the State of Pennsylvania fixes the value upon the capital stock for capital stock tax purposes.

BY MR. COX:

Q. Do you accept their word without question, or is there a check on that?

A. We have a right to check with the Public Service Commission records, or send out investigators to check the companies' actual figures; to find out whether or not they have told us the truth.

Q. Have you exercised it very often?

A. Right now the Department of Revenue has a corps of investigators checking the capital stock tax reports filed by various companies, whether they are utilities or not.

Q. Formerly you did not?

A. We had men in the field, but they were limited, and we therefore could not make the investigations which probably should have been made.

Q. Now, you are doing more?

A. We are doing more.

Q. Do you think it is necessary, have you found it is a good idea; has anything been disclosed since you started to make this check-up?

A. In the reports checked so far the Department has found that most of the tax paying corporations have told the truth.

FATHER COX: That is good; remarkable.

THE WITNESS: That is, on the reports that have been checked. We have been checking principally in regards to manufacturing companies right now.

BY MR. EVANS:

Q. Take for example here the Clarion River Power Company report. Will you just explain that briefly. Now, as I understand it, on page 2 of this report—pages 2 and 3, the company gives you the information in regard to their income, their general balance sheets, their capital stock reports. Now, here, for instance, what are the figures in this sheet which you used in assessing capital stock tax?

A. Net earnings of the Clarion River Power Company for the year 1929 were \$32,787. The Company estimated that its fair value of all assets was \$7,873,837.94, which included \$2,850,000 of treasury bonds. The dividends paid during the last five years were small, that is, the average would be small, because only one dividend of \$423,520 was paid during the year 1928. For the years 1925, 1926, 1927, 1929, no dividends were paid. On page 1 of the report the company showed that its indebtedness exceeded its fair value by \$2,838,631. The taxing officers when examining the report decided that the value fixed by the officers of the company was not the proper value and placed a valuation of \$3,000,000 for the stock of the company, which valuation has not been appealed. The Company has capital stock of \$4,518,000, a book deficit of \$903,553.55. These figures were all considered by the taxing officers in fixing the valuation of \$3,000,000; the net book value of the assets being approximately \$3,600,000.

MR. COOKE: What comparison do these figures have, Mr. Evans, with the figures that this company claims?

MR. EVANS: We are going, a little later, Mr. Cooke, to show a comparison of the reports of these companies to the Commission and to the taxing authorities.

BY MR. EVANS:

Q. Now, Mr. Sheaffer, your department then places at the bottom of page 1 the assessment which it places on the capital stock, is that correct?

A. That is the place where the taxing officer makes his notations to the value to be fixed upon the stock, and the last page of the report is the final settlement made by the Department of Revenue, which is approved by the Auditor General's Department and signed in accordance with the Act of Assembly.

Q. Well, now then, you have stated the capital stock was assessed, as I understand it, at \$3,000,000, and a 5 mill tax of \$15,000 paid on that?

A. I have not the records with me to show that the tax has been paid; it has not been appealed or a petition filed for a resettlement of the account.

Q. So the tax is at present due on that, or it has been paid?

A. I cannot say whether it has been paid or not. The records would show that in the office.

Q. Now, just to get the idea of one or two of the larger companies. Here is the 1929 capital stock report of the Duquesne Light Company. Will you in the same way run over the figures like that, so that I can be sure that I can understand it.

A. For the year 1929 Duquesne Light Company reported net assets of \$9,588,335.03. They paid dividends of \$9,575,000. They have preferred stock outstanding amounting to \$27,500,000; common stock with a par value of \$50,700,000. \$3,503,330.79; surplus invested in mixed capital of \$1,083,238.17; intangible surplus of raised from a restatement of book values of properties \$8,462,579. On page one of the report the net worth of the company, being the difference between the assets and liabilities is reported here as \$49,490,068. The average earnings for the five year period ended December 31st, 1929 were \$6,919,780.78; average dividends \$6,656,666.66; the average net worth, \$44,469,569.04. The taxing officers placed their value upon the capital stock of \$77,821,875.

BY FATHER COX:

Q. You never questioned the corrections of these statements, then, do you, with a big company like that.

A. Yes, we do question it, because the net worth of the company reported on page one was \$49,490,068 and the taxing offices place a value of \$77,821,875.

Q. That is good. That is a Pittsburgh company and we want to know something about it, to see if they are keeping in line, isn't that right, Mr. Hagmaier. We feel that figures don't lie, but liars will figure.

THE WITNESS: May I say to you further that that value of \$77,821,875 represented the book value of the common stock and the preferred stock at its sale price of the market.

BY MR. EVANS:

Q. Now, Mr. Shaeffer, I understand that here again the assessment of the tax is endorsed on back of the return as made by your department.

A. That is correct. In this particular case the company had certain taxes which were exempt from taxation, for which the company was given a proportionate deduction.

Q. You here have made an allowance for the assessed tax finally \$76,000,000—

A. The amount of tax was assessed on \$76,320,302, being a tax of \$381,601.51.

FATHER COX: You never found any difference in the value they placed upon it for rate making purposes, and the value they place upon it for tax paying purposes.

MR. EVANS: We are going to take that up later Father Cox.

BY MR. EVANS:

Q. Now, I notice on some of these returns there are names stamped, for instance, on this there is Howard M. Bingham, Attorney at law, Harrisburg, Pennsylvania, what does that mean?

A. Mr. Bingham is the attorney for the company in Harrisburg for tax matters.

Q. Take up another of the larger companies, Mr. Shaeffer, and I show you the 1929 return of The Metropolitan Edison Company. Will you explain to the committee how that return has been made out and the assessment of the capital stock made by your department.

A. The company fixed a value of \$14,952,140, upon the capital stock for the year 1929. The net earnings for the company for 1929 were \$3,191,379.89. The average net worth of the company for the five year period, as fixed by its officers, was \$12,937,816.90. The average earnings for the same period was \$1,859,947. The average dividends paid \$1,953,412.93.

Considering the earnings and the dividends paid, the assets and other features of the report, the taxing officers fixed a value upon the capital stock of \$21,552,000, whereas the officers of the company appraised the stock at \$14,952,140.

BY MR. MEMOLO:

Q. Where there any exceptions taken to that?

A. They have filed a petition for a resettlement, claiming that the value is too high. There has been no action taken upon the petition filed by these attorneys.

BY MR. EVANS:

Q. And in this case I gather that from the figures and the endorsement that there was a small amount of this property which was also exempt from taxation?

A. That is correct. The net amount of the tax for the year 1929 was \$21,318,784. The tax on that at five mills was \$106,593.92.

Q. On this return I notice the stamp of Homer Shoemaker, Harrisburg, Pa. I assume that he is the representative of the company in tax matters?

A. He is the company's attorney in tax matters.

FATHER COX: Another thing that we ought to look into are these exempt exonerations of these public utility companies. In the city of Pittsburgh the exonerations on charitable institutions and utilities are \$225,000,000, and now, out of that there is at least ten million exonerated for public utilities. I think the Committee ought to go into that. It is wrong. They are better able to pay than the ordinary household. People cannot own property any more on account of paying the taxes that public utilities ought to pay.

(Discussion off the record)

BY MR. EVANS:

Q. Another one here. The 1928 return of the Philadelphia Electric Company; will you explain that, briefly to the Committee?

A. For the year 1928 the officers of the company fixed a valuation of \$92,953,025, upon the stock, the net income for that year was \$11,329,550.18. The company paid dividends from income of \$7,436,242. The report does not show the average earnings, or the average dividend for the five year period.

The par value of the capital stock outstanding was \$92,953,025. The profit and loss account carries liabilities of \$18,623,161.14.

In the original settlement the valuation of \$250,954,050, was fixed upon the account. This account was subsequently resettled and a valuation of \$113,495,000 was fixed upon the stock of the company.

Q. In fixing the value originally, did you use the same basis that you have used for other electric companies, that we have been talking about?

A. No; the first value was based solely upon the average selling price of the common stock as it sold in the market. Apparently in the resettlement consideration was given not only to the average selling price of the stock but to other earnings and dividends paid, which apparently accounted for the reduction in the value of the stock.

BY MR. TURNER:

Q. Don't you think that in figuring the value of the stock, or the average market price, that that is not always a fair value?

A. That is the reason apparently why the account was resettled and reduced from the average selling price to what it was for tax paying purposes, upon earnings, and dividends paid.

Q. We all know, perhaps in the last year and in the year before that there were many stocks that were selling on the market for four or five times of what the book value might have been or the actual value?

A. Apparently that is the reason why the value was resettled, and the lower amount placed on it, instead of maintaining it at the average sale price.

BY MR. EVANS:

Q. In order that I may not misunderstand this answer, you have fixed the value, in the regular course of \$250,954,005, who has authority to resettle those taxes. What is the process under which that is done?

A. The officers of the company being dissatisfied with the valuation that is placed upon the stock of the company, files with the Department of Revenue a petition for resettlement of the account, citing in detail why the settlement in their opinion is incorrect, and any other facts that they desire to present. Of course, they undoubtedly alleged that the sales price was not the correct one to be used in fixing the value of the capital stock.

After a petition is filed, it is considered by the taxing officers of the Department of Revenue, also the taxing officers of the Auditor General's Department. Under the law the Department of Revenue is supposed to review the petition first and fix its opinion as to the value of the stock. That settlement is then sent to the Auditor General's Department for audit, and the Auditor General's Department either concurs or refuses to concur. Under the fiscal code if it fails to concur, it is supposed to be sent to the Board of Finance and Revenue for final determination, but in most cases, if they are dissatisfied with the valuation fixed upon the stock, it is returned to the Auditor General's Department—I mean to the Department of Revenue, and we have a joint conference and agree upon a valuation. Apparently in this case there was such a hearing, because it is marked that there was a hearing had on the facts presented in the petition, and undoubtedly the Auditor General's Department was present at the same time this matter was considered.

Q. When did this resettlement take place?

A. August 25, 1929.

Q. That is indicated by a memorandum in the margin of the return?

A. That is correct. That is the usual method of making the order for the resettlement, on the margin of the original settlement.

Q. There are certain initials, which I am not sure of, attached to the memorandum.

A. "EMS"—Edward M. Sayres, one of the taxing officers of that department marked the settlement for resettlement.

Q. And that memorandum is in his handwriting, is it not?

A. That is in his handwriting.

Q. At the time of this resettlement, Mr. Johnson—was he not the Secretary of Revenue?

A. He was the Secretary of Revenue.

Q. And there was a deputy secretary of Revenue?

A. J. Lord Rigby, Senior Deputy Secretary of Revenue. There are other deputies, but not in tax matters.

Q. Were there any penalties of any sort attached to this?

A. There were no penalties imposed, none being due.

Q. When, ordinarily, would penalties, commence to run?

A. The penalty would start to run for failure to file the report within the time provided by law. Under the act of assembly if a corporation does not file its tax report on or before March 15, it is subject to a penalty of ten per cent. of the taxes due for that year.

Q. How about after the tax is settled and is not paid, is there any penalty or interest then due?

A. If the tax is not paid and the account is subsequently resettled, interest starts to run from the date of the resettlement, rather than from the original settlement date; that is, a corporation. Ninety days from the date of the original settlement or resettlement within which to pay the tax without any interest being charged.

Q. I notice on this report the firm name of Snyder, Miller and Hull. I assume again they were the attorneys representing the Philadelphia Electric Company in tax matters?

A. That is correct. They are the Harrisburg representatives of the company.

BY MR. TURNER:

Q. Who was the Auditor General on that?

A. Charles A. Waters was the Auditor General at that time, the present Auditor General; that is when the resettlement was made. The original settlement was made during the term of Edward Martin as Auditor General.

Q. The original settlement?

A. The original settlement.

BY MR. EVANS:

Q. And Edward Martin was the State Treasurer and the time of the resettlement?

A. I beg your pardon. Mr. Waters was Auditor General at the time of the original settlement, and General Martin State Treasurer. That was before the Department of Revenue was instituted, the Department of Revenue having begun to function on July 1st, 1929, and the original settlement was made on May 8th, 1929.

Q. When was the resettlement?

A. August 21st, 1929, after the Fiscal Code was in operation. When the settlement originated in the Department of Revenue, it is approved by the Auditor General, I repeat the principals for the benefit of counsel and the Committee. The original settlement of this case was made by the then Auditor General, Charles A. Waters, on May 27th, 1929, by Edwin M. Soyer, Deputy, and was transmitted to the State Treasurer who was Edward Martin, the present State Treasurer, on May 28th, 1929, the settlement being approved by Phil. B. Dunn, who was one of the tax clerks in the department at that time.

Q. This was the original settlement on the basis of \$250,000,000 valuation?

A. That is correct. The resettlement was made after the beginning of the function of the fiscal code.

Q. Who was Auditor General at that time?

A. Charles A. Waters, the duties of the Auditor General having been transferred into the Department of Revenue.

Q. Who was the State Treasurer at that time?

A. General Martin was, but he had nothing to do with the resettlement.

Q. Mr. Sheaffer, take up the 1927 report of the Philadelphia Electric Company, was there also a resettlement of that?

A. Yes, the original valuation was \$187,500,000. The valuation fixed in the resettlement at a hearing was \$92,116,365, also made on August 21st, 1929.

Q. At the same time as the 1928?

A. That is correct, the answer being that the company was about to be merged with several other companies and the record shows here there were appeals filed from the original settlement, and these taxes were all adjusted prior to the consolidation.

Q. I show you the 1926 report of the Philadelphia Electric Company and ask you whether there was also a resettlement of that?

A. There was. It was made on August 21st, 1929, the original valuation was \$171,036,301; the revised valuation was \$70,817,438, made at the same time as the other.

Q. And made in the same way that you have already testified to?

A. Yes sir.

Q. The original settlement in this case was made in September, 1927?

A. Yes sir.

Q. And the resettlement in August, 1929?

A. Yes sir.

Q. Was there a resettlement of the 1925 capital stock tax of the Philadelphia Electric Company?

A. That account was also resettled. The original valuation was \$118,738,889, the adjusted valuation was \$75,377,906, and was made on August 21st, 1929.

Q. Now in these resettlements for the earlier years, were there any penalties or interest added to the amount finally fixed?

A. No, there would be no interest due because the accounts were resettled. The resettlement voided any interest charges from the date of the original settlement.

Q. Under the law they have a right within ninety days to file an application for a resettlement?

A. That is correct.

Q. And after the resettlement they have sixty days to make settlement of their taxes?

A. It is ninety days. In this particular case for a while the Department of Revenue and the Auditor General's Department were maintaining they could sustain the market sales price for the use or basis of fixing the capital stock tax valuation. They later discovered that the market was entirely out of line with any real valuations and they then considered not only the sales price but the earnings, the dividends paid and the assets which manifestly accounted for this adjustment here.

BY MR. COOKE:

Q. Some of these reports were for the years before we made the discovery that the market price was above the real value?

A. No, there were a number of companies that had been contending that for quite a few years, that the sales price was not the real basis, and these companies that were fortunate enough to file appeals were in a position to have their cases opened up and those cases were successful.

BY MR. EVANS:

Q. Mr. Sheaffer, do you use a different method in assessing the capital stock taxes on the Philadelphia Electric Company originally during the years 1925, 1926, 1927 and 1928, than you used for other companies whose stock was listed on the Exchange and currently traded in?

A. For quite a few years, as before stated, the taxing officers contended that under the law they had to use average selling price for the fixing of valuation of capital stock. That was done with many of the large companies. They immediately protested with the result that after much deliberation it was agreed that we could not hold to the average selling price, and therefore that accounts for the difference apparently in the figures which were given in the resettlement.

Q. If my figures are correct, and I ask you to supplement them by checking over them, the original settlement for 1925, 1926, 1927 and 1928 of the Philadelphia Electric Company totalled \$728,229,195, adding them together, and they were resettled for \$351,617,210. In other words they were resettled on a basis of less than fifty per cent. of the original settlement?

A. I have not made any tabulations on that, you have.

Q. Will you do it please?

A. Yes.

Q. Mr. Sheaffer, will you give the correct figures of the total original statements of the Philadelphia Electric Company capital stock for 1925, 1926, 1927 and 1928?

A. I have it here at \$728,229,195.

Q. What was the total for the re-settlements for the same year?

A. \$351,607,210.

Q. So the reduction in the assessments was something over \$350,000,000 for the four years?

A. According to these computations, yes.

Q. You happen to know how the tax attorneys representing these corporations are paid for their services.

A. I cannot tell you.

Q. You don't have knowledge of that?

A. I have no knowledge.

BY FATHER COX:

Q. Is it true that there are a large number of attorneys here specializing on how these taxes can be reduced?

A. There are a lot of attorneys who specialize in corporation tax, corporation law.

Q. Don't they sort of solicit, let organizations know they can do something for them in this line?

A. Mr. Evans can answer you on the ethics in regard to that question.

Q. It is not a question of ethics. What we are trying to get at if the thing is legal, then we ought to have reductions, the small companies ought to have them, it should not be necessary for it to be brought to their attention; there ought to be some way in the state itself to do the just and right thing. I am not questioning the attorneys.

A. The price of a two-cent stamp addressed to the Department of Revenue will be all that is required of any taxpayer paying a corporation tax, if they desire to do it. In other words, the Department of Revenue will not take advantage of any tax paying organization. If the corporation is dissatisfied with the tax settlement and they write to the department and ask how they made the settlement, we are at all times very glad to see that the taxes are equitably assessed. We don't desire to collect one cent more than we are entitled to.

Q. Would it not be well if that could be done without the purchase of a two-cent stamp?

A. How can we tell what they are to pay?

BY MR. COOKE:

Q. Would you say that your instructions for the making out of these returns are in detail comparable to those put out by the Federal Income Tax authorities?

A. We have no printed regulations with regard to the filing of tax reports.

Q. Would it not be desirable for us to have such regulations?

A. That would be a matter for Dr. King to answer.

BY MR. EVANS:

Q. Mr. Sheaffer, if I understand this correctly these four years, their statements were made within two months after the fiscal code became effective, is that true?

A. What time?

Q. Within two months after the fiscal code became effective?

A. The fiscal code became effective July 3, 1929, and the re-statements were made August 21, 1929.

MR. TURNER: Mr. Evans, I don't know whether it is your purpose to follow this up with further testimony, but it seems to me it would be ultimately unfair to leave the impression go out in the public press and the people of Pennsylvania that that tax of \$750,000,000 was settled for \$350,000,000, without bringing out the facts that entered into the re-statements, and which formed the basis for the \$750,000,000 settlement, because I am familiar enough with tax work myself to know the wide divergence many times between the bills, not only to large corporations, but the bills to small ones, to municipalities, where when you get the picture probably set up under the law, and the corporation takes advantage of the opportunities offered under the law, the amount of the bill is reduced very materially.

MR. EVANS: I will be very glad, Mr. Turner, but I thought that had been made clear in Mr. Sheaffer's testimony.

MR. TURNER: The trouble with that sort of figures in Mr. Sheaffer's testimony becomes technical and involved and the newspapers won't print the rest of what Mr. Sheaffer had to say about it, and there is often left with the people, the wrong impression. It is a good story to say that \$750,000,000 of tax were settled for \$350,000,000, and it will be in all the newspapers in Pennsylvania tomorrow, and I think that would be absolutely unfair to the taxing officers of the State; it would be absolutely contrary to the actual fact, or what might the actual facts might be. I don't say that they are, but I think we ought to be fair about it.

MR. EVANS: I certainly want to be.

MR. TURNER: I have no doubt that you personally do.

BY MR. EVANS:

Q. Mr. Sheaffer, take the year 1925, will you explain to the Committee the base on which the original settlement of tax was made and as far as you know it, the basis of the re-settlement. We will get at it year by year.

A. For the year 1925 the average selling price of the Philadelphia Electric Company was \$46.108 a share. That value was used by the taxing officers in making the original valuation of \$118,738,889.

Q. What does the company show as their basis of value.

A. The net earnings for the year 1925 was \$7,537,790.66. The dividends paid for that year were \$5,203,755.50. In fixing the valuation of \$75,377,906 the earnings for that year were capitalized at ten per cent, that is how the amount was determined in the original settlement we used the average sales price, and in the re-settlement it was based on the earnings of the company capitalized at ten per cent.

BY FATHER COX:

Q. Were the reasons for that valid in your estimation as an accountant; you can answer for the state.

MR. EVANS: I think it is a little difficult for Mr. Sheaffer to answer that, as he has approved the original settlement, and I think it is putting him in a position of criticising his superior officers. I don't know whether you want to press it or not.

FATHER COX: No.

BY MR. TURNER:

Q. Mr. Sheaffer did any question of the valuation of the property enter into that. You said you capitalized the dividends, as I understand it—the net earnings, were capitalized, was there any consideration given to book values of the property.

A. Undoubtedly there was in using the figure at ten per cent., because if the dividends which they paid that year would have been capitalized at from eight to ten per cent. it would not have produced a valuation of \$75,000,000.

BY MR. EVANS:

Q. You would not capitalize dividends.

A. Under the law we consider dividends to in fixing a valuation of the stock.

Q. But you don't do it on a capitalization basis?

A. We do in many cases. We consider the dividends paid as one of the tests of value. For example, if the company is earning \$500,000 and they pay dividends of \$400,000 we would take the earnings at the twelve per cent. basis, for instance, at eight or ten per cent basis, consider the net worth of the company from the actual book value, and then fix in our minds what would be a fair value for the company to be capitalized at for tax in the State of Pennsylvania.

BY MR. HAGMAIER:

Q. In their case what did they have?

A. The company itself asked for a valuation of \$53,099,681.

Q. And the final was what?

A. \$75,377,906, or approximately \$22,000,000 more than the company asked to be taxed on.

MR. HAGMAIER: And still they were satisfied, so it is not so much out of the road anyway.

BY MR. EVANS:

Q. Mr. Shaeffer, in order to get this picture complete, Mr. Turner has suggested it, will you do the same thing for the year 1926, the return?

A. Again the average sale price for the year was \$54.12, using the valuation the total value of the stock would be \$171,036,301. The net earnings for that year were \$6,202,363.76. Dividends were paid of \$7,954,043.50. The valuation asked by the officers of the company was \$70,954,043.50. The valuation fixed by the taxing officer in the re-settlement was \$70,817,438. If the earnings would have been capitalized on a 10% basis, the value would have been much less for 1926. Therefore the taxing officer undoubtedly considered dividends paid as well as earnings for that year, in addition to the net worth of the company.

Q. Now will you do the same for 1927?

A. The average sale price as fixed by the tax officer was \$52.46 a share. Using that as a basis would give a valuation of \$187,302,397. The valuation fixed by the taxing officer was \$187,500,000, which was round figures. The earnings of the company for that year were \$9,715,636.51. The dividends were paid were \$7,140,662. The valuation requested by the company was \$68,341,998.91. The revised valuation fixed by the taxing officers was \$92,116,365, or approximately \$24,000,000 more than the company asked to pay.

Q. And in 1928?

A. In 1928, based on the average sales price of \$67.80 a share, the valuation was \$240,954,005. The earnings as reported for that year, were \$11,329,550.18. The valuation as fixed by the company and requested was \$92,953,025. The valuation used by the taxing officers in settlement was \$103,295,501, or \$21,000,000 approximately more than the company appraised the stock.

Q. In order to bring it down to date, I show you the capital stock report of the Philadelphia Electric Company for 1929, for ten months.

A. The report for the first ten months of 1929 shows that the net income for the first ten months was \$10,859,496. The dividends paid during that period were \$5,554,181.50. From the information, which I have before me in the report, it appears that the company did not place a value upon the capital stock for that ten months period. The taxing officers fixed a valuation of \$130,313,952, for the ten months period, which account was not resettled.

BY MR. HAGMAIER:

Q. What are their figures in that?

A. They did not fix a value on the capital stock.

BY MR. EVANS:

Q. On what basis do you fix that value of \$130,000,000.

A. Those earnings, cover a period of ten months. It was assumed that earnings for the last two months would be approximately one-fifth more. Therefore, the taxing officer when he made the settlement, computed the net earnings at \$13,131,395.20. On the capital stock—and capitalized that amount at ten per cent, in fixing the value. The report filed for the next two months shows that the net earnings were \$3,462,915.22.

Q. There had been a merger, had there not, with the Philadelphia Electric Company and the Suburban Counties Electric Company as of approximately November 1, 1929?

A. The taxes were settled on that basis. The officers of the company placed a valuation on the stock of \$129,494,500, which the taxing officers raised up to \$170,000,000. The valuation apparently has not been contested, because the record shows no petition having been filed for resettlement. In other words, for the last two months the taxing officers increased the value of the stock of the Philadelphia Electric Company for taxing purposes approximately \$41,000,000 more than they appraised the stock.

BY MR. HAGMAIER:

Q. Has the date for filing passed on that?

A. Yes sir.

Q. They were satisfied with the \$41,000,000 raise?

A. Apparently satisfied.

BY MR. EVANS:

Q. This resettlement had a reduction of \$376,000,000, would be a reduction in taxes of 5 mills on that figure, would it not?

A. That is correct.

Q. Or somewhere in the neighborhood of between—some-what under \$1,900,000?

A. That is correct.

MR. EVANS: In order that the record may be perfectly straight, I wish to state, in suggesting that Mr. Hull might throw some light upon the situation, I was under the misapprehension that Mr. Arthur H. Hull was a member of the firm of Snyder, Miller and Hull. The gentleman informs me that that is not the case.

MR. TURNER: Mr. Evans, is it your intention to leave or do you intend to imply that the settlement made by the department originally on the basis of \$750,000,000 or on the basis of the average price of that stock was the proper basis upon which it should have been settled?

MR. EVANS: I don't know that I can express any opinion on that Mr. Turner. I think we ought to get it perfectly clear on the record what was done, and then any inferences, that we can draw from that can be drawn as a matter of inference.

BY MR. EVANS:

Q. As I understand the situation, the original settlements for the years 1925 to 1928 were based solely on the average market value of the stock of the Philadelphia Electric Company, it being a stock that was listed on the Exchange currently traded in?

A. That is correct.

MR. TURNER: But Mr. Evans, if that is not a legal basis upon which to make the settlement, then it seems to me that the figures have no value at all in arriving at anything, and might lead to improper inferences on the part of people who do not know.

MR. EVANS: Mr. Turner, I am sorry, I cannot recall any decision on the subject, as to whether that is the proper basis and I don't think there is any decision.

MR. EVANS: Mr. Turner, I am sorry, I cannot recall any.

Q. As I understood you, it was the practice of the Bureau during this time to tax the capital stock tax of corporations whose stocks were currently traded in on the exchange on the basis of the average price of the stock?

A. That is correct. For a time the taxing officers were of the opinion they could sustain valuation along on the average selling price without considering earnings, dividends, or assets. Many of the large corporations were dissatisfied with this determination and accordingly filed appeals from the original settlements, as the Philadelphia Electric Company did. They contended that that was only one of the tests as outlined by the law. As a matter of correct statement, it is one of the tests; the sales price, but there are other tests in fixing the value of the capital stock; that is, earnings as heretofore testified, dividends paid, assets, the nature of the business in which the company is engaged, and any other relevant fact that must be considered in fixing the value of the capital stock for tax purposes; that is, the value of the capital stock so that the department therefore, in the resettlement apparently has considered all of those features, rather than solely the sale price in the original settlement. Is that the matter on which you desired information?

BY MR. TURNER:

Q. Let me ask you how long have you been in the department?

A. I have been with the State of Pennsylvania since July of 1925, having been with General Martin in the Auditor General's Department until May 6, 1929, when I became Assistant State Treasurer, which office I held until May 1, 1930. Since May 1, 1930, I have been a Supervisor of the tax bureau in the Department of Revenue. Prior to that time I was for eight years a law clerk in the office of an attorney practicing corporation law and corporation taxes.

Q. I was not asking you for your qualifications so much, but I was trying to find out how far your history runs back in the department.

A. My personal knowledge of what the department is doing has been since July, 1925, and my outside knowledge of what the department has been doing, since 1917.

Q. How long have those bases for capital stock purposes been used; that is, the average price of the stock?

A. It was started somewhere around 1925, using solely the sales price for a while, but the large companies—

Q. Who was Auditor General at that time?

A. General Martin was, was he not?

Q. Yes; General Martin was Auditor General at that time.

Q. Therefore, at that time you were only taxing on the valuation of the stock, the average price of the stock, which was one of the elements stated in the law?

A. That is it. We took the valuation as measured by the sales price, for a number of large companies where their stock was actually traded in on the exchanges.

BY MR. EVANS:

Q. How many of these companies approximately would there have been?

A. There are a hundred of those whose stocks are traded in on the New York Stock Exchange and the Philadelphia Exchange, the Chicago Exchange, the Pittsburgh Exchange.

Q. Taking the companies actively traded in on the New York City Exchange. How many companies would there be, approximately, that would file stock returns in Pennsylvania?

A. There are forty thousand corporations approximately operating in Pennsylvania.

Q. I am trying to get at approximately the number of corporations you assess on this basis during this period?

A. I cannot answer that because settlements were made mostly against the large companies on this basis.

Q. What do you refer to as these large companies.

A. The Pennsylvania Railroad, the Reading Railroad Company.

Q. Did they appeal?

A. They have. The New York Central. They have all appealed, every one of them.

Q. Have their taxes been resettled on approximately the same basis as this?

A. They all have been held pending the outcome of the case of the Pennsylvania Railroad Company which is now in the courts. It has not been decided.

Q. It has not been decided as to what the method is?

A. It has not been decided as to what the deductions are.

Q. Is there any case where you did apply the sales price only which was taken into the courts and that method declared to be improper?

A. No sir.

BY MR. TURNER:

Q. The anthracite coal companies appealed too, didn't they, Mr. Sheaffer?

A. Yes sir, some of them did.

Q. There were a number of them over a number of years?

A. Yes, but that was mostly on the anthracite tax.

BY FATHER COX:

Q. Would it be too expensive to these smaller companies to make an appeal?

A. No sir.

BY MR. MOORE:

Q. Is it true that a number of companies have been assessed taxes that were paid on this basis?

A. There may be some, but the most of them contested it where it was done, that is the large companies contested where it was involving large sums.

Q. And they all accepted the raise from ten to fifteen millions above what they put in in the first place?

A. We have raised them considerably. We have not used what they think, but what we thought was a fair value for capital stock tax purposes, considering all of the measures I have referred to.

BY MR. WALKER:

Q. You yourself approved the original settlement in this case?

A. I did not. They were made by Mr. E. M. Sayers, one of the tax officers.

BY MR. MEMOLO:

Q. What average did you use in fixing the price on stocks?

A. We used the yearly average as one of the tests. We capitalized the earnings at from ten to twenty per cent.

BY MR. EVANS:

Q. Where you did use the market value of the stock, how did you determine the market price during the year?

A. By the figures usually given by the company where they are required to give the average price, the mean between high and low.

Q. What period did you use?

A. The year for which the report was made.

FATHER COX: It is a kind of a gamble?

BY MR. MEMOLO:

Q. For 1928 and 1929, you had a very high average for those two years?

A. Yes sir. The sales price for stock during the year 1929 had a material influence upon the revenue collected by the State in 1930 for the last biennium.

BY MR. EVANS:

Q. In 1929, the stock of the Philadelphia Electric Company was not listed, so you could not use the market value there, could you?

A. The report here shows for the last two months it was not listed. That I could not be able to tell you without checking it. I know of my own knowledge that the United Gas Improvement Company acquired the stock of the Philadelphia Electric Company, but I would have to check the records to find the exact facts.

W. M. DIETRICH recalled.

BY MR. EVANS:

Q. You already have been sworn in this proceeding?

A. I have.

Q. Mr. Dietrich, have you made a study of the fifty-three capital stock reports which were introduced this morning?

A. I did.

Q. You have not examined, of course, the Philadelphia Electric Company reports which were introduced this morning? As these have been produced today for the first time. Now for what purpose particularly did you examine these capital stock reports?

A. The purpose for which I examined the capital stock reports was to pick out the electric companies that showed a difference in valuation in fixed property in the Public Service Commission reports for the year 1929 as compared with the capital stock reports of these companies for the year 1929.

Q. And have you prepared an exhibit setting forth the result of your investigation?

A. I have.

Q. I show you paper headed "Electric Utilities A and B. Comparison of Reports to Public Service Commission and Reports for Capital Stock Tax Purposes 1929." Is this the paper to which you refer?

A. It is.

MR. EVANS: I offer this as Exhibit No. 107.

Q. This exhibits covers eighteen companies, I believe?

A. Yes sir.

Q. The rest of the fifty-three companies did not show any material reduction in their actual value of fixed assets in their capital stock report from those set forth as fixed capital in their reports to the Public Service Commission?

A. Either they did not show any material reduction or they did not extend any fixed value into the actual value column.

Q. You have taken all the companies where the figures were extended and which showed a reduction in their capital stock report from that shown in their reports to the Public Service Commission?

A. That is right.

Q. Take for instance, the Bangor Electric Company. Explain to the Committee, if you will, the figure in the second column of \$133,767.03. How do you derive that?

A. That was the fixed capital as shown in the Public Service Commission report for 1929 less reserve for replacements and renewals as shown in this same report.

Q. And without any deduction for work in progress?

A. That is right. I included work in progress.

Q. Now the next column headed "Actual Value Fixed Assets Capital Stock Tax Report Figures \$70,125.36." How did you arrive at that figure?

A. That figure is shown as the actual value of fixed property placed by the officers of the company on its property as shown in their capital stock tax report for the year 1929.

Q. On page 2 of the report?

A. That is right.

Q. So the figure which they show in their capital stock tax report is the actual value of their equipment and fixtures you have taken and inserted in column 3 of Exhibit 107?

A. That is right.

Q. Then the next column, Mr. Dietrich, represents, as I understand it, the ratio of column 2 to column 3?

A. That is right.

Q. The fifth column entry says what?

A. Gross income as shown in the Public Service Commission report, plus the loan tax which was charged back, less rents.

Q. Now, take that figure on the basis that you understood Mr. Morgel's testimony as being the proper way of arriving at the income of the company, you did that.

A. I did.

Q. And the next column shows the percentage of the gross income to the fixed capital as shown in the reports of the Public Service Commission.

A. That is right.

Q. And in this case is 7.04%.

A. Yes.

Q. What percentage is the gross revenue in column five of the actual value of assets, as shown in the company's capital stock report.

A. 13.02%.

Q. In other words, the sum of \$9,410.98 in 13.42% of \$70,-125.36.

A. That is right.

Q. And for each of the companies you have prepared the data in the same way.

A. Yes.

Q. Now, I notice column three, after some of the figures you have inserted letters A. B. C., those refer to notes at the bottom of the exhibit, do they not?

A. Yes.

Q. Taking up note A for the Clarion River Power Company, will you explain that to the Committee.

A. The Clarion River Power Company on their capital stock report set a value of \$5,000,000 as the actual value of the fixed properties. In comparing the figures on the liability side of the capital stock report those on the liability side of the Public Service Commission report, I found that the reserve repairs and renewals of \$226,677.35 as shown by the Public Service Commission report, was shown as a liability on the capital stock report, so in computing the actual value in that case I deducted the reserve from the actual value as shown by the capital stock tax report.

Q. In other words, you deducted from the \$5,000,000, \$226,-667.35 reserved for repairs and renewals.

A. Yes.

MR. TURNER: Now in taking the Clarion River Power case as an example, might the capital not be the fixed capital less reserves, \$11,226,390.66, and the actual value \$4,473,322.67, might those figures not be actually true, and might the company not have \$11,000,000 capital and only have assets of \$4,000,000.

BY MR. EVANS:

Q. Will you explain that, Mr. Dietrich, to Mr. Turner.

A. That figure of \$11,000,000 is not their capital, it is fixed property.

MR. TURNER: You say here capital.

MR. EVANS: That is the heading, Mr. Turner, in the report to the Commission.

THE WITNESS: That is the heading, it is under there, it is the value of the fixed property, their capital may be entirely different from that.

MR. TURNER: That is what I wanted to know.

MR. COOKE: These are the same figures that they put in before the Federal Power Commission.

BY MR. EVANS:

Q. Now going down to note B, for the Erie Light Company, a similar situation exists, though the figures are somewhat different.

A. Yes.

Q. That is the case, is it not?

A. Yes.

Q. And with the Solar Electric Company it shows Note C, that the same general condition appears.

A. Yes.

Q. Now, Dietrich, have you any special comments to make in regard to certain of these companies.

A. I have if the Committee is interested in them.

BY MR. COOKE:

Q. May I ask, Mr. Dietrich, why the Penn Central is not here, under what rules are they not shown.

A. They showed no actual value.

MR. EVANS: You see, some of the reports, Mr. Cooke, do not show, the capital stock reports, do not show their actual value, the company just left it blank, and Mr. Dietrich has

been unable in those cases to make the comparison. It is only when the reports have shown the actual value on page 2 of the capital stock report that he has been able to make the comparison.

MR. COOKE: The same thing applies then to the Philadelphia Electric Company?

THE WITNESS: Yes.

FATHER COX: I have listened to this, the methods used in all these valuations and figures, and they are so fantastic, really fantastic and misleading, that it seems we ought to have some system of sound computation. It is just anything that these accountants say, and no reflection on them, they are all wonderful men, but what is it? There is nothing there. It is just a fantasy; whatever you imagine, whatever you dream, whatever you put down.

MR. EVANS: I think the significance of this exhibit is primarily in the fact that it shows the difference between the claims of the company when they are making reports to the Public Service Commission, and when they are making reports for tax purposes. It may perfectly well be that there is a difference between the value for taxation and the value for rate making purposes, but this merely brings that into the picture, and that is the purpose of it.

FATHER COX: We have no rule, no law, nothing to determine these things. I think with our modern efficiency in business—I don't see why we cannot have a little efficiency in the regulation of this thing, and in the State's way of looking at it. We just take anything.

BY MR. EVANS:

Q. Well, Mr. Dietrich, have you got any other facts that you wish to call attention to. I think you were in the midst of calling attention to the first one, were you not?

A. There are several of these companies show a difference in their surplus. In the Public Service Commission report as compared with the capital stock report, for instance, the Bangor Electric Company in the Public Service Commission report shows a surplus of \$14,554.17, while the surplus in the capital stock report is \$8,367.71, or a difference of \$6,186.46.

Now, these reports are made of the same date?

A. Yes.

Q. Now, what have you to say in regard to the Clarion River Power Company?

A. The Clarion River Power Company in their capital stock report shows no value at all on their capital stock, that is, the officer's own opinion as to its capital stock.

Q. As a matter of fact it shows a minus value, does it not?

A. It shows a minus value of \$2,838.621.

BY MR. HAGMAIER:

Q. Should not the department send a statement of that kind back?

A. This company has outstanding, according to the Public Service Commission report \$650,000 in common stock and \$4,453,000 in preferred stock, or a total of \$4,518,000 of capital stock on which they place no value in their capital stock report.

BY MR. EVANS:

Q. Now, this is the company I think Mr. Sheaffer testified the Bureau fixed a value of \$3,000,000 on the capital stock?

A. It did.

Q. Now, how about the Erie Light Company?

A. The Duquesne comes next.

Q. The Duquesne Light Company, have you something to say there?

A. The Duquesne Light Company reduced their surplus in the capital stock tax report \$7,388,418.54. The Duquesne Light has reduced the value of their fixed capital from the Public Service Commission report and the capital stock report of approximately \$42,000,000, and the reduction is due principally to the throwing out of intangible values which they claim have no value for capital stock tax purposes.

Q. For capital stock tax purposes?

A. Capital stock tax purposes.

Q. What do these amount to that they have arrived at, approximately?

A. Approximately \$40,000,000 worth of intangibles they throw out.

FATHER COX: But, oh, how they dwell on them for rate purposes.

THE WITNESS: I can read you the list of these intangibles if you want them.

BY MR. EVANS:

Q. What is this, Mr. Dietrich. Have you got anything to say about the Metropolitan Edison?

A. The Metropolitan Edison Company reduced their surplus \$241,751.88, the capital stock report as compared with the Public Service Commission report.

Q. Have you anything else in particular that you wish to call attention to? The others seem mostly smaller companies?

A. Not unless the Committee has something else that they want to ask me about.

BY MR. COOKE:

Q. Have you any accounting theory for why the surplus should be different?

A. No, sir. In the most of these cases they have taken a reduction in surplus and added it to the reserves, as shown in the capital stock report. They have taken a reduction in the Public Service Commission report and added it to the reserves in the capital stock tax report. That would go to reduce the value of the capital stock for tax purposes.

Q. That is, the surplus is higher in the Public Service Commission than it is in the—

A. Yes, sir. It is over \$7,000,000 in the case of the Duquesne Light.

BY MR. EVANS:

Q. On the other hand by including it in surplus and not in the reserves in their reports to the Public Service Commission, they get a higher book value, do they not, of their property?

A. You mean to the Public Service Commission?

Q. Yes?

A. Yes, sir.

Q. At the bottom of this exhibit you have deducted the total of the actual used in their capital stock reports in column three from the fixed capital as shown in their reports to the Public Service Commission, as shown in column two, and show a difference of \$63,901,584.42?

A. Yes, sir.

Q. I think it is self evident what you mean by that. You have applied the five mill tax return to that difference to show the difference in the amount of tax which would have been payable.

A. I wish to explain that this is a theoretical loss, contingent on the fact of whether or not the taxing department would use that basis in computing the tax. Now, Mr. Sheaffer has explained that there are several methods used, and if this method was used there would be that theoretical loss to the State in the reduction of these values. Meaning there would be that theoretical loss to the State in the reduction of these values.

Q. In other words, if any capital stock was based on the fixed capital of the company less reserves, as reported to the Public Service Commission there would have been this additional amount of tax payable.

A. Yes, sir.

MR. TURNER: It seems to me the way I would have done it would be to find out on those returns well what the taxing officers actually does fix particular value, and then have taken the difference, or to make another computation.

MR. EVANS: This is off the record.

MR. TURNER: It seems to me we are getting a great many things off the record.

MR. EVANS: I shall be glad to put anything on the record that you want.

My understanding of this is that under such an addition it would not indicate anything at all. Yet I might be mistaken entirely, but I think the basis of the tax fixed by the revenue bureau will be considerably less than the actual value of fixed assets shown on the report.

MR. TURNER: I think it ought to be set forth, but I don't think you ought to compute, as the bottom here the value of 5 mill tax based on these figures,—it was perfectly proper for you to do so—the difference between these two figures and these two reports; but then you take a computation and put a

five mills tax to show what the return would be on these two figures, when the tax not based on the actual figures as shown in the report.

MR. EVANS: I think Mr. Dietrich has made a theoretical calculation.

MR. TURNER: You don't mean to say you ought not to make a theoretical calculation.

MR. COOKE: It may be greater or less than that. He is presumably taking a method—

THE WITNESS: Mr. Turner, there would be no basis of comparison; if the taxing bureau used the basis of the selling value of the stock or the average price of the stock in the market for the year—then there would be a comparison; yes.

MR. TURNER: Sure, there would be a basis of comparison.

THE WITNESS: That is the reason I said that.

MR. TURNER: But that is a false premise, and I don't think you ought to place in the record a false promise.

MR. EVANS: In order to make the record perfectly clear, I will put into the record the values fixed by the Department of Revenues:

The Bangor Electric Company tax, according to the report has not been assessed; it is blank;

Bradford Electric Company, taxable value of capital stock in Pennsylvania \$1,290,000;

Clarion River Power Company, taxable value \$3,000,000;

Delta Electric Power Company, taxable value of capital stock in Pennsylvania \$21,764,000;

Delta Water Power Company, \$43,661,000;

Duquesne Light Company, \$76,320,300;

Erie Lighting Company, \$2,991,651,000;

Fleetwood & Kutztown Electric Light, Heat and Power Company, \$300;

Metropolitan Edison Company, \$21,318,784;

Northern Pennsylvania Power Company were recently taxed at \$972,878; re-settled (as near as I can make it, this will have to be subject to a correction) \$600,000;

Portage Light & Power Company, \$87,500. It is marked "Re-settled and taxed \$87,500, eighteen months to seven—1-29 paid as per letter attached" There was a merger here, and this was a return for seventeen or eighteen months.

Rockingham Light & Power Company, \$30,000;

Solar Electric Company, \$75,000;

The South Penn Power Company, \$834,000;

The Southern Pennsylvania Power Company; originally settled at \$98,015, resettled \$68,611;

Sullivan County Electric Company, \$50,000.

This is marked a petition for resettlement filed. That does not appear to have been acted on.

MR. COOKE: Mr. Evans, did you get that Sullivan County correctly?

MR. EVANS: A taxable value of stock in Pennsylvania, \$50,000 tax rate of 5 mills \$250.

Wellsboro Electric Company, \$150,000.

Winber Electric Company, \$88,423.

BY MR. EVANS:

Q. Will you, at the next hearing total the figures, which have just been read into the record as of the value fixed by the Department of Revenue for the capital stock tax, in order that we may have a basis of comparisons of the totals given on your exhibit 107.

A. Mr. Evans, there is no comparison.

Q. Mr. Turner wants the figures and we will put it in, and then you can make an explanation as to why it will be significant, because I want it to be perfectly clear. Will you make the explanation now.

A. Yes, sir.

Q. You may go right ahead, as to why that figure would not be a significant figure for us to have.

A. The figure I have set out here as the actual value of the fixed assets is the value the corporations' officers placed on the fixed assets of the company for tax purposes. Now, they may have other assets, such as cash and other current assets, deferred charges and investments that are not included here. Then when we come over to the value put on the capital stock by the taxing authorities, the liabilities come in, and we have no consideration of the liabilities here. This is the actual value of the fixed property as shown by the capital stock taxes and that alone.

MR. EVANS: The purpose of totalling these figures, Mr. Dietrich, was merely to show the difference in the value placed

on the actual value of their fixed assets in their capital stock report and the corresponding items in the reports to the Public Service Commission.

MR. DIETRICH: I think I am safe in saying that three-fourths of these companies, the tax is actually based on the value of the capital stock rather than on any price basis, and this would influence the value placed upon them by the taxing officers.

MR. TURNER: I think I understand perfectly well what you are proving by these two columns of figures. My objection was to a computation of a five mill tax on the difference between the two columns. I don't think there is any use to pursue this any further unless you desire it.

MR. EVANS: Now Mr. Dietrich, suppose you put it around the other way. Have you made any calculation as to what would be the reduction in the revenue to which these companies would be entitled if the value of their property for rate making purposes would be reduced by the figure of \$63,901,584?

A. That at seven per cent would be \$4,473,110.91 excess that the consumers paid.

Q. Now, assuming that these are the right bases—

MR. TURNER: Mr. Evans, have we had in evidence the actual values fixed by the Public Service Commission in any of these cases? Have they fixed the valuation for any of these companies in rate cases and has that been in evidence?

MR. EVANS: I cannot answer that offhand.

MR. TURNER: It seems to me it might be interesting to have another comparison as against this first column.

MR. EVANS: Will you, Mr. Dietrich, also check up and see if any of these eighteen companies have been valued for rate making purposes?

MR. DIETRICH: If you want me to make a better comparison I will take the valuation as shown by the Public Service Commission report on these eighteen companies, and calculate the capital stock tax on that basis.

BY MR. EVANS:

Q. Now is there anything further, Mr. Dietrich, that you wish to add in discussing this exhibit?

A. No sir, not unless the Committee wants something more.

Q. Is there anything the Committee wants to ask? I think that is all we have for today unless the Committee wishes to sit this afternoon.

THE CHAIRMAN: This committee will now stand adjourned until next Wednesday, April 1st, 1931, at 2.00 o'clock P. M. in this room.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Wednesday, April 1st, 1931, at 2.00 o'clock P. M.

There were present:

Messrs. D. Glenn Moore, Chairman  
Bart Richards  
Martin Memolo  
Louis W. Hagmaier  
Ellwood J. Turner  
Frank L. Bowers  
Chester A. Rhodes  
Harry A. Crawford  
Morris L. Cooke  
Harold Evans, Esq.  
John M. Waler, Esq.

#### WATER SUPPLY—GREENWOOD, BLAIR COUNTY

JAMES EDWARD AMMERMAN sworn.

BY MR. EVANS:

Q. What is your full name?

A. James Edward Ammerman.

Q. And where do you live?

A. I live in the district of Greenwood, Logan township, Blair County, Pennsylvania.

Q. You have some difficulties with your water situation there, and will you explain those difficulties, briefly, to the Committee?

A. We have an inadequate supply of water.

Q. Would you, please, state who supplies the community with water?

A. Part of the community is supplied by Mr. J. M. Hutchinson.

Q. And does he operate as an individual or a company?

A. An individual; yes sir.

Q. And who supplies the rest of the community?

A. The Home Water Company.

Q. Does Mr. Hutchinson have a certificate of public convenience from the Commission; do you know?

A. Not that I know of.

Q. Now, will you explain briefly the difficulties that you have had.

A. Well, we don't have enough water at any time for to supply the community or the one hundred and five taps which he has got. That is the line that Mr. Hutchinson has, and since school started, during school hours, one-half of the community is shut off during school hours and the other half have water.

Q. Is this situation this year due to the drought or is this a situation that has existed before?

A. It has existed before.

Q. Have you taken it up at all with the Public Service Commission?

A. The Public Service Commission made a ruling with Mr. Hutchinson.

Q. And as a result of that ruling, was the situation remedied?

A. No sir.

Q. What did the Commission order Mr. Hutchinson to do?

A. Mr. Hutchinson was going to shut the water off for all the people; the people refused to pay the water rent unless he could give them a sufficient supply of water, to supply their needs, and he said he would shut the water off on them. Then, we made a complaint to the Public Service Commission for not having a sufficient amount of water, and then Mr. Hutchinson—about Mr. Hutchinson shutting the water off, and then they made a ruling on that. That was the hearing on the 23rd day of April last year.

Q. And the Commission ordered him not to shut the water off?

A. Yes sir.

Q. But you still have that difficulty with the inadequate supply, do you?

A. About the same thing we have always had; yes sir.

Q. What is the situation with regard to the Home Water Company?

A. It is another location, but it is a part of Greenwood. It lays to the east, it has only got one line running from their base of supply over to East Altoona, across Little Ridge. Now, they won't supply water to anybody, unless they lay their own water lines. They have their main line. Some people laid 500 feet, 800 feet and 1,000 feet, and they must pay for that themselves before they get water. He has no fire protection or anything of that kind.

Q. Has there anything ever been said to the Public Service Commission?

A. To the best of my knowledge, I couldn't tell you. We then made a petition—we then got up a petition, and we handed it to our attorney, Mr. Woodcock, in Hollidaysburg. That was last September—in regard to the Home Water Company, and to the best of my knowledge, I don't know whether he has filed that with the Public Service Commission or not.

Q. Is the supply of the Home Water Company fairly adequate for—

A. No sir.

Q. You have an adequate water supply even when you do connect with their main, do you?

A. Yes. We don't have any supply. Some people have been out of water for five months, and some for six months.

Q. How many people in the community are served by these two utilities?

A. About 150 taps, outside of the city, and the railroad company.

Q. That is, 150 taps in the Community of Greenwood?

A. Yes sir.

Q. What is the population of Greenwood?

A. Between 2000 and 2500.

Q. And so, there are a good many houses there without water at all?

A. Oh, yes. There is a space in between those two water lines. Quite a number of houses which had made application to this water company, and they wouldn't put it in. They said they wouldn't make any additional extensions.

Q. Is there anything else you wish to say to the Committee?

A. No sir.

BY MR. WALKER:

Q. Is there anyone else who tried to furnish water to Greenwood?

A. We had Mr. Huett, who represents the Home Water Company, and we asked him whether we would be allowed to put our water in ourselves, and he said, "Well, if you do, you will find me there with a rebuttal." Well, then, I said, "There is no use of our going ahead trying to get water," and he said "No, we have the charter for Logan Township." Logan Township surrounds Altoona.

BY MR. EVANS:

Q. Greenwood is situated in Logan Township?

A. Yes; east of Altoona.

BY MR. WALKER:

Q. Have you ever tried to get water from Altoona?

A. Yes sir. That is the thing. They couldn't furnish us with water. They didn't have enough for themselves.

Q. Did anybody ever attempt to furnish water in this territory that is supplied by Hutchinson?

A. Mr. Shaeffer, G. W. Shaeffer.

Q. What happened to him?

A. He had a hearing with the Public Service Commission—I think it was in 1923—and the Public Service Commission, from what I could learn, told him and Mr. Hutchinson to get together on this.

Q. They refused to let Shaeffer serve the district, didn't they?

A. Yes; after Shaeffer had the water shed and all like that, and had the hydraulic engineer go all over the system to see whether it would have a sufficient amount of water for to furnish So, he had spent quite a bit of money. He was developing some ground down below there, and had this water line for his ground and for the benefit of the general public in Greenwood.

Q. Has that service been increased since November 25th, 1930?

A. No, sir.

BY MR. EVANS:

Q. And so, your situation, briefly, is that you cannot get service, from either Mr. Hutchinson or the Home Water Company, and the Home Water Company won't let you or anybody else start a new service in that community?

A. That is the idea.

Q. Is there any connection between Mr. Hutchinson and the Home Water Company?

A. No, sir.

Q. Is the Home Water Company a local company or—

A. The Home Water Company was first organized by the Baker Estate. It was taken over by the Callahan Estate. They went into bankruptcy, and Mr. Hewett bought the Water Company in the bankruptcy sale.

Q. But it is controlled locally in Blair County?

A. By one man. He bought it.

Q. What is the source of the supply that Hutchinson uses?

A. He has got a spring about four hundred fifty six feet, that holds one hundred gallons.

Q. And what is the source of supply of the Home Water Company?

A. If they would develop it, they would have a sufficient amount of water to furnish Greenwood.

Q. They have reservoirs, do they?

A. They have one small one.

Q. I suppose you have no fire protection?

A. None whatever; only a chemical engine. We have a fire department there with a chemical engine. I have a letter here, if you want to look at it from one of the men who had a fire there (producing paper).

Q. Will you just tell the Committee of any instances that you know of of fire losses in that community?

A. This is a letter here that pertained to Mr. Martin's fire. If we would have had water; we had seven or eight companies

there with one engine, a pumping engine and when they came there when the engine came there I was trying to direct the traffic there, and the fire companies—I told them—they wanted to tap on, and I said, "Don't tap on, because if you do we won't have enough for other chemical engines." We seen there was nothing to do with the chemical engine no more; only to let it burn down; they tapped on, and he says with four or five exhausts of the engine the line was completely dry; never had any water.

Q. How much loss was there in that fire; what burned?

A. His garage and gasoline station, about \$2,000 completely destroyed. Then, Mr. Dillon, our neighbor there, had a store. His store and residence, and the next residence to him was burned. We have another committeeman here that can relate that case to you very readily.

Q. Is that all you have to tell the Committee?

A. That is about all.

MR. COOKE: What is the next step after the Public Service Commission issues an order and it is not obeyed?

MR. EVANS: The only order that I have any knowledge of in this case is an order of the Commission, issued November 27th last, restraining J. M. Hutchinson from cutting off consumers who did not pay their bills. There seems to be no other order of the Commission with regard to that.

MR. COOKE: Did he obey that?

BY MR. EVANS:

Q. Did Hutchinson cut off the consumers after this order of the Commission?

A. He threatened everybody to do it.

Q. But he has not cut anybody off?

A. No; he hasn't cut off anybody yet.

HARRY MAYS sworn

BY MR. EVANS:

Q. You are a resident of Greenwood, in Logan Township, Blair County?

A. Yes, sir.

Q. You have heard Mr. Ammerman's testimony with regard to your water situation. Have you anything to add to what Mr. Ammerman has said?

A. Well, I couldn't catch all that he said, but our water conditions have been horrible, and not only last year during the drought, but it has been in previous years, where our children would have to go home to tend to nature. They had to carry water to school in bottles to drink, and we have no water there. We had no water in my house upstairs for five months; and an up-to-date house. We have to go to the city, if we want to get a bath, and we have to carry water from creeks for washing.

Q. Your own house is served by J. M. Hutchinson, is it not?

A. Yes, sir.

Q. And you, I think, filed a complaint against Mr. Hutchinson, that has been referred to, did you not?

A. Yes, sir.

Q. As far as you know, does Mr. Hutchinson have a certificate of public convenience?

A. I wrote to the Public Service Commission in 1928. I don't remember the file number. I mislaid the letter I got from them, and they said Mr. Hutchinson had no water rights, no charter, and he had never made any application to the Public Service Commission. It was a pretty good letter, I cannot remember all of it. I tried to hunt it up to have it as evidence, but I mislaid it; I couldn't get it.

MR. TURNER: Do I understand the witness to say that he never had a certificate.

MR. EVANS: This man, who testified before you came in, said that J. M. Hutchinson served 100 consumers.

THE WITNESS: He has about 150 taps.

MR. EVANS: And he apparently has no certificate to operate as a water service company.

THE WITNESS: He had the water line for his own use when he run the dairy, and J. K. Hamilton, his brother-in-law, he owned all that ground through there, and he left Mr. Hutchinson go through there with his water, with the understanding that the people should have; whoever wanted water could be tapped on this water line, and it was \$3 a tap and 50 cents a year, and then it jumped from 50 cents to a dollar, and then a new collector came on. He jumped the price of water and he jumped the price from \$3 to \$10 a tap, and it

seems as though whenever anybody wants a few dollars, they come around and collect it from you. One man came up to me and said, "Mr. Mays, you have built there. I am going to levy on you for \$10." I kicked, and he said that it is Mr. Kurtz's orders, and I said it was too much, and he came back in a few days and said that Mr. Kurtz had dropped it down to \$6, and the balance that I owed on the water line as soon as I can—I don't believe I had moved in the house, but it was \$7.50. I paid it, and put the rest in my pocket.

Q. In other words, Hutchinson is serving the public and making charges for it, whether or not he has a certificate?

A. Yes. Mr. Hutchinson, told me that he didn't know anything about that levy, for \$6; he didn't order a levy on me for construction work.

BY MR. TURNER:

Q. Is this pipe line on private ground?

A. It is supposed to be a private pipe line, and it runs through my ground too. There is nothing on my deed for them to reserve any rights on it.

BY MR. COOKE:

Q. It is not wholly private ground?

A. Sir?

Q. It does not cover the public highway at all?

A. It comes through my ground and some of the rest of the people below me; through their lots and through my lot and then it goes down an alley, and then it crosses a lot and then it goes down through an alley. There is pretty much private ground the pipe line runs through as it does in alleys.

BY MR. EVANS:

Q. Have you ever tried to get service from the Home Water Company?

A. They are southeast of me.

Q. You are not in their territory, near their main?

A. No; they are about a mile east of me, but we filed a petition supposed to,—and I got about three hundred and two signers, and we canvassed the neighborhood, and got about three hundred and two signers, and I think about the twenty-first of September, I think that is the date, I took it down to Mr. Woodcock to send in to the Public Service Commission, and he says he will send it today. Now, he received money for that. We paid him for his services.

Q. I do not think we are interested in any dispute you may have with your lawyer. That does not enter into this picture at all. If he filed it with the Commission, that is all right.

A. I don't know what he done. I took it to his office in good faith, that he would file it with the Public Service Commission.

Q. I don't think we had better get into that matter. Now, is there anything else that you wish to add to what Mr. Ammerman and you have already testified to.

A. Now, the Home Water Supply Company; you can read over the notes (indicating), they are charging all kinds of rates. Some of them have on one spigot \$8; one spigot \$8, in our town. I have got one here for \$24, one spigot.

Q. Have you looked at the filed schedule of rates of the company.

A. Of what company?

Q. Of the Home Water Company?

A. I think I have got it here. Well, it seems as if this company pretty nearly have their own rates.

MR. RICHARDS: Has this company a Certificate of Public Convenience?

MR. WALKER: They have a filed schedule, Mr. Richards.

THE WITNESS: The difference is in the spigots.

BY MR. WALKER:

Q. Different spigots make the different rates?

A. They must have pretty good sized spigots on some of them.

MR. EVANS: It appears from this bill that their rates, for what they call domestic services, are \$8; pave wash \$6; water closets \$3.50; wash stand \$3; bath tub \$4; and hot water \$2.

THE WITNESS: And stationary tubs, below there (indicating) is \$3; stationary tubs.

MR. EVANS: Stationary tubs, \$3, on a six months bases.

BY MR. WALKER:

Q. As I understand it you would be perfectly willing to pay the charges if you got the service: is that right?

A. No body would refuse to pay them.

Q. And your main interest is in seeing that this Committee helps you get the service; is that right?

A. Yes sir. On this private line that runs from the Home Water Supply Company; these people have to pay, some of them, \$200, two thousand seven hundred and ninety-nine; eight of them that cost \$164.86 a piece. Anybody that taps on that line it costs them \$110, besides paying anywhere from eight to thirty-six dollars a year.

BY MR. EVANS:

Q. This is Hutchinson?

A. This is the Home Water Supply Company, and there is 8 lines that run off that. Anybody that wants water off that, they have to put in their own line and do the work themselves, and the city of Altoona takes—

MR. EVANS: I think, if the Committee please, the best suggestion to make with regard to this situation, if the Committee is willing, would be to address a letter to the Public Service Commission, asking them to investigate this particular local situation, where the water supply seems to be inadequate.

PANTHER VALLEY ELECTRIC HEAT, POWER & LIGHT  
CO. Now PENNSYLVANIA POWER CO.

LEIGHTON E. SCOTT sworn.

BY MR. EVANS:

Q. Where do you live?

A. Lansford, Carbon County, Pa.

Q. You are a member of the Bar and were formerly borough solicitor for Lansford?

A. Yes; I have been a practicing attorney for 33 years; borough solicitor about 20 of the 33 years.

Q. What electric company formerly served the borough of Lansford?

A. The Panther Valley Electric Heat, Power and Light Company was incorporated in 1893 at a capitalization of \$10,000, par value of the stock \$50. It subsequently changed the name from the Panther Valley Heat, Power and Light Company to the Panther Valley Electric Company.

Q. Approximately, what is the chartered territory of this company?

A. The chartered territory served was the borough of Lansford, with about 5,000 population when the company was organized in 1893. Since then they have added to the territory the borough of Summit Hill, which now has a population of 6,000, the village of Nesquehoning and Mauch Chunk, with a population of about 6,000, and the borough of Coaldale, in Schuylkill County, that has a population now of about 6,000.

The company has been serving the borough of Lansford since 1893, and the other boroughs and townships for over 25 years. In 1893 the capital stock of that company was \$10,000 of 200 shares, with a par value of \$50 a share. In 1923 the capital stock of the Panther Valley Electric Company was 7,250 shares of the par value of \$50.

Q. Had new money been put into the company?

A. Not one cent was put into the company. Those dividends were declared out of earnings of the company.

Q. As though that were an original investment of \$10,000; the capital structure was?

A. 7200 shares with a par value of \$50 each, according to my record here, \$50 a share.

BY MR. TURNER:

Q. Pardon me, what dividend is that?

A. I will tell you about that. In 1916, 1917 and 1918 they were paying almost 20%. Previous to that I believe the dividends were very much larger; the cash dividends. In 1916 they opened a set of books, I think the first books that they ever kept; they were opened by Hines and Company, certified public accountants, and they made an appraisal of their own plant; I think they placed it at about \$95,000. 1916 their capital stock was \$90,000. Three years later their capital stock was increased approximately, I think, to \$362,500. They had a valuation made by Gannett, Seelye and Fleming, Inc., Engineers, of Harrisburg, Pa., I think they went the limit when they put a valuation of \$362,000.

BY MR. EVANS:

Q. In what year was that?

A. 1919, I am sure that was, as near as I can make out. In 1919 a certain person in our borough died, owning 126 shares of the Panther Valley Electric Light Company stock, which was inventoried at \$60 a share. For transfer inheritance tax purposes to the state of Pennsylvania it was priced at \$60 a share.

Q. How many shares were then outstanding?

A. I think about thirty-six hundred shares, about, outstanding then.

Q. This was before they declared the one hundred per cent stock dividend?

A. Yes; I will come to that, Mr. Evans, in a few seconds. In 1922 another person died, owning 355 shares of stock, inventoried at \$60 a share, appraised by the state of Pennsylvania for transfer inheritance tax purposes at \$60 a share. I happened to be the auditor in this case to distribute it, and while the audit was before me in 1923, the 100% stock dividend was declared increasing it up—I have here 7250 shares; I am not certain whether it was 7250 outstanding; I think it is, that my figures are correct; although I am informed that 7250 is the correct amount. The shares were inventoried and a tax paid on a basis of \$60 a share. That stock dividend was declared in 1923, and in 1926 this stock, that was worth \$60 a share for transfer inheritance tax purposes before the 100% dividend was declared—then by declaring the 100% dividend, that would bring it down to \$30 a share for taxable purposes if the valuation was correct. This stock—

BY MR. TURNER:

Q. That might have been true, unless they transferred from reserve to something else.

A. All right, maybe they did. I don't think they did. I think after Gannett, Seelye and Fleming made their valuation they put out the stock dividend. This stock, two companies were after it; one Pennsylvania Power and Light Company, that control everything in our country almost; and another company, a New York concern, they bought out the Mauch Chunk Power and Light Company. I don't know just the name of that company, but they own the Mauch Chunk Power and Light Company—a New York concern. The stock that was worth \$360,000, according to Gannett, Seelye and Fleming, the plant was sold directly to the Pennsylvania Power and Light Company for \$1,450,000.

BY MR. EVANS:

Q. Slightly over \$200 a share?

A. \$200, a share it was sold. People that originally invested \$400 in the company in 1893, got out something like \$300,000; one man got out \$200,000. Another man up there, who died, left three sons, and each one of the sons, got eighty thousand a piece out of it. His twenty shares grew to \$240,000. The stock was purchased by a man by the name of John Wise, I think Superintendent of the Pennsylvania Power and Light Company in Allentown, Peter McCarron, the division superintendent at Pottsville, Pennsylvania, and some others, who held the stock for a while, and they did business under the name of the original company, Panther Valley Electric Company, for a year or so, but all of the old directors resigned except two. And new directors, composed of Pennsylvania Power and Light officials, were put upon the board and they did business as the Panther Valley Electric Company for a year or so, until Governor Pinchot, in his first term, went out of office, and as he did, they immediately merged it with the Pennsylvania Power and Light Company, and the stock was transferred to them, and they are controlling it ever since.

The thirty thousand people have furnished a rich territory to produce revenue on the basis of even the \$360,000 valuation placed by Gannett, Seelye and Fleming, but they sold it for a \$1,450,000; above the valuation put upon it by Gannett, Seelye and Fleming, and a short time afterwards they issued preferred stock at seven per cent and they had their employees sell that stock, and they gave them bonuses of selling it, and I am informed, although I have no evidence, that is, legal evidence, that they paid these same employees for the time they spent going around selling this stock, and charged it up to operating expense. Since they got hold of it they have changed the rates three times. For instance, about four years ago I put in a Frigidaire in my home, and I was given a rate of \$4, a minimum, which entitled me to 60 kilowatts.

Q. Kilowatt hours?

A. Kilowatt hours. A number of months I never reached the 60 kilowatt hours, but I paid \$4. Anything over the 60 kilowatt hours, I was charged at the rate of 3½ cents a kilowatt. My bill never reached \$5 a month under that rate, but they advertised a new rate and filed one, and in big headlines, "Reduction in rates," and instead of paying \$4, I have been away up, \$5.75. That is the way they reduced the rates.

BY MR. TURNER:

Q. Was that on the same basis, the amount of current used?

A. Yes; I am talking about it on the same basis. They went on a new rate and they charged me for seven rooms in my house, and then by some method of figuring they charged me \$2.40, and then, in addition to that, I had to pay so much a kilowatt hour, which brought me to \$5. My bills are all that way, and I can't generally explain it. I have an office, and I don't work on the night shift, and I use very little—in fact, my rate for ten years was 10 cents a month, but on the first of this year they put on a dollar minimum, and I have to pay it. That is a 90 cent increase, and hundreds of others up there are in the same boat. There are six that occupy the offices with me, and we all have to pay \$1 minimum. We are entitled to 10 kilowatt hours for that dollar, and I don't use one.

My complaint is that with our rich territory, they paid large dividends before it was merged with the Pennsylvania Power and Light Company, and they now must get some money from somewhere to make it up on that \$1,100,000, the price they paid above the price set by Gannett, Seelye and Fleming, Inc., for the plant.

BY MR. TURNER:

Q. Were these rates all filed with the Public Service Commission?

A. I don't know.

Q. Were complaints filed?

A. No; no complaints were filed. We were lulled to sleep; we were going to get reductions. They had advertised, and the last one they have, is a reduction. I have some of the advertisements here. They are about to issue another series of preferred stock. That is one of the lurid ones, (indicating) and it says they pay dividends every three months, and so on; never miss; and so on. They used to pay 7%, but now they are down to 5.

Q. You mean 7% on the common?

A. No, sir; preferred.

BY MR. COOKE:

Q. That is 7%? (indicating)

A. No; this is 5. This is one of them, (indicating) but they did come down to 6. This is 5, but I understand they have bought some more plants and they need some money for their preferred stock. My complaint is that too much was paid for the Panther Creek Company, \$1,100,000 above its real worth, and we have to pay the difference.

BY MR. TURNER:

Q. That is your supposition; real worth based on this proposal. I presume?

A. Yes, sir.

Q. You don't know whether anything was added to that?

A. I do know that they added very little. I know they didn't add any improvements. They don't own their power plant. They purchase from the Pennsylvania Power and Light Company at less than three cents per kilowatt, and made the people, I am informed,—sold it to us around ten. They own a sub-station, but they issued bonds for \$40,000, and those bonds were still outstanding when the Pennsylvania Power and Light Company took over the plant. They added nothing. I am pretty observing around there. They added nothing in the way of improvements that I know of. Their lines were up in Sumnerdale, Nesquehoning and Lansford. Their substation had no additions to it in the last fifteen years; the same old substation.

BY MR. COOKE:

Q. And do you know anything about the transaction when Messrs. Wise et al sold to the Pennsylvania Company; whether they turned it over for what they paid for it.

A. The way I understand it, they did. They were acting for the Pennsylvania Power Company, and after they got it within a year or so, they put in Pennsylvania employees; Dickey,

Swoyer of Allentown. No doubt it was the Pennsylvania Power, and as soon as they went out of business, they transferred and merged it into a whole lot of other companies with the Pennsylvania Power and Light.

BY MR. TURNER:

Q. Did you wish to infer from that that it was the fact that Governor Pinchot restrained them from making this transfer?

A. I do. Governor Pinchot was opposed to it. I think they did make application, and they withheld it because Pinchot was opposed to these mergers.

MR. EVANS: As you doubtless know under the Public Service law, when a utility acquires an interest in another utility it requires a certificate, but when an individual does, he does not have to have approval.

THE WITNESS: Yes; they sold it to a number of individuals, and then the individuals sold it to the company.

As to the value of the stock, persons at Lansford can testify what they received for the stock. It is reported, some of them told me, who sold it, that they got \$200 a share. Some of them took preferred stock of the Pennsylvania Power and Light Company for the Panther Valley stock, and some of them took the cash.

I think I made it clear; in 1923 the par value I have been informed was \$100. My notes here show that it was \$50 a share. In 1923 this estate, that I spoke of received a check dividend on 355 shares, and the distribution was as follows: NYD 150 shares; PE Co. appraisal at \$50.325. That leads me to believe that the stock was \$50 a share. On the appraisal of it in 1922, a year before, for transfer inheritance tax purposes it was \$50 a share.

BY MR. EVANS:

Q. I think you have made that quite clear.

A. Is there anything else you gentlemen wish to ask me? (No response)

WILLIAM COLLEDGE recalled.

BY MR. EVANS:

Q. You have testified before the Committee before?

A. Yes, sir.

Q. Have you made any examination of the recent reports of the Panther Valley Electric Company filed with the Public Service Commission?

A. Yes; for the years, 1923, 1924, 1925, 1926, 1927, and for the first three months of 1928, this company having been taken over by the Pennsylvania Power and Light Company as of April 1, 1928.

A. I could not obtain any surplus prior to 1923. That was the first report filed on the long form of the Public Service Commission.

Q. Do these reports show anything as to the write-up of fixed capital of the Panther Valley Electric Company?

A. Yes, sometime in 1923 the Panther Valley Electric Company wrote up its fixed capital \$285,847.96.

Q. What was the book value before the write-up?

A. The book value before the write-up was \$439,371.31, which means that the write-up was equivalent to 65% of the original book value. The Company then wrote down its reserves for renewal and surplus from \$52,415.42 at the end of the year 1923, to \$15,764.68, or in the amount of \$36,650.74. This again eliminated the reserve at the beginning of the year 1923 entirely.

BY MR. TURNER:

Q. That was when the stock issue took place?

A. I am coming to that.

BY MR. EVANS:

Q. What then was done with the books of the surplus?

A. The amount of this write-up was credited to surplus and a stock dividend of 100% or \$360,000 was declared and stock of the company was issued in that amount. That was an increase in the stock of the company of \$360,000, increasing it to \$720,000.

Q. Did the company pay any cash dividends during those years?

A. Yes, cash dividends were paid as follows:

For the year 1923, \$30,600, or 4¼% on the \$720,000.

In 1924, \$43,200, or 6%.

In 1925, \$43,200, or a 6%.

In 1926, \$7,200, or 1%.

In 1927, \$90,000, or 12½%.

No dividends were paid for the first three months of 1928.

Q. These percentages you have given were all calculated on a capital of \$720,000?

A. Yes sir.

BY MR. TURNER:

Q. On what was this stock issued? Is there anything in the statement to show on what it was issued?

A. They wiped out the reserve for depreciation and increased the fixed capital and then wrote down the reserve. The reserve for depreciation, which left the fixed capital flat.

Q. Could they do that write-up from fixed capital?

A. That I don't know. The fact of the matter is that I had to dig to find this. The only way I found it was that the fixed capital figure for the year 1923 was that much higher than it was at the end of 1922 and I commenced to dig and found that it just buried itself in fixed capital account and made no separations on the book.

BY MR. COOKE:

Q. What justification was there for writing down depreciation?

A. I don't know.

BY MR. TURNER:

Q. They would have to have something to write it up on?

A. They wrote these fixed accounts and credited surplus, which increased surplus by that much.

Q. Was that not only a bookkeeping matter if that was the time they issued the capital stock?

MR. EVANS: It was either a valuation or an arbitrary valuation put on their fixed property.

MR. TURNER: Is it not against the law to issue stock against the law except on something of value?

MR. EVANS: I believe it is.

BY MR. TURNER:

Q. Did that appear in the reports to the Public Service Commission?

A. As I said before, the only way you could do it was by comparing the fixed capital as of December 31st, 1922, with the amount of the fixed capital on December 31st, 1923.

Q. As to the write-up how was it done or on what basis or with what authority for it?

A. I cannot tell you.

MR. EVANS: It seems to me the minute books of this company are in existence, and if so they should show how it was done.

BY MR. RICHARDS:

Q. Did the reports show who the officers were at the time?

A. That I cannot tell you.

(Mr. Scott, a former witness, volunteers the following information as to who the officers were).

George M. Davies, President; C. K. Walton, Secretary; Dr. E. H. Kistler, Treasurer.

Dr. Kistler is dead; Mr. Davies and Mr. Walton are living.

BY MR. EVANS:

Q. They all live in Lansford?

A. Yes sir.

MR. HAGMAIER: Is there any way we could get their minutes of the company at that time?

MR. EVANS: We can subpoena them if they are in existence.

Q. Now, what do the reports for the years 1923 and 1927 show as to the per cent of over all returns that this company earned on its fixed capital?

A. Based on the depreciated book value of its fixed capital at the end of each year including the write-up and excluding construction work in progress divided into net operating income, the company showed an over all return as follows:

For the year 1923, 6.551%.

For the year 1924, 7.2%.

For the year 1925, 8.66%.

For the year 1926, 11.6%.

For the year 1927, 11.33%.

Q. Now Mr. Colledge, if instead of including the write-up you excluded it, what would this percentage become?

A. For the year 1923, 11.95%.

For the year 1924, 12.91%.

For the year 1925, 15.69%.

For the year 1926, 21.76%.

For the year 1927, 21.2%.

Q. Now will you explain how you calculated the net operating income, taking for instance the year 1923 for an example?

A. I took the gross operating revenue of \$161,044.17 and added to that revenue for merchandise sales of \$801.23, and rent revenue of \$342, making a total of \$167,187.40, and I then took the operating expenses of \$123,898.58, and eliminated therefrom Federal income tax of \$5,082.93, and then I added merchandise sales expenses of \$2,088.20, rent expenses of \$52.72, making a total of \$120,956.57. Taking the total expenses of \$120,956.56 from the total revenues of \$167,187.40, I obtained the net income figure of \$46,230.83.

Q. And that is the figure you have used in calculating the percentages you have given us?

A. Yes sir.

Q. I notice the merchandise sales expense is considerably greater than revenue from merchandise sales, so I take it if you had excluded both of these return would have been slightly increased?

A. Yes sir.

BY MR. COOKE:

Q. Why did you stop with these three months of 1923?

A. That was the year the Pennsylvania Power and Light Company took the company over.

RALPH S. RICHARDS sworn.

Q. Where do you live?

A. Lansford, Pennsylvania.

Q. What business are you in?

A. Electrical contractor and dealer.

Q. I understand you are here representing a number of consumers of Lansford, electric consumers of Lansford?

A. Yes sir.

Q. Since the Pennsylvania Power and Light Company took over the Panther Valley Electric Company there have been several changes in rates, have there not?

A. Yes sir.

Q. When were these changes effective?

A. When it was still in the name of the Panther Valley Electric Company when Mr. McCarren had charge and sat on the Board of Directors was the first increase.

Q. What year was that?

A. That was about 1927 or 1928.

Q. What was the effect of that rate change as far as you have been able to ascertain?

A. It was generally an increase. We were increased all that time all the way through.

Q. Did the increases apply to the domestic consumers?

A. No, not the domestic.

BY MR. TURNER:

Q. Does he mean the individual bills increased or the rates were increased?

A. There were no new schedules filed. It was simply an interpretation of the rates filed by the Panther Valley Electric Company taken by the Pennsylvania Power & Light Company that increased the rates.

BY MR. COOKE:

Q. For instance?

A. Under Schedule D filed by the Panther Valley Electric Company the power could be combined. Immediately after they took charge of it, they took a different interpretation on the rate whereby they increased the rating and converted it all into horsepower and by doing that they raised the consumer's monthly minimum charge, and he had to buy a large amount at 6¼ cents which he had previously got at a rate sometimes as low down as 2 cents.

Q. What kind of power was that?

A. The small power user. I have in mind a church, St. Michaels Church in Lansdowne. The manager of the company told him he could take advantage of Schedule D by

re-establishing his wiring, which he did and which cost him to the amount of about \$400.

BY MR. EVANS:

Q. Approximately when was that?

A. In 1925 that happened, about 1925, immediately after the Pennsylvania Power and Light Company got hold of it they increased his minimum to 28 H.P.

Q. What had it been?

A. Five horsepower previously.

BY MR. COOKE:

Q. What does a church do with 28 horsepower?

A. They don't have 28 H.P. He has approximately 5 H.P., he has a motor generator set and the organ that they use in part of the parochial school and what they use for ventilators.

Q. You mean the current needed for moving the ventilators and pumping the organ, that 5 H.P. is all that is necessary?

A. That was all that was necessary.

Q. Was it later raised?

A. They came in indiscriminately and converted the lighting into horsepower. This cost the priest an increase of \$12.60 to \$17.30 a month through the interpretation of the schedule under the old Panther Valley Electric Company.

Q. Now was the next change of rates of one of interpretation of the rate schedule?

A. All the merchants in town enjoyed all their window lighting under Schedule B, that was called outside or sign lighting, which they sold us on a one dollar minimum charge when they allowed them 10 kilowatt hours and they billed it at six cents, and if they paid it within ten days they allowed them a discount of 16 2/3%. They immediately took that away from him, immediately as soon as they could, except where a customer was big enough or strong enough to yell loud enough, they left it in. There was discrimination all along the main street.

Q. This was at the same time?

A. Yes, sir.

Q. Were there any other matters particularly at that time that you wish to call to the attention of the Committee?

A. About this time they started in requiring the consumers to install new services whenever the house became vacant even though the consumer had installed the service to meet the requirements of the company, and to pass the Board of Fire Underwriters, as soon as a property became vacant, they required the owner to put in new service costing anywhere from twenty to twenty-five to thirty dollars. If a person yelled loud enough again, they did not have to do it. I have in mind a lot of people who could ill afford to pay that increase who have had to do it.

BY MR. COOKE:

Q. Why didn't they yell?

A. They assumed the power company is so strong there is no relief from it.

BY MR. MEMOLO:

Q. Has there ever been any complaint made to the Public Service Commission?

A. Not to my knowledge of the exact conditions like this except at the present time when these merchants complained about it and asked me to bring it over here, and they are just about ready to take some action to secure relief. I went in with a complaint and that was one of my own in which I complained to the Commission, and the letter was referred back to the Pennsylvania Power and Light Company, and they came to see me and settled it.

BY MR. COOKE:

Q. Just what form did that take? You say you came to a settlement?

A. In the schedule we had from the Panther Valley Electric Company they refused to continue that schedule with us. We refused to pay it until the total ran up to \$300. They came into the store and told us that if we did not pay it within ten days they would discontinue the service, and if we failed to pay the balance, and I entered a complaint to the Public Service Commission, and they sent the letter to the Pennsylvania Power and Light Company, and they came over to the store, either from Pottsville or Allentown, and they told us it was totally unnecessary for us to do that, that the matter could be ad-

justed. I refused to pay it, and their representative offered to take \$200 off and reduce it to \$100, and I still refused to pay it, and he asked me to withdraw the complaint and that we could settle. I withdrew the complaint, but they still have that \$100 on their books.

BY MR. COOKE:

Q. Over how many months did this \$300 accumulate?

A. About two years.

Q. That is what you mean by hollering in this case?

A. Yes, sir.

Q. You say nobody else complained?

A. They have complained through their attorneys, and the attorney naturally goes to the light company first and there it is generally settled or held in abeyance. I have several cases in which the balance is wrong.

BY MR. EVANS:

Q. How, have there been any subsequent changes in the rate?

A. Yes, there are the advertised rate reductions as of January 1st. I show you the advertised reduction of electric rates. This advertisement provides that where local rates are modified or lower than the proposed rates they shall be retained as optional rates, but they have removed them and presented all new rates, and as Mr. Scott has testified under schedule A where the rate is ten cents per kilowatt hour less a sliding discount where you only pay ten cents per kilowatt and if your bill is less than a dollar, you paid ten cents a month meter charge. That has been removed and new bills have been rendered at one dollar the minimum and that affects a large class of laboring men in the different sections where their bills in the summer time run around before thirty, forty, fifty, sixty or seventy cents, and now they have to pay the dollar. Under the old schedule a man using a total of 515 kilowatt hours of current in one month, it would cost him thirty-two dollars and ninety-one cents, but under the new schedule it would cost him thirty-four dollars and fifty-five cents or an increase of one dollar and sixty-five cents.

Q. What sort of consumer is that?

A. That is the small store, commercial lighting.

BY MR. COOKE:

Q. What examples are there of rate decrease?

A. That will be over the old schedule where the user gets up possibly to within 100 kilowatt hours, but if he goes into the two hundred class it is an increase and he don't strike the decrease until he reaches the four hundred class.

Q. Is there any decrease in the domestic consumer's rate?

A. A slight decrease of a few cents a month.

Q. What is the difference in the schedule?

A. A man using eleven kilowatt hours at ten cents, he would receive five per cent reduction on the old rate, but under the new rate he would pay ten cents for his kilowatt hours up until—it would depend on the number of sockets—it is complicated schedule, and would take a lot of explaining. It partly depends on the number of sockets. You may have to use up a lot of kilowatt hours before you get to the eight cent rate, and from there to the five cent schedule.

BY MR. COOKE:

Q. The five cent is the minimum?

A. No, you can get down to three cents if you use approximately two thousand kilowatt hours.

BY MR. EVANS:

Q. Mr. Scott has testified in regard to his own charge for electric refrigerator; have you any data on that?

A. Yes. Under the old Panther Valley Electric Company rates, if you used an electric range and an electric refrigerator, the user using approximately 71 kilowatt hours for an example, under the old rate, the charge was \$4.67, but they then put into effect their schedule RL 5 as it was known, and it cost him under that schedule \$10.19 or an increase of fifty-three per cent per month for 71 kilowatt.

Q. This same reduction worked through the same way?

A. Yes, sir.

Q. So this advertisement as a reduction of rates was not really a reduction?

A. No. This was put across and the user was told it would be a reduction inasmuch as his monthly cost would be less, but

under the new schedule RL 5 it just brings them the same 71 kilowatt hour which cost them \$4.66 or still an increase of thirty-three cents over the old rate of the Panther Valley Electric Company. That is under the seventy-one kilowatt hours.

Yesterday in getting bills from the various merchants, one of the merchants came and told me that he could not furnish me with the bills that he had promised me, that he himself was a coward and that he was yellow, that he had been approached by the district manager of the Pennsylvania Power and Light Company and that he could not give me the bills that I could take along to use as evidence.

MR. TURNER: Mr. Evans, do you think that is the kind of evidence we want in there.

MR. EVANS: I think it is, Mr. Turner. If any pressure is brought to bear on a witness, to prevent him from appearing before your Committee.

MR. TURNER: Yes, sir. I agree with you as far as pressure is concerned, but it seems to me that the man who want is the man who knows it.

THE WITNESS: This gentleman told me that the light company had a strangle hold on him, that he could not go along with the bills. I had another—

BY MR. TURNER:

Q. What was the strangle hold?

A. That was all the information he could give me.

BY MR. EVANS:

Q. Who was this gentleman?

A. Nathan Greenberger, of Greenberger Brothers.

BY MR. WALKER:

Q. Had he previously given you the bills?

A. No, sir, he had not, but Mr. Richards Edwards of the J. C. Bright Store did. He called up and asked to have the bills back.

Q. What reason did he give?

A. That he had been approached by the officers of the Pennsylvania Power & Light Company.

Q. Did he say anything further than that he had been approached?

A. That is all.

Q. Did he say what officer approached him?

A. The local officer, Tom Williams.

Q. Were you approached by the local officer?

A. Yes, sir.

Q. Who?

A. Tom Williams.

BY MR. TURNER:

Q. What is his job?

A. District manager.

Q. What did he say to you?

A. He wanted to know about my testimony, and said what a fool I was to go before the committee to testify.

MR. TURNER: I ask that Mr. Williams be subpoenaed to come before this committee.

BY MR. RHODES:

Q. Do I understand he is the District Manager of the Pennsylvania Power & Light?

A. Yes sir, all the towns surrounding around there.

Q. What is his full name?

A. Thomas Williams.

Q. Where does he live?

A. Lansford.

BY MR. WALKER:

Q. Did he say why you were a fool?

A. He didn't get that far. He did state that Mr. Scott and I were running around raising a rumpus against the harmony and good order of the community.

MR. HAGMAIER: Mr. Evans, do we have any bill of what the average house, what its charge is a year? We could get at it better in that way?

MR. EVANS: Mr. Hagmaier, he has been testifying more as to the changes in rates since the Pennsylvania Power and Light took over the local company. That is the purpose of his testimony.

Q. Can you give the committee any information as to what the average monthly bill of the small domestic consumer in Lansford would be?

A. In the neighborhood of \$1.50 to \$1.75.

Q. And that would be, say, a six-room house?

A. A six-room house.

BY MR. RICHARDS:

Q. What rate do they use to electric consumers?

A. On their new schedule, that would depend on the number of sockets, you would get it at probably 9 cents a kilowatt.

BY MR. TURNER:

Q. On what basis, the use of kilowatt hours?

A. Ten cents a kilowatt hour. Being engaged in the sale of electric refrigerators, I find it necessary when I sell a refrigerator to a doctor or a dentist, that it is necessary to separate the wiring in his office from his home where he ran his office in conjunction with his place of residence, but when the light company sold a refrigerator to a doctor or to a dentist in a neighboring town it was not necessary. A complaint was made to them and they agreed to conform to the rate on that meter, but when it had cost the doctor or the dentist from \$100 to \$135 to make these changes, they were not repaid in the future. Dr. W. C. Scott, a dentist, Dr. Druckemuehler, and Dr. John Breslin, they had to separate their wiring so they could enjoy the low rate which they gave. Previous to that Dr. Clewell, Dr. Kistler enjoyed the rate the whole time, even while these other people were compelled to separate, and put in new switchboards.

BY MR. RICHARDS:

Q. Do you mean they have a power rate and a light rate?

A. Yes. He had to take his office at 10 cents a kilowatt, the office could not go on the refrigerator and range rate.

CHARLES WILLIAM LEES sworn

BY MR. EVANS:

Q. Where do you live, captain?

A. Allentown.

Q. What is your occupation?

A. Manufacturer.

Q. You have heard Mr. Richards' testimony to the effect that the Pennsylvania Power and Light Company's customers if they kicked hard enough the company did not enforce certain charges. Have you had any similar experiences in Allentown?

A. Yes sir.

Q. Did the company attempt to charge at one time for changing your meter?

A. Yes.

Q. And how much did they attempt to charge you?

A. A dollar and a half.

Q. Did you refuse to pay it?

A. I did.

Q. Did they ever enforce it?

A. No sir.

Q. How long ago was that?

A. Last November.

Q. Have you ever had any other experiences of a similar nature?

A. Yes sir.

Q. What was that?

A. Refusing to pay interest on overdue account.

Q. That is the penalty charge?

A. Yes sir. Ten per cent if you are a day over.

Q. And you declined to pay that?

A. Absolutely.

Q. What does the company say about it?

A. They have never tried to enforce it. I challenged them to take action to recover it if they can.

Q. When was that?

A. Last July, August, September, October and November.

BY MR. TURNER:

Q. You were delinquent each month?

A. I purposely allowed my bills to go over a day and then sent in the original amount. They kept adding it, but I didn't pay it. I had been in the office and said to them "Take any proceeding you like, but don't take my light out."

BY MR. TURNER:

Q. What was your purpose?

A. I claim they don't have any right to charge interest on accounts. They do not pay interest on overdue accounts which they owe. They have owed me accounts for six months and didn't pay me any interest.

BY MR. COOKE:

Q. What is your business?

A. I manufacture writing inks, the only one in Pennsylvania.

PETER MCCARREN sworn.

BY MR. EVANS:

Q. Where do you live?

A. Pottsville.

Q. What is your business?

A. Division Manager for the Pennsylvania Power and Light Company.

Q. Were you one of the gentleman who purchased the stock of the Panther Valley Electric Company?

A. I was not.

Q. Who were the gentlemen who purchased that stock?

A. Well, I cannot intelligently answer that.

Q. Was Mr. John Wise one of them?

A. I think he would be.

Q. Do you know whether he was?

A. I could not say that.

Q. You don't know anything about the purchase of the stock?

A. I don't know anything about it; after the stock was bought and the company was tied in with us, I was sent there to manage it.

Q. Did you have anything to do with the company while the stock was in the hands of Mr. Wise and his associates, before the merger?

A. I think I was one of the directors; that is my recollection. I was a director in many more companies that we took over.

Q. The company was in fact taken over by the Pennsylvania Power and Light Company, and put into the hands of individuals; was that not the case? I think you said you did not know very much about the rates?

A. I had nothing to do with the buying over the stock of the company.

Q. You are not entirely familiar with the rate situation?

A. No. We have our rate experts, and I would not want to testify as to rates, because I have nothing whatever to do with compiling the rates.

Q. Can you state when it was that you became a director of the Panther Valley Electric Company?

A. The exact date I cannot give you, but I could get it for you; I don't remember the date.

Q. Were you in any way in charge with its management prior to the merger?

A. Yes sir for a short time?

Q. Approximately how long was that?

A. Well from the time we took it over until it was merged.

Q. From the time Mr. Wise and his associates took it over, up until it was merged?

A. Yes sir.

Q. And it is still under your management?

A. I am division manager.

Q. And that position includes the territory of the former Panther Valley Electric Company?

A. Yes sir.

Q. Is Mr. William McConnell who has been referred to, one of your subordinates?

A. Yes sir.

Q. Do you know anything about his attempt to persuade Mr. Richards not to come down to testify?

A. I don't know anything about it. If he did that it is all news to me.

BY MR. WALKER:

Q. Is it a fact that if a consumer hollers loud enough you will take off his one dollar and a half charge we have heard of.

A. That is news to me. That is not our policy. When we took over that company we run into a lot of conditions and one of them was the minimum charge. In fact we don't have a

minimum charge. We had bills going to consumers for ten cents and it cost us more to deliver bills than the handling was worth, and at the last reduction in rates we cut out that section of it and we put in our standard rates which we have all over the property. We had a few isolated cases where the man might have a garage or an office and practically he never uses it; in a number of cases we were getting ten cents a month. The total number of customers affected would not amount to two hundred altogether. I think we have close on to seven thousand customers in this particular territory, and it was just for the correction of these evils that that was put into effect. We tried to get three or four customers in a group to use one service. We done everything in our power to correct that evil without imposing any hardships on anybody.

BY MR. EVANS:

Q. In the advertisement of the rate reduction effective January 1, 1931, it is stated: "Where existing local rates as modified are lower, etc., the local rate shall be retained as optional rate." Has the company done that?

A. We have put in our standard rates with the reduction to get rid of these evils I have just told you of.

Q. You do say it was optional if they want to take it?

A. We don't take hold of anybody by the neck and compel them. I went over there different times myself and talked to customers and many places we made big reductions. The fact of the matter was that we made a reduction to Mr. Richards. He was happy about it and said he would pay it, but up to date he has not paid it. They had another condition over there —where they had a rate that was a joint power and light rate. We had customers that put in a one-eighth horse power meter and demanded the power rate; that was discrimination.

BY MR. TURNER:

Q. Was this a reduction or not?

A. Absolutely, with the exception of possibly these little cases that I told you about that were for the correction of an evil.

BY MR. COOKE:

Q. This dollar rate, is that a matter that is common throughout your territory as settled by the Commission's regulations?

A. I could not answer that. We have a dollar minimum and for that we give them ten kilowatt hours and our step is eight cents.

BY MR. EVANS:

Q. How would you say that one dollar is made up?

BY MR. COOKE:

Q. The ten kilowatt hours presumably cost you something in the neighborhood of a little over one cent a kilowatt; the juice itself would cost you a little over one-half a cent an hour?

A. You are talking about juice at the power house, and we are talking about juice at the customer's residence.

Q. What I am talking about is how you arrive at the one dollar minimum. It seems excessive to me.

A. It may seem excessive, but I think that if you get some statistics as to what it cost to keep the meter in premises and to read the meter and the bookkeeping, I think you will find it is far in excess of one dollar.

BY MR. EVANS:

Q. How often do you test meters?

A. We live up to the Public Service ruling.

Q. The Public Service rulings are that when a complaint is made of a meter and the complaint is correct the charges are paid by the consumer?

A. I don't know of our ever having charged the consumer for testing.

Q. How much does testing a meter amount to a year?

A. I cannot give you the figures. We have a good sized force of men testing meters and it costs a good deal and we maintain laboratories for testing meters with a force of men at that cost.

Q. If your energy at the generating station costs you one-half cent, how much does the distribution cost you per kilowatt hour?

A. That is an engineering proposition, and I would not like to go into that.

Q. You don't know how that is made up?

A. Not enough to give you an intelligent answer.

Q. What is your customer's expenses per month, I mean what you refer to as to testing meters and reading meters?

A. I would have to get my figures on that because the territory I have charge of has possibly seventy thousand customers.

Q. But you don't know the average throughout your territory?

A. Not without looking it up for you.

BY MR. TURNER:

Q. We had some charts here that showed the prices of rates per kilowatt hours on 15 and 40 and 80 kilowatt consumers, and it is my recollection in that figure that the statement was made that fifty-one per cent of the users were in the 15 kilowatt class.

BY MR. EVANS:

Q. What Mr. Roushenbush testified to was that he didn't know the proportion of the customers that were on the 15-kilowatt hour basis, but that a test recently made in New York City to determine that fact had shown in the City of New York, 51% of all customers used 15 kilowatts or less.

MR. TURNER: I was going to ask if he knew in his company what the percentage was.

A. I don't know exactly, but I think it would be very small.

Q. Would it run 50%?

A. I don't think so.

Q. Would it run 15%?

A. I don't think so.

BY MR. EVANS:

Q. Could you get that information?

A. I could. You understand, Mr. Evans, you called me in cold. I didn't come here to give any testimony.

MR. TURNER: I think it might be interesting to get that, for after all, the value of the testimony on these charts should relate to what is the actual experience here if we can get it.

A. You can get that from our company without very much trouble. Personally I would say a very small percentage of our customers were down to 15-kilowatt class; very, very small.

BY MR. EVANS:

Q. Will you produce, Mr. McCarren, for the benefit of the Committee, a statement showing for the years 1929 and 1930 the domestic consumers of the system divided among those who had a consumption of 10 kilowatts per hour, 15 kilowatts per hour, 40 kilowatts per hour, and 80 kilowatts per hour, monthly?

A. Yes, sir, I would be glad to do that. If you let me make a suggestion, I believe if you would subpoena our rate man here, he would be glad to give you all that information. I am not working in the general office, I am in the division. I would be very glad indeed to make a reply to any testimony given here to you today. I think we have a right to come in here and put before this Committee the true situation. I am safe in saying that in 95% of these cases there was no discrimination, the customers had a square deal and the company went the greatest distance possible to please them.

MR. EVANS: I don't know that we want that.

MR. TURNER: You may not particularly want that testimony, Mr. Evans, but I do.

MR. EVANS: We expect to have an opportunity for the companies to present their testimony later.

MR. TURNER: That is one of the things we have to determine. There is a resolution introduced in the House of Representatives that the last day for the introduction of bills during this session will be April 22nd, and I understood the purpose of this investigation was to furnish information to the Legislature upon which legislation could be based. The schedule as I understand from you was to go through the next month and you had your plants ready that way. But what is the use of our going through a lot of testimony when we after all can only form a record that won't be used by the Legislature.

MR. EVANS: Perhaps it will be useful in determining as to the feasibility of bills that have already been introduced.

MR. TURNER: I don't see how it can. If we get through by the first of May the adjournment will be so close. I think the important question we have to determine now is to determine simply where we are going with this testimony.

## METHODS OF VALUATION.

MORRIS L. COOKE called.

THE WITNESS: Mr. Chairman, in making this statement, it seems to me appropriate to ask the indulgence of some of the members of the Committee who have quite as much familiarity as I have with some of the matters that have come up, especially those who are lawyers and who are practicing in these matters every day.

Now, it seems to me the first thing, in taking up the question of valuation, is getting away from the idea that such a valuation has anything to do with that value. Valuation for rate making purposes is more or less of a mechanical device in order to facilitate the fixing of rates, and I think, if we get rid of the idea of abstract value, it will enable us to clarify the situation.

Now, there are two schools, the Prudent Investment School and the Reproduction Cost New School.

In making a Prudent Investment valuation one must depreciate in order to arrive at a rate base.

In making valuations under the Reproduction Cost New, we must also depreciate, so, in my discussion, I will assume that depreciation has been made in both cases under both systems and both schools, and will refer to depreciation as little as possible.

Now, first, with regard to prudent investments: They may be actual or historical, so long as they are prudent, and a prudent investment is not conjectural, imaginative or fictitious or imaginable. It is almost wholly factual.

The term "Prudent Investment" came into being through the dissenting opinions of Justice Brandeis, and in the most celebrated dissenting opinion that has a bearing on this subject is the State of Missouri versus the Public Service Commission, which is known as the Southwestern Bell Telephone Case, and in a footnote to Justice Brandeis, he says, "The term prudent investment is not used in a critical sense. There should not be excluded from the finding of the base, that is, the rate base, investments which under ordinary circumstances would be deemed reasonable. That term is applied for the purpose of excluding what might be found to be dishonest or wasteful or imprudent expenditures. Every investment must be assumed to have been made in the exercise of reasonable judgment, unless the contrary is shown."

Now, Mr. Zimmerman expressed his interest in the possible method by which we might pass the prudent investment basis; I wired a half dozen friends in different parts of the country who have had experience on the public side in rate litigation, asking whether it would be possible for them to send me succinct and reasonably self explanatory definitions of prudent investment, and I have received five, the first four of which might almost be put on top of each other without showing discrepancies, and for the benefit of those who may be interested in looking up this great problem, and with your permission, I will put them on the record.

### No. 1

Prudent investment means the actual legitimate prudent cost of constructing and establishing the project works and facilities of a public utility, including additions and betterments and excluding depreciation.

Prudent used in this definition refers to bona fide and diligent exercise of normal business judgment without liability for the consequences of unintentional error.

### No. 2

Prudent investment may be defined as to what the existing property should reasonably have cost. The presumption is that actual cost, if known, was prudent unless contrary clearly shown.

Accrued depreciation should be deducted from prudent investment to arrive at rate base, but it might be a reasonable compromise to deduct only amount of depreciation reserve.

### No. 3

Prudent investment is the actual outlay in dollars to create the existing property now used and useful in the public service diminished by or depreciated for wear and tear, inadequacy and obsolescence.

The amount of depreciation should be equal to the portion of the original service life already exhausted.

## No. 4

Prudent investment is the investment made by security holders in property usefully devoted to service of public less impairment in service value due to causes which ultimately cause property to be retired.

Exceptions and amplifications are doubtless necessary.

## No. 5

The prudent investment of capital made and remaining in properties devoted to public use may be ascertained by determining actual or recorded cost of existing units at the time of installation, which should be checked by an estimated reasonable cost and supplemented by the estimated reasonable cost of those units whose actual cost is not available, so that the total will represent the reasonable cost of historically reproducing existing property, from which should be deducted actual depreciation representing loss of service right through use or obsolescence.

BY MR. TURNER:

Q. Wouldn't that leave a wide door open again for speculation on the cost of going back historically, if you don't have the actual figures?

A. No; and apparently his idea in setting up that reasonable estimate is simply to guard against the introduction of large quantities of acts that were obviously not prudent. In the early days a great many of these enterprises, as you know, entries would be made, which would be, at least, detected by such a system, and then they can be explained away or not, as it may be possible.

Q. One of our difficulties, it seems to me, is that we have seen these charts and heard the testimony, and there is a wide variance of opinion as to the cost?

A. I think I can—before I get through, we will get rid of that to a very great extent.

Q. I do not want to ask you any questions that will in any way disturb your thought, nor your testimony, and if you have something later, just say it at that time.

A. Yes.

BY MR. EVANS:

Q. May I ask this, does not that last definition also intend to take care of the situation where the books do not include all the utilities' property, and therefore, you have to make some estimate to take care of such properties as are not included?

A. Certainly. That was the second; it provided for two things, checked by an estimated reasonable cost and supplemented by the estimated reasonable cost of those units, though actual cost is not available. And now, so much for prudent investment.

Now, the reproduction cost new method, on the other hand, is almost wholly theoretical. The plant, as is constructed over night, no matter how obsolete any section of it may be, reproduction cost new is not the projection of a plant capable of doing the work; it is the projection of work in being, with all its mistakes and without all its obsolescence and other factors, which would tend to reduce the capital invested, if you were simply planning a plant to do the work which this plant is now doing.

In an article appearing in the Harvard Business Review for April, 1930, under the title, "Shoring up the Regulation of Electrical Utilities," I said:

"The reproduction cost new method presupposes a clean slate. Imagine, if you can, that there is no electrical company in New York City. Before one can be produced, 'or reproduced,' someone must conceive the idea that there should be such a company. So the first item,"—all this goes in over night, understand,—“So the first item that goes into the inventory a la reproduction cost new is the 'conceiver's charge,' or a fee to be paid an individual, or a group, for having conceived the idea that it would be a desirable thing to have an electrical company in New York City. Later, of course, comes the necessity for money to execute the plan for such a company. Advertisements are put in the papers notifying the public that stock will be for sale tomorrow morning. Great crowds of people gather at the fiscal office to enter their applications. What more natural than to have one or more policemen on hand to keep these crowds in order? So down goes the item in the capital account for the hypothetical wages paid these imaginary policemen for rendering what would have been a

useful public service if it had actually occurred. Under this reproduction cost new theory, this electric-service company which we are planning has no employees today, while tomorrow it may have thirty thousand who yesterday had no knowledge of the business. Today, under our theory, each such employee stands fully equipped for his task. Hence, down goes the item on the balance sheet for teaching this newly recruited staff to perform their several functions. These assumptions that we have been making of the impossible, are very real by the time they reach the balance sheet. In the current New York Edison Company case, now running nine years, this item for teaching the staff amounted to seven and a quarter millions of dollars. In the recently decided New York State Telephone case it was called the 'inefficiency factor,' and amounted to some twenty-five millions."

Now, the same amount of income can be allowed these companies under each of the systems. In that same article, I said, "Absolute justice in the matter of return can be done just as well under the prudent investment as under the reproduction cost new method of valuation. Under the unimpaired prudent investment method the valuation at any given time is obtained largely from the books. It will come wholly from the books, if they are properly kept and if there is no question as to the prudence observed in making the investment. By using this somewhat fixed base and varying the rate of return, the property can be made to yield any income which the Commission decides is proper. Under the reproduction cost new method, however, the various items of property must be revalued by current prices every time it is desired to question the income or the rates which provide it. Under the reproduction cost new method the rate of return is fairly stable, while the rate base varies with every change in the price level."

In an article appearing in the November, 1930, issue of the Yale Law Journal, "Taking Stock of Regulation in the State of New York," in a footnote, I stated the same question this way:

"Shall the amount of return to be allowed a given utility be figured on the actual fair investment in the property or on the estimated cost to reproduce the property at price levels existing at the time the return is determined and the rates to produce this return are adopted. In the first case the base on which the return is figured is fairly stable, i. e. obtained from the books, and the rate of return varied to meet conditions. In the second case the base constantly fluctuates with the price level and the rate remains more or less stable—more often at 7 per cent than otherwise."

So that you will see that full justice can be done to the companies under either system, but the one is based on facts and the other on guesses. Under prudent investment you eliminate guessing. You get your base from the books. Under the other, the reproduction cost new, everything is unstable and shifting, and the rewards go to the promoters, engineers, and accountants. —I have excluded the lawyers.—having the most imagination. Now this is not a new issue. It should be stated that some years back William Jennings Bryan pled for the reproduction cost new method in valuing the railroads, while the companies pled for prudent investment. In my opinion he was in error in having so pled. The one system is no more ethical than the other. But from the standpoint of engineering and exactitude, there is no comparison between the ease with which rates can be regulated under the two systems. It will be hard enough under the prudent investment; it is impossible under the reproduction cost new.

Now, answering your question, Mr. Turner, the case that I have the most familiarity with was one brought while I was a public official, against the Philadelphia Electric Company. The valuations in that case fell into five different categories. The first one was 17 millions, the next one was 23 millions the next 30, 52 millions, and 69 millions.

I believe it will be helpful to the Committee to understand the relationship between these two types of valuation if I explain the significance of those five typical valuations. There were other valuations in between those, but those five seem representative classes. In those days the Commission forced complainants to establish a prima facie case before they would entertain the formal complaint. The engineers that I employed on behalf of the city of Philadelphia to make a valuation set up 17 millions as the value of the property that was used and useful.

MR. TURNER: That was under the reproduction cost new or prudent investment?

THE WITNESS: No; that was virtually—as a matter of fact, we were not allowed access to the books and we were not allowed access to the property; so, it was pretty largely an historical method. We consulted the Bureau of Boiler Inspection to find out when the boilers were put in, and we photographed the plant, and we consulted the Bureau of Highways to find when the streets were torn up, and with that he made an historical prudent investment figure. During the course of the case the company put in reproduction cost new methods varying from 52 millions, which was the guess, or the engineering estimate, of Dougal C. Jackson, a very distinguished engineer, and 69 millions was the top put in by William McClellan, a valuation engineer, later Dean of the Wharton School at the University of Pennsylvania.

Before that case was determined we met on the outside and agreed each to appoint an engineer to work out as nearly as possible the actual investment. But that company was the result of a consolidation, as I recall it, of some 30 companies; so that a good many of the records were missing, and we had to supplement that with a good deal of historical information. But it was a satisfaction to everybody connected with that case that, although Doctor Maltbie had been appointed to decide anything that they could not agree on, the engineers appointed by the company and by myself signed a valuation of 23 millions. Now naturally there was some give and take. Probably each man, on certain times, would rather have had some other figure used. But they did not have to use the appointed arbitrator to come to a final figure of approximately 23 millions, and my judgment is that, if the case had not gotten to a point where the thing had to be settled and settled pretty promptly, those engineers would not have varied by five per cent. We put a good deal of pressure on them to come together. Probably the company did; I know I did. But I think that under usual circumstances engineers would not vary by five per cent on the actual investment. The case was settled on a valuation, as near as we could figure at the time, of about 30 millions.

MR. TURNER: If the engineers working in that case could come within five per cent, what I can not get into my mind is why this great discrepancy between 52 million and 69 millions and between that 23 millions and 52 millions. If you can get engineers—

THE WITNESS: Will you ask me that question again?

MR. TURNER: I say, you got your engineers together as a board of arbitration, and you were able to work it out whereby you got a valuation of 23 millions, and you do not feel that if they were left alone there would have been a variation of more than 5 per cent. Why do we get these great larger figures, the difference between 23 millions and 52 millions, and between the company's own engineers, of 52 millions and 69 millions?

THE WITNESS: Well, it is just because, in the reproduction cost new—you and I, if we started to reproduce a property, we would never think of tucking in a conceiver's charge; we would say that went in with something else. But two men get together in a tavern somewhere and decide we ought to have a telephone system somewhere, and bing! there is a hundred thousand dollars down in valuation for conceiver's charge. There is no limit to the use of imagination, and I may say that it has a very bad effect on some of our professions this bringing the imagination into play rather than depending upon actual facts.

Now, the reproduction cost new is the law of the land.

MR. TURNER: Well, Mr. Cooke, you mean to say that that is the basis upon which the valuations are made? Aren't there other elements that are supposed to be taken in?

THE WITNESS: What I mean is during recent years the Supreme Court apparently was able to resist passing 90 per cent reproduction cost new up to the time of war, but with the tremendous increase in the price level as the result of the war and after the war the discrepancy between values established by prudent investment and those established by reproduction cost new became so great that the Supreme Court in various decisions apparently gave more and more weight to the reproduction cost new method, and I think reached its peak in the Baltimore street railway case.

Reading from the same Harvard Business Review article, I say: "In the Baltimore street railway case—one of the most recent utility decisions rendered by the United States Supreme Court—the majority opinion held that depreciation of property used by a utility should be deducted, not from its actual cost but its present value. . . . This allowance can not be limited by the original cost, because, if values have advanced, the al-

lowance is not sufficient to maintain the level of efficiency.' Depreciation at best is highly speculative. But if it is to be figured on hypothetical reproduction cost new estimates of value, it becomes pretty nearly as nebulous as an early morning fog on a Maine lake.

"It must be remembered that determinations such as this late ruling of our highest Court call for, are made by ordinary human beings whose mentality is frequently taxed by routine accounting. Any such piling of Ossa on Pelion as this will mean valuations that can neither be attacked nor defended by the logic of the market place."

Now two or three decisions of the United States Supreme Court in recent months since then, since this article was written, suggest that that was the peak, and that the swing is going to be away from reproduction cost new, and then the fact that price levels are falling and falling fairly rapidly may possibly influence the Court, and it is certain the falling of the price level has already influenced the industry, so that men who a year ago in the electric industry were throwing up their hats for the reproduction cost new have at least begun to question whether, if this falling of prices continues, they may not be out of luck, because, if it is all right to boost the valuation on an advancing price level, it will be obviously logical to reduce it.

Now I am accepting the fact that the majority of six out of nine in the New York Commission that investigated regulation last spring were constantly referred to this as the law of the land, and in the sense that they used it I am using it, that it is the law of the land. Now the problem is how are we going to get away from it? How is it being met in different parts of the Union, and how are we going to meet it here in Pennsylvania? Because to wait for the price level to change or to wait for the United States Supreme Court decisions to change may be a long process.

Massachusetts is continuing to fight for the prudent investment, but then it is in a very strong position to make that fight because it has regulated the issue of securities for a great many years, so far as I know, for a hundred years, and they have no instances in Massachusetts utilities of inflation such as those that we have to contend with. But it was the decision of the Massachusetts commission refusing to allow the Boston Edison to issue securities that has been given as one of the reasons for the break in the stock market in the fall of 1929. In other words, they served notice on the utilities of Massachusetts that they would not go along on reproduction cost new. However, it is only fair to state that another most important case, that is the most important case bearing on domestic rates, the Worcester case, the commission claimed a valuation of 9 millions, the company claimed a valuation of 16 millions, and the master appointed by the United States Court allowed 15 millions on the ground that,—in other words, he allowed them 90 per cent, the company 90 per cent of its valuation; but then, by means of an allocation of costs as between the different classes of service, sustained the five cent maximum rate which had been fixed by the commission. The company appealed this, but before the appeal had gone along very far they withdrew it. So, the feeling is that they thought it better to let that decision of the master stand. Now in New York they have been through their hearings in the New York Edison case. They have what amounts to a gentleman's agreement that that question of valuation will not be brought up. Just how they are going to come through on that I don't know. The present rate is 7 cents, and there is an effort on the part of the commission to reduce it, and in order to get away from all this minutiae connected with valuations, both sides have apparently agreed to see whether they can not get somewhere in a rate reduction without it.

In California a new method has been developed in a recent case by the commission, in a recent case against the Los Angeles Gas and Electric Company only decided on November 24, 1930, and if it is sustained, it will in itself, I should say, play hob with the reproduction cost new.

In the first place, when we make a reproduction cost new valuation, they threw away in the record aside, started making an inventory of the personal property,—made a valuation which puts the whole thing on an absolutely hypothetical basis. The California Commission simply took the inventory as it was and moved up the valuation of the stock to take cognizance of the increase in price level. In this particular case, the increase amounted to about \$6,000,000 in a total claimed by the company of \$93,000,000. They reduced the overhead expenses,

all overheads, to 6%, roughly, I should say, is about one third, or less than one third probably of the normal overhead charge in our reposition cost valuations made in this part of the country. They disallowed the holding fee, possibly on the ground that they did not render any service that the companies' officials could not render. They allowed for going cost by use \$400,000 against the claim of over \$9,000,000. They cut out large obsolescent valuation,—some change brought by the introduction of natural gas. That obsoleted a lot of their properties, running into many millions. The Commission said, you have asked for a valuation on the fair value method reproduction. That only should include the property that is used and useable. This which is completely obsoleted we will cut it all out. If you ask for a valuation on the prudent investment basis, we will recognize the fact that this property was obsoleted by an act of God; we have given you a period of ten or fifteen years to wipe it out.

This reduced the rate of return from 9.7 to 7.7 on investment; and from 8.8 to 7 on their value,—again discriminating against fair value. The consequence was that for a claim of \$95,000,000 they allowed \$65,000,000, which depreciated, brought it down to \$57,000,000, which was \$3,000,000 less than the claim of prudent investment.

There are three different methods of getting around reproduction cost new. Those methods are all open to active and alert public service commissions. Every commission, except the Massachusetts commission, however, it is only fair to say, is handicapped by the fact that the record as to issuance of investments issuance of securities is not so good, and, therefore, they make the appeal in some of these methods a little more difficult than it would be in Massachusetts.

In New York and Massachusetts they are trying to open the way so that the municipal plants can be built with a minimum of discouragement. Here, as you know, our Public Service Commission has to issue a certificate of public convenience, whereas in Ohio, cities that want to go ahead and build a property, rather, build a public plant, can go ahead and do it. Experience has shown that this is a very good way of getting around reproduction cost and the high rates that grow out of them.

In New York, and this investigation last spring, they tried to do it by two methods. The majority moved for an appropriation—it was either \$10,000,000 or \$20,000,000 to be given to the Public Service Commission, and they were to be authorized to value every utility in the state, with some exceptions, but all electric utilities, and, I think, all the gas utilities, and determine as to the fair value, which was then to be entered up on the books of the company, and would become for all time the value of that property up to that time, and after that the entries were to be made on the prudent investment basis.

That had, in my opinion, a good many disadvantages. In the first place, the price—those valuations would have been made at a time when the price level was very high, and it was altogether optional with the company whether they would agree to those valuations. Those negotiations probably would have gone on for years. It would have been a rather tiresome process. Then, as I recall, there was some other provision that these valuations were only to run for a term of years. If my memory serves me correctly, ten years—in the case of some of them, and before one value would have been agreed upon, it would have become obsolete.

The minority of the three suggested the fixing of the prudent investment by legislative fiat. It seems to me that that was open to quite as serious objection as was the majority suggestion. The plan provided for the Commission to make valuations on the prudent investment basis, and by some piece of legislation, that became the rate basis for valuation purposes. After that the entries were to be made in the prudent investment bases. My opinion is that that was not only unjust, but would hardly have stood the test of the Supreme Court decision, unless they changed very much more rapidly than they appear to be changing at the present moment.

Now, in 1923, I think it was Phillip T. Wells, then Deputy Attorney General, made a suggestion, that seemed to me to be a fair one, and he recalled that in the Dartmouth College case, the Supreme Court had decided that state charters could not be revoked, and the states met the Supreme Court's decision by that time in inserting in every charter a clause that they were revocable. In other words, the states beat the Supreme Court. Wells' thought was, "What can we do, the Supreme Court decisions being what they are, what can we

do to beat them on this issue," as they were beaten before on the question of whether the charter was revocable or not. He suggested the contract method, of entering into a contract with these companies, by which they would go on a prudent investment basis, and allowing them to get what they could under the law of the land, or whatever has been expended up to date.

That was the suggestion that we made the other day to Mr. Zimmerman, and he stated, "If you are not going to charge us for errors of judgment in fixing prudent investment, then I think we might be willing to go along with you." I am not quoting him exactly.

The definitions that we have produced here, five of them, including that of Mr. Justice Brandeis, meets Mr. Zimmerman's objection 100%. So, I think if we had to do business with him in the mood he was in the other day, there would be no trouble. When he comes to consult with his associates, and they raise various objections, as they properly should, he may not feel so strongly about it. I feel quite sure that every company in Pennsylvania will not, at first blush, take the same advanced position that he did.

Then it becomes a question, what pressure are you going to bring to bear on them to make them accept that method of valuation. Personally, I would be very sorry to see that made legislative pressure, that is legislative pressure in the sense that they sought to exert in New York.

I notice in Bill No. 1275, now before your House, page 72, that it says under Article V, Section II:

"Every public service company which after the date of the passage of this act obtains a charter, shall as a consideration for the granting of said charter specifically agree in its application for charter to have its fair return computed upon the basis of its actual legitimate capital prudently invested in the business and facilities involved."

BY MR. TURNER:

Q. Does it go on to give any more definitions than those you have given?

A. The index which has just been sent me, in that this is the only reference to prudent investment. I think, Mr. Turner, that Judge Woodruff was one of the authors in this Act. I think you will find he would much prefer not to use the term "prudent investment," simply because it give rise to the same criticism that Mr. Zimmerman expressed. We do not want to be judged by hindsight; we want to be given credit. They go on to further amplification of the thing. I know of no place where you can go and get a carefully threshed out investment that will compare in the character of its draftsmanship, with the definition of net investment, but, when you come down to definitions, I am not sure that the net investment is a term much more easily defined. That is so much for companies coming in and asking for new charters.

The section goes on to state: "Also any public service company which has obtained its charter prior to the passage of this act may voluntarily file with such Board an agreement to have its fair return computed upon said basis." I would think that Mr. Zimmerman, in the mood he was in the other day, he would be in that class, and come in voluntarily.

The section continues on as follows: "And also if any Public Service Company shall have its charter rights established prior to the passage of this Act, and shall apply to the Board for a certificate of public convenience for any material increase in its charter rights or its issue of securities, or for a merger or other material changes in its rights and duties as a public service corporation, the Board shall not grant any certificate of public convenience unless and until the public service company making such application shall file with the Board an agreement to thereafter have its fair return computed on said basis."

As a layman reads that section, there are three groups: Those that ask for charters—they shall include prudent investments—rate basis, integral to its charter; the class that voluntarily comes on that basis; the third class, where pressure is brought to bear on them because they want further rights and privileges that the State can grant, and presumably withhold. In this instance, those further rights and privileges are not granted until they agree to it.

Within the last few days there has reached my desk a publication called "Current Comments," apparently issued by the Investment Registry of America, Inc., date line, Philadelphia, Pa., March 27, 1931, by H. E. Taylor, president. I am sure

that any one who tries to cast off the reasons or differences, as reflected in that Philadelphia Electric case, in all these cases brought in here—the reason for it is left very much mystified; no illustration that I have seen has been so succinct as this one included in this bulletin. This is a sheet that comes to me periodically—I don't know just why. I quote this particular paragraph:

"As illustration of the growth in valuation of utilities, let the following bit of history serve as a guide to final judgment: In 1919-1921, the Lehigh Power Securities Company common stock had little value. It was not listed, but sold 'over the counter' at a low of three, and high of nine. In 1922-1925 it was listed, and sold, low, sixteen and high one ninety seven. In the January of 1926, it was listed 10 to 1. In 1926-1927 the split stock was listed and sold at, low 12, high 65, and in January, 1928 it was exchanged share for share, for National Power and Light. In 1928-1931, National Power and Light sold, low, at 22, and high, 71. In the period of 1919-1926, the Lehigh Coal and Navigation Company owned 60,000 shares of the Lehigh Power Securities, carried on its books at one dollar for the lot, the lot having cost them practically. In the Lehigh Coal and Navigation balance sheet of December 31, 1930," which is the December just last past, "it showed ownership of 700,000 shares of National Power and Light common, with a market value of \$43, or about \$30,000,000. Similar instances of increased valuations can be cited of scores of companies whose accomplishments were comparable, such then were the results of the development of power,—all in the space of eleven short years. I think you will find that practically all of that enhancement has grown from two causes: one, an engineering cause; the other a financing cause. The engineering cause is that throwing these companies together, so as to build up their load factors and cut out other operating expenses has been a real economy of very great value, which the companies in the enjoyment of those economies, should have participated in. But that is a bagatelle compared with this enhancement of the rate basis that has come about through these holding companies, each one in turn made possible by the enhancement of the rate basis through reproduction cost, new methods.

Now, in this particular instance of the growth of the value of those securities from \$1, to something like \$30,000,000, in eleven years,—every step of that either has been or will be put on the record in the Federal Trade Investigation, and the companies that expected them is the one which in a dozen states of the union has been shown to have worked out the technique of this imaginary, almost to the top."

There is just one thing more that I want to say, Mr. Chairman. I want to read —

BY MR. EVANS:

Q. The Lehigh Power Securities is the holding company of the Pennsylvania Power and Light Company, is it not?

A. I cannot say definitely. This started back about 1917, during the war, by the merging of Hauto, the Marwood and some Allentown properties. They have been shifted and reshuffled, and you had better get some one to answer that question who really knows.

I would not be fair to you if I unduly emphasized the valuation features in regulation. If I was Governor of this State, a member of the legislature or the Public Service Commission, and had the choice between a real live Commission and the best method of valuation that the mind of man can conceive, I would take the first. In other words, I think that our Commissions have taken this valuation issue lying down, and the Commissions themselves are responsible for the length to which they share with the promoters and the others—the length to which the companies have gone.

BY MR. TURNER:

Q. It might be a real live Commission today, without the proper legal requirements, the proper legislative requirements, as to methods of a valuation and so forth, it might be different?

A. Certainly. I am simply saying that that is not the whole story.

I am reading from the Yale Law Review as follows:

"From a more immediate point of view it seems probable that the relative importance of the valuation factor in the whole scheme of utility regulation has been greatly over-emphasized. With the public service commissions in New York and elsewhere sitting virtually as courts, and with most of their time

and thought devoted to questions of valuation, nothing else could have happened. The administrative phase of their task have been correspondingly neglected. It should be noted that in undertaking to operate in this field the commissions have chosen ground where the utilities are strongest. In the last twenty years the utilities have schooled a veritable army of lawyers, accountants, 'economists,' public relations experts, valuation engineers, et al. in the attenuated philosophy of reproduction-cost-new as well as in the minutiae with which it is made effective. Hence the commissions would be well advised from the standpoint of strategy—if for no other reason—to seek other ground on which to set up the controls needed for the protection of the public interest.

"Given a commission with the ambition to make regulation effective and with reasonable appropriations at its disposal, it is the writer's opinion that a very important advance can be made within the provisions of any of the more comprehensive regulatory acts and in spite of the immediate difficulties raised by recent Supreme Court decisions. A vigorous administrative attitude toward accounting—including the classification of accounts, reporting, standardization and simplification of rate structures, cost finding, consolidations, mergers and other inter-company relationships—accompanied by an entirely unknown degree of publicity would effect something akin to a revolution. If the present foggy mass of uncertainties concerning the management and business status of utilities were replaced by definite, understandable facts the basis for many disagreements in judgment would disappear. The commissions must take into their confidence both the legislature for whom they act and the public whose interests they are supposed to protect."

I have copies of this paper, which is a review written at the request of the Yale Law Journal of the New York investigation, which raises practically all the issues that we have before us here.

BY MR. EVANS:

Q. I should like to ask Mr. Cooke this question: If I understood you right, at one point in your statement, you stated that reproduction cost new is now the law of the land, and later amplified that somewhat. Did I understand by that that you meant simply to say that reproduction cost new has been given a greater and greater weight until in recent decisions it seems to have made it almost controlling?

A. Yes sir, I used that with quotation marks myself, which is just a convenient term, but this last decision in the Baltimore rate case, where you forced the companies to depreciate by the reproduction cost new method, there is nothing that the Supreme Court can do that would go further than that. Ordinarily when you enter up the depreciation of property, it has taken close to a year, and you have rules for applying to different classifications,—some 2%, some of it is depreciation of 50%. But this means that before you can depreciate any property you will practically have to have a valuation. If you would ask any accountant whether that is feasible, I think he will tell you it is an utter impossibility. It is not only impossible for the average man to do it, but it is theoretically impossible. It is inconceivable, because the valuation of a property, like the Philadelphia Electric Company, could not be consummated in the period in which these entries would have to be made. I am sure that the decision that was handed down in the street railways case, where the court was obviously considering that the railway business is not very flourishing at the moment. I think perhaps the fact that they gave such an extreme decision has brought the thing to a focus, that they will either have to change the line of thought, or you are coming to public ownership.

MR. TURNER: Mr. Cooke, what I understand from that is that while the decisions have held,—that is, the decisions of the Supreme Court have held that reproduction cost new is one of the elements that enter into valuation, your thought is that it has become a more and more important element until, in the recent decisions, it has been the over-weighing element that has determined the valuation?

THE WITNESS: Overwhelmingly predominant, in the Baltimore street railway case. Now, of course, I need not tell you, Mr. Turner, that there are surprising cases in the middle of this series, where the general drift has been in the direction I have indicated; there are cases where they have turned the writing of the decision over to Mr. Justice Brandeis,

and he gives the prudent investment all the aid and comfort they want.

MR. EVANS: Mr. Cooke, in your reference to House Bill No. 1275, and the proposal on page 72 in article 5, section 2, did you mean to infer that in your opinion this section was an attempt to use legislative pressure such as you did not approve of?

THE WITNESS: No; I would hardly call that legislative pressure; that is administrative pressure.

MR. EVANS: In other words, you would not put this in the class of the legislation that you referred to in New York?

THE WITNESS: No.

THE CHAIRMAN: This hearing will take a recess until 7.30.

Adjourned at 5.20 p. m., until 7.30 p. m., April 1, 1931.

W. W. COLLEDGE, recalled.

BY MR. EVANS:

Q. Will you please take the stand. You have testified several times before the Committee all ready.

A. Yes.

Q. Have you made a study of the reports of water companies to the Public Service Commission?

A. Yes.

Q. Have you found any cases where the capital accounts and the percentage of over all return?

A. Yes.

Q. Have you found any cases where the capital accounts of these companies have been written up in the reports of the Public Service Commission?

A. Yes. The water properties of some of the holding companies have been written up in amounts ranging from 16% to 398%, that is, properties affecting great communities in the State.

Q. Now, when you say the water properties of some of the holding companies, you mean that the reports of the operating companies to the Commission show these write-ups?

A. Yes.

Q. Now, what communities have been affected by these write-ups?

A. The companies listed together with others not listed, but coming under the same group, serving territory in Pennsylvania the population of which numbers between four and five hundred thousand. This territory includes the City of Washington, East Washington, Canonsburg and South Strabane, North Strabane, North Franklin, Canton and Chartiers Townships in Washington County, Greensburg, Youngwood, Jeanette, Penn. Manor, Irwin, North Irwin and Derry in Westmoreland; Williamsport and South Williamsport in Lycoming County. It also includes Vandergrift, Uniontown, Monacahele City, Osceola Mills, Waynesburg, Houtzdale, Madera, Ramer, Frackville, Milton, Watstown, New Columbia, East and West Lewisburg, Montandon, Clarks Summit, Moundsville, Northumberland, St. Marys, Kane, Great Bend, Bangor, West Easton, Glendon, Wilson, Pottsville, St. Clair, Port Carbon, Mechanicsville, Palo Alto and Mt. Carbon.

Q. There are other communities that are similarly affected?

A. Yes, for example, the whole Scranton Spring Brook group.

Q. You have not included them in your study?

A. No sir, they come separate.

Q. Now, have you prepared an exhibit covering these examinations and the write-ups to which you have referred?

A. Yes, you have it there, it covers two sheets.

Q. I show you this, and ask you whether this is the exhibit that you refer to.

A. Yes.

STATEMENT, CAPITAL REAPPRAISALS AND EARNINGS  
WATER COMPANIES, PRODUCED AND MARKED  
EXHIBIT No. 108

MR. EVANS. I offer this in evidence as Exhibit No. 108, consisting of two sheets.

BY MR. EVANS:

Q. Now, Mr. Colledge, as I understand this exhibit you have divided it according to the various holding companies.

A. Yes.

Q. And grouping the operating companies under the head of holding companies.

A. Yes.

MR. COOKE: Mr. Evans, I didn't get that, how the list of communities was made up.

BY MR. EVANS:

Q. How did you select the companies in making up this report?

A. We examined all the reports of the A and B Companies, as well as all the companies that we were able to determine that had made write-ups in their fixed capital, and in the C and D companies we just took certain ones at random, because there was so many of the C and D companies and we did not think it worth while to go into all of them.

Q. In other words, you have not included companies which did show any write-ups of fixed capital.

A. Yes.

BY MR. COOKE:

Q. How did you come not to select Scranton Spring Brook, did you think we knew enough about that?

A. No sir, that is coming under a separate man. He is making a study of that particular group.

MR. EVANS: The Scranton Spring Brook case is being treated by itself.

BY MR. COOKE:

Q. Will that be the only exception, the Scranton Spring Brook Company, these are all the water companies that you have examined?

A. No sir, there are others that will come later, but this is a special group here that I have taken.

BY MR. EVANS:

Q. As I understand it, you have not included any C and D companies, have you?

A. Only a few of them.

Q. Now, turning to this exhibit, the first group of companies, that you have are those held by Community Water Company Service Company?

A. Yes.

Q. Will you explain briefly how this exhibit has been made up?

A. I think it would be well to explain the significance of the columns across.

Q. I think so too.

A. The first column is fixed capital less construction work in progress at the end of the year. The second column shows the amount of the write-up. The third column shows the fixed capital less the write-up. The fourth column shows the per cent. of the write-up; in other words, as compared to the net amount of the fixed capital, less the write-up.

Q. In other words, as I understand it, the percentage represents the relationship of column two to column three?

A. That is right. That comes under the main heading of fixed capital. In the next group of columns comes the main heading of reserve for depreciation. Column 5 is the total reserve for depreciation. Column six is the amount of the write-up in the reserve for depreciation. Column seven is the reserve less the write-up in reserve. Column eight is the per cent. of the write-up—

BY MR. COOKE:

Q. Do you mean that when they came to make the write-up in column two, they took a certain percentage of it and just added to it for depreciation and reserve.

A. I wouldn't say that, Mr. Cooke. Apparently when they wrote up the fixed capital, they also decided that the reserve should be increased, probably due to the appraisal or whichever way they determined the amount of the write-up.

BY MR. EVANS:

Q. If I understand it correctly, where a write-up is based on an appraisal, the total appraisal without any deduction depreciation appears under the head of fixed capital; does it not?

A. Yes sir. It will appear in column two.

Q. Yes; in column two?

A. Yes sir.

Q. Then, if that appraisal has been made on the basis of reproduction cost now, less depreciation, there would also be an increase in depreciation reserve to represent that depreciation, would there not?

A. Yes sir.

BY MR. COOKE:

Q. Does that mean that in order to get the real write-up you might have to add column two and six?

A. No; you deduct column six from column two to get the net write-up.

MR. COOKE: I get you now.

BY MR. EVANS:

Q. Column 8, you were about to take up.

A. Column 8 shows the per cent. of the write-up to the original reserve; in other words, the relation 7 to column 6.

Q. It is the other way around, is it not; column 6 to—

A. Column 6 to column 7; yes sir. Column 9 shows the fixed capital including the write up, less the reserve. In other words, it is the result of deducting column 5 from column 1. Column 10 shows the fixed capital, excluding the write-up less reserve, and is the result of deducting column 7 from column 3.

Q. In other words, column 10 represents the fixed capital if there had been no write-up, less the depreciation reserve?

A. No; it represents fixed capital with the write-up in, less the depreciation reserve.

Q. Column 10, I am dealing with.

A. Oh, I beg your pardon. I was looking at the wrong column. Yes I was looking at column 9. Yes; that is right.

Q. Column 11 represents what?

A. Column 11 is the net operating income, less rents and/or contractual deductions and obligations.

Q. It should be "and/or" instead "and for."

A. Yes; that is a typographical error in there. That should read less rents and/or contractual deductions and obligations.

Q. Will you explain what you mean by contractual deductions and obligations?

A. Those come under the heading in the uniform classification of accounts having gross income deductions, and represent apparently payments that they make to the holding companies; that the subsidiaries make to the holding companies. That is the way I interpret that. Now, whether I am right or not, I don't know.

Q. Where there are such items on the books, you have deducted them from gross operating income?

A. Yes sir; I have allowed them as a deduction from gross operating income. This is set up the same as it was in the electric companies.

Q. And now, column 12 is the percentage of over-all return, and the first group is the percentage including write-up; in other words it is column 11 divided by column 9, and the second group is excluding the write-up and is the result of a division of column 11 by column 10. You have taken the three companies forming a part of the Capital Water Service System, namely the Citizens Water Company, of Washington, the Westmoreland Water Company and the Williamsport Water Company, and have given this date for them for the years 1927, 1928, 1929.

A. Yes, sir.

Q. The next group of companies are those in the Pennsylvania Water Corporation System. By whom is that system controlled?

A. That is controlled by the Community Water Service Company of Delaware.

Q. Therefore, they are affiliated with the first group of companies?

A. Yes sir; in other words, the Community Water Service Company owns or controls directly the Citizens Water Company of Washington, the Westmoreland Water Company and the Williamsport Water Company, and then through the Pennsylvania State Water Corporation it controls the group of companies that are listed in that company.

Q. Do you happen to know the banking group which control the Community Water Service Company?

A. P. W. Chapman Company of New York.

Q. Now, going down this list, I notice in columns 6 and 8 the words, "Decreased" are inserted in a few places, will you explain what those mean?

A. In the case of the Monongahela City Water Company, the company wrote up its fixed capital, but apparently the reappraisal showed that the reserve, as shown by the books, was too high; so, instead of increasing the reserve they decreased the reserve \$33,727.76.

BY MR. COOKE:

Q. Did they do that two years in succession?

A. No, Mr. Cooke. I have listed these companies in the year in which they wrote the writeup and have relisted in the next years to show the progression to get a comparison of net income; to show what they were doing.

BY MR. EVANS:

Q. In other words, taking the Citizens Water Company of Washington, the first company on the list, it shows a write up in 1927 of \$725,455.55, and the next year it shows a write up of \$723,447.52. That does not mean that there was a write up of those amounts in each of those years, does it?

A. No; it means the write up occurred in 1927, but it still appeared in a reduced amount in 1928 and 1929. The reduction no doubt, is due to retirements.

BY MR. COOKE:

Q. A slight reduction?

A. A slight reduction, yes sir.

BY MR. EVANS:

Q. Now, how many companies have you listed altogether in this exhibit?

A. We have listed, according to the holding companies, eleven companies whose reports show write-ups during the year 1927. For the year 1928 we listed sixteen companies, including those listed for the year 1927, and in the year 1929 we have listed twenty-three companies, including those listed for the years 1927 and 1928. In other words, in 1928 there were five more companies showing write-ups than in 1927, and in 1929, there were seven more companies that wrote up their fixed capital than there were in 1928.

Q. In other words, as I understand it, eleven of these companies put their write-ups in their books in 1927, five of these put them in their books in 1928, and seven others put them in in 1929?

A. That is right.

Q. Now, what is the range in these write-ups in fixed capital expressed on a percentage basis?

A. As I stated previously, the write-ups in fixed capital ranged from 16% to 398% on the original value, and as to reserves for depreciation, from 20% to 237% on the original reserve.

Q. And I think you have already explained why you repeat the companies that made their write-ups in 1927 and the subsequent years?

A. Yes.

Q. Now what is the significance of the figures which you collected on this Exhibit, Mr. Colledge?

A. The write-ups have been so large that on the basis of fixed capital, including write-ups, only one company for one year earned a 7% on the write-up, and that is the Citizens Water Company of Washington in the year of 1929, as to depreciated book values less write-up. Four companies showed no income over 7% in 1922, ten companies showed over 10% income in 1928, and seventeen companies showed a net income over 7% in the year 1929, one of the latter, the Trotter Water Company, owned by the United States Steel Corporation, showing a net income of 56.46%, as compared to the original book value depreciated.

Q. That company you have just referred to is the last company listed on the second sheet of your exhibit, is it not?

A. Yes.

Q. And the figure which you have just referred to, 56.46%, is the last figure on the exhibit?

A. Yes, sir.

Q. Now, as I understand it, those write-ups to which you refer are definitely shown on the reports of the companies to the Public Service Commission?

A. Yes.

Q. Is it possible there are other write-ups which are not shown on those reports?

A. Yes. For example, the Scranton Electric and Water Companies that I talked about this afternoon, the Panther Valley Electric Company, I had to dig that one out.

Q. In other words, some of the write-ups appear on the face of the report and others can be found only by comparison of the reports year after year?

A. Yes, sir.

Q. Then the ones that you have listed here are the ones that appear definitely on the face of the reports?

A. Yes.

Q. Now, under the subject of operating expenses, as I understand it, you have taken the actual operating expenses shown by the report?

A. Yes, that is correct.

Q. And if there have been fees to holding companies or other operating expenses which might be questioned, you have included all those?

A. Yes. There is no total on the reports as to certain groups of excesses whereby you can tell whether there was any inflation in them or not.

Q. In general, these expenses would be included in the heading "General Miscellaneous Expenses," would they not?

BY MR. COOKE:

Q. Generally speaking, what total of the operating expenses of a water company are the general and miscellaneous expenses?

A. I don't believe I could state that, even in round figures. It varies considerably according to the class of company. The small company, the general expenses would be probably small as compared with the general operating expenses of the other groups of production and distribution expenses. I would be glad to make a comparison like that if you would like to have it.

Q. Is it as high as it is with the electric companies? Is that your impression?

A. I would not like to say that either.

BY MR. EVANS:

Q. Now Mr. Colledge, does the expense of write-ups such as you have referred to in any way affect the security values of those companies?

A. Yes.

Q. When did most of these write-ups of water companies begin, as far as your examination has shown?

A. In 1927, and of course they carried through 1928 and 1929.

Q. Did you examine the reports prior to 1927 in order to ascertain that?

A. Yes; the Commission has allowed them to make up their reports in a way that make it possible to hide the earlier write-ups. The majority of the present ones in 1927, 1928 and 1929 came with the holding companies entering the field. That is when the community water service and those other holding companies commenced to come into the field here in Pennsylvania.

Q. Besides the Community Water Service Company and its affiliated companies, what other holding companies have you included?

A. The Keystone Water Works and the Electric Corporation, and the North American Water Works Corporation, and I might explain that these groups are reversed here. The North American Water Works Corporation is similar to the Community Water Works Corporation in that it controls directly the companies listed under it and through the Keystone Water Works and Electric Corporation it controls the companies listed under that corporation.

Q. So that with the exception of the independent companies and the United States Steel Corporation companies there are two systems of holding companies that are included in this work; the North American Water Works and the Community Water Works system?

A. Yes, sir.

Q. Now, do these write-ups represent money actually invested?

A. No sir, they represent hope.

Q. In other words, in the case of the Citizens Water Company of Washington?

A. In the case of the Citizens Water Company of Washington in the year 1927 there was not \$727,000 of new money put into the property or any part of it.

Q. Do the reports indicate in any way on what basis these write-ups were made, whether on the basis of appraisals, or in what method?

A. One case particularly that I did notice was the case of the Williamsport Water Company, which company wrote its fixed capital-up in 1927 as \$154,945.87. The report stated that that was the basis of an appraisal made by its consulting engineers.

BY MR. COOKE:

Q. Did it give their names?

A. Morris Knowles, Inc.

Q. Morris Knowles of Pittsburgh?

A. Yes; and one or two of the smaller of the companies particularly I believe Trotter Water Company, stated in its report that its write-up was based on an appraisal made by the Internal Revenue Department. I might explain what that means. In the early days, before the Federal income tax came into effect, the majority of the smaller companies simply had a cash book. That is the only book they had, cash receipts, cash disbursements.—never had any fixed capital account books at all. When they came along to work up the invested capital for excess profits for tax purposes, they caught these fellows with their dish pan upside down. The Internal Revenue Department attempted to build up a fixed capital account to work out this capital. Apparently that was what the Trotter Water Company used.

Q. When you stated that these write-ups represented hope, what did you mean?

A. In the hope that the Commission will allow them the fair return on the rate fixed as well as the actual capital.

Q. To whom does the benefit of the earnings of such write-ups go?

A. The holding companies.

Q. Do these holding companies control all or practically all of the common stock?

A. Yes sir, all except, I believe in a few cases, directors' qualifying shares.

Q. So that the earnings of the operating companies would go to the benefit of the common stockholders, whoever they might be, and in this case it would be the holding companies.

A. Yes sir.

Q. Are the holders of the preferred stock of these operating companies benefited by these write-ups?

A. Where they are represented by actual cash investment, no, but the holders of preferred stock issued by the holding companies are affected where the holding company owns the common stock of the operating company and has issued preferred stock on that equity. In other words, speaking generally, the holders of the capital stock of the operating company are not benefited, but the holders of the preferred stock of the holding company may be benefited.

Q. In referring to the holding companies I assume you mean the Community Water Service Company and the Pennsylvania State Water Corporation, and all of these holding companies you have listed?

A. Yes sir.

Q. I wish you would state again to the Committee why in your opinion the earnings shown in column twelve are comparatively low, as compared for instance, with the electric companies which we have already had.

A. In my opinion it is due to the fact that the boroughs can buy out the water plants and not the electric plants. Under the Act of April 29, 1874, P. L. 75, Section 34, it makes that provision, that after twenty years from the introduction of water or gas, the city or municipality can purchase the plant.

Q. On what basis does the act provide they can purchase it?

A. By paying the net cost of erecting and maintaining, with interest thereon at the rate of 10% per annum, deducting from such interest all dividends theretofore declared.

MR. COOKE: Is that a recognition of a prudent investment?

MR. EVANS: I could hardly state it would be so termed.

MR. COOKE: Certainly it is not a recognition of a reproduction cost new?

MR. EVANS: Certainly not. This was passed long before there was any regulation of any sort.

BY MR. EVANS:

Q. Is there anything else particular in regard to this exhibit, or any of the companies covered by it, that you think would be of interest to the Committee?

A. Yes.

Q. What companies do you refer to?

A. The Williamsport Water Company.

Q. That is a part of the Community Water Service System, and is the third company on the exhibit?

A. Yes sir.

Q. Will you explain that situation briefly to the Committee?

A. The Williamsport Water Company, subsidiary of the Community Water Service Company, paid in cash out of a bond issue of \$2,500,000 and an issue of 8390 shares of \$6.00 cumulative preferred stock, a premium of \$110 per share on 14,624 shares of its common stock, all of which was held by the Community Water Service Company.

Q. State briefly to the Committee the details of that transaction, so that it may be understood.

A. On July 1, 1927, the Williamsport Water Company was taken over by the Community Service Company. During that year after the taking over by the Community Water Service Company, the Williamsport Water Company wrote-up its fixed capital \$2,134,945.87.

Q. That is shown in column two, line 3, of Exhibit No. 108?

A. Yes sir, as stated to agree with an appraisal made by its consulting engineers, Morris Knowles, Incorporated. This write-up was credited to the capital surplus. Against that capital surplus was charged a write-up of its depreciated reserve, \$314,161.42, as shown in Column 6, line 3, of the exhibit.

Q. What was the balance then left in the surplus account?

A. Left a balance of \$1,120,784.45 in the capital surplus account.

Q. Then what did the company do?

A. The company then proceeded to retire 14,624 shares of its stock at par of \$100, plus a premium of \$110 per share, or a total of \$210 per share. This stock was all held by the Community Water Service Company, and on January 1, 1927, the company had an earned surplus of only \$507,720.73. In setting up this transaction, involving an expenditure of \$3,071,040, it charged to earned surplus \$501,256.23, and to its capital surplus account, \$1,107,383.77, or a total of \$1,608,640, representing the premium of \$110 per share. In order to retire this stock and pay the total of \$3,071,040, it was necessary to sell an issue of 5% 25-year mortgage bonds, amounting to \$2,500,000, and an issue of 83,000 shares of \$6 cumulative preferred stock of no par value. These bonds were sold to P. W. Chapman and Company, of New York, at 91%, and the stock was sold to the Lycomine Trust Company of Williamsport, Pa., at 94%. P. W. Chapman at the time was president of P. W. Chapman & Company, Investment Bankers in New York, and was president of the Community Water Service Company and a director in the Williamsport Water Company.

Q. Now, Mr. Colledge, there is nothing, I take it, in the reports to indicate at what price the Community Water Service Company paid for the stock of the Williamsport Water Company, is there?

A. There is nothing in the report, no, but there is testimony—by the way, I might state that there was a complaint filed against this set-up by George E. Graff and others under Complaint Docket No. 7447, in which it would be possible to obtain that information from certain briefs and testimony at the hearings.

Q. The reason I asked, is because I know of another case where the holding company financed the purchase of its stock through very much this sort of a transaction, and this liquidating of the dividend of \$210 a share, if that is the right way to designate it, suggested that that was possibly what was done here. Apparently there would be the very same kind of testimony that was alleged in this case.

Q. In other words, in any event the net result of this was that the Community Water Service Company obtained complete control of the Williamsport Water Company, holding all its stock, and from the Williamsport Water Company secured a premium on the common stock amounting to \$210 a share?

A. No, it only received a premium of \$110 a share.

Q. Excuse me, received a total of \$210?

A. Yes, received a total of \$210 a share on 14,624 shares.

Q. And what was that total amount that was paid to the Community Water Service Company?

A. \$3,071,040.

BY MR. RHODES:

Q. Did that include the bonus?

A. Yes, that was the total amount paid for that stock.

BY MR. EVANS:

Q. Now, Mr. Colledge, in order to issue these securities, it was necessary, was it not, for the Williamsport Water Company to file a certificate of notification with the Public Service Commission?

A. Yes.

Q. And that certificate of notification must under the Public Service Company Law state the purpose for which the securities are to be issued?

A. Yes.

Q. Have you examined the certificate of notification filed in this case by the Williamsport Water Company?

A. Yes.

Q. What does it show as to the purpose for which these bonds and preferred stock were to be issued?

A. Certificate No. 4671, was filed by the Williamsport Water Company with the Public Service Commission.

Q. I show you a copy of this certificate. (Showing witness statement subsequently marked Exhibit No. 109.)

A. Yes, that is a copy.

Certificate of notification, Serial No. 4671, Williamsport Water Company to Public Service Commission, produced and marked Exhibit No. 109.

MR. COOKE: Mr. Evans, do you know what that purports to say as to dividends?

MR. EVANS: Mr. Cooke, I think it is a case where the purpose of the certificate of notification has been entirely frustrated, and while I think a close examination of that certificate of notification would put the accounting bureau, perhaps, on notice that the company intended to retire its common stock out of the proceeds of the bonds, yet I don't think for a minute that that certificate complies with the intent of the Public Service Company Law. It does not seem so to me.

I think this apparently a case, from what Mr. Colledge has stated, where the holding company has acquired the stock of the operating company and has obtained most, if not all, of the price paid for the stock out of the public through issuing securities of the operating company.

MR. COOKE: In other words, it is a case where they get something without putting up any money?

MR. EVANS: Or very little money.

BY MR. EVANS:

Q. Is there anything else, Mr. Colledge, that you can add as to this issue of bonds; any other information you were able to get?

A. Nothing, Mr. Evans, except I obtained from one of the briefs in this complaint filed by George E. Graff et al that while the bonds were sold to P. W. Chapman at 91 they were offered for sale by P. W. Chapman and Company's Chicago Office at 101. And now, I am only stating what from the statement made in the briefs filed in the case—of my knowledge I don't know—because I didn't see what they call those bills of offering securities for sale?

Q. A bond circular?

A. A bond circular stating down at the bottom of it: "Price furnished upon application." So, in this circular it was not stated just what they were offering them for. Now, if they sold them for 101 and paid 91, for them, they got ten per cent. on them.

Q. And what would have been the commission on that basis on the entire issue of bonds?

A. \$250,000.

MR. EVANS: Are there any questions by the members of the Committee?

BY MR. RHODES:

Q. I would like to ask Mr. Colledge what disposition was made of the complaint relative to this set up.

A. The complaint before the Commission, Mr. Rhodes, was dismissed. I think I have a few rough notes as to just what the Commission said about it. The Commission said, in sub-

stance in this order, that the Commission has no power to regulate the issuance of corporate stocks and bonds, and that there was no complaint as to rates or service; these having been settled in 1925 by a withdrawal of the complaint against the new schedule of rates filed by the Williamsport Water Company and for these reasons "The complaint, therefore, will be dismissed."

BY MR. EVANS:

Q. When was that dated?

A. The order was issued on April 23, 1929.

Q. Do you have where it was reported?

A. Volume 9 of the Public Service Commission Reports.

BY MR. RHODES:

Q. So far as the Commission was concerned, the sky was the limit in these financial manipulations?

A. Apparently. That was Complaint Docket 7447.

BY MR. COOKE:

Q. How long was this before the Commission?

A. I don't know how long the thing lasted, Mr. Cooke. I didn't notice just the date when Mr. Graff filed his complaint.

BY MR. COOKE:

Q. Was the valuation of Morris Knowles and Company, Incorporated, a part of the record in any way?

A. No; I believe that the Commission referred to it in stating that the company had written its books up in 1927 to agree with an appraisal made by its engineers, Morris Knowles & Company, Incorporated, which appraisal was used in connection with the rate case in 1925. That is from memory. Now, I wouldn't be exactly sure of that.

Q. Is there anything to show that the Commission recognized that valuation was used as a basis for a 91% write-up?

A. No I don't believe there is, Mr. Cooke. They stated in their opinion, or in their order it is stated, in there, the figures are referred to in there, the amount of the fixed capital at the time this complaint was before them.

Q. They state the amount of the fixed capital before and after the write-up and say it was done on Morris Knowles, Incorporated valuation, then why was that not an admission on the part of the Commission that this engineering valuation is a justification for a 100% write-up?

A. I would say that would be recognition; maybe I did not get the point of your question.

Q. What I want to know is, did the Commission know that Morris Knowles, Incorporated valuation, that that was the justification of a 91% write-up?

A. Yes, sir.

BY MR. RHODES:

Q. From these figures, Mr. Colledge, did it appear to the Commission that there was a brokerage of about nine dollars on each of these bonds and six dollars on each share of stock?

MR. EVANS: According to the figures they were sold to the bankers at 91 and to the public at 101.

Q. Was that brokerage apparent to the Commission?

A. I have a part of the journal entries that were a part of the certificate of notification, that was sent out in the certificate. The certificate of notification contained these facts.

Q. That notification was before the sale was made?

A. Yes, sir.

Q. The Commission did not give any consent?

MR. TURNER: The Commission said in their opinion they had no control over the issuance of the certificates.

BY MR. RHODES:

Q. That was before the notification came in?

A. No sir, the certificate was filed in 1927 and the opinion under this complaint was handed down in 1929.

MR. COOKE: Mr. Evans, am I not right that you were on the Commission when there was an example of where a security had been sold and by an action on the part of the Commission, the people who sold them were obliged to get them back?

MR. EVANS: I expect you refer to the case of the proposed acquisition of the Penn Central Power Company by Albert Emanuel interests in which this same thing was attempted to be done by the bankers and the Commission in 1925 notified

the bankers through their attorneys that they would not approve the transaction and that the money for the stock would have to be put up by the bankers. The Commission was informed that that would be done, but I have been later informed—it is now being checked—that certainly after Commissioner Scattergood and I were not confirmed, the same result was obtained by declaring a liquidating dividend of the Penn Central Power Company amounting to four and one-half million dollars, and it was allowed. I can only say that in answering Mr. Cooke's question. I think it should be checked.

Q. It is a fact that the Commission thought securities approximating \$5,000,000 had been withdrawn from sale after you had reason to believe they were sold?

A. Yes sir, they were in the hands of the bankers.

BY MR. RHODES:

Q. As I understand, the Commission definitely stated that it had no authority or control over the issuing or selling of these securities below par?

A. Yes sir.

Q. And if they could sell them at 10% below par they could have sold them at 25% below par?

A. Yes sir.

MR. COOKE: Mr. Evans, was there any doubt expressed when you were a member of the Commission as to the right of the Commission to do what you thought you were doing?

MR. EVANS: I cannot answer that. I know the Commission informed its attorneys it would not be approved, and rather than have the Commission disapprove it, the whole set-up was changed.

MR. TURNER: Mr. Evans, if the Commission took the stand they had no legal control, why were they asking for approval in this case?

MR. EVANS: In this case, as I understand it, the certificate of notification was filed.

Q. I mean in the case Mr. Cooke referred to?

A. The case to which I referred involved the acquisition by one operating utility which was a small one whose name for the purpose was changed to the Penn Central Light & Power Corporation or some such name to a system vastly larger, namely, the Penn Central System, centering in Altoona, and it was very much the case of the mouse swallowing the lion. Here I take it that the Community Water Service Company—if that is the right name—is not an operating utility and therefore its purchase of the stock of the Williamsport Water Company was not subject to the control of the Public Service Commission. It is a typical case where the holding company can be used to thwart regulation, I think.

MR. MEMOLO: I should like to ask Mr. Colledge about the Scranton Electric Company.

MR. EVANS: That is coming in later.

BY MR. MEMOLO:

Q. You say you didn't go into the write-up in that case?

A. I did not personally. Another man has that.

BY MR. EVANS:

Q. Mr. Colledge, what is the write-up of the Vandergrift Water Company in the year 1929, as shown by your Exhibit No. 108?

A. The write-up of the year 1929, was \$949,451.10, or a percentage over the original book value of 99.15%, and the reserve was—

Q. And the reserve was written up how much?

A. The reserve was written up \$124,220.81, on a percentage of a write-up over original reserve of 68.51%.

Q. What was the per cent, over-all return excluding the write-up?

A. 10.79%.

STEPHEN RAUSHENBUSH recalled.

BY MR. EVANS:

Q. Have you got some corrections you wish to make in your testimony of the last hearing.

A. Yes sir, they are practically minor ones. They are all matters of misspelling, as follows:

On page 822, the name was misspelt throughout. The correct spelling is Raushenbush. On page 837, line 1910 should read 1925. On page 838, third last line, the head of the public utilities should read head of the public utilities department. On page 842, line 11, 9.35% changes to 9.635%. On page 842,

line 13, 33.6% changes to 37.6%. On page 845, line 7 (Bangor Electric) changes from 1 to 3 years. On page 845 line 8, Barnesboro-Spangler changes from 2 years to 4 years. On page 846, Erie Lighting Company changes to Erie County Electric Co. On page 847, last line, Natrona Light, Heat and Power Company changes from 1 year to 4 years. On page 849, first two lines drop out. On page 849, the Pennsylvania Public Service Corporation changes to the Pennsylvania Water and Power Corporation. On page 849, the Philadelphia Electric Company Systems changes to Rockingham Light, Heat and Power. On page 849, line 9, the Scranton Electric, "they lost on" is changed to "is omitted for." On page 851, line 12, changes from 2,500,000 to 2,300,000. On page 855, line 7,

Pittsburgh changes from 4.06 to 4.6.

Erie changes from 7.05 to 7.5.

Reading changes from 7.01 to 7.1.

Scranton changes from 5.09 to 5.9.

On page 857, every City listed drops the zero after the decimal point,—thus, Allentown changes from 9.06 to 9.6. Last line, Allentown from 9.02 to 9.2, and the same changes on all the figures on page 858. On page 860, fourth last line, Bedford changes to Butler. On page 871, Mr. Thomas Edison changes to Metropolitan Edison. On page 879, second last line, New York 8.04 not 8.4. On page 882, the sentence changes from "There are 26 comparisons in which the Pennsylvania rates show higher; in 19 instances they are a little lower and in 6 are about equal." to "There are 26 comparisons. In 19 instances, the Pennsylvania rates show a little higher, and in 6 they are a little lower."

Q. You have already been sworn in this proceeding?

A. Yes sir.

Q. Have you made a study of the reports of the natural gas companies, classes A and B to the Public Service Commission?

A. Yes sir. I have made a report, taking the two years,—the last one was made in 1929, made to see whether that condition existed before the year 1926,—taken arbitrarily.

Q. I show you paper headed "Natural Gas Companies A and T 1926," and ask you whether this is one of the exhibits to which you refer.

A. Yes sir.

MR. EVANS: I offer this in evidence as Exhibit No. 110.

BY MR. EVANS:

Q. I show you a paper marked "Natural Gas Companies A and B, summary, 1926," and ask you whether that also was prepared by you or under your direction?

A. Yes.

MR. EVANS: I offer this in evidence as Exhibit No. 111.

BY MR. EVANS:

Q. Before taking up these exhibits, reference has been made once or twice to the studies previously introduced by you, the electric rates, particularly in regard to the figure of 15 kilowatt hours per month consumption. Will you state to the Committee what the facts are in regard to the reasons for taking the 15 kilowatt hour consumption per month as one of your basis of comparison.

A. The answer to that is simply a rephrasing of the answer I made at the time. The average consumption around the state is somewhere around forty kilowatt hours. It varies with the companies. A good many people use a good deal more than that. A good many people use considerably less. At one time I orally asked a member of the accounting staff of the Commission if they knew in any way what group used the 15 and what group used the forty, and what group used the eighty the three classifications that we had. They said they had no data available on that at all. I pointed out the experience to which you referred this afternoon, the experience in New York, where the remarkable results was obtained that 50% of the users apparently were in that class of 15 or under. That might be a slight indication of what it would be in a large industrial city with a large working population.

BY MR. TURNER:

Q. Have you since been able to get any figures in Pennsylvania?

A. There is no way of getting it except through the companies directly. The Commission hasn't got it. A lot of people use 15; a lot of people use 40; and a lot of people use 80. The low in the 80 offsets the high in the 15. The average

throughout the State for domestic consumers was somewhere in the neighborhood of 40 kilowatt hours per month.

BY MR. COOKE:

Q. Where did you get that?

A. From Commission reports. I said it differed by companies.

Q. The only figure that I recall that was definite was the one that we got from the companies in the 1926 of 336. I was wondering whether it was a jump to 480 in the meantime.

BY MR. EVANS:

Q. Turning to your exhibit No. 110, being the analysis of the 1926 reports of the Natural Gas Companies A and B, will you explain this briefly?

A. This exhibit is a little different than the electric exhibits we introduced before. It follows a little more closely the Commission procedure, the calculated rate based that was introduced in Exhibit 10. They were not able to follow it completely, because there are arbitrary figures which do not show on the books of the company. We have taken fixed capital account, as reported by the books, depreciation reserve, third columns, fixed capital companies depreciation and reserve. And in the fourth column, adjusted gross income. We have followed exactly the procedure used by the Commission, in finding adjusted gross income. The per cent. of return is worked out between adjusted gross income and fixed capital, and 7% return on that fixed capital less depreciation is given; excess is given, and the second to the last column shows how much capitalized excess, or shows how much money the Commission would have to grant any one of these companies by way of working capital by way of giving value, or reproduction value, in order to produce a 7% return and no more. In the last column, that is put in percentages, and the second to the last column was put in percentages, and you can see there the exact effect of it in order to give a 7% return. On this fixed capital less depreciation reserves, the Commission would have had to allow for working capital, going value, and other items like that, practically double the value of the present depreciated fixed capital, that is, 97%, on top of what it is now. The percent of return there is almost 14—13.87.

Q. In other words, the fixed capital less depreciation reserve is \$1,452,000 in round figures, and the capitalized excess would be \$1,426,000?

A. Yes.

BY MR. TURNER:

Q. That might not have any relation to valuation?

A. Well, it is an attempt to do exactly what they did here—

BY MR. EVANS:

Q. Refer to it as the exhibit?

A. In this exhibit where they tried to figure out tentatively a rate basis, and whether the companies were earning more or less, to the extent that they show how much they would have to chuck in there to make the present return a reasonable 7% return.

Q. And by this exhibit which you have referred to, you mean Exhibit No. 10 which was set up by the Commission's Bureau of Accounts in electric companies?

A. Yes, introduced by Mr. Morgal.

Q. I am not sure whether it is perfectly clear on the record or not, Mr. Raushenbush, but the column headed 7% return, means the amount that 7% on the fixed capital less depreciation would be?

A. In dollars, yes.

MR. TURNER: Mr. Evans, this fourth column, it says, "Gross income," do you mean that to be after the expenses have been deducted?

THE WITNESS: The word "adjusted" should be added.

BY MR. TURNER:

Q. And it is not gross income?

A. No; no. It is gross income, and from that has been deducted all the operating expenses, some non-operating income and non-operating expenses have been included, exactly following the procedure as that followed by Mr. Morgal in presenting his evidence here on electric.

BY MR. EVANS:

Q. Now, how did you select the companies which you have covered by this Exhibit No. 110?

A. They all are class A and B companies on which we had records. There is one, the Equitable Gas Company, that had a divided period; it had a reorganization at the end of the first three months, and the first three months showed a very large profit, and then some transactions went on, which we could not quite understand in making a report, and in which a rental was tied on that absolutely killed the profit, showing a deficit for the remaining nine months, and it was very hard to adjust these two periods. That is the only reason we left it out, and that is the only one we left out.

Q. Now, there are certain notes to this exhibit. Are they self-explanatory, or do you want to say anything in regard to them?

A. Well, the first three really don't make very much of a change, because they have not written up their capital stock; they have written up their surplus, and it does not affect any of these columns. The "E" note, is the Peoples National Gas Company, and might mean that the reserves here should be much larger than they are, which in turn would raise the revenue. They have something called depletion reserve for gas that is being used up, but they didn't put it in as depreciation reserve, and we gave them the benefit of the doubt. If the depletion reserve were deducted here, the rate of reserve would jump very emphatically. The "E" note is not important. The "F" note, as it applies to the Alum Rock Gas Company, there apparently they have very large investments and report no income on it. We just took the figures from the books of the company, and perhaps they have only that \$10.50 income on that investment. We don't know how it might affect that figure if they had made full and complete reports, and it seemed worth while to call attention that there was that question in that one company. Those are the only serious ones.

Q. Then I see their per cent. of return is 25.87?

A. Yes, if by the same method they had included in their report some of the income from investments, then we would not have deducted it. If they had reported them, we would have deducted them from that \$101,000, and that would have lowered it, and so we are going by their books as they stand. It might also be said, Mr. Crawford called it to my attention, that in natural gas companies there might be, that 8% perhaps instead of 7 might be considered—but we have taken into consideration the cost of the risk involved in this industry.

Q. In other words, it is a more hazardous interest than the electric interest?

A. That is a matter of common knowledge, and because they have a large part of the risk paid by the public in the form of large depreciation charges and depletion charges.

Q. Now, apparently from this exhibit the Phillips Gas and Oil Company had the largest per cent. of return, being 51.33%.

A. Yes.

Q. Have you any explanation that accounts for that in any way?

A. No, some of that is the oil business, and if you go ahead and add—I mean make a figure on the side for the oil revenue and figure out the oil expenses, which he does not do, does not separate these, it would bring the per cent. there down to 50 perhaps. I have no explanation of that. I have some figures on the price that he purchases his gas for, and the price he sells it for on the average.

BY MR. COOKE:

Q. Have we had any rate cases on natural gas?

A. We have had the Equitable.

Q. Is that one given?

A. That is not in this particular report. It is given in the 29, and as I explained, it was not given here.

Q. Have you examined that case?

A. Well, I examined it sometime ago.

Q. What was the relation between the actual investment and the reproduction cost new?

A. Just about the same as it is. It was a complicated case from the fact that the Commission did not find a final value. They said, we guess their value is somewhere between two figures, and it didn't mention them exactly, so a final value was not found.

BY MR. EVANS:

Q. How did the average of these two figures compare with the value claimed by the company?

A. I would have to have the case before me to remember that relationship.

Q. Now, Mr. Raushenbush, is there anything more you wish to say about Exhibit No. 110?

A. The significant thing here about this exhibit is several things indicated in the rate base—at this time in 1926. I want to make the same comments I made here about the electric, that this form of making the return gives the company the benefit of several doubts, which a Commission might dissolve. If allowed early inflations that are not specifically ear-marked or labeled, if there are any such. It takes the fixed capital at the close of the year. It also adds in construction work in progress at the end of the year. It also allows any operating expense for rentals that may be due by holding companies, which might not be allowed by a Commission that did not feel they were justified. It shows a rather startling thing with the Columbia Gas and Electric group, as earning of an average practically double of what they are supposed to earn; a seven per cent. return; and some other groups have been apparently favored or neglected, as whatever the word is to a somewhat similar extent; the Natural Fuel and Gas Company. When it comes down to some of the others there is a difference—the Allegheny Gas Company not particularly; the Standard Oil Company, one of them, the Peoples Natural is doubled and then, of course the Phillips Company. The Columbia Gas, a big group stands out as very consistent, almost averaging double every one of them. There are some companies there; the Manufacturers Gas Company, although I believe that is largely industrial; and the Natural Gas Company of West Virginia, a Commission would have to add on one hundred and forty-six and one hundred and thirteen per cent. of the present fixed capital, in order to get a return of seven per cent.

BY MR. EVANS:

Q. What does the summary at the bottom of that exhibit indicate?

A. This first column is simply an addition. The total fixed capital there is \$191,394,090, and the depreciation reserves are as given, \$67,407,000, and the fixed capital, less depreciation reserves, is \$120,986,871, and the gross income adjusted is \$16,305,739. All these companies averaged in together; that is, in the way we get in the calculations; averaged in all together, including some that are below seven per cent.: three that are below seven per cent.; the average 13.1%. The seven per cent. return, what it would be is a calculation of seven per cent. on \$123,000,000, and the excess of those companies earning over a seven per cent. return is \$7,802,379, but there are some that didn't earn over seven per cent.; they earned under; \$185,700; but they are shown by the subtraction by which you would get the total excess of all the companies, and then reduced to figures, excluding those that are—the latter one is the really important one, where the exclusion is made. A Commission would have to add one hundred and eight million nine hundred and fifty-two thousand, three hundred and fifty-seven practically by way of going value, good will, reproduction, new, working capital, and so on to make that seven per cent.; the present return of seven per cent. That would be about 87%.

Q. These percentages, that you have given in this summary, are straight percentages of the figures given in the summary, are they not?

A. Yes.

Q. For instance, in the per cent. return they are not averages of the averages?

A. Well, it is a weighted average. The excess would check out the same.

Q. I mean between 13.1% in the per cent. return with that obtained by totalling the per cent. return in that column and dividing by the number of companies?

A. Oh, no; that would not be any average.

Q. Turning to a exhibit 111, this exhibit consisting of five sheets, in this case you have put the summary at the beginning of the exhibit?

A. Yes, sir.

Q. I understand that this is prepared on the same general basis as the preceding exhibit?

A. It is. The thing is a little more complicated as a job, because in the meantime the companies started writing up a

great deal, or some of them did, and we have taken the total fixed capital, depreciation reserves, and so on, all the way across without the write-ups, and they give different results, of course.

Q. Well, will you explain that to the Committee; taking, first a company, with a write-up.

A. At the bottom of page 1—the page right after the summary page—there is the Greensboro Gas Company—

Q. In parenthesis you have indicated where the company operates?

A. Washington, Westmoreland, Green and Fayette Counties are the main ones, I believe. That first figure all along that line is the fixed capital with write-ups, exactly as we gave in the electrics not taking them off at all, and that shows that the write-up included—the valuation included, they were earning 8.86%. And now, that write-up is taken off and it is taken off both in the fixed capital—the depreciation reserve in that case does not change. The difference shows up both in the fixed capital and in the fixed capital less depreciation, as a little over six million; six million six hundred thousand roughly, and once that write-up is taken off for the percentage that the percentage return jumps from 8 to 25%, which is about three and one half times more than they are supposed to be getting. Is that sufficient?

Q. Yes; I think so. Have you any information as to how these write-ups were arrived at? Were they mostly on the basis of valuation?

A. On the basis of appraisals made for that purpose; yes sir.

Q. Do these figures of write-ups definitely appear in the reports to the Public Service Commission?

A. Yes sir; that is the only source of information we used here.

Q. Mr. Colledge referred to some cases where the write-ups were not disclosed on the face of the reports and it required some work to dig them out?

A. He was working on the write-ups. I was working on an earning story, and that was definitely marked. You could read it in black and white that it was a write-up.

Q. What comments have you to make in regard to this exhibit 111?

A. Here, again, is a story of some high earnings that would need a great deal of justification before a Commission that was interested in getting a justification. Perhaps, the Natural Gas Company of West Virginia, on page 1 might after the summary is as startling a one as any. The write-up there, as you see, was somewhere around \$4,600,000, and the differences show up in a small company of that size very much. The present return instead of being twice as large as before, 14.8, jumped to 90%, which I think is higher than Mr. Phillips' percentages on this exhibit.

Q. And that per cent. in the last column—

A. We would have to add \$9,781,000 or more on this valuation in order to make a fair return. That is one of the most striking things on it. That company is a West Virginia corporation it operates in several states, Pennsylvania, Ohio and West Virginia.

Q. Do you know whether it is owned in West Virginia?

A. That is the name of it. Here again, as I remarked before, on this chart if it were based on an 8% return, that is if it were decided that 8% return is fair to an industry where there is a hazard, the excess percentages would naturally be reduced and still with an 8% return, some of these returns allowed would stand out very noticeably. The significance of 1926 compared with this was that the Commission had the information before it all these years and there was no write-up, the first being in 1929, as I believe five write-ups of some importance.

Q. When you say there are no write-ups in 1926, of course you mean there are no write-ups that are apparent on the face of the report?

A. Yes, I state that with the same qualification. It is possible to have a write-up without showing it, as in the case of the Scranton Electric Company.

BY MR. COOKE:

Q. Mr. Evans, are you going to show to us what part of Pennsylvania is controlled by holding companies over which the Public Service Commission has no control?

A. We expect to do that with the electric companies.

MR. COOKE: I would be interested to see a map showing what part of the State—if I understood your reply to the other question, it was that they could not do anything about the inflation of securities because it was a holding company over which we had no control.

MR. EVANS: I said it was a different situation that that presented by the Penn Central, but I would not say it was a matter over which the Commission had no control.

MR. COOKE: No, but its control is less tenacious that if it had been a Pennsylvania company. If it had been an operating company subject to Commission control; it was not a question of whether it was owned inside or outside of the State, it was a question of whether it was an operating or a holding company.

It would not be very difficult to show us maps in black showing this part that is controlled, as the lands of the Pennsylvania companies, and the rest of the territory in another.

MR. EVANS: I think that can be done. Of course you understand Mr. Cooke, only Class A and B companies are covered by these exhibits, and to make another exhibit complete you would have to include them.

Q. You would cover 90 to 95% by taking classes A and B.

A. I think 95%.

THE WITNESS: I have the total percentages by holding companies, percentages of total sales by various holding companies which I can give you.

The column here, gas and electric companies of Delaware, 24.36% of the total production of these Class A and B companies.

The National Fuel Gas Company of New York is 16.55% of the total sales.

The American Electric Power Corporation of Delaware is 2.86% of the total sales.

The United States Steel Company with its various subsidiaries, it is 11.01% of the total sales.

The Standard Oil Company of New Jersey, controlling these two, Peoples National Gas and the Columbia National Gas, is 19.2% of the total sales, and the Philadelphia Company and the Pittsburgh, controlling the Equitable Gas—

BY MR. COOKE:

Q. What state is that incorporated in?

A. Delaware that is 16.23% of the total sale. D. W. Phillips is 8.62% of the total sales, and the Pennsylvania Electric—

Q. Is Phillips incorporated outside of the State?

A. No, I think he is local.

Q. Leave him out of the calculation, for what we want to know is the percentage of those outside the State.

A. I think the Philadelphia Electric Company and the Johnstown Fuel Supply is local. The latter is 5.6% of the total.

Q. Will you add up those that you are sure are outside of the State?

A. Those that are surely outside of the State, taking off 9.18% of the total, that is they are about 90.82. Take those two that are uncertain and you would get 9.18% and the rest is 90.82.

BY MR. EVANS:

Q. I think it is only fair to point out that the mere fact that the holding company is incorporated in Delaware does not necessarily mean that the control of that concern is outside of Philadelphia.

MR. COOKE: I am talking about the Commission control. We have been told that rates are based on the operating company prices and the exhibits that have been shown here make them seem far from a correct statement and it would seem that the real rates are based on the necessities of the holding companies. Apparently 90% of the holding companies do not come within the control of the Commission except as they may be controlled through their local incorporated operating companies.

MR. EVANS: All I meant to point out is true, that would be equally true if the holding companies were Pennsylvania corporations, so the distinction I think is not significant.

MR. COOKE: But in any event it is in excess of 90% whether we take those incorporated inside the State or outside of the State of Pennsylvania. Is it not true that we have in our legal power now the control of the Pennsylvania incorporated holding companies?

MR. EVANS: Yes.

MR. COKKE: And there is a serious doubt except that possibly through Federal legislation that they can give us legally such commission control of holding companies except those incorporated in the states where the commission happens to be; is that not true?

MR. EVANS: Yes.

BY MR. EVANS:

Q. Have you any information at all as to which of these companies produced their own supply of gas, and which purchased from other companies.

A. Yes sir, I have some information about that. The Fayette—

MR. CRAWFORD: The Fayette buys from the Hope Natural Gas Company. They are purchasers too.

THE WITNESS: I haven't got it into very good shape

BY MR. EVANS:

Q. If you haven't got it readily accessible, what other comments have you to make in regard to your exhibit No. 111?

A. Nothing except to point out that almost uniformly, where these write-ups have taken place, the earnings on the written-up capital show lower. They really are fairly high, where that is taken out of consideration.—The Natural Gas Company of West Virginia, Greensboro, on the first page. There are some other high earnings there, even without write-ups.—Alum Rock Gas,—largely industrial,—Dempseytown Gas Company has an earning there of 22% over all. Another one of them, the Apollo which is largely industrial, practically industrial has 11.6. The People's Natural Gas Company has 13.76, and the Phillips Company is high. The Johnstown Fuel and Supply Company, however, even taking out the write-ups, shows a deficit for this year on that basis.

Q. Have you any information as to what portion of the output of the companies controlled by the United States Steel Corporation is used by United States Steel?

A. Most of it, I am told. They say in their reports that there is very little outside sale. They say there are no boroughs, towns. How much they sell otherwise industrially I don't know.

Q. This has been prepared in the same way as the summary of Exhibit No. 110, has it not?

A. Yes sir; a little more complicated, because of this combination of deficits and write-ups.

Q. And the percentage of returns of all the companies, eliminating write-ups, amounts 11.6%.

A. Yes.

Q. If you include the write-ups, it amounts 10.4%?

A. Yes sir. It wouldn't help in most cases, it wouldn't help the companies having deficits to have some other company raised in rates of return. The first line in both cases isn't what the Commission would do. Lumping them all together, it is a true average. They would, if they were interested in taking up the companies showing high return, include those showing deficits as beyond their help. It would show 11.3%, and 12.1% without a write-up. Those are the ones they address themselves to.

BY MR. BOWERS:

Q. Do you know whether there are any rate cases pending against any of those companies?

A. Not that I know of. It was not put down by the Commission on this exhibit as cases undertaken under their own motion. I don't remember any gas cases on that list.

THE CHAIRMAN: The hearing will stand adjourned until tomorrow morning at 10.00 o'clock.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Thursday, April 2, 1931, at 10.00 o'clock A. M.

There were present:

Messrs. D. Glenn Moore, Chairman  
Bart Richards  
Martin Memolo  
Louis W. Hagmaier  
Chester H. Rhodes  
Ellwood J. Turner  
Frank L. Bowers

H. J. Crawford  
Rev. James R. Cox  
Morris L. Cooke  
Harold Evans, Esq.  
John M. Walker, Esq.

STACY MAY sworn.

BY MR. EVANS:

Q. Mr. May, you are professor at Dartmouth College, I believe?

A. I am.

Q. You are a native of Philadelphia?

A. I was born in Philadelphia and raised there.

Q. And will you briefly state to the Committee your training and experience in regard to public control of business?

A. Well, I am what Mr. Cooke calls an economist, in quotation marks, at least that has been my experience. I took my doctorate in economics writing a thesis on the general field of public control of business. I have been teaching courses in that field, which includes the jurisdiction of anti trust laws, and public utility laws, including public utilities and government participation in business at Cornell, at Dartmouth and at Columbia.

MR. COOKE: I guess we can leave the quotation marks off, Mr. May.

THE WITNESS: I am not sure of that.

BY MR. TURNER:

Q. I would like to know if you ever worked for a public utility?

A. I have never worked for a public utility, no sir.

BY MR. EVANS:

Q. Mr. May, what in your opinion is the aim of public utility control, and what should the laws controlling accomplish?

A. Well, it seems to me that public utilities have definitely been set aside and put in a class that differentiates them, as you all know, from other industries, but I should like for a moment to attempt to examine that particular distinction that has been given to them, and the basis for it. It seems to me that in most industries you are dependent upon competition to protect the consumers, and you depend upon Commissions to protect his interests and to guarantee him reasonably low rates, reasonably low charges for the cost of service, and reasonably efficient service, that in certain industries it has been decided by Legislatures, and those decisions have been validated by the Courts. That for one reason or another, there are a variety of reasons, competition breaks down and does not sufficiently protect the consumer in these fields in these ways; it does not sufficiently provide that they shall have reasonable rates, they have simply to depend upon open competition; it does not provide, it does not guarantee that the service will be adequate, and it does not guarantee that there shall be general and efficient management of the industries, with incentives for making necessary improvements and things of that sort. Therefore, these industries have been set aside and called public utilities, or industries affected with the public interests, and these controls have been instituted, and generally Commissions have been set up, which as I see it have the specific duty of seeing, or providing broader than that, but for the consumer usually, providing protection and guaranteeing them that their rates shall be no higher than necessary, which is what competition is supposed to do in other fields, that the service should be efficient and adequate, and the necessary improvements be made. That, as I see it, is the affirmative duty of every Commission which intends to perform that service, which competition is supposed to perform in the ordinary industry.

Q. Perhaps you mentioned it, but is there not also the question of waste of competition through duplication of facilities?

A. Of course, that is one of the feature reasons why it has been decided that this particular group should not be allowed to work under ordinary competition. I think I should like to add one thing to that, sir. I think it is necessary for the Commission to see that the investors in public utility stock receive an adequate return, and by adequate I mean something very definite, a return that is large enough to interest people in the purchase of public utility securities, and to guarantee that there shall always be sufficient capital, when such capital is needed for expenses and improvements. I

should state that as one of their affirmative duties. I think it is not necessary to have an inordinarily large return, but I think it should be adequate, and I am inclined to think it should be generous.

Q. Well, from your survey and knowledge of the situation has commission control of public utilities, as distinguished from the railways, been successful in accomplishing the things that you have mentioned?

A. I think I could best answer that, or possibly indicate my answer by giving you some specific facts about the field. About a week ago I looked up, when I heard I was going to be asked to testify before this Committee, and I looked up the records of the Standard Statistics, on the returns that securities in various fields are yielding at the present time at present market prices, that is, common stock. Their index showed that at that time, about a week ago, and the condition has not changed markedly since, public utility common stocks, other than railroads, were sold at prices measured by the twenty leading market leaders in the field, were selling at prices that yielded only about  $5\frac{1}{4}\%$  return. Industrials, measured by the twenty leading industries, show a return of about  $5\frac{1}{2}\%$  to 6%.

THE WITNESS: Railroads show a return at the present prices of seven per cent. measured in the same way. Now, I think that is significant, sir. On possible interpretation, but surely an interpretation that any public utility man would be willing to accept is that people are willing to invest their money in the common stocks of public utilities, for a return of three and one-half percent. I think that is an unfair interpretation. I think that the fact of the matter is that this field is looked upon as the most speculative of all fields. They are willing to pay such high prices for the stock, not because they are willing to accept the moderate return yielded at those prices, but because they fully expect, from the past history of those securities, that they will yield a higher speculative return and the common stocks of these industries; administered by the Interstate Commerce Commission in a manner that is more effective. Of course, there is a story on railroads, that is very clear.

BY MR. TURNER:

Q. Don't you think you ought to speak in the past tense?

A. No; I think they still expect to.

Q. Don't you think that the most of them were in the market when they thought they were going to get big returns?

A. Why are the prices still holding up, sir? All the securities that are being sold are also being bought and the present return averaging three and one half per cent. I think that is the gold field.

Q. Doesn't the factor of safety enter the return?

A. I tried to include that in the first answer. If you will accept the hypothesis that they are willing to invest in these industries for a return of three and one-half, I could bear that, but I don't think the utility people do, do you?

Q. I am not an expert. I don't know.

A. I think that is an untenable hypothesis, although they are willing to invest on that basis.

Q. My question was a factor?

A. I am willing to consider it as a fact. I believe that people are willing to believe that there is gold in those hills.

BY MR. TURNER:

Q. Don't you think that ought to be, there was gold in those hills, rather than that there is gold in the hills?

A. As business was operated in the past, future expectancy is based on that experience. People fully expect that securities which yielded them three and one-half per cent. in the past would yield a higher return in the future.

Q. The average return on bank stocks was around two and one-half per cent.

A. I think exactly the same thing applies to banks; that they expect large speculative returns.

Q. You still think the public expect large speculative returns out of the banks.

A. I do; yes.

BY MR. RICHARDS:

Q. It is the enhancement of the prices rather than the yield?

A. That is right; and if they hold on to their stock they will get the increased yield.

Q. You say this three and one-half per cent. is based on the market price of today?

A. Of the twenty leading utilities, other than railroads. That includes some holding companies as well.

BY MR. EVANS:

Q. They are present prices, not past prices?

A. This is the present price. When I say "present" that is not today. The last index I saw was last week.

BY MR. RICHARDS:

Q. The prices of two years ago do not show so great a percentage?

A. That is right. The most attractive field I believe, is the field of utilities, other than railroads. Now, that is an opinion, sir.

BY MR. EVANS:

Q. To what extent does the regulation of public utilities exist in the United States? How many states are without some form of regulation of public utilities?

A. I think I am correct in saying that all states have some form of regulation except Delaware.

Q. And you think Iowa has but comparatively little?

A. Oh, they vary tremendously in scope.

Q. What I wanted to get at, was whether you felt that this speculative feature in public utilities stocks was influenced to any great extent in certain fields where the utilities were not subject to regulation.

A. Yes; very definitely, well I would rather say, for practical purposes, that in some places the control is very much weaker and the jurisdiction is very much more limited than in others. Of course, the prices, in general, are affected by that situation, but I would go on to say that I think in the places today where the control is most through going, there is still room for believing that there are large speculative profits. That may reasonably be expected from the common stocks.

MR. TURNER: Mr. Evans, what was your question?

(Question read)

THE WITNESS: I think they could improve it.

BY MR. TURNER:

Q. Do you think that the average individual takes into consideration the regulatory laws in the state where he makes his investment?

A. No; I think that is imputing to him a close judgment; if you are talking about the average one, I think that is imputing to him more care than he exercises.

Q. From the ignorance shown of the Pennsylvania laws at these hearings, I doubt whether the larger investors do.

A. No; they seem to know more about what has happened in the past.

BY MR. EVANS:

Q. Have you any suggestions as a reason why public control of public utilities has not been more effective than it has been?

A. There are a great many factors that would have to be considered in the answer, sir. I should like to concentrate on what I think are, perhaps—I won't say the most thorough-going, but the very vital lines under which public utilities broken in the United States—the effectiveness of which had broken down. I think there has been a great difficulty in getting an effective control on the rates of return that are allowed to utility companies. I shall name these, if I may, and then go back and state specifically what I mean by each one.

I think there has been very real difficulty in arriving at an adequate working base, a workable rate base. I think there has been great difficulty in control, the adequate control of utilities, and I think there has been great difficulty in escaping the cloud that is cast by the fact that there is no effective control at the time over inter-state distribution of the electric current; the rate of return that is allowed utilities, other than railroads, in most states in the United States where there is control, is usually named at 7 to 8%, one or the other, or somewhere in between. But that doesn't mean that the commissions who are administering the laws have really held the return of the companies that they are exercising jurisdiction over to that figure. As I understand, 7% is the figure generally

accepted in Pennsylvania and Mr. Raushenbush presented figures to show you that in 1925 the major electric utilities received a return that amounted to something like 11.8% on their fixed capital and that in 1928 their return averaged 9.6%, roughly, on the same figure.

BY MR. EVANS:

Q. These are returns on book values, you are speaking of?

A. Yes. This, of course, if you commence to ask seriously the question I raise, how much it is necessary to allow this company in the way of a rate of return in order to make its securities really attractive to the investor so that necessary money is forthcoming, and I believe you will see that any rate of return is based on the book value or on any realistic value of the entire capital of the company goes further than the incidents of the case. Let me explain what I mean to you. Take as a hypothetical case the company that is organized with a capital of some kind or other where money is invested in the property of this company to an extent of say, \$1,000,000. The utility commission says that the \$1,000,000 is the actual investment in this company and they will allow them 7% on it. That means they will have to give them rates that will give them a return \$70,000 a year. Suppose that company had raised \$500,000 by selling 5% bonds, and suppose it had raised \$300,000 by selling stock, and suppose it had raised \$200,000 by selling common stock. There is no speculation about what return is necessary in attracting bondholders in that field. Let us say that this \$500,000 has been raised by selling bonds. It is necessary to raise \$25,000 to pay off these bondholders, and it is necessary to have this to pay the interest to the bondholders. The preferred stock sold of \$300,000, and let us say this was sold at 6% on the preferred stock, it is necessary then to allow the concern to have \$18,000 to pay off that. These two together absorb \$43,000. And in this case I have suggested the Commission allows them to earn 7% on the entire \$1,000,000; they get a return of \$70,000 for the year, before the bonds are paid. They pay \$43,000 as interest and dividends and they have left \$27,000 for the common stockholders available for distribution, either as dividends or accumulations or surplus and that is a return of 13½% on the common stock.

BY MR. TURNER:

Q. You are presupposing that everything is profit. We know there are other factors that enter into that?

A. It depends on how you arrive at those figures.

Q. You cannot sell bonds at par, and you have to amortize them. You cannot sell preferred stock at par. You have to pay someone else to go out and sell it.

MR. MAY: If I gave you figures with these hypothetical figures in it, it would be a long, long story. You could make it large enough to pay on all of those things. I think the Commission should have a figure before them. Now, sir, if you will apply this kind of reckoning to the Pennsylvania companies, as I did when I went to the Commission to look over their figures, you find that the returns that have been allowed to them have merited very large returns indeed. If you measure that return according to what appears to be actual common stock investment in the companies, you get the figures I have derived here on three companies which I selected practically at random. I think the figures I have arrived at show that amounts to a very generous allowance to the common stock investment.

The Metropolitan Edison Company have a total fixed capital investment of \$2,678,000. I have thrown away the last three figures. They have had a write-up listed in the Commission's report of \$4,485,000 so that the total fixed capital without the write-up amounts to \$57,633,000. Depreciation reserve amounts to \$5,297,000, approximately, so there is left as a figure upon which earnings, bonds paid, of a figure of \$52,366,000. They have outstanding bonds of \$31,442,000, approximately, preferred stock \$13,580,000, approximately, and the preferred stock carries interest at 6%, the great majority. There is a little at 7% and a little at 5%, but the bonds, the majority of them, are 4½%. There are a few at 5%. Investment of these two items totalled is something over \$45,022,000. That leaves you an equity on the common stock, in examining it closely to see whether it represents the money actually invested, that leaves \$7,374,000. The net operating income for this company for the year 1929 is \$5,045,000. The month interest they have paid was \$1,478,000, absorbing the total of

these two of \$2,339,000 approximately the net operating income. That left \$2,506,000 as the amount that was left available for distribution to common stock. The accumulation of surplus, for common stock, on a common stock adjustment, that I am certain from their account was no higher, and perhaps considerably lower than \$10,374,000, a return of 34% on the actual common stock investment in this company at its highest, I should say. The Pennsylvania Power and Light Company.

BY MR. COOKE:

Q. May I ask you whether you happen to know who owns the equity of interest of the Metropolitan, the Associated Gas and Electric.

A. The control of the company is Associated Gas and Electric.

Q. That is, I mean that they own majority of equity interests?

A. I am not able to answer that question. I did not put that down in my notes. They have a controlling interest, but whether it is just a majority, or much more than a majority, I don't know. I have not got the figures at any rate and that had better be checked.

FATHER COX: I have here a few cases I was going to ask about, but don't you think that with the facts that have been received here during the investigation we have a right to bring criminal action both against these companies and the Public Service Commission. In my opinion there is a collusion there. Things of this kind cannot go on, they simply must be held up, and I think it is the duty of this Committee if we are going to prove to the people that we mean business, there ought to be criminal action taken against these companies and make them restore, I am talking from the clergyman's standpoint, their ill-gotten goods.

MR. TURNER: I think if you will remember that the testimony produced here, so far, shows that there has been legal action, and I think if you were to go into the legal situation, I think you would see that these figures are based upon the law and the evidence as produced and whether that has been misconstrued, that is something also.

FATHER COX: Here is my point. We cannot decide it here, and if the situation is such as it appears to be, it ought to be decided in court; somebody ought to institute criminal proceedings. What is the use of our talking here. Why, we have got enough evidence in a very amateurish way of thinking, to institute criminal cases, and to regulate these things, and to regulate them for years and years to come. If we had this same situation concerning some poor criminal, some boy, we would have prosecuted him long ago, but here they are stealing millions and all we do is to pat them on the back, and I don't think that is right, and I think we ought to do something.

MR. TURNER: If you had been here yesterday you would have heard that we have decided to go on taking testimony until the 1st of May.

FATHER COX: I believe it is good to hear the testimony, and I think the more testimony we get the better, because it is going to serve as an example for years to come. I think we ought to get all of the testimony that we possibly can, and then we ought to proceed by some action of this Committee. I came down here to say just that thing. Here is an editorial from our Sun-Telegraph in Pittsburgh, showing what the Duquesne Light Company has been doing: \$149,000,000 for rate purposes, and a very great amount more for taxing purposes. Cartoons in the paper show the injustice to the people, how they are being robbed, and here we sit and listen to it and do nothing with respect to it. We pat them on the back and treat them—

MR. RHODES: I don't see where this Committee has handed anybody anything.

MR. TURNER: You don't think I have handled them in that way?

FATHER COX: We have been very very kind to them.

MR. TURNER: We ought to be courteous to them.

FATHER COX: I think it is all right to be courteous, but I do think we ought to take legal action.

MR. EVANS: The taking legal action is not within the scope of the resolution under which this Committee is acting. It is a fact finding body, and I think if we confine ourselves to that basis, we will perform the services for which the Committee was appointed.

THE CHAIRMAN: The Chair was just going to quote the resolution.

BY MR. EVANS:

Q. Now, Mr. May, would you continue?

A. I have worked out some estimates on the approximate return on the common stock investment in the Pennsylvania Power and Light Company, which is controlled by the Lehigh Power Securities Company, and the Duquesne Light Company, which is controlled by the Philadelphia Company. I don't know if you want me to recapitulate the figures on each of these, or if you simply prefer to have me tell you the return on the amounts of the common stock investment.

Q. I think perhaps if you will just briefly do the latter, without going into detail, it will be giving us what the Committee wants.

A. I would be very glad to furnish them with the basis on which these estimates are made. I believe the Pennsylvania Power and Light Company, which Mr. Raushenbush found to be yielding a return for 1929, I think of approximately 8½% on the fixed capital, as he has estimated, actually yields a return of 84% upon the maximum common stock equity in the company, the actual investment represented by common stock ownership.

Q. Suppose you just do give us the figures on that?

A. The total fixed capital of the company, according to their report to the Commission for 1929, was \$170,988,000.

BY MR. RHODES:

Q. I didn't get the company that was for?

A. The Pennsylvania Power and Light Company, sir. There approximate depreciation reserve is \$12,834,000, and subtraction then of those two, of the one from the other leaves \$158,134,000. The funded debt of the company was \$100,359,000. The preferred stock, which by the way, and I think it is important, in their report they make no separation whatsoever of their preferred and their common stock, they simply lump the two together in their report to the Commission, and the preferred and common stock such and such an amount, 62 odd million dollars, I believe. I had to derive that figure for preferred stock investment then by first finding the amount that they were paying in dividends on preferred stock, and estimating the amount the stock earned on which dividends were paid. In that way I derived their preferred stock of \$52,103,000, total represented by these two, bonds and mostly preferred stock, \$152,462,000. The total fixed capital depreciated was \$158,154, and that leaves \$5,692,000 as my estimated maximum value of common stock investment in this company. The net operating income for the year was \$13,353,000; the total of the funded debt was \$5,105,000, the total dividend on preferred stock was \$3,141,000, the total of these two, \$8,536,000, and subtracting the two from net operating income, \$4,870,000, is left, which is available for distribution as dividends on common stock, or accumulation of surplus, or a maximum return on the common investment of 85%.

Q. Who is the Pennsylvania Heat and Power?

A. That is the Pennsylvania Power and Light.

BY MR. COOKE:

Q. Owned by the Lehigh Securities Company?

A. Yes.

Q. Who owns the Pennsylvania Power and Light?

A. That is connected, I think, with the Electric Bond and Share Company.

BY FATHER COX:

Q. And the National Power and Light Company?

A. That is correct, I think.

Q. The National Power and Light Company is owned by the Electric Bond and Securities?

A. I think so.

Q. Is that taken from the Public Service Office?

A. That is taken from the Public Service Office.

Q. And yet they knew nothing about it?

A. I have no idea. I have not seen the Commissioners, sir. One of the men employed in the Commission Office, Mr. Dietrich, was most co-operative.

Q. There was no objection at the time these reports were sent in.

MR. EVANS: I don't think Mr. May has any knowledge of that.

THE WITNESS: The Duquesne Light Company, which is controlled by the Philadelphia Company. The story of that

is fixed capital, the total, \$159,872,000. There is a write up listed in the books, not representing capital investment of \$22,438,000. That subtracted gives you \$137,444,000. A depreciation reserve, and I have taken here since I have deducted the write up the old depreciation figures rather than the corrected ones, which are much smaller, of course, than the corrected ones; subtracted the old depreciation figure, and that leaves you \$134,835,000 upon earnings before bonds are paid. The funded debt was \$65,000,000 of the four and one-half per cent. bonds. Preferred stock \$27,500,000. The two together total \$72,500,000. Subtracting that from the \$134,000,000 approximately, we find that \$62,335,000 is the maximum estimate, my estimated maximum, investment value of the common stock. Net operating income, \$14,993,000, total interest on the funded debt, \$2,000,000. Dividend on the preferred stock \$1,335,000 subtracting that from the \$14,998,000, we have left \$10,629,000 available as a common stock return upon a maximum investment of \$42,335,000 of common stock or almost exactly a twenty-five per cent. return. Those are the three that I picked on; they are the only three that I examined.

BY MR. TURNER:

Q. Now, Mr. May, if a private individual were to buy a property for \$5,000, and places a \$4,000 mortgage on the property, on which he pays six per cent. interest, and he can rent that property at \$100 a month, that is returning to him a very high percentage of return on his \$1,000 which he has invested in the property, is it not?

A. Yes.

Q. There is nothing to say that that individual should surrender any part of the increased income or annual charge so much as to give him a fair return on his \$1,000.

A. No; in that case there is nothing to say that he should not, because there is no control over these transactions.

Q. It is not considered illegal or improper?

A. That is right, sir. I am not imputing any story of unethical procedure here.

Q. I was only trying to explain about the other cases; if we can go through the question and get it clear, and get it before the minds of the laymen who perhaps are not as familiar with all the surrounding circumstances, as you know them.

FATHER COX: Public service is different from private property.

MR. TURNER: I appreciate that, but the Supreme Court of the United States has said they must get a fair return on the property used in their business. The Supreme Court has said that there is not much difference, so far as that is concerned, between the individual and the public utility, except that it gives, in effect, a monopoly of the business and because of the police power of the state, they are able to regulate them to a certain extent.

FATHER COX: No Supreme Court or Superior Court or law should say that any company could plunder the people, and when they make the returns, such as they have been making in the state of Pennsylvania, they are plundering the people. And now, they certainly have the right to have a fair return.

MR. TURNER: I would be willing to go along with you, but the great difficulty in this, as Mr. Cooke has pointed out, is the question of value.

Q. What was the highest rate; eighty-four per cent?

A. Eighty-four per cent. return on the actual maximum investment.

FATHER COX: Only God knows how much money they have put in those things. They are probably making 584%.

MR. TURNER: Of course, we can't ask Him to appear here as a witness.

FATHER COX: The people do not want to be plundered. THE CHAIRMAN: The Chair suggests that we permit the witness to go through. It is very difficult to follow his testimony.

MR. HAGMAIER: I move that we take these things up at the Executive Session.

MR. TURNER: The Executive Session does not take these things up.

MR. HAGMAIER: You will admit that there have been some over charges, and let us cut this out, and get down to brass tacks.

MR. TURNER: We will find the facts out when we hear the testimony.

**THE WITNESS:** I would prefer to be interpreted, that returns, as measured by the requirements, for the purpose of making these securities attractive, and nothing else.

**MR. TURNER:** I think we can clearly understand what Mr. Evans' purpose is in the introduction of this testimony.

**THE WITNESS:** The great gap, I think, in effective control has been the determination of the rate base, and I had the pleasure of hearing Mr. Cooke's discussion of that particular question yesterday. I would say that so far as my opinion goes, I am in thorough agreement with his conclusions, namely, that it is impossible to have any effective control whatsoever; it is perfectly clear to say that a rate of return means nothing to us; so the question of whether or not you can have any effective control remains a widely fluctuating factor. I believe that certain utilities might be willing to accept the prudent investment basis. It might be unprofitable for them to adhere to the reproduction cost new base, which fluctuates at a time when prices are going down and may continue to go down. Regardless of that and regardless of the fact that there might be some crude adjustments in applying the principle that they have been asking for, when it was profitable to them—when it was no longer profitable, I think would be a petty revenge and most ineffectual. I think you would be perpetuating an unusual system, and I think you will agree that we ought to get off that as quickly as possible. I think that as long as you have reproduction cost new as an important item in the Commission's fixing of the rate base, such abstract estimates of going value or things of that sort, I think that the control is ineffectual.

**BY MR. EVANS:**

**Q.** Now Mr. May, what is meant by the term "Going Value" as used in rate cases?

**A.** Well I wish that I knew certainly, sir, because it is one of those vague terms that is used loosely and used generally without specific definition simply to justify an increase of rates. Let me suggest here it means nothing in this particular field. The nearest I can approach to a definition is that you decide as to a concern, as a going concern, that it has been earning large returns, and therefore would bring a price higher than some other form of valuation maybe will do. The reason that valuation is undependable is that the yield of your securities depends upon the rate the concern has been allowed to charge. To put such items into the terms of rate is to get you into a great deal of trouble. Here is a million dollar company with a million dollars invested. The Public Service Commission decides it shall have 7% or \$70,000 a year, and I have told you that utilities are selling now on the basis of 3½%, so presumably—let us say the common stock of this particular concern, that the people are willing to but that at 2½, this would give you \$2,000,000. Then if you give your valuation at \$2,000,000 you begin your process all over again, and if securities sold for four million dollars, you would again repeat that you would get \$140,000 in the one case on your rates, and so on.

**Q.** Is it not also claimed that in rate cases that where the company has had a lag in earnings for one year, that is to be considered, and that sometimes is distinguished as a going cost?

**MR. TURNER:** What do you mean?

**MR. EVANS:** That the earnings in an earlier period have not been adequate and that they should be compensated for this loss of return.

**THE WITNESS:** Another point on which I think the commission control has been weak is in their inability on the whole to control properly on account of court decisions, their inability to correctly control operating expenses. It must be obvious to everybody that no matter what the rate base may be and what return is allowed, if operating expenses can be charged off recklessly before you estimate your earnings, no correct basis can be arrived at. This I think is important because a holding company has become such an important factor in the utility field. There is some justification, at least in the absence of specific evidence to the contrary, there is a presumption that operating expenses have some reasonableness, if the presumption that brings these operating expenses into existence as between the utility companies and individuals that are entirely supported by their business, if part of the operating expenses include payments that are paid by the operating company to the holding company. Your operating company owns all or a majority of the

interests of the operating company and it must be obvious that the whole transaction is different from the ordinary competitive transaction. For instance, the item of these payments is an item that is acted on by the directors of the operating company. The directors of the operating company are elected by at least one form of common stock, and that is held by the holding company, and they are therefore elected by the holding company and of course they are passing on the price to be paid to the holding company and are not in a position to exercise ordinary business discretion but they do have a dual responsibility.

Now let me tell you about one Pennsylvania case that I have found and which I have taken from the 1929 report of the Equitable Gas Company.

**BY MR. COOKE:**

**Q.** Where is that located?

**A.** Pittsburgh, I believe. It is owned by the Philadelphia Company, and its ownership is exercised—it is a direct ownership of sixty-nine per cent, of the stock of the Equitable Gas Company. This company produced in the year 1929, they handled produced gas, gas produced by themselves to the amount of 3,404,793 cubic feet. They purchased gas for resale to the amount of 22,644,600. They paid to the utility company for lease of the Natural Gas System properties \$2,327,911. This is a lease allowing them, since they don't own the gas themselves, to lease the right of producing the gas from the Philadelphia Company fields. The production expenses, we find were \$1,361,346, the total cost and we find of the cost that they leased as produced gas by far the major item, there being the amount they pay on the lease of \$2,689,257, the cost of producing gas then to this company per thousand cubic feet is about seventy cents. They paid for gas that they purchased for resale from outsiders seven hundred and seventy-eight thousand three hundred and eighteen dollars, and their total expense was \$7,746,600, and the cost of producing gas per thousand cubic feet was thirty-four cents approximately as compared with the cost of seventy cents for the gas they produced under the lease with the Philadelphia Company. The gross income before paying rent and interests on funded debt was \$1,209,497, the interest on the funded debt is nominal; it is \$240,751, after paying this with the rental plus this \$240,000 item their net loss for the year was \$1,359,165. Let me make myself entirely clear. I know nothing about these transactions. There may very possibly be some very valid explanation for why they were able to buy the natural gas from outsiders at a rate of 34 cents for themselves, and why upon the gas that they got from the deal with the company that owned a controlling interest that that gas cost them about twice as much. All I know is that this is a technical situation and I have found it exists and that are entirely comparable in every set-up where the object simply is to pad the reports with undue operating expenses as being shown on the books in order to obtain the profit for the holding company. This transaction may be a legitimate transaction. All I suggest is, it is such a transaction that the Public Service Commission should seize upon immediately.

**Q.** Are these not questions of business or management judgment which the Commission almost never looks into?

**A.** That may be so. I think there is no real business judgment when you make a bargain with yourself. The directors of the operating company are making a decision for the operating company in a transaction with the holding company that they are supposed to represent.

**Q.** You testified you are familiar with the regulations that various states now have?

**A.** Yes sir.

**Q.** Will you refer me to any case where the Public Service Commission has taken action in a case of that kind?

**A.** Yes, if I may seek to qualify it by saying that their particular action was not allowed by the court, the Public Service Commission of Missouri took such action.

**Q.** I mean they took it and it was declared illegal it leaves us in the situation that I believe obtains everywhere, that such transactions I think fall outside of what has been considered legitimate action.

**BY MR. EVANS:**

**Q.** Mr. May, are you prepared to state that in your opinion under court decisions, payment of management fees, and other similar charges made by operating companies are removed from Commission control?

A. No, I am not prepared to say, that, sir, nor am I prepared to say that there is even a stronger likelihood that the Supreme Court of the United States would always allow such action to prevent over-charging.

BY MR. COOKE:

Q. I have just asked to be given one case where the Commission had affectively acted in a situation of that kind.

A. No, I cannot give you a case on hand.

BY FATHER COX:

Q. Could we not, however, have the company explain this particular action.

A. I think so, yes.

Q. Why would there be any trouble to have some one from the gas companies, from the Pittsburgh company come here and give us that explanation?

MR. EVANS: It all depends how long this Committee is going to sit.

FATHER COX: It ought to sit for a long time to find out things of this kind.

THE WITNESS: It certainly is feasible for the Commission to demand such information, and the court recognized its right to demand such information in the Southwestern Bell case, they decided that the particular charge was probably not unreasonable, but that it raised the point that you suggested.

BY MR. COOKE:

Q. It is far from customary for the Commission to go into this, it is a question of business judgment.

A. I would have to insist that it is not really a question of business judgment, which I think you will agree to.

MR. COOKE: On this particular thing.

FATHER COX: Let us have one explanation, of what is happening at least.

THE WITNESS: In my opinion this point is an important one. The Federal Trade Commission, in their Document No. 92, Parts 23 and 24, Page 126, Federal Trade Commission Reports, in 1927 the Electric Bond and Share Company charged the subsidiaries, and those subsidiaries principally include this Lehigh Power Securities group, now Pennsylvania Power and Light, and they do not constitute all of the subsidiaries, but they paid about 15% of the charges of the subsidiary, they charged them for service a certain sum and the Federal Trade Commission figures that that sum yielding to the Electric bond and Share Company, that is the sum that they charged to their subsidiary for services of various kinds, a profit of certainly not less than 106% and probably not more than possibly 241%, depending upon the particular form of bookkeeping that the Federal Trade Commission applied to the transaction, as to how much overhead and so forth should be allowed as part of the legitimate expense.

BY MR. TURNER:

Q. I think Mr. Zimmerman admitted that there should be a provision by which the Public Service Commission should have jurisdiction over the management agreements.

MR. RHODES: I don't think Mr. Zimmerman admitted that, I think it was Mr. Porter.

MR. HAGMAIER: I think both of them did.

BY MR. COOKE:

Q. Is it not a fact that the operating expenses are loaded, and I am using that term in a broad sense, not only by management fees, but in many other ways, and will you suggest some of the other ways?

A. Why, yes. Very often they are loaded by charges for rentals, perhaps, or leases, and I suggested this might be the case in this particular case. Very often they are loaded by charges, and I think perhaps the most usual one is, charges for financing service. That is one that I think should always be scrutinized. Of course, I do not want you to understand that it is my statement that the Public Service Commission should not scrutinize any operating expenses except expenses accruing in transactions with the parent company. I think that they ought to scrutinize all of them, and if they could do nothing else, they could demand the information and give thorough publicity to what is happening, and if they could do nothing else; I am not convinced myself that they could do nothing else.

MR. COOKE: I think they should do something else. I think the law has been, and the practice has been, that they have gotten into it.

MR. MEMOLO: May I ask you one question, Mr. May. Now, for instance, there are so many ramifications in this electric bond and share proposition, the Pennsylvania Power and Light is controlled by the National Power and Light, and that in turn is controlled by the Electric Bond and Share, and so forth. In taking all these steps, that is where the financing cost is really incurred. Take for instance, the Equitable Gas Company, the Duquesne Light Company, is controlled by the Philadelphia Electric Company, and that in turn is controlled by the Standard Gas and Electric, Billingsby Corporation, with headquarters in Chicago. Now, in all of these steps that occur, there is a lot of financing cost, and all of that affects the rate.

THE WITNESS: A great deal of it, sir, and I think it should be carefully scrutinized by the Commission,—some of the great difficulties that might be placed on the investment bankers.

The fourth thing that I would suggest—

BY MR. EVANS:

Q. Just before you go into that, and perhaps, you have mentioned it; is there not another way on which these fees are charged, as on purchasing contracts by the holding companies.

A. Oh, yes.

Q. And also on construction contracts?

A. Very often; yes. The fourth big gap in effective control is the fact that there is no adequate control over interstate shipments so far on holding companies across state lines. It is perfectly possible for one company in one state to enter into an unprofitable transaction with another company in another state, in order to show the less profit to it and more profit to the other company. Here unfortunately again we have a law saying that a Commission is not allowed to forbid such shipments and as to whether they might be able to exercise any effective control, I am not sure. What I am sure of is that the Commission should cooperate, should start their propaganda toward repairing this gap, or insisting on central jurisdiction or joint state control over this particular gap.

BY MR. COOKE:

Q. Are you familiar with the arrangements that the U. G. I. has with the Delaware Light Company?

A. I am not familiar with that.

Q. We have had testimony here to the effect that that company sells to the Delaware Light for four or five cents per kilowatt, and one of the witnesses was trying to explain that that was not a low cost, although it seems out of line with their other costs.

A. There seems to be one thing, and that is agitating for greater control. The Federal Power Commission, you see, has such a limited jurisdiction over water power production, only, that there seems there ought to be a new set up there, unless you have some form of interstate jurisdiction.

Q. And there seems to be an example of that in Governor Pinchot's home town in Milford, where the power company operating across the line, owns the little company in Milford. They sell to them 600,000 kilowatts per year, and charge that subsidiary in Milford more per kilowatt hour, then I say for my modest use of electricity in my own home.

A. Yes. I think the state Commissions on the whole have been opposed to it rather than promoting it. I am very conscious of the fact that I have taken a great deal of your time.

MR. HAGMAIER: That is all right, we enjoyed it.

BY MR. EVANS:

Q. You have pointed out some of the points where regulation is ineffective in your opinion. Going now to the constructive side, have you any suggestions as to how these defects may be remedied?

A. Yes; I should like to take up the four gaps, item by item and suggest a few things that I think, at least should be done to repair the gap in each case.

The first thing is on the rate of return. I think that it is perfectly possible to get accepted at least to have the Commission fix realistically upon the amount of money, a generous amount, to attract capital into the utility field, and I think, whether that is obtainable or not, that is the goal for the future. So that I think in figuring the return, after you get a system of control worked out, and perhaps you will not be able to impose this retroactively over all past pro-

cedure, but I think it can be definitely done for the future, that the rates allowed a company should be figured as being sufficiently high under efficient management, to yield a return upon the common stock investment, after they have been attracted and paid for, of more than the market rates—the capital that has to go in in the form of loans secured by bonds and by preferred stock, to the common stockholders' equity in the company. I think that definitely the goal should be aimed to apply to the future, if not to the past. I think when you have said that you have raised an important question. The prices fluctuate, but it is not at all true that what is attractive for a given type of security to one party is not necessarily attractive to a given type of security to another party.

I have already suggested that I think the rate base should be kept on a permanent basis, and that the flexibility, as I see it should be the rate itself. When I say flexibility, I do not mean it has to change monthly or it has to change necessarily yearly. That was pointed out very conclusively, I think, by Mr. Cooke, that neither a legislature or a Commission can possibly work out changes in valuation quickly enough for practical application, but it would not be so hard to change simply your statute, if that was necessary that applied to the rate of return. A legislature could do that, and I think it would be necessary too, to cover the possibility of major price fluctuations in a long period. In a country like France, which happened to have gone off the gold standard, and it is conceivable that for practical purposes the United States, having gone off the gold standard many times, during its history, may go again—in France you understand the franc has been stabilized one-fourth of what it was before; it is obvious that a flexible return, figured upon seven per cent., upon a settled basis might prove very inadequate for the purpose over a long period, and it seems to me that none of the objections—the particular suggestion that Mr. Cooke raised here of unwieldiness would not apply to the rate. It could be changed legislatively to meet important fluctuations without too much difficulty.

I think it is always hard to estimate what rate of return would be yielded by specific rates that you allow to the company, and, therefore, I heartily approve of the system, which I understand has been incorporated in the bill that is before the House at the present time, that would make it possible in periods, or when the rates are guessed at, yield too low a return—make it possible to recapture the excess earnings. On the other hand, I think also that it might be very wise to put some districts on the other side, and also to provide instead of simply having a recapture that works automatically and immediately, that excess earnings cover an amount in any particular year should be put aside into a reserve, and that reserve accumulated to a given size before you commence your recapture procedure, in order that a lienure may be recovered out of reserves that have been earned in a given year.

BY MR. TURNER:

Q. We have had some recapture experience have we not, with the railroads?

A. We have; yes.

Q. And how has it worked out.

A. It is a difficult question to answer. However, my answer would be, not very well.

Q. You believe you should not take all the profits away from them in the good times and not leave them something to take care of the bad times?

A. I think you could well afford to allow them to accumulate a reserve in the profitable years to be used to carry over their deficits in the bad years.

Q. Has not this era of prosperity in these utilities come about from the prosperous conditions or the inflated conditions through which the country went in the last few years? If we hit a long period like we did prior to 1917 and these same rules were applied, might it not be a very great burden?

A. I think that would be undesirable. I think you should have control that always gives a reasonable return. You cannot afford to run your utilities into the ground. They must get investments; they must be attractive; and they must be kept up, and I think probably everybody would agree with that.

BY MR. EVANS:

Q. When you speak of a control of the returns you don't mean a legislative control, that an act is necessary; you mean that is something that the commission should control?

A. It would have to be set up officially by the Legislature.

Q. Under the present law, there is nothing that fixes any rate of return; that is left to the Commission?

A. It would be feasible to leave that to the Commission.

BY MR. COOKE:

Q. It should be administrative instead of legislative?

A. Yes sir, and I think that would be desirable. You have been talking about a rate of return, and I think the Legislature could detail what the Commission shall aim at as a satisfactory return. I think it is much better to leave it as an administrative matter.

BY MR. CRAWFORD:

Q. Do you think a liberal rate of return should be prescribed for all public service utilities?

A. No, I think I would stick to my original story there, sir. I think you have very definite economic measures of a desirable rate. I think the rate for any particular utility should aim at making those utilities attractive to people whose money you need for development in these utility fields. They must be attractive.

Q. I have in mind a water company which had a river from which it could draw its supply. It is easy to reckon your earnings on a property of that kind where with a natural gas concern where you have to drill each well and your supply depends upon the drilling of each well, it seems to me the hazard in that business is more than it is in some others?

A. I quite agree with that. I think there should be enough to cover an attractive investment, but I think under present conditions we have gone much further than. If we are going to have control we should make it a control that adequately operates. I don't impute villainy to the present operating company. As long as we have free private enterprises you can definitely assume the honest attempt on the part of the Board of Directors to earn as big earnings as possible to take care of their stockholders, and I don't there is any question but what under our present system all boards of directors of public utilities have attempted to do as well as possible under the control. Of course, if there happens to be collusion or unfairness, that is another matter.

On the rate basis I have already stated that the program of your present bill as outlined by Mr. Cooke appeals to me as an excellent program insofar as setting a rate basis is concerned. I think that that runs along with every other plan that cuts across the present valuation as defined by the courts. It runs a possible hazard in the courts. I think it is worth while trying and had a chance of acceptance by the utility companies, but I think it is very difficult to say in advance that it absolutely would be accepted without question. I think it can be worked out by the Commission and will be applied upon the utilities in this state insofar as it will be accepted by these utilities voluntarily. The pressure in your present bill is sound in the direction given the Public Service Commission directing that they shall refuse to give certificates to build extensions and improvements and new lines to companies who do not see fit to come in under the provisions of accepting the prudent investment basis.

BY MR. TURNER:

Q. You are speaking now of House Bill No. 275?

A. Yes.

BY MR. COOKE:

Q. That was not the suggestion I made to Mr. Zimmerman.

A. I think there is a hazard in it that ought to be looked at in advance, and that is this: If the company decides or does not wish to enter into this voluntary agreement, they should consider it better to fight the question through the courts, there comes a time when this company should build improvements and extensions, it is possible you will get some sabotage on the part of the company. When you get into this situation they say that they won't build the extensions. If that is true the first person who suffers will be the consumer who really needs this improvement. Against that you have the powers that undoubtedly belong to the Commission in addition to their ordinary powers, they should see that the

necessary extensions and improvements are made, and you also have the powers of the Commission to abrogate the charters of the company in case the companies are not given adequate service.

BY MR. TURNER:

Q. Do you think in a situation like that the courts would sustain such action?

A. That is a question, sir. You would have to get a decision as to whether it is voluntary or coercive. I have said that is something to keep in mind and I don't wish to be interpreted for a moment that you should not put through the provisions in that bill. I think it has some chance of going through, I mean going through the Supreme Court. I am not convinced that it may not even go unchallenged. I think it is very worth while trying.

BY MR. COOKE:

Q. You have a considerable percentage, 80 or 90% of the state has the same system of procedure as that, and taking the matter of the Courts by 10% would not be a matter of very great moment?

A. I would think the Court would be tremendously influenced by the acceptance of that percentage, and I think their decisions would reflect such an influence definitely. Whatever we do here at least, and I think the minimum that one could demand, is absolutely fixing the prudent investment basis for all future investments on the part of public utility companies. I think that is the minimum that one can ask. I think also that the fixing of some initial valuation base is of primary importance, and I quite agree with the manner of making up that prudent investment, and I should be willing to hazard the chance of the Court overthrowing it, but I think some initial basis should be fixed, and if you cannot get prudent investment there, some basis upon whatever items of valuation the Court insists must enter into it, and then for the future prudent investment basis be thoroughly accepted without question. The control over the operating expenses I think depends upon accurate accounting, and vigorous Commission action, and that depends upon the personnel of the Commission obviously. I already stated that I think the Commission can take no direct action on the question of interstate shipments of electricity, and that all they can do is agitate for some Federal action that will be all controlling, or will allow them jointly to be controlled. This would meet the general situation. I have one other suggestion that I think might be of importance. I think you will have some questions sooner or later to face if your controls ever get really effective, as to what incentives are left for extraordinary efficiency on the part of public utilities. These incentives for extraordinary efficiency being new developments for creating savings, and things of that sort. If every person in the utility was promised future rewards, I think, as I already stated, that the form those rewards should take—and I might say that the particular difficulty at the present time, is the incentive for wasteful managed and badly managed companies, is through the holding company setup, but there are some of them there, and they must be recognized, and I think it might be perfectly possible—and I think it might be desirable to set up in a bill sooner or later, certainly if effective control became a reality, some form of bonus, perhaps some authorization on the part of the Public Service Commission administratively to appraise their operating expenses, on a particular type of company, and then to give them permission to distribute at least a percentage of the savings under those operating expenses that were effected by efficiency to the people who had promoted the efficiency. I think it is not a pressing present issue, but I think if your controls become effective, that it might become important, and it might be an item of considering in original legislation.

BY MR. TURNER:

Q. Do you think it could be worked out that you could write down a definite plan of operating cost?

A. It would depend upon the engineering feasibility of such a thing. I am not enough of an engineer, I cannot say that it could be done, I think it might be done. I think if you get a very aggressive commission, if you do anything—and I was very much interested in Father Cox's statement that he really believes, if I am interpreting him correctly, that the most important single item in this control question is an effective commission. I would reiterate my position on that,

I think that an aggressive commission I think that the real capacity of commission action has been greatly exaggerated, and I think that the Commission is a judge to arbitrate disputes between the public on one hand and the operating company or the holding company on the other. I think the Commission is fair as a representative of the public, of the consumers, if you like, chiefly. I think that they are there, as I suggested, because it has been decided that competition won't protect the consumers in this particular industry, and that they must set up a control the competitive system itself won't provide in this particular industry a control suggestedly protected the public interest. When I say an aggressive commission I don't mean to be understood that they should be prosecuting the company, but I am going to take my former position there on that, that they must remember that the last thing in the world that they can afford to do, and the worse service that they could give to the people they are supposed to represent is to run the companies that they are controlling to ground, and so realistically I think that they ought to represent the best interests of the public and to do that aggressively they ought to be scrutinizing every report sent to the Commission and attempt to find out just how well the public interest is being presented in so far as the reports are concerned. I think they ought to dedicate a form of report in a way that will allow them to learn the things that they want to know for the public's protection.

BY MR. EVANS:

Q. In other words you would lay considerable stress on the reports made by the companies annually to the Commission.

A. Very consistently. I think the Commission is a technical staff, in the examinations I have made of the proportions of the staff in public service commissions in various parts of the country, I think they are very grossly inadequate; inadequate in the hiring of the commission's staff, and inadequate in the service of efficient men. I don't mean to intimate that there are not efficient men on the staffs, but if anybody has to be interested I can present a long line of evidence showing a continuance of efficient men from Commissions and Commission staffs over to private employment, private utilities, because they can get more money there.

BY MR. TURNER:

Q. That, of course, is one of the big problems in all of these governmental functions that the Government won't pay them enough money. We have the same thing in the Bank Department, where they pay them picayune salaries in comparison, and when they have a good man they lose them?

A. I thoroughly agree with you that they ought to be competitive in that particular line, or at least more nearly adequate returns are important under present day conditions, in order to get the grade of service that they need.

BY MR. EVANS:

Q. Now, are there any other points, Mr. May, that you think the House Committee should consider in this investigation?

A. I have taken a great deal of time, sir, but I should like to suggest just one more item before closing.

I think that it is worth while for any legislature in any state of the United States, to take into consideration the feasibility of making it easy, making it possible and reasonably easy for municipalities or other government units within the state to go into the utility business themselves. I think that if you have plants run by municipal agencies or other governmental agencies in the country, in operation within certain districts, under given conditions, you could run a great many of those upon that operating basis, and we have some information to act as a guide in the control of private companies. I think it has proven itself, competition on the part of municipal plants and plants owned by governmental agencies in certain parts of the country to be remarkably effective as a supplementary control to Commission control. Several studies have been made and definitely show in certain states that the rates charged by private companies, that are contiguous or in the same district with the municipal plants, let us say in operation actually do charge lower rates to the domestic consumer, particularly those companies which are under Commission control in those states, which are not subject to that particular form of competition. I think making it possible for governmental units, such as I have suggested, to go into business for themselves, making it easy for them, by removing

the restrictions that are placed upon such action, may, in the last analysis prove to be your most effective weapon; if that is held out as an alternative the actual starting of them, the acceptance of some such plan, may prove feasible.

I think Mr. Cooke has told you about the Worcester case, that was instituted in Massachusetts, which was dropped and it is my understanding that it was dropped on account of the definite threat on the part of the Public Service Commission of Massachusetts to recommend municipal competition and to recommend the repeal of certain state bills, that tended to protect the private companies from such definite direct competition on the part of municipalities in case the applied system of fixing rate bases broke down. So I think it would be useful for that purpose. I think that in that event you really run into a situation where the courts of the United States are so short sighted as to systematically upset every attempt to effectively regulate this very important situation, that that is the only alternative you have. Unfortunately, on this particular point, the courts have so committed themselves that there is no question whatsoever toward allowing almost any form of governmental competition with private companies in the public utility field or in any other field. I have handled several cases in this field, the last important one of which I have note is the case that involves the setting up of municipal gasoline distribution stations in Lincoln, Nebraska, to operate at cost in competition with private companies, and the courts have not only validated—you understand that could be very destructive to private business. The courts have said that it was all right, and we have the dicta, such as Chief Justice Taft's dicta that the government may enter into engagements that will help the general public, will pay the cost of the plant, and will help to pay the costs of operation. The Supreme Court, in the Lincoln case, they allowed the Standard Oil lawyers to present their case, and when the district attorney for the city of Lincoln arose, the Justices of the Supreme Court had whispering conference together and then said, "there is no use for you to speak after we have heard the Standard Oil side." I feel very apologetic for having absorbed so much of your time.

THE CHAIRMAN: No apology is necessary.

BY MR. COOKE:

Q. Will you just very briefly, tell us the drift in the price level as between, say, 1920 and the present year?

A. Of course, it depends on what theories of prices you are talking about, but the wholesale prices in 1920 drifted up to an index of 220 upon a 100 base in 1913, and since then they have fallen considerably below 150.

Q. And that is, they have dropped in those ten years from 220 to 150?

A. Yes.

Q. We have had some testimony here right along as to write ups. How soon would you expect, in equity, that there should be write downs? Are not some of them a little over due?

A. They are over due, sir. I think I would stick to my story; I don't believe in write ups. I am not sure that I believe in write downs. There is a lot of justice in it, but I think possibly you would do very much better to attempt a prudent investment.

Q. You and I know that there have been write ups?

A. Yes.

Q. And in view of the fact that we have had a continuous stream of write ups in the past five years, would you agree that write downs were due?

A. Yes, and if I could impose those write downs in a rate going application by going back to prudent investments, I would certainly use the other alternative, and I think you will find in such specific fields, particularly the building trade, more favorable returns to the public.

Q. I have one question more. The annual reports to the Public Service Commission for the year 1930 are due or over due. Would you suggest, in view of the changes in the price level, or would you expect some write downs in those reports?

A. I wouldn't be that optimistic, sir.

Q. But I mean, as an economist, and if you had justified former write ups, you would expect write downs to appear in the reports?

A. Yes, I think I would.

MR. TURNER: That is all right in theory, but it is not human nature.

LOWELL W. MONROE sworn

BY MR. EVANS:

Q. What is your residence, Mr. Monroe?

A. Ellwood City.

Q. You are the borough manager of Ellwood City?

A. Yes sir.

Q. What is the population of the borough?

A. The 1930 gave us 12,322.

Q. What is the approximate area of this borough?

A. Approximately 2 square miles.

Q. What is the assessed value of the real estate for taxation purposes?

A. \$7,730,667.

Q. What is the total bonded indebtedness as of January 1, 1931?

A. \$320,000.

Q. What is the limit of its legal indebtedness counting both its councilmanic and other borrowing authority?

A. That is \$541,146.

Q. What is the tax rate?

A. The tax rate is 15 mills.

Q. How is this divided?

A. For the general fund, 10 mills; for the sinking fund 3.5 mills; and for the hospital 1% approximately.

Q. Does Ellwood City have a municipal electric plant?

A. We have not a generating plant but we have a distributing plant.

Q. When was this municipal plant built?

A. In 1900 there was a generating plant built and put in operation in 1901 which operated until sometime in 1904, when the contract was entered into for the purchase of current from an outside corporation.

Q. The borough at the present time purchases this current from what company?

A. From the Pennsylvania Power Company.

Q. How many kilowatt hours did you pay for in 1930?

A. 3,603,600, at 2300 volts.

Q. At what price did it purchase this current?

A. For the first eleven months, 1½ cents, a flat rate per kilowatt hour.

Q. Was a new contract entered into effective as of the first of December, 1930?

A. Yes sir.

Q. What is the rate under the new contract?

A. It is a bulk rate. The first 5000 is at 3 cents, the next 5000 is at 2½ cents, the next 40,000 is at 2 cents, the next 50,000 is at 1½ cents, and the next 100,000 is at 1½ cents, and all over 200,000 is at 1 cent, bills to be rendered monthly.

Q. What was the amount you actually paid for electric energy in 1930?

A. \$53,041.

Q. What would have been the amount at the new rate?

A. \$49,036.

Q. And what would the average cost per kilowatt hour have been on that basis?

A. 1.3607, approximately 1½ cents.

Q. How many kilowatt hours did the borough sell as metered sales in 1930?

A. 2,749,719.

Q. How much was used for street lighting purposes?

A. 330,165 kilowatts.

Q. How much was used for lighting public buildings?

A. 66,835 kilowatts.

Q. Making a total of how much?

A. 3,146,749, and the balance was taken up by line loss or transformer and traffic light and a few uncollected sales.

Q. And that amounts to what percentage?

A. 12.3%.

Q. What were the 1930 receipts to the borough from the sale of electric energy?

A. \$140,294.93.

Q. What is the rate charged by the borough or what was the rate charged by the borough in 1930?

A. 6 cents per kilowatt, with a discount of 1 cent per kilowatt if paid on or before the discount period ended.

Q. Has the borough council approved the new schedule of rates?

A. They have passed an ordinance on one reading.

Q. What will the new rates be which are proposed to be put into effect?

A. This rate carries, for the first 30 kilowatt consumption 6 cents, the next 70 kilowatts at 5½ cents, the next 300 kilowatts at 5 cents, and all over 500 kilowatts at 4.6 cents; these rates are subject to a discount of 1 cent per kilowatt if paid on or before the end of the discount period.

Q. Are bills rendered on the monthly basis?

A. Yes sir.

Q. Can you give us any analysis of the 1930 meter sales of the borough and the basis of the above schedule of rates?

A. We have had approximately 3000 consumers. Of these 25.7%, there bills will come in that first lot, or their average consumption is never over 30 kilowatt hours per month; the next 61½% bills will come in the second lot between the 30 kilowatts and the 200 kilowatts a month; and 8.4% approximately will come in the third lot, or between 200 and 500 kilowatts, and the balance in the fourth lot or 4.2% represents those people whose consumption is over 500 kilowatts.

Q. What do you estimate would have been the total revenue in 1930 on these rates?

A. \$121,919.67.

Q. That is a reduction of what amount?

A. It is estimated as a reduction of \$18,375.30.

Q. What does the borough have in the way of street lighting?

A. We have a white way, an ornamental lighting system, in our business district, consisting of 200 lamps of 600 candle-power each. The residential district is lighted with street lamps, 250 of them at 250 c. p. each.

Q. What was the amount of current consumed for street lighting?

A. 330,165 kilowatt hours.

Q. How much did the general fund of the borough pay to the electric fund?

A. \$4,952.48.

Q. What rate is that per kilowatt?

A. One and one-half cents per kilowatt hour.

Q. Now, if the Ellwood City plant were privately owned, and basing your estimate on the cost of street lighting in other communities in the neighborhood, what would have been the cost of street lighting in your borough for 1930?

A. It would have been approximately \$20,000 or about \$15,000 more than is now being charged for that service.

Q. Now, what payment, if any, is made to the electric fund by the general fund for current in public buildings?

A. No payment whatever, and that also includes the local city hospital. It does not include the schools.

Q. What would this amount to if the general fund did make a payment to the electric fund?

A. We estimate it at about \$3,000 a year.

Q. What is the fixed capital of the municipal electric light department of the borough?

A. \$202,610.75 is what we carry it at.

BY MR. COOKE:

Q. What was that for?

A. Fixed capital.

BY MR. EVANS:

Q. What was the principal item in that?

A. It includes transmission system, what we call our primary system, distribution, secondary system, the utilization which is the street lighting system, and general fixed capital.

Q. What is the total of the fixed capital in the transmission system and the distribution system, utilization system and the general that you have referred to?

A. \$32,917.21. That is just a little bit out of proportion, that is installed since 1919.

A. \$51,893.23.

Q. You are required to keep your accounts on the same basis as other electric utilities under the Public Service Company Law, are you not?

A. Yes.

Q. And your division of fixed capital prior to 1919 and subsequent—

MR. RHODES: I didn't get what that item represented; is that the transmission system?

MR. EVANS: Yes, transmission system; they don't have any generating.

BY MR. EVANS:

Q. Now, what amount of cash was in the hands of the borough treasurer belonging to the municipal electric department?

A. As of December 31, 1930, \$158,443.01.

BY MR. RHODES:

Q. That is cash on hand?

A. Yes.

Q. What are you going to do with it?

A. Part of that represents deposits for meters, and part of it is what we call electric light cash reserve fund for emergencies. Probably \$100,000 of that is in those funds.

BY MR. TURNER:

Q. What was your net income to the borough during the last year?

MR. EVANS: We are just coming to that, Mr. Turner.

MR. TURNER: Pardon me.

BY MR. EVANS:

Q. I think you said that the gross income from sale of current in 1930 was \$53,041?

A. That is the amount paid for current.

Q. What were the actual receipts from metered sales, that was the figure I meant?

A. \$140,294.93.

Q. Now, turn to your operating account. What were the receipts for meter sales for a private line?

A. \$137,485.85.

Q. What was the amount charged the general fund for ordinary residence street lighting?

A. \$3,440.84.

Q. For the business district lighting?

A. \$2,545.05.

Q. Then what were the receipts for unmetered sales for private lighting?

A. \$120.83.

Q. And were there any discounts?

A. Amounting to \$2,709.09.

Q. And by that you mean where people did not pay their bills during the discount period, and therefore paid the 1 cent kilowatt hour additional?

A. Yes.

Q. There also was a small non operating revenue from the sale to merchandise, and so forth?

A. Yes.

Q. What did that total?

A. Approximately—

Q. Maybe you would rather give us the items

A. Oh, I don't know, I can get it here in just a minute. \$879.39.

Q. That made your total earnings of the municipal department how much?

A. \$147,181.04.

Q. Now, what were your total expenses?

A. \$75,617.83.

Q. How much of that was for electricity purchased?

A. \$54,099.42.

Q. And how much for the operation of the transmission system?

A. \$1,218.82.

Q. And how much for the distribution system?

A. \$3,542.06.

Q. And how much for the utilization system, street lighting?

A. That is \$4,604.42.

Q. What were the commercial expenses?

A. \$3,950.68.

Q. The general administrative expenses?

A. \$7,846.62.

Q. And that includes salaries and so forth does it not?

A. Salaries, trucking, labor.

BY MR. TURNER:

Q. Does that include your salary?

A. Not all of mine is charged against that. They charge one-third of my salary against the electric light plant.

MR. EVANS: Mr. Monroe is the Borough Manager.

BY MR. EVANS:

Q. There also was a small item of non-operating expense.

A. A total of \$355.81.

Q. And that makes up the total expenses of \$75,617.83 that you have already stated.

A. Yes.

BY MR. TURNER:

Q. Where do your employees, linemen, and you inspectors come in.

A. Their salaries are charged against these several items by the day, which ever department they happen to be working in that particular day.

Q. They work both for the borough and the—

A. The electric light employees do not do anything except electric light work.

BY MR. EVANS:

Q. But their salaries are charged against transmission or distribution.

A. Yes.

Q. Depending upon what branch they are working in.

A. Yes.

BY MR. RHODES:

Q. I didn't quite get there the net profit there that you gave.

MR. EVANS: I don't think he has actually stated.

BY MR. EVANS:

Q. You stated that the total earnings for the year 1930 were \$147,181.04.

A. Yes.

Q. And the total expenses for the same year were \$75,617.83.

A. Yes.

Q. That made a profit of how much from the operation?

A. \$71,563.21.

BY MR. TURNER:

Q. On a \$200,000 investment.

A. Yes.

MR. TURNER: I think they ought to be investigated.

MR. EVANS: Their tax is only fifteen mills.

MR. RHODES: That is in addition to the fact that they receive a large amount of current free.

MR. COOKE: And also in view of the fact that the sale price is very low.

THE WITNESS: Yes.

BY MR. RHODES:

Q. I notice that your penalty there is much more than 10% for non-payment of your bills in thirty days.

MR. EVANS: It is a discount in this case.

MR. RHODES: It means the same thing.

THE WITNESS: The same thing.

MR. RHODES: If you don't pay it you are penalized actually more than 10%?

BY MR. EVANS:

Q. What is this period within which payments must be made after bills are presented.

A. Up to and including the tenth of the month; they are given ten days.

BY MR. RICHARDS:

Q. Bills are rendered on the first of the month.

A. Yes.

BY MR. RHODES:

Q. What is the population of your borough?

A. 12,323 as of 1930.

BY MR. COOKE:

Q. Could you easily give me the cost of distribution per kilowatt hour.

A. That is dividing the capital and operating expenses by the number of kilowatt hours sold to domestic and commercial consumers. It cost approximately .9 of one cent per kilowatt hour to distribute.

Q. I have been bawled out for making the statement that a cent and a half was the average in the United States. .9 of a cent per kilowatt hour is your distribution?

(No Answer)

MR. RHODES: I think that one thing that might account for that is they don't have any \$40,000 pension men.

THE CHAIRMAN:

Q. What is the average cost per street light?

A. Per street light?

Q. Yes, for each light?

A. It is approximately—pretty nearly \$11 a year.

Q. A year?

A. A year. That is all that they are paying for it. Now, understand there is no labor charge or maintenance charges in that. It is just the actual cost of the current.

BY MR. EVANS:

Q. What did the borough do with the profit of 71,500 odd dollars from the electric light plant?

A. That is used to finance borough projects.

BY MR. TURNER:

Q. You had to pay for your \$200,000 investment; how did you pay for that?

A. I cannot tell you that. Most of it was paid before 1900.

Q. How much income have you on this plant?

A. Not one cent.

Q. Were they issued by the borough generally?

A. Well, I can't say.

Q. And so, out of this \$75,000 you have to deduct some charge for interest on your sinking fund?

A. There are no bond on this plant.

Q. I understand that, but that would be applicable?

A. Sure.

BY MR. EVANS:

Q. And can you give us an idea of what the actual value of the property or the assessed value is, roughly?

A. Between 25 and 30%, I would say.

BY MR. RHODES:

Q. Is that data in such shape that it could be put in the record?

MR. TURNER: It is all in.

MR. EVANS: Do you mean in the form of an exhibit?

MR. RHODES: I mean in the form in which he has it.

MR. EVANS: Yes, I think we could incorporate it in the form of an exhibit.

BY MR. RHODES:

Q. You said that this money was applied to the borough projects. Do you mean that that reduces the taxes to the people in Ellwood?

A. That is what it means; in other words, any public improvements, this money is applied for that purpose, otherwise, bonds would have to be issued and the interest for those bonds go in the general taxation.

Q. What would that be per mill; do you know?

A. I don't know. It would mean, possibly, about 3 mills per year.

Q. In other words, if you bought your power and light from a private corporation, your taxes in Ellwood City would be three times higher than they are now?

A. That is for street lighting alone. On top of that, you would have to take care of your improvements.

MR. EVANS: It would be quite easy, I think, Mr. Richards, to ascertain what millage it would take to produce 71,000.

MR. RICHARDS: I know something about this case. I merely want to get it in the record, because in my way of thinking this Ellwood City case is the most unusual condition.

BY MR. TURNER:

Q. Of course, you would have to take out your \$75,000 out of your \$75,000 offered as depreciation to take care of your replacements.

A. I would take out 5% a year.

Q. Without counting that in the other figures you gave?

A. No.

BY MR. EVANS:

Q. What is the depreciation?

A. \$11,047.79.

Q. And so that in there would reduce—

A. From 71 to 60.

BY MR. TURNER:

Q. Of course, 15 mills is the limit you could levy, except, of course, you could levy for street lighting, and if you had to issue bonds for public improvements, you could levy a tax to

take care of the sinking fund and the interest and the State tax?

A. I understand we have to go before the courts for special permission over 15, don't we?

Q. No?

A. Don't we?

Q. No?

A. That is something I am glad to know.

(Discussion off the record.)

MR. EVANS: Their actual tax rate for general purposes is 10 mills.

MR. TURNER: Yes; I understand that.

MR. EVANS: That included the sinking fund and the library fund millage also. The Borough of Aspinwall also has a municipal plant; has it not?

MR. HAGMAIER: Yes.

BY MR. EVANS:

Q. Answering Mr. Richards' question as to what millage for tax rate purposes in net profits from the electric plant would be, can you now state that approximately?

A. Approximately 7.7. mills.

Q. And that is after deductions for depreciation, is it not?

A. Yes, sir.

BY MR. TURNER:

Q. But not figuring anything for sinking fund on any bonds that might have been issued in the past?

A. No, sir.

Q. Do you have any power sale in that?

A. No, sir, our contract limits us to 15 kilowatt demands. It would be unprofitable for any large concern to purchase power from us.

BY MR. EVANS:

Q. Your contract provides that you give service to customers of the demand under 15 kilowatts?

A. Yes, sir.

BY MR. COOKE:

Q. Did you say approximately 8 or 9% use more than 200 kilowatts a month?

A. Yes, sir.

Q. What do they do with it?

A. The largest part of that is in stores, what we call our small commercial.

Q. Are your rates supposed to be regulated by the Public Service Commission?

A. I understand not.

Q. Do you have to file a rate schedule?

A. No, sir.

BY MR. TURNER:

Q. Do they use electricity for cooking?

A. Not to a large extent.

BY MR. HAGMAIER:

Q. You have natural gas, have you not?

A. Yes, sir.

FATHER COX: The newspaper people will quote what I say here this morning, and in order that they may quote it correctly, I want to read the statement as I have written it out:

Some facts have been revealed during this investigation that demand in my estimation criminal action against those alleged to be guilty. The Spring Brook Water Company, to be examined further, is a case in point. Official records prove that the Duquesne Light Company of Pittsburgh placed a value on their property for tax purposes of only 49 millions of dollars. For rate purposes the value is placed at \$149,000,000. This case appears to be one of culpable negligence on the part of the Commission. We need more than a ripper bill to oust the Public Service Commissioners and establish a Fair Rate Board. We need action to properly punish these Commissioners and the companies who have plundered the people. In the name of the people I ask for action as well as facts from this Committee. Figure the hundreds of millions stolen from the people through the connivance of the Public Service Commission officials. This should not be permitted to go by unpunished and restoration should be made to the people.

MR. TURNER: I don't think this statement should be put on the record. This Committee has no power to institute any proceedings in the first place.

It don't seem to me that this Committee should sit silent with that statement going to the public. I don't want to be misunderstood in any way and I don't want the impression to get out that because the Committee was silent that that is any indication and should be considered as an assent to the statement by the Committee, because I differ radically with Father Cox in that statement in view of the fact that the testimony is not all in and in view of the fact that the Scranton-Spring Brook case is now in the appellate courts, and it seems to me to determine that fact before we know what the evidence is, would be highly improper in this Committee.

MR. RHODES: This is a fact-finding body, and we are limited naturally by the scope of the resolution establishing this Committee. This is not a Grand Jury.

MR. MOORE: The Chairman understood this as being merely an expression of Father Cox's.

MR. TURNER: I understood Father Cox all right, but I don't want to have any misunderstanding on the attitude of the Committee and especially myself on this subject.

At 12:45 P. M., the hearing took a recess until 2:00 P. M.

Harrisburg, Pa.,

Thursday, April 2, 1931, 2 o'clock P. M.

#### AFTER RECESS

All parties were present as before noted.

E. W. MOREHOUSE sworn

BY MR. EVANS:

Q. Mr. Morehouse, you are a professor at Northwestern University?

A. Yes.

Q. On what subject?

A. Public utility regulation.

Q. And you are also connected with the Journal of Land and Public Utility Economics?

A. Managing editor.

Q. Will you briefly state to the Committee your training and experience in the field of public utility regulation?

A. I began the study of public utility regulation about eight years ago, and I have been teaching it off and on for the past eight years. My graduate work was taken at the University of Wisconsin, and I taught public utility regulation at Wisconsin and at Northwestern University. In addition my research work has been in the field of public utility regulation.

Q. How long have you been managing editor of the Journal of Land and Public Utility Economics?

A. Since it was started in 1925.

Q. You have made a study, Mr. Morehouse, I understand, of the regulation of public utilities in Massachusetts and in many other states?

A. Yes.

Q. Will you state briefly to the Committee the general method of regulation of public utilities in Massachusetts, and what you feel are the merits and defects of the Massachusetts system?

A. I shall be glad to do so. The system of regulation in Massachusetts is made up of three ideas mainly. First, the control of security issues, second, the application of the prudent investment rate basis, and third, the application of a flexible rate of return from stockholders' investments, calculated to attract additional stockholders' capital. If I may take these three matters, distinctive features, in order: The regulation of security issues, goes back a great many years. The development up till 1894 was by way of general statutes covering the following matters: Stock should only be issued for cash or property paid into the company; stock dividends were prohibited; the ratio of bonds to stock was stringently regulated, and for some years between 1871 and 1878, the security issues of stock—the issues of railroad companies were required to be sold at public auction, and from 1873 down to 1894 the stock issues of gas companies were required to be sold at public auction. In 1894 statutes were passed which accomplished two important changes. In the first place the statutes gave to the existing Commissions the power to approve capital expenditures, and the power to approve the issued price of stock. Taking first the power on the part of the Commission to approve the price of stock, the Commissions were required to find the market value of the stock, and the company had to issue at that market value deter-

mined by the Commission, that gave the companies treasuries certain funds. The Commission on the other hand had the power to scrutinize and pass upon the expenditure of those funds for capital purposes. In other words, if the company proposed to issue security issues, issue stock to capitalize operating expenditures, capital expenditures for maintaining the property, the Commission had the power to throw those issues out and not allow the company to issue that stock. That law of 1894 endured until 1909. Criticisms were arising that the law prohibited stockholders from getting any benefit on the value of stockholders rates, because, you see, the requirement that the issues had to be at the market value, meant that the stockholders could not sell any right, or get anything for that, and consequently it was said that stockholders were discouraged in those companies. Also it was said that when the commission fixed the market value of the stock in a securities case, and subsequently in a rate case, the companies were having a strong argument for saying that rates should not be fixed at a level which would deny the stockholders a return on the last issued price fixed by the Commission. Consequently it was felt that the requirements that the commission determine the market value of stock, operated to freeze the existing rates and the existing earnings of the companies at the time the stock price was fixed. As a result of these criticisms, the law slightly changed in 1909, so that the directors of the companies had the power to determine the issue price of stock, in the first instance subject to the commission's power to review that price and to fix a new price. The Commission felt that the directors' price was too. In other words, that gave the companies the power to issue valuable stockholders rights, but gave the Commission power to review and change the value of those rates. That law has been maintained down to the present time. As a result the control of security issues by administrative commissions since 1904 has been in effect. If you take the gas and electric companies at the present time all except about 19% of the funds, coupon notes and stock issues of the gas companies have been issued with the Commission's approval, and all except 5% of the similar securities of electric companies have been issued with the Commission's approval.

As a result, when a rate case is thrown or brought before the Massachusetts Commission, the Commission does not have to make any inventory and appraisal of the assets, because they can take, with reasonable assurance, the amount of stock, with the premium paid in thereon, and the bonds which they have approved as representing the original prudent investment and estimate of the company. For that reason the rate base in Massachusetts is determined by looking at the liability side of the balance sheet, rather than at the assets side of the balance sheet, because the Commission has heretofore determined that those liabilities represented at the time they were incurred the original prudent cost of the assets.

The Commission has been accused of fixing rates on capitalization. It has also been said that the Commission in Massachusetts used the prudent investment. Both statements are in part true, but I would call your attention to the fact that although securities at the time they are issued may represent the original prudent cost of the assets, that does not mean necessarily that at some future time, some subsequent period, the original cost has been maintained unimpaired. In other words, the companies may have slighted depreciation, they may have slighted the maintenance of these assets, with the result that the result that the assets may be impaired, so that in ten years, let us say, after the security issues were approved in a rate case, the Commission may find that these securities do not represent the real worth of the assets at that time, because under maintenance or depreciation.

BY MR. TURNER:

Q. Then, you only get back to the same policy, don't you, on which you are working?

A. How is that?

Q. If you started out with prudent investment the Commission may find that the assets do not represent the value, and then you go back to the reproduction cost proposition?

A. Let me explain what the Commission does to plug the hole, so to speak. In security petitions the Commission is disinclined to authorize stock issues or bond issues in advance of a construction, except under unusual circumstances. Their

reproduction cost of property for construction is not so reliable, and certainly indefinite as the actual cost, after the expenditures have been made. It is a question proving up the costs.

Another safe-guard that the Commission imposes, if in a security case finds that the deficiency appropriations are inadequate to maintain the property, the Commission has taken the position that it will attach a condition to the approval of the stock, that condition specifying that before any dividends may be made, a certain amount shall be set aside for depreciation to make good the impairment of the assets. They may also say that certain abandoned property, that is still on the assets account shall be written off. They may also say that certain security issues, that are then outstanding, shall be retired before the new issues are put out. In that way the Commission has the power to see to it that the original prudent investment is kept unimpaired.

Q. Does that answer your question?

A. Yes; but that is not exactly the problem in my mind. If you find that it does not equal what they consider a fair value, you are going to switch over to a consideration of what is the value, and, therefore, it comes to the reproduction cost new.

MR. EVANS: I think, perhaps, that will be brought out. If we differentiate between what the Commission itself does and how it has stood the test of court decisions. I am not sure whether it will or not.

MR. TURNER: Let us see how it develops.

THE WITNESS: There is a third phase that I would like to mention, and in this respect, the Commission of Massachusetts has departed from other Commissions.

The Commission of Massachusetts has encouraged the reinvestment of earnings in the plant. It does not allow the capitalization of these earnings in the form of stock or bonds. Consequently the amount of reinvested earnings, the reinvested surplus in the plant represented an additional cushion in addition to your depreciation reserve to maintain the original prudent investment in the assets.

And now, it is important to realize how the Commission, had a series of security petitions before it over a period of years, handles the matter of rates in a rate case. Feeling that the prudent capital liabilities represent the prudent investment, this is the way, approximately the Commission proceeds in a rate case: They investigate operating expenses to see whether all the expenses are reasonable. They find out what are the taxes imposed. They find out whether the depreciation appropriations have been excessive or inadequate. They find out what has been the interest on borrowed capital. That leaves the margin, roughly, for dividends and appropriations to surplus. In passing upon the dividend rates, the Commission scrutinizes the past dividend history of the company; what it has done in disposing of its net earnings. If the Commission feels that the dividend rates have been too high, they are inclined to cut down on the earnings permitted the company.

An illustration of that is in the Worcester case, which was mentioned this morning where in the year before the rate case came before the Commission Worcester company paid out forty-six per cent dividends on par which amounted to a yield of about 27% on what the stockholders had paid in in the form of par, plus premiums, having required the issuance of stock at the market value; it may have been above par; the premiums paid in were treated as permanent capital investments and kept in the liabilities as a permanent capital investment rather than allowing it to go in surplus. In other words, the rate case, the Commission fixed the schedule of liabilities outstanding, which it has approved, examines the operating expenses, taxes, depreciation, interest and dividends, and relates those items to the rates which they feel are legitimate. They will allow rates for reasonable operating expenses reasonable appropriations to depreciation, and reasonable interest charges, and reasonable dividends.

Now, here is one place where the Commission has been somewhat embarrassed, owing to the fact that for five years, the Commission was required to fix the market value of stock, and after 1909 frequently had to approve directors' prices, which were above par, and those market prices tend to become bench mark of reasonable dividends, because the companies will say that you should not pare down rates below a point which will enable us to pay reasonable dividends to maintain the last issue of prices which you approved. Is that point

perfectly clear? That is embarrassing to the Commission to a certain extent, because in the security cases they do not have the right of review. An additional embarrassment in controlling rates is in the fact that until 1927 the Massachusetts Commission did not have the power to initiate a rate case on its own motion. That could only be brought by a customer, by the municipality or by the company itself, and the Commission or judicial body to receive reviews upon these complaints. Since 1927 the Massachusetts Commission has had the power to initiate the rate complaint.

BY MR. EVANS:

Q. Does it exercise that power?

A. Yes. In the case of the Boston Edison Company they have. There has been some criticism that the Commission was free to act in that case, and that pressure had been exercised by the municipal officials.

BY MR. TURNER:

Q. Even with that pressure it was left up to the Commission after all?

A. Yes, sir.

Q. Then it all depends on the mental attitude of members of the Commission, just the same proposition you are up against in Pennsylvania today.

BY MR. COOKE:

Q. You don't mean to say the variations would be comparable to what we have?

MR. TURNER: After all, it is up to the opinion of the Commission. They may have rules and regulations with greater latitude.

THE WITNESS: The Commission in Massachusetts has endeavored to keep the capital and liabilities down.

MR. TURNER: That is not so much legislative as administrative.

THE WITNESS: The Commission has taken the view that the problem is economic rather than a legal problem, and it has on several occasions criticized very critically, particularly since the war, the necessity of some of the rates. They look at the liabilities rather than the assets.

BY MR. TURNER:

Q. You say that they look at the liability side more than they do at the asset side of the statement?

A. In rate cases.

Q. Would that not be an incentive, or rather there would be no incentive to buy cheaply?

A. Buy what?

Q. Suppose you buy the plant. You might pick up a plant worth \$100,000 for \$50,000. Your liability side would only show \$50,000. That would be the incentive to buy cheaply?

A. The companies which are consolidated, or I should perhaps say that the laws of Massachusetts ruling the consolidation of gas and electric companies are rather stringent in that only those companies in certain contiguous territory can consolidate. As a result they have taken the position that the stockholders of the operating companies identity has been retained. When the holding companies buy the stock of the operating companies, there comes the rub, because when they buy the stock the Commission does not have control over the purchase price, and consequently you find these holding associations picking up stock of operating companies at fancy figures. The stock of the Worcester Electric Company was acquired at \$226 a share, and that was after competitive bidding. You may ask what is the effect of that. The Commission has taken the view that their job is to control operating rates of the operating companies. They have no jurisdiction over the holding corporation. In other words, there is power to determine how much the holding association shall pay into the operating company's treasury for new stock that is used to refinance capital conditions. However, under the law in the case of gas and electric companies the security issues are under the control of the Commission such as stocks, bonds and notes maturing after three years instead of after twelve months as in most security laws. It has been the policy of the Commission not to permit the raising of funds for capitalization in advance of construction and companies have been forced to borrow from time to time on short time notes. When the holding associations came into the picture borrowing was done from the holding association either on notes or on bond accounts.

That raised the question how much interest was paid on those notes and how much interest was paid on those bond accounts which are subject to the scrutiny of the Commission but not subject to the control of the Commission, and the notes are—you will find that some of them paid 7% and in one case 8% to the holding association and some of them have paid 7½% and there have been borrowings at less interest rates than that. But you see what happens. From the time that the capital expenditures are incurred the holding association having loaned the operating company at 7½% or 8% is getting a return on its capital addition quite outside of the control of the Commission unless the Commission in a rate case determines the amount paid in interest on these short time borrowings is excessive, and under these circumstances they may disallow some of the interest paid on short term borrowings of the holding association. The holding association may have borrowed either from the banks or other parties at a less rate than they charged the operating companies. They may have borrowed from surplus fund or from the funds of the subsidiary and pay that subsidiary only 5% and reload to this subsidiary needing capital funds at 7%, and a margin of 2% goes to the holding association. Some of that is proper for compensation to the holding company for management and direction and for financing they are entitled to receive a profit provided it is not excessive.

Q. Now, Mr. Morehouse, in connection with Mr. Turner's question, suppose an operating company proposed to acquire—

MR. TURNER: Would you pardon me just a minute before this stenographer leaves, I am somewhat concerned about the statement that was made this morning and was issued to the newspapers, to the early afternoon papers, the statement that was later made by me with reference to the statement of Father Cox. I feel that in the first place we ought to ask the stenographer if he won't copy Father Cox's statement and the statement that I made, as well as that of Mr. Rhodes, who also made some statement, and whether we cannot ask the newspapers—I hesitate to say this in one sense, they can exclude my name from it—whether they won't include our statements, so that we will not have a wrong impression any more than is going to be created by the afternoon papers. I think we ought to say to the press, Mr. Chairman, that it is rather unfair for the newspapers to come into a meeting of this kind—

MR. EVANS: Do you want this on the record?

MR. TURNER: I am sorry to clutter up the record, but I think we had better. It is rather unfair to come into a meeting of this kind and take part of a proceeding and utilize that for news, without getting the picture—I see the Chairman smiling, as a newspaperman he possibly entirely agrees with me—but I would appreciate if the Chairman will agree with me in this instance, I would like to ask him to, and ask the stenographers if they won't run that off and ask the gentlemen of the press if they won't handle that statement in a way that will clarify, at least to the public, the situation here.

THE CHAIRMAN: As far as the Chair is concerned the situation seemed perfectly clear this morning. It was an individual statement of Father Cox. Mr. Evans and the Chairman also called attention to the fact that the Committee was a fact finding body, it could not authorize any prosecution. It is possible there is a misunderstanding, and so far as the Chair is concerned, he is perfectly willing that this explanation be made and go on the record.

MR. TURNER: I am not so much afraid of the fact that the public won't realize that we cannot issue prosecutions, but the fact that conclusions are reached from the testimony without all the testimony having been in.

MR. HAGMAIER: That don't change the situation with the press at all; you can give out all the statement you want.

MR. TURNER: I am sorry to have interrupted.

BY MR. EVANS:

Q. Where a utility in Massachusetts is about to issue securities for the acquisition of another plant, does the Commission consider the fairness of the price which the company proposes to pay for the plant, in determining whether or not the securities should be issued?

A. Yes.

Q. In other words then, if the company attempted to acquire a \$50,000 plant for \$100,000, and issue \$100,000 of securities for that purpose, the Massachusetts Commission would—

A. Scrutinize it and correct it.

Q. Yes.

A. If I may restate the advantage of the Massachusetts system, it provides an easy inexpensive method of controlling rates without an elaborate or expensive and time consuming appraisal of assessment. It enables the Commission to relate rates to the earnings necessary to protect additional stockholders' investments, and it gives the Commission the power from time to time to scrutinize the use that the company makes of the funds raised by security issues. Consequently we may say that insofar as the Commission has approved capital liabilities, and insofar as it had insisted that the company maintain a proper depreciation reserve, or a cushion of re-invested earnings, in order to keep unimpaired the original costs of the assets, that the commission is applying the prudent investment rate basis. I might, although I hesitate to take the time, say a few words about what items the Commission has regarded as not capitalizable. Working capital is one, which the Commission has at times refused to allow be raised by utility issues. Funds expended to maintain property may not be represented by capital issues, where the cost of real estate has been inflated, the Commission will cut down that cost in approving the security issue.

BY MR. TURNER:

Q. Why is that? Are they not all part of the operation of the business?

A. Yes, but the Commission takes the view that the company is to be allowed to incur permanently capital obligations only for these reasonable proper expenditures for real earnings having real earning assets. Now if the company comes in and has paid, let us say, \$50,000 for a piece of real estate, and it has declared that real estate, let us say, three or four years ago, and since that time the market value has gone up, the Commission has said we will allow you to issue stock only to the amount of what you paid for the real estate, not on the market value.

Q. I think that is all right. I didn't refer so much to the real estate as to the other statement of working capital.

A. Well, of course, that attitude of the Commission is at variance with the procedure in most states. Of course, a distinction might properly be capital useful for operating purposes and capital useful for constructing purposes. I don't want to give you the impression that in all cases the Commission has refused to allow working capital to be raised by stock issues, but in some cases it has. It exercises a judgment in each particular case as to whether that is the proper method whereby the company shall acquire working capital. In general I think it may be said that the Commission prefers to have working capital set aside by the directors before dividends out of earnings.

BY MR. EVANS:

Q. Mr. Morehouse, in the Worcester case the Commission had, as I remember it, fixed a minimum rate for domestic consumers of 5c a kilowatt hour, has it not?

A. Yes.

Q. And the company then took the case into court.

A. Yes, into the Federal Court.

Q. And was the Commission ever reversed, as a result of the company's action, in taking the case to the Federal Courts?

A. The Commission's rate order fixing the 5c rate was sustained in the Master's Report to the Court. The Commission scrutinized the cost of production in what the Commission calls the Supreme Court ruling, was not the same in the report. The Master said that the Supreme Court ruling was valid in Massachusetts, but you will note that the Master suspended the Commission's rates. Now, that rate applied only to the lighting of customers, and the way the Master got around that difficulty was to apportion the total investment of the company as between light customers and other customers, and in that mysterious process of apportioning the investment he reached the conclusion that the rates fixed by the Commission allowed a fair return even upon the investment determined by the Supreme Court's ruling of cost of production.

Q. And the company did not take an appeal from the Massachusetts Report.

A. The company did not take an appeal. One reason for that was that the company shortly after the case was taken into the Federal Court, was acquired by the New England Power Association, in which New England capital, I under-

stand dominated, and the New England Power Association was reluctant to carry the case further.

Q. Can you outline, briefly, what you feel are the essential provisions for adequate control of securities in a Public Service Company Law?

A. I think, in the first place that the Commission should have the power to determine what amount of securities—by that I mean bonds, coupon, notes, stock issues and all obligations running for more than twelve months—that the Commission should have the power to determine what amount of these securities should be issued. In reaching such determination the Commission, I feel should have the power to scrutinize the proposed or the actual use of those bonds, for acquiring assets, so that the Commission shall have the power to say that this stock issue may not be put out because the proceeds are to be used for purposes which are not properly capitalizable.

I think, to a certain extent, the Commission should have the power to review the prices at which securities should be issued. I realize that in Massachusetts that provision has been under attack, and it has caused some embarrassment to the Commission. On the other hand, when practically all of the stock of most of operating companies is controlled by holding associations it seems to me that that power is a very effective one which possibly can be sustained, in order to see that the operating company does not make undue gains from stock holders' rights. In other words, in order for the Commission to see that the holding company pays into the operating company's treasury the proper amounts for the stock issued by the operating company to the holding company as the chief stockholder.

I think also, that the Commission should have the power to determine the minimum discount at which bonds should be issued, and of course, should have the power to determine the proper rate of amortization of such discount on bonds.

Q. You mean, the maximum discount, do you not?

A. Yes, I said the minimum price of bonds or in other words, the maximum discount at which the bonds may be issued.

Also, I think that the Commission should have the power to proportion the securities of the different classes in order to maintain a safe guard on the credit of the company. In other words, if a company proposed to issue bonds up to 80% of the value of the assets or the cost of the assets, it seems to me that the Commission should have the power to say, you should not issue bonds to that amount, but should, instead, issue stock. In other words, the Commission should have the power to control the distribution of your security issues of different classes in their capital structure?

Q. Is it feasible, in your opinion, to attempt to control securities which have already been issued?

A. I doubt whether that could be done on any general scale, because of the attitude of the courts towards retroactive legislation. In some particular cases the Commission, if it is given adequate powers may be able to attach conditions to the approval of the issues, which would tend to correct in some measure, a condition of over-capitalization or a condition of the impairment of the assets, but I am inclined to doubt whether the Commissions can go very far in correcting the past over-issues of securities.

Q. And now, you spoke of the controlling designed by the Massachusetts Commission over the subject of depreciation. Do you feel that that is a subject over which a Commission should be given control, in order to make regulation effective?

A. Absolutely. In Massachusetts, I have the impression, that the Commission has not been as scrupulous as it should be in scrutinizing appropriations for depreciation. In many cases that is not very serious, because of its attitude towards the capitalization of surplus earnings reinvested in the plant. Nevertheless I think it is important that the Commission should have the power to require the companies to determine the rate of depreciation on their properties, and that rate of depreciation should be certified and approved by the Commission.

I think, also, the Commission should have the power to require the companies to maintain that rate of depreciation, at least before dividends are declared. There may be some cases of weak companies in which the Commission should be given discretion to relax depreciation provisions, and I am told that a bill is to be introduced in the Wisconsin Legislature dealing with this subject of depreciation. That bill will probably re-

quire the companies to determine the rate of depreciation by the different classes of property or for the property as the whole, and the Commission shall have power to certify the reasonableness of that depreciation rate. A duty is imposed upon the companies to set aside each year out of earnings depreciation appropriations in accordance with that certified rate before any dividends may be paid; and, furthermore, charges to that depreciation reserve are only made for property actually retired; the actual consumption of property. In other words, dividends may be paid out of depreciation reserves. That provision is an attempt to maintain the integrity of the reservation of surplus in depreciation reserves.

I think it is important for the Commission also to take the point of view that depreciation is an operating expense which must be met if the customers are to be protected, as well as the investors from an impairment of the assets of the company. Also it is only fair to customers, different classes of customers, in different periods of time, to make sure that the customers in one year pay the full cost of the service including the using up of the property as represented by depreciation appropriations.

Q. Does the Wisconsin proposal contemplate using the original cost of the property or its reproduction cost for the calculation of depreciation?

A. The original cost.

Q. Do you know how that proposes to meet the decision of the United States Supreme Court in Baltimore Street Railway case?

A. So far as I recall the provisions of the bill, that matter is not covered in the bill. I do not know specifically what measures are in the minds of the Commissions or those in charge of the legislation to meet that particular case.

Q. In rate cases the claim is often made by the companies that depreciation reserve should be disregarded, and that what is called observed depreciation considered. What have you to say in regard to that?

A. That situation has become rather important in the New York telephone case. You may recall that in 1926 the Supreme Court of the United States held that depreciation reserves larger than necessary were nevertheless the property of the stockholders and could not be used in a rate case to justify a rate that was confiscatory. The telephone companies in general have used a straight line method of accruing those depreciation charges, meaning by that that a particular unit of property is estimated to have a service life of ten years and at the end of that time they will have to replace it, and the company has therefore set aside one-tenth of that property each year, and this is not taking account of the stock value, but they prepare a fund that will take care of that unit. By using the straight line method, the balance in depreciation reserves it sometimes happens that in some cases the service life of the unit of property is longer than anticipated in the accrued depreciation scheme. As a result at any given time the depreciation reserve which the company has collected from the customers and set aside from the earnings of the company, more than what the engineers think is the condition of the property at the present time. The condition of the property at the present time taken as a whole and operated as a unit, on account of adequate maintenance may well have say 90% of its efficiency when new. That 90% is in fact the measure of the over all efficiency of the plant, and it is sometimes referred to as observed depreciation. The courts have said in the use of cost of reproduction method of getting at the rate prices they should be reduced by the amount as observed depreciation. The consequence being that in some of these telephone company cases the company has set aside for depreciation reserve an amount which under the plans of the reserve is much larger than the amount that they say should be deducted from the cost of reproduction in a rate case. In other words, the depreciation reserve which measured from the accrued depreciation will be higher than the amount of the observed depreciation which the company insists upon as the only proper cost of reproduction; so you have in fact the company collecting from the customers more than they were to deduct from the cost of reproduction on a rate basis. In the New York case, I believe one lower court has held that the Commission should deduct the balance of the depreciation reserve in determining the cost of reproduction rather than merely the observed depreciation.

Q. What have you to say, Mr. Morehouse, in regard to the necessity of control of operating expenses for adequate regulation?

A. I think it is very important. In the system of operation of a great many of these companies where the management and control is involved, the fees paid to the managing company are included in the operating expenses. It was stated this morning that the Commission has hesitated to scrutinize the reasonableness of these management fees.

BY MR. TURNER:

Q. We have had a statement made that they would not allow the management fee in Pennsylvania?

A. In some cases some commissions have scrutinized and reduced these management fees. The Massachusetts committee has criticized these management fees in the past and in Wisconsin they have said that they would throw out the management fee unless the companies submitted an estimate proving the costs of the services rendered and in January of this year the United States Supreme Court handed down a decision in Smith versus the Illinois Bell Telephone Company. For the purpose of this particular point the important wording of the court was this: The lower court was instructed to find the cost of the service by the A. T. & T. Co., that is the parent company, to the Illinois Bell Company, the operating company, and was required to apportion the proportion of the cost of serving that particular company to the Intra-State business. In other words, there were apportionments that AT&T was required to make, one was to find out the total cost of the management advice and services furnished to a single company and the other was to state that total cost to that individual company as between the inter-state and the intra-state business. As I understand it, the A. T. & T. in the present case has taken the view that it could and would have produced the total cost of the management rendered by it to subsidiaries, but it did not know how to apportion the operating costs of the different operating subsidiaries. This decision of the United States Supreme Court in requiring the lower court to make such a finding seems to me rather a departure from the ruling in the Southwestern Bell case.

Q. In the Smith case, did the Commission regulate the matter of these fees, or how did it get into the courts?

A. It got into the courts by argument of counsel for the city.

Q. On an appeal of some sort from the Illinois commission's decision.

A. Yes, sir. As I remember in the case before the Commission, such scrutiny of the management of it was not made by the Commission. Now, in Wisconsin I am informed a bill is likely to be introduced which will utilize that advantage in the point of view of the United States Supreme Court. That bill would provide that the burden of proof is upon the operating company and subject to the regulation of the Commission—subject to the jurisdiction of the Commission—to show not only the amounts paid by the operating company to the management company, but also under the Smith case, what it cost the management company to render this service to that particular operating company. Of course, one is never quite sure how the courts will entertain such a law if a test case is made out of it, but it seems to me that it is an interesting experiment illustrating that the commissions indirectly have a control over that particular item of general expense, greater than they have been supposed to have heretofore.

BY MR. COOKE:

Q. Where is that going to stop. We had here the other day a case of where one of the large operating companies, which for years employed the same architects, had handed out a good deal of work without competition. How far can the Commission go in getting those details of an undertaking without taking away from the operating company the responsibility for management which they have always claimed they required in order to preserve their initiative?

A. Well, this is a very delicate question. As I understand the court's position upon it, the Commission had the authority to scrutinize those expenditures, and if they feel that they are incurred in that phase, through collusion, or fraud, and perhaps in view of the Smith case, if they are considered unreasonable, the Commission may substitute their judgment for that of management. I am not a forecaster, and I could not tell you exactly how far that could be pushed, in view of the legal attitudes, it is, of course, a very delicate question for a commission to substitute its judgment for that of management.

under the circumstances, but as was stated before this morning, where the two parties to the bargain are representing essentially the same interests, the Court has very distinctly said that such transactions may and shall be subject to scrutiny.

Q. It seems to me that that is the ultimate question upon whether regulation can be made to work. The questions such as we have been discussing are very picayune compared with that one. If the Commissions are going to have to go in and run these businesses, you will seemingly take away the management, and the whole thing will fall?

A. Well, that is a very grave danger, and I should think that the Commissions ought to reserve that power for occasions of abuse, for major cases, but nevertheless, I think they should distinctly have the power to make such scrutiny. Now, so far as the management fees for general management services are concerned, the same principle it seems to me should be applied, and there are other kinds of these fees, and mention was made this morning of financing fees, they might also be applied to fees for engineering advice, for construction service, and so on, and purchase of materials.

BY MR. EVANS:

Q. There has been, has there not, in Congress a bill introduced at the suggestion of the Interstate Commerce Commission, providing for Commission control of contracts between carriers and their affiliated companies?

A. I understand there has.

Q. Have you anything to say to the Committee, Mr. Morehouse, on the question of Commission regulation, the costs of regulation, and I mean by that, as to who shall pay the costs in matters of that sort. A rate case I am dealing with primarily.

A. Yes. The suggestion has been made in Wisconsin, which has been implied in part in other states, that the cost of regulating utility companies, should be assessed back upon these companies regulated. In Massachusetts the costs on the gas and electric regulatory work are assessed back upon the gas and electric companies in proportion to their gross revenues. In Wisconsin the proposal has been made that the expenditures of regulation be divided into two classes: one is the general administrative routine expense, which shall be assessed back upon the company regulated, with the exception of railroads, in proportion to their gross operating revenues. However it is supposed that where the Commission on its own motion or on complaints, incurred special expenditures for appraisal for property audits for investigation of a particular company, that the expenditures of that special investigation shall be assessed back upon the particular company which is investigated, and those special expenditures, shall be collected in the same fashion as taxes, except that the Commission is given some distinction—or is to be given some distinction in determining how soon such fees shall be collected. The theory of it is that where a special investigation is made in behalf of the consumers of a particular company that expenditures of that kind are properly chargeable against the consumers for whose benefits the investigation was undertaken. It is pointed out that the expenditures of the companies in rate cases are ordinarily included and allowed in most cases in the operating expenses. I am inclined to think that some attempt may possibly be made with profits by a Commission to require that such expenditures of companies in rates reduction, court costs, and so forth might be so adjusted as to be paid by the stockholders for whose benefit such legislation is undertaken.

BY MR. TURNER:

Q. Whether they win or lose?

A. I was going to say, perhaps it might be desirable to separate out expenses incurred in a losing case and a winning case and assess a differential of expenses in those two classes of cases. In other words, if the company wins, why the stockholders should pay. Do I make my point clear? Now, that is one method which has been proposed and discussed—I would not say proposed in the Wisconsin case, because they have not quite gone that far, but at any rate a separation of special expenditures within the control of the Commission in investigating particular properties has been proposed for assessment back up on the companies regulated.

Q. Has the Indiana Commission taken any steps to assess the cost of rate cases, utility cases, do you know?

A. I am not informed on that point.

BY MR. WALKER:

Q. Do you know anything about the percentage of cases in Pennsylvania where the companies lose?

A. No; I do not.

I meant to say in my previous testimony that where the company loses it's case that the expense of carrying that litigation should be assessed back upon the stockholders.

Q. And where they win, the consumers should pay it; is that right?

A. Understand I am not saying that that particular exposition of that idea has been proposed in Wisconsin. They have merely have gone so far as to say that particular expenditures of a particular company should be assessed back, and that the general routine expenses of the Commission should be assessed back upon the company in proportion to the gross revenue.

BY MR. COOKE:

Q. How frequently has the state of Pennsylvania Commission in that kind of case, put back the costs on these companies; frequently enough to make it a precedent.

(No answer).

BY MR. TURNER:

Q. As I understand it, in Wisconsin do they apportion the costs of the Public Service Commission among the utilities?

A. At the present time the law reads as follows: Whenever the Commission shall find that any rate, toll, charge, schedule or point rate is unjust, unreasonable, insufficient or unjustly discriminatory, or preferential or otherwise unreasonable or unlawful, or a measurement, regulation, practice, act or service complaint, that is unjust, unreasonable, insufficient, preferential, and so forth, or that the service is inadequate, that any service that can reasonably be demanded cannot be obtained, the Commission shall ascertain and by order fix the expense incurred by the Commission upon that investigation and direct such public utility to pay to the state treasury within twenty days after such expenses so incurred. However, only in a few instances, as far as my information goes, has the Commission utilized that existing clause of its statute to assess back such expenditures upon the companies. In general the expenses of the Commission have come out of the general state fund.

BY MR. WALKER:

Q. When the Commission would institute an investigation in a rate case on their own initiative, and the company would establish that its rates were fair, in such a case under your theory, who would pay the costs?

A. Under this theory, as the proposal has been worded, I can't say definitely because I have not seen the final draft of the bill, whether the bill is in this form—under the proposal as worded, whenever the Commission in a proceeding upon its own motion or upon complaint or pursuant to the duty to keep itself informed, shall direct its staff and experts to investigate the case and so forth, the expense of such investigation may reasonably be regarded as a reasonable expenditure in behalf of the service shall be assessed back upon the companies involved. Under that proposal, you see, it makes no distinction between the result of the case. It simply says that when the Commission on its own motion or upon complaint incurs these special expenditures the expenditures may be assessed back upon the companies concerned.

MR. TURNER: I do not think that is fair.

BY MR. EVANS:

Q. There is no provision as I understand that you have read as to whether or not it shall be included as an operating expense?

A. No; not as I have read it.

Q. If it is included as an operating expense of course, then the ultimate cost would be paid by the rate payers, at any rate.

(No answer).

BY MR. COOKE:

Q. Are you familiar with the clause in the New Hampshire act, by which they can go out and employ engineers and other technical assistants in determining action on a certificate of public convenience?

A. I am not familiar with the New Hampshire provision. I know that in Vermont they have retained outside engineers to do that sort of work. I am not certain as to that.

Q. That is, assessed back against the company?

A. Assessed back against the company in New Hampshire.

Q. Is that done anywhere else?

A. Well, the expenditures in Massachusetts for the regulation of gas and electric companies are assumed back on the companies and in some other States also; I think Missouri, Michigan—there may be one or two other cases.

(Discussion off the record)

BY MR. EVANS:

Q. Mr. May this morning spoke of the possible desirability of a recapture provision in a public service company law. Have you anything to say in regard to that?

A. I have some misgivings as to how well a recapture provision may work. For one thing some recapture provisions are set up in such form that they tend to make the rate of return rigid. My feeling is that it is better policy in the long run to attempt to apply the prudent investment rate base, with strict control of depreciation, adequate control of securities issued, and allow a flexible rate of return to take care of changing costs of money or costs of capital, changing price levels and so on. Now, when a recapture provision is so framed that it recaptures all above a certain percentage return upon capital, the tendency is to make that maximum rate of return rigid. I am inclined to think that that is unwise. Where, however, the recapture provision is adjusted to a flexible rate of return, the experience of some of the English provisions of this character is, I think instructive.

In the first place, where you fix the standard, with relation to a standard rate as in the Boston Sliding Scale System, which was tried for a period of years in Massachusetts, which is no longer applicable, the rates you fixed were determined with reference to the cost of service at that time. Now, suppose there is a technical improvement in the industry which would enable a considerable reduction in the cost of service, and there is a tendency to proportion the cost of service downward, but that rate is rigidly fixed, so that unless the rate of dividend is adjusted very carefully the stockholders will get the majority share if not the entire share from any benefits of that technical improvement.

A. It is my feeling that a fair share of the technical improvements should go to the benefit of the stockholders. Another criticism of the English System has been that the stockholders get the benefit of improvement in service resulting in lower costs and lower rates rather than the individuals who are primarily responsible, namely, the management of the company. As a result writers maintain that there should be some provision for compensation of the managers who make possible the limitation in part rather than the stockholders. It is probable that such a scheme could be worked out on a bonus basis.

Q. Is it not true that many of the improvements have been made not by officers of the operating company, but by the research department of the General Electric and other companies which are not a part of the operating company?

A. The operating company in order to take advantage of these improvements have to incur the expenditure of retiring the property before the useful life is used up. It seems to me the companies deserve some credit for taking advantage of the opportunities to make improvements regardless of whether their own research work has made these improvements technically possible. I would agree with the statement made by Mr. May this morning that in fixing your rate the return on the investment rate basis you should be careful to attract additional capital and I think that principle ought to be recognized even to the extent of being generous to these companies. However I would say that that principle should be applied with considerable caution where the Commission in the past has not had adequate control of security issues.

Q. Mr. Morehouse, have you prepared or had prepared a series of four chart illustrative of, and showing the security issues issued by the Massachusetts Commission?

A. I have. I can show the charts to the Committee.

Q. I show you a chart headed number of petitions for issuance of stock of "Massachusetts gas and electric companies for the years 1910-1930" which will be introduced later, if possible, as exhibit number 112.

Would you briefly explain to the Committee?

A. Exhibit number 112 shows the number of petitions for the issuance of stock by Massachusetts gas and electric companies for the years, 1900 to 1930, which appear in each year, shows the total number of petitions for the issuance of stock. These bars are divided in the early years into two parts. The black part shows the number of petitions which were approved by the Commission as submitted to the Commission. The cross hatched part at the top shows the number of petitions in which the amounts were changed by the Commission. Beginning in the year 1915 that section of the bars shows the number of petitions in which both the amount and the price were retained by the Commission and in some of the years since 1920 there is still another section, and some of the bars show the number of petitions in which the price of issue only was changed by the Commission. This chart shows the activity of the company in issuing security bonds, but it does not show the amount approved, but just the number of petitions.

Q. I show you another chart headed: "Stockholders Investments in Massachusetts gas and electric companies presented as approved for the years 1900-1930 as exhibit number 113." Briefly explain that to the Committee.

A. As I understand the procedure, the Massachusetts Commission could control security issues. The Commission has the power to throw out certain parts of the stock petitioned for as representing not properly capitalizable capital expenditures. This chart shows practically for the year 1910 and thereafter the amounts of the stockholders' investments which were approved by the Commission. It is interesting to note that the amounts which were distributed occurred largely in the years 1926, 1927, and 1928.

Q. Here is another chart headed, "Par value of stock of Massachusetts Gas and Electric Companies petitioned and approved by years, 1900 to 1930—and I offer this in evidence as Exhibit No. 114. Will you briefly explain that to the Committee?

Chart, Par value of stock of Massachusetts Gas and Electric Companies petitioned and approved by years 1900 to 1930, produced and marked Exhibit No. 114.

A. In this chart each bar in each year represents the total par value of stock of Massachusetts Gas and Electric Companies which were petitioned and approved. There are five possible divisions for the bars, not all of these divisions occurred in each year. The black portion of each bar shows the par value of issues which were approved if they were petitioned for by the companies. In other words, no change was made by the Commission, either in the amount or in the price of the issue. The shaded portion of each bar shows the par value of issues approved, whose amount was established by Commission order. In other words, that amount of security issues petitioned for which the Commission felt was excessive. The third section found in some bars is the par value of issues whose amount and price both were changed by Commission order, and the dotted section on some bars, particularly the years 1925, 1926, 1927, and 1928, represents the par value of issues, the price of which was revised by Commission order, and the hollow white section of each bar represents the par value of issues which the companies asked for but which the Commission denied.

BY MR. COOKE:

Q. There again, in these same years it shows the Commission was very active in holding down the enthusiasm of the companies for issuing securities?

A. Yes, at a time when the pressure to change from a cost rate basis—an investment cost rate basis to reproduction rate basis was most active.

Chart, par values, premiums of stock issues by Massachusetts Gas and Electric Companies, approved by Commission for years 1900 to 1930, produced and marked Exhibit No. 115.

BY MR. EVANS:

Q. I show you the chart headed par values premiums of stock issues by Massachusetts Gas and Electric Companies approved by Commission for years 1900 to 1930, will you briefly explain that?

A. As I understand the process of administrative control of security issues, the Massachusetts rule was required to be issued at a price of par—excess of the price above par. In other words the premium is treated as a premium on capital investment and is kept as a liability on the balance sheets, instead of being carried to surplus and returned to stockholders. This

charge shows the amount in par value of the stock issued and approved by the Commission and the amount of the premiums approved by the Commission. There were two rather striking years, the years 1912-13 and 15, the amount of the stock issued which represented premiums was larger than any previous years. During the war years the price of the stock sagged and the amount of the premium required by the Commission went down. Beginning 1921, and going to a peak in 1927, and to a certain extent in 1928, the Commission was raising issue prices as stock prices went up. In other words, reducing to a certain extent the values of stockholders rights in order to get the stockholders to contribute to the company's treasury as much as could be obtained without destroying a ready market among the stockholders for additional shares of stock. Perhaps I should add for the record that in the case of all these exhibits the length of the bar for the year 1930 does not represent a full year.

MR. EVANS: Thank you very much, Mr. Morehouse. We appreciate your kindness in coming here and testifying before the Committee.

MR. MOREHOUSE: I hope I did not take too much of the Committee's time.

MR. EVANS: That is all we have this afternoon.

THE CHAIRMAN: This hearing will stand adjourned until Wednesday, April 8, 1931, at 2.00 o'clock P. M.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Wednesday, April 8, 1931, at 2.00 o'clock P. M.

There were present:

Messrs. D. Glenn Moore, Chairman

Bart Richards

Chester H. Rhodes

Martin Memolo

Harry J. Crawford

Ellwood J. Turner

Louis W. Hagmaier

Morris L. Cooke

James R. Cox

Harold Evans, Esq.

John M. Walker, Esq.

MR. EVANS: If the Committee please, I would like to call attention to the fact that certain of the data requested from the Commission on March 4th has not yet been furnished, and we are anxious to get it at an early date. This data consists of Item No. 10 in the letter, which was a list of certificates of public convenience which had been issued upon condition that they would terminate upon the extension of some other certificate holder's service to the territory.

Item 12, a list of cases decided contrary to the recommendations of the sitting Commissioner.

Item 13, the same information with regard to recommendations of Commissioner Benn.

Item 14, all cases where management fees have been included in the operating expenses of companies in rate cases.

The last is perhaps the most important for our immediate purposes, and I hope the Committee may use its good offices in getting this information as soon as possible.

MR. COOKE: Wouldn't it be a good idea, Mr. Chairman, to find out the approximate date on which it will be available.

THE CHAIRMAN: If you will have a letter prepared requesting that date, I will sign it.

MR. COOKE: And asking the date on which they will be sent, Mr. Evans.

M. CLYDE SHEAFFER recalled

BY MR. EVANS:

Q. Mr. Sheaffer, you have been subpoenaed to produce certain capital stock reports of the Mt. Pleasant and Citizens Water Company. Have you those reports with you?

A. For the year 1929 there are two reports for the Mt. Pleasant Water Company, on account of the consolidation with the Citizens Water Company, and a report for the Citizens Water Company for the full year.

MR. EVANS: I offer in evidence the copy of the capital stock report of the Mt. Pleasant Water Company for the year 1929 up to July 19th, as Exhibit No. 116.

The report of the Mt. Pleasant Water Company for the year 1929, to November 30th, I offer as Exhibit No. 117.

The 1929 capital stock report of the Citizens Water Company of Scottdale, as Exhibit No. 118.

BY MR. EVANS:

Q. Mr. Sheaffer, will you explain why the Mt. Pleasant Water Company filed a report as of July 19, 1929?

A. The Revenue Department was notified that the Mt. Pleasant Water Company would sell its property to the Citizens Water Company as of that date. An examination of our records in the Department of Revenue show that apparently they held the election for the sale of the Mt. Pleasant property on July 19th which accounts for the report being filed up to the date they intended to make the proposed transfer. The treasurers return was not filed with the Secretary of the Commonwealth until the beginning of December; therefore it was necessary for the corporation to file an additional tax report covering the period ending November 30, the approximate date that the transfer took place.

J. HASE MOWERY sworn

BY MR. EVANS:

Q. Mr. Mowery, you are manager of utilities of the Borough of Chambersburg, are you not?

A. Yes.

Q. How long have you held that position?

A. About 20 years.

Q. The borough of Chambersburg operates its own electric light plant and water plant, does it not?

A. And sanitary sewage system.

Q. What is the population of the borough?

A. About 14,000 in the 1930 census.

Q. And what is the approximate area?

A. Between three and four square miles.

Q. What is the approximate assessed value for tax purposes?

A. The real estate is \$7,600,000; the occupations are \$350,000. Making a total of \$7,950,000.

Q. What is the tax rate in the borough?

A. For borough purposes it is 6 mills, and for bond tax it is 4 mills. That is a total of 10 mills.

Q. What is the total amount produced by taxation for the revenue of the borough in 1930?

A. \$44,082.

Q. What was the total budget of the borough for 1930?

A. \$306,813.

Q. How was the difference between the \$44,000 and the \$306,000 of the budget produced?

A. The difference was largely made up from the profits from the operation of the utilities mainly water and light.

Q. What were the profits of the electric light plant for the year 1930?

A. Including the credit account for light and power service furnished to the different departments of the borough, for which we get no actual cash, it was \$144,101.

Q. And in arriving at this figure, did you include the operating expenses, interest and depreciation?

A. Yes sir.

Q. How much was invested in the electric light plant as of January 1, 1930?

A. \$635,000.

Q. And how much had been invested during the year?

A. We had put in capital account during the year \$65,357.

Q. Now what was the total receipts of the lighting department from all sources for the year 1930?

A. \$260,393.

Q. And of this, how much represented cash receipts and how much represented the value of free service from power, city light, and so forth?

A. From all sources we received \$223,756, and credited the account for free light and power furnished other departments \$36,637.

Q. What were the total operating expenses for the year 1930?

A. \$74,728.

Q. How much was charged off for depreciation during the year?

A. \$20,260.

Q. And how much did you include in your statement as interest on your investment?

A. \$58,391.

Q. At what rate did you figure that?

A. At 6%.

Q. What were your total charges and expenditures including interest, depreciation and operating expenses?

A. I believe, Mr. Evans, I have made a misstatement. You asked me for interest during 1930. I gave you \$58,391. That is wrong; that should be \$38,130.

Q. To that the total for interest and depreciation is—

A. \$58,391.

Q. Now what is the total then of the operating expenses interest charged and depreciation for the year?

A. \$133,119.

Q. And deducting that from your total revenue of \$260,393, it gives you a net operating revenue of how much?

A. \$127,274.

Q. What did you do with that net operating revenue?

A. We laid aside a certain amount in a sinking fund and the balance was turned into the common treasury for carrying on the borough project.

Q. Can you tell the Committee how much was in the sinking fund?

A. \$24,000.

Q. What is the total bonded indebtedness of the borough?

A. 200,400.

Q. And how much of this is chargeable against the electric light plant?

A. About \$5,000. There was an issue in 1930 of \$15,000 for the Water and Light Departments, \$10,000 of which was spent on the water and the balance went into the light. It is about \$5,000.

Q. So that the borough owns the electric lighting plant almost free of debt?

A. That is right.

Q. Have you prepared a statement showing the cost per kilowatt hour to the borough of Chambersburg for generating electricity?

A. I have; yes sir.

Q. I show you a sheet headed "1930, cost per KWH to generate KW," and ask you whether that is the paper to which you refer?

A. That is it; yes sir.

MR. EVANS: I offer this in evidence as exhibit number 119. (Paper in question so marked).

BY MR. EVANS:

Q. Now, Mr. Mowery, without going into all the details of this exhibit, which I think is self explanatory, as I understand, you have divided your generating expenses into what we called fixed charge and variable charges?

A. That is right.

Q. What do you include as fixed charges?

A. I include all of those charges which do not vary with the use of the commodity, such as half of my salary as applied to the light department, office supplies, printing, postage, siding rental, labor, maintenance and repair of boilers, condensers, generators, turbines, fire and accident liability, interest on investment, and depreciation.

Q. And what do you include as your variable charges?

A. I include in those charges, the costs which vary with the use of the commodity; fuel, and freight on fuel, and water.

Q. For the year 1930 your total fixed charges for generation were \$52,453, omitting the cents.

A. That is right.

Q. And your variable charges were \$31,472.

A. That is right.

Q. How much was your total cost per kilowatt hour delivered at the bus bars, of the generating station?

A. 1.25 cents.

Q. Per kilowatt hour?

A. Yes sir.

Q. Do you generate all of your own energy?

A. Yes sir; we generate everything.

Q. What is the capacity of your generating station?

A. Three thousand kilowatts.

Q. And what improvements, if any, are you contemplating in the generating station during the current year?

A. We are engaged in installing fuel pulverizing and burning equipment.

Q. And what will be the cost of this improvement?

A. Approximately \$80,000.

Q. How do you expect to pay for this improvement?

A. It will be paid for out of this accumulation in the sinking fund, to be set aside annually.

Q. In other words, you use your sinking fund for extensions and improvements?

A. That is right.

BY MR. COOKE:

Q. Before you decided to make this extension to your plant, were you solicited by any private company to buy this added equipment?

A. No; not at this particular time, but we have been frequently.

Q. When was the last time; how long ago?

A. About a year ago.

Q. About a year ago. What was the price they quoted?

A. I don't believe I can tell you that. It was considerably higher than we could make it ourselves.

Q. You made money by making it yourselves?

A. Yes, sir.

Q. Was it higher than two mills?

A. Oh, it was much higher than two mills.

Q. I mean, two cents.

A. With the demand charge, I think it was somewhere in the neighborhood of two or two and a quarter.

Q. You can make it yourselves for two or two and a quarter?

A. Yes; at the bus bars.

Q. What is the added expenses—what added expense would there be over and above that?

A. Well, we still have to transmit it.

Q. About how far?

A. Approximately a mile—that would be a half a mile; a circle of the radius of a half mile.

Q. What do you figure are the expenses that transmit it?

MR. EVANS: We have an exhibit on this matter. I think that will come out in a moment.

BY MR. EVANS:

Q. The next question I was going to ask you was whether you had prepared a statement showing the cost per kilowatt of the Chambersburg plant to distribute this electricity energy?

A. Yes; I have.

Q. I show you an exhibit headed "1930 cost per KWH to distribute" and ask you if that is the paper to which you refer?

A. That is it; yes sir.

MR. EVANS: I offer this as Exhibit Number 120.

(So marked)

BY MR. EVANS:

Q. Just to make the record complete, what do you mean by the bus bars of a generating station?

A. The bus bars are that portion of the electrical equipment to which the current from the generator is delivered and to which the outgoing lines are tapped to distribute.

Q. According to this Exhibit Number 120, what is your total distribution cost?

A. \$45,440.

Q. What does that amount to per kilowatt hour?

A. .79 of a cent.

Q. In figuring these on a kilowatt hour basis, you have used the number of kilowatt hours sold, and not the number of kilowatt hours generated, have you not?

A. Yes; the total number of kilowatt hours sold we have used.

Q. What then, are your total costs for generating and distributing per kilowatt hour sold to customers?

A. 2.04 cents.

BY MR. COOKE:

Q. Should not the word in the middle of the sheet be "distribute," rather than "transmit"?

A. Yes, sir; that is right. We have no transmission.

BY MR. EVANS:

Q. What do the profits of the electric plant for the year 1930 amount to when expressed on a millage basis; in other words what millage would be required in order to produce the same amount of revenue by way of taxation?

A. On an assessment of \$7,000.00 roughly, it would be in the neighborhood of twenty mills.

Q. Can you tell the Committee approximately the number of kilowatt hours used during 1930 for public purposes, for which no cash revenue was received by the plant?

A. 558,050 kilowatt hours.

Q. And what is the total number of kilowatt hours sold to customers?

A. 5,159,465.

Q. What was the cash balance in the treasury of the borough as of January 1, 1930?

A. \$56,924.

Q. What change, if any, is in contemplation in the rates charged for electricity?

A. I have already been authorized to make a flat reduction of ten per cent. throughout all the rate structures in the borough.

Q. What are the present rates?

A. Our maximum lighting rate is 8 cents, less 10%, which would be 7.2 cents net. Our minimum is 3.6 net for lighting.

Q. What is your average rate per kilowatt hour sold, if you have got that?

A. For lighting, including our minimum charges—we have quite a number of small residences that for three months or four months in the year will only burn one or two kilowatts—our minimum happens to be 75 cents a month, but including those minimum charges, the average for lighting charges was 5 cents per kilowatt hour.

Q. What are your power rates?

A. On the same basis, the power was 3 cents, including in every case minimum and demand charges.

Q. I expect you have different power schedules, have you not?

A. We have a secondary power schedule, which starts in at the basis of 5 cents less 10%, 4½ cents net, and it goes down to 1.9 cents gross less 10%. Then we have a primary light and power schedule which provides for light and power, where the consumer furnishes his own transformers, and we meter on the primary side of his bank of transformers, which starts in at 1½ cents per kilowatt; the next block of 100,000, 1¼; the next block at 1¼; and all in excess of that, 1 cent in addition to a demand charge of \$1.50 for the first 200 kilowatts of minimum demand, is measured by the demand meter, and credit of 80% power factor, and all in excess of 200 kilowatts is a dollar.

MR. EVANS: Mr. Mowrey has a chance to catch a train in about three quarters of an hour, and I want to ask him some questions in regard to the water plant. I do not, however, want to turn from the electric light situation until the Committee have asked all the information they desire.

BY MR. COOKE:

Q. These estimates you have given us are quite comparable to those of a private concern, except that you have omitted the profit item, is that right?

A. Yes, that's right.

BY MR. EVANS:

Q. You are required, are you not, by the Public Service Commission, to keep your books on the same—to use the uniform system of accounts?

A. Yes.

BY MR. COX:

Q. The people are well satisfied with your service?

A. You wouldn't think so to hear them talk sometimes.

Q. Do you have as many complaints. You don't have complaints about rates, do you?

A. We don't have any serious complaints, but it is apparently human nature to complain about anything, and we have, of course—they never become violent, we help ourselves.

BY THE CHAIRMAN:

Q. In the exhibit that was presented, there is just one half of your salary charged to light account?

A. No; there is more than that. I get about \$5,000 a year, and there is \$2,712 of my salary charged up to the light department, and on that exhibit you will find that half of that is divided between distribution and production.

BY MR. COOKE:

Q. May I repeat that question now? You have this total of 2 cents and 4 mills per kilowatt hour. Now, if you added

onto that a profit item, if you were operating on a private basis, that would represent a fair price?

A. Yes, that's right.

BY MR. EVANS:

Q. Mr. Mowrey, have you got a statement of the profits of the lighting plant for the last ten years, say?

A. Yes, I have.

Q. What were they, beginning with 1920, and just give them to the Committee from then on, if you will?

A. Profit in 1920 was \$55,316.

1921 was \$59,871.

1922 was \$57,119.

1923 was \$68,734.

1924 was \$97,087.

1925 was \$105,214.

1926 was \$121,910.

1927 was \$119,536.

1928 was \$125,895.

1929 was 139,025.

Q. Have you got what the total profits running back to the year 1911 have been?

A. Yes, that was \$1,155,249.

MR. HAGMAIER: When you say profits, Mr. Evans, have they charged against that the depreciation, interest and sinking fund?

BY MR. EVANS:

Q. Is that after the deduction of depreciation and sinking fund charges?

A. No, that is not. There is no interest or depreciation taken from that.

Q. So that that is not comparable that you gave for 1930?

A. No, not at all.

Q. Now, does that include the amount of revenue for energy sold, or does it also include the credit for revenue furnished to the borough and public agencies free of charge?

A. This last statement does not include any monies that might have been received or credits coming to the department for furnishing of current or service to the departments.

Q. And during the same period, since 1911, what would be the approximate total of those credits, if you have it?

A. That is \$544,989.

Q. Mr. Mowrey, if you capitalize it, the profit for the year 1930 on a 7% basis, what would that make the value of the plant on that basis, if you have that figure?

A. About \$2,000,000.

Q. Turning to the water department, you also are in charge of that?

A. Yes.

Q. Can you tell the Committee how long the borough of Chambersburg has owned its own water department?

A. 1876 they started.

Q. What is the capital investment in its water plant?

A. \$567,774 as of January 1, 1931.

Q. Where does its water supply principally come from?

A. It comes from the Michau State Forestry Reservation, in the South Mountains, about 11 miles east of Chambersburg, from a stream called Birch Run.

Q. Is it a gravity system or is it pump?

A. Entirely gravity.

Q. What were the operating expenses of the water plant during the year 1930?

A. \$12,175.

Q. And what were the revenues for the same period?

A. The revenue was \$58,465.

Q. Giving a net operating revenue of how much?

A. \$46,290.

Q. Is that after the deduction of depreciation and sinking fund charges?

A. No, there is no depreciation in that at all.

Q. Do you set aside any of the revenue for depreciation?

A. We do not.

Q. Did the borough have a reasonably adequate water supply during the recent drought?

A. Yes, we had a very reliable supply. It comes from a very heavily wooded forestry reservation on which there are no habitations at all and a single public road going up through it. There is a very heavy leaf mulch on it which has a great tendency to conserve the water and we suffered very little if at all. We had to restrict the use of water for railroad work

and actual wastage was eliminated during November and December, but we really didn't suffer at all.

Q. Was that true of the neighborhood around Chambersburg in general?

A. No it was not. Shippensburg, eleven miles north of us had quite a time of it. Waynesboro had quite a lot of trouble. Gettysburg had a very serious condition and so did Hanover have a very serious condition.

Q. What improvement, if any, does the borough contemplate in the municipal water plant?

A. They have under contemplation now the construction of a retaining dam across the entire valley through which the roadway runs, which will impound about 100 million gallons of water and will cost between \$250,000 and \$275,000.

Q. Will the funds for this be raised by a bond issue?

A. Bond issue.

Q. At the present time, is there any of the borough's bonded indebtedness chargeable against the water plant?

A. Yes, about \$80,000.

Q. What rate does the borough charge for water; first, to domestic consumers?

A. We have a minimum charge of \$1.50 a quarter and their commodity rate is one dollar a thousand cubic feet, which would be approximately 12 cents or 12½ cents a thousand gallons.

Q. And in the figures you have given us, is any credit taken for the fire service furnished to the borough?

A. Yes, for fire service and water to other departments for flushing and cleaning the streets, amounting to approximately \$13,500.

Q. Can you give us what this credit is for fire service?

A. That is at the rate of \$15 a fire plug per year.

Q. How many fire plugs are here in the borough?

A. 205 fire plugs in the town.

Q. Is the charge of \$1.50 a quarter to domestic consumers a service charge or a minimum charge?

A. It is a minimum charge.

Q. How much consumption does that cover?

A. That will allow them 1250 cubic feet per quarter.

BY FATHER COX:

Q. Is there not a great difference in the charges at Chambersburg, which is only \$15 per fire plug, and some of the other reports we read where it was as high as \$85? How can they do it so reasonable? There must be few fires in Chambersburg?

BY MR. EVANS:

Q. How do you fix the charge, Mr. Mowrey? For fire service to the borough?

A. That is just an arbitrary charge that has been in effect up there ever since they have had the Department. It really does not serve any purpose.

BY MR. COOKE:

Q. Would that charge be a carrying charge—

A. I should not think so. Fire service is the most expensive service that the water companies or municipalities can get into account of the tremendous flow they must have in short periods of time involving large mains.

BY MR. HAGMAIER:

Q. Do you think where the plug and all is furnished that \$50 of a charge is too large?

A. Well, I really would not like to attempt to answer that question. It is a matter of the amount of equipment you have tied up to furnish that plug with water when it has to be furnished and the fixed charges on it and the water that is used. In some cases \$50 might cover it, and in some cases it might not.

Q. They require considerable attention in order to keep them from freezing?

A. No, none at all. If a fire plug is set properly, I cannot conceive of it freezing in this particular latitude. Frosts do not go down with us—it is an exceptional frost that goes down three feet, and most plugs are set 4½ feet. We don't do anything with them except to see that they drain out at the barrel after they are used in the winter time.

BY MR. EVANS:

Q. What are the rates charged for industrial water supply?

A. Manufacturing rates start in at—the consumption runs

from zero to 20,000 cubic feet a month—at 80 cents a thousand cubic feet, and go down to 600,000 cubic feet a month or over, at 30 cents a thousand cubic feet.

Q. We have had all our rates quoted on the basis of gallons; can you tell me approximately what the relation between the cubic feet and the gallon is?

A. It would be—there would be 7½ gallons in a cubic foot, so that would make these start in at about 10 cents for the first thirty thousand and about 3 cents on the 600,000 basis.

MR. EVANS: Were there any questions that the members of the Committee would like to ask Mr. Mowrey in regard to the Chambersburg situation?

FATHER COX: It ought to serve as an example to these other people. I think it ought to be brought out, very definitely just what they are able to do with these water works that are owned by municipalities; a horrible example and a good example.

MR. EVANS: Thanks very much. I think that is about all we can bother you with now. We appreciate very much your coming down.

THE WITNESS: I am very glad to be here.

#### IN RE BOROUGH OF MIDDLETOWN

H. V. McNAIR recalled

BY MR. EVANS:

Q. What position do you hold in the borough of Middletown?

A. Burgess.

Q. Does the borough of Middletown own its own electrical plant?

A. Distribution plant only; not generating.

Q. From whom do you purchase your energy?

A. Under a contract originally with the York Haven Power Company; later transferred to the Metropolitan Edison, and now it is owned by the Associated Gas and Electric, I believe.

Q. What rate do you pay?

A. One cent per kilowatt hour.

Q. What is the population of the borough of Middletown?

A. Sixty-five hundred.

Q. And approximately what area does it cover?

A. A mile square; about three square miles.

Q. Can you give us, approximately the assessed value of its property for tax purposes?

A. About two and one-quarter million.

Q. What is the tax rate?

A. Our borough tax is six mills.

Q. Is there, in addition to that, a sinking fund tax?

A. There is no borough indebtedness whatever. We have no bonds or sinking fund to take care of.

Q. The borough is entirely free of debt?

A. Entirely.

Q. Approximately, what is your investment in your electrical distribution system?

A. The auditor's report for 1930 shows an investment of \$135,000.

Q. And how many consumers do you have?

A. We have slightly over 1600 consumers. If you want the exact figures, I have them here, if you prefer them.

Q. I think if you can give us the exact figures it will help.

A. The exact number is one thousand six hundred and twenty-six.

Q. What are your rates for domestic lighting?

A. For domestic lighting the maximum rate is eight cents, with a reduction of twenty per cent, which makes it 6.4 cents maximum.

Q. To whom is the twenty per cent. discount payable?

A. To the borough of Middletown, electric light department. That is not a penalty. That is a deduction from the eight cents. We don't charge a penalty. We give a discount within a twenty-day period.

Q. Do you also have a resident power rate?

A. We have a resident power rate, which starts at nine cents per kilowatt hour.

Q. And goes down to what?

A. It goes down to 1.2 cents.

Q. What does your residence, lighting rate go down to?

A. It goes down to two cents. That includes residence and commercial lighting. We have only two classes; one for light and one for power.

Q. Does this ordinance give it (indicating)?

A. Yes; that ordinance gives it. That includes everything.  
Q. What were your total operating expenses for the year 1930?

A. \$34,475.52. That was for 1929; for 1930 they were \$31,280.20.

Q. And how many kilowatt hours did you sell during those years?

A. We don't keep a separate record of the entire amount sold. We light the streets, and the three fire houses, and the borough chambers, and we don't check. We can figure up our totals, and we did that several years ago, for a check on what we were selling and what we were giving free, but we don't have those figures for 1930—

Q. I see.

A. Due to the fact that these rates were slightly different when our check was given. I didn't think you wanted these figures, because they wouldn't be exact as compared with these rates.

BY MR. EVANS:

Q. Well, cannot you give us the total kilowatt hours billed to customers who paid for the service?

A. No, we don't have those totals for last year. We don't have any accountant or engineer, it is just run by laymen, and we don't go into details on our accounting.

Q. And these operating expenses that you have given us, do you include depreciation?

A. We include depreciation in this sense, that included in those figures is the maintenance to par of the system, so that our system is maintained at par all the time. We are always repairing and bringing it up to the same standard, and those expenses for maintenance to this standard are included within that expenditure. We make no charge for depreciation, because there is no actual depreciation.

Q. How do you charge extensions and betterments to the system?

A. It is all included in this expenditure.

Q. You cannot though, I take it, give us the cost comparable to those that Mr. Mowrey gave us for distribution?

A. We couldn't give you any figures, any percentages, no. We can just give you the actual figures which it costs us.

Q. But not a kilowatt basis?

A. Not on a kilowatt hour basis.

Q. What was the profit from the operation of the electric light plant during the year 1929 and 1930?

A. In 1929 the net profit was \$26,423.08. In 1930 the net profit was \$25,054.36.

BY MR. RHODES:

Q. Was that before or after depreciation?

A. That was after everything had been deducted, including \$3,000 for sinking fund for any abnormal stress on the lines or replacement of transformers. That is absolutely net profit.

BY MR. EVANS:

Q. What did you say the investment in the system amounted to?

A. Our auditor's report shows \$135,000.

BY MR. COOKE:

Q. You have got in your operating expense there the item for current?

A. Yes, that is included also.

Q. Do you know that total generated for the year?

A. We buy it already generated.

Q. I mean, do you know the total that you buy?

A. It will show from this figure which we show under our expenditures for the year 1930, expenditures for current, \$17,654.

Q. If you subtract 17 from 34, and divide by the kilowatts you bought, it will give you your distribution expense per kilowatt hour, won't it?

MR. EVANS: Per kilowatt hour purchased, rather than per kilowatt hour sold.

MR. COOKE: Yes, that would be an interesting figure to have; if you can give it to us.

THE WITNESS: I will supply the report for the year; we don't have any engineer or accountant there.

BY MR. COOKE:

Q. But if you take your 17,000 off the 32 or 34, and divide it by the kilowatt hours, you get the average cost for distribution?

A. This figure paid for current will show you the number of kilowatt hours bought, because it is merely a matter of dividing your cent per kilowatt hour to that figure. In other words, there would be 1,765,400 kilowatt hours purchased and extended.

Q. Both Elwood City and Chambersburg testified that the cost of distribution per kilowatt hour was less than a cent. This afternoon Chambersburg testified .79. It would be interesting if we could have Middletown's testimony of what it does cost to distribute per kilowatt hour?

A. I would be unable to give you that immediately, because there were all the other factors included in the total expenses.

BY FATHER COX:

Q. How does it come that you are able to get along without an engineer and accountant, when they are so important to these other companies?

A. Every year our treasurer shows a profit after all expenses are deducted, of \$25,000, so we are fairly well satisfied with that.

BY MR. EVANS:

Q. The figure that you gave of \$17,763, was it, that you paid for current?

A. \$17,634.

Q. Is that for the year 1929 or 1930?

A. That is for 1930.

Q. So if you deduct that figure from the \$31,980, which were your total operating expenses, you will get approximately your distribution expenses, will you not, for the year 1930?

A. I believe that you will, yes.

Q. If my arithmetic is correct, that is approximately \$14,326 distribution expenses, and the kilowatt hours purchased amount to 1,765,400?

A. That is correct.

MR. COOKE: Will you make the division?

MR. EVANS: Well, I can only say that it is evident it is considerably under a cent.

MR. COOKE: I think we ought to get that in the testimony. This is a nation-wide question.

THE WITNESS: I will testify up to that point, and take your division for the rest of it. Due to fact that this is operated by laymen, you might say, down there, we keep our bookkeeping very simple, because we don't want to make any mistakes.

BY MR. COOKE:

Q. You have no non-revenue current; that is, you would charge the different departments—you don't use current for city manufacturing?

A. The only free current that we do not charge for is our street lighting, our three fire engine houses; or if we have any carnivals, or anything of that nature, for the community, we don't make any charge for that.

Q. You could charge for it if you had a system of bookkeeping?

A. We very readily could charge off a large amount for that, but we have a very extensive street lighting system, the streets are very well lighted.

BY MR. RICHARDS:

Q. What size lamps do you use in your street lighting?

A. I think we use 400.

Q. That compares with the average street lighting system, does it? I just want to get a picture of yours compared with the other cities?

A. Our lights, I think, are considerably larger than necessary. We don't spare much expense, because we make a large profit, and we try to put it back into the community.

Q. 40 watts is not a large lamp for street lighting?

A. Well, they are very closely spaced. You couldn't figure that, because on some of those streets we have light standards, they are staggered at close intervals, so that the streets are well lighted. I couldn't give you the exact size of the lamps, the overhead lamps and the standards, because I am not exactly familiar with the size they use.

BY MR. EVANS:

Q. Mr. Walker and I independently have made the division and arrived at the conclusion that the approximate cost of

distribution is 8 mills per kilowatt hour purchased. When you have that checked, and if it is not correct, advise us later?

A. You have arrived at that by deducting 17,654 from the 31,000?

Q. From the 31,980, yes.

A. And divided into that the number of kilowatt hours?

Q. Does the Borough of Middletown also own its water system?

A. It does not.

Q. What company serves the borough?

A. Middletown and Royalton Water Company.

BY MR. COOKE:

Q. We know the quantity of current they buy?

BY MR. EVANS:

A. That is on the record.

THE WITNESS: I can leave copies of the auditor's report for you; all the facts are there if the percentages are not.

BY MR. COOKE:

Q. Has there been any special change in the price paid for current in recent years?

A. Our price was fixed 25 years ago by contract with the York Haven Company, and that contract is to be continued indefinitely on the part of the York Haven Company, but Middletown has the right to cancel at any time on six months notice, but we do not expect to give that notice very soon.

BY MR. EVANS:

Q. Mr. McNair, you also are the solicitor for the borough of Royalton?

A. I am.

Q. Does it also have its electric distribution plant?

A. It does.

Q. What is the population of the Borough of Royalton?

A. Approximately 1100.

Q. What is its area?

A. Its area is about a square mile. The houses are more widely separated than in Middletown.

Q. From whom does it purchase its current?

A. From the same company, the Metropolitan Edison, now the Associated Gas and Electric.

Q. What does it pay for energy?

A. It pays 2¼ cents per kilowatt hour.

Q. When was that contract made?

A. That contract was made within the last ten years.

Q. What profit does the Borough of Royalton show from its electric plant?

A. In 1929 the total receipts—this plant has 243 consumers—in 1929 the total receipts were \$5976.63, and its expenditures were \$3,562.77, making its net profit \$2,413.86.

Q. Will you give the same figures for the year 1930?

A. The total receipts for 1930 were \$6,367.96, the total expenditures were \$4,002.22, and the net profit was \$2,365.74.

Q. Do you know what rate the Borough of Royalton charges?

A. They charge 10 cents for the first 40 kilowatts and six cents for all over 40 kilowatts, with a 10% discount on all bills.

Q. Does it also furnish a certain amount of public lighting?

A. Street lights are deducted. The expense of lighting the community area is also deducted prior to this net profit. In other words, the net profit does not include that, that is included in expenditures.

Q. So that we may be clear on that point, is the expenditure which you gave us, does it cover the total expenditure including the public lighting?

A. It does.

Q. The revenue includes only the cash revenue without any public lighting?

A. Only the cash.

BY MR. RICHARDS:

Q. Does Mr. McNair mean gross profit or net profit?

A. The profit is net after the expenses including the cost of current, the maintenance of lines and the street lights and the borough hall are deducted.

Q. You do not take into consideration interest on investment or depreciation?

A. We do not take into consideration the investment because the plants pay for themselves. There is no borrough money invested in them whatsoever. In Middletown they started out with indebtedness of \$28,000 for which bonds were issued in 1893. The debt has since been paid off by receipts from the light plant so we charge off nothing for interest because there are no funds invested. We don't pay anything to anybody for it. It has paid for itself out of these net profits.

Q. How are your expenses paid?

A. Out of current revenue, and charged for in current expenditures.

BY FATHER COX:

Q. Can you explain why you are able to keep your charges down so low while the utility companies are putting them up to 8 and 10 cents?

BY MR. EVANS:

A. The Royalton charge is 10 cents.

BY FATHER COX:

Q. Can you give us any reason at all for these high prices of the utilities where they have such immense facilities and should be able to give a lower rate than you do?

A. We use the receipts from the light plant at Middletown as a sort of a tax because our borough millage is only six mills which is as low as the county millage. We pay as much to Dauphin County in taxes a year as we pay to our own borough to operate our borough and to pave streets and take care of the expenses of the borough generally. We used \$25,000 from the profit from our light plant to maintain our streets. If we deduct it from our maximum rate for current which we could easily do, we could operate on \$5,000 as it is now. You can readily see we could deduct \$20,000 easily and lower our light rates to effect that deduction. We could not very well lower the power rate because we supply power for light house purposes starting at 2 cents in a very nominal demand charge. The house demand charge is 25 cents a horsepower, the equivalent of that does not run very high.

BY MR. COOKE:

Q. Do you have two meters?

A. We have two meters, but we have been contemplating a general revision of rates so that we could have only one meter, but we have not yet had time to work it out.

BY FATHER COX:

Q. You are operating a small plant and are unable to supply such cheap rates. What in your estimation causes this increase in rates?

A. In many cases I think they make double charges. They charge maintenance and depreciation. We charge only maintenance because if you maintain the line properly there is no depreciation. We maintain our depreciation solely in the expenditures and we don't charge off depreciation in a separate item. You find most of these companies making a double charge for what is practically the same thing.

BY MR. RICHARDS:

Q. You have no depreciation?

A. No, not where you maintain a plant at par.

Q. You have to make repairs?

A. There is no depreciation there.

Q. There is depreciation until such time as you have to make repairs?

A. In 1925 our plant was the same as it is now, kept to exact power.

Q. Your transformers are in service and they are not worth as much today as they were five years ago?

A. We have been operating for 25 years and as they go out of service we replace them with new ones.

BY MR. EVANS:

Q. They pay for betterments and extension out of the operating revenues instead of charging them to a capital account; as I understand Mr. McNair's testimony, the amount that they spend for betterments and expenditures equals any possible depreciation in the plant which they maintain to a high degree of efficiency.

BY MR. RICHARDS:

Q. I did not hear your figures. I was talking to somebody else. What is your cost to the consumer; that is, your average consumer using, say, 40 kilowatt during a month? What is the cost per kilowatt hour? I didn't get that, I know you gave it, but I didn't get it.

A. I don't believe I gave the average. I believe I was speaking of the Royalton charges.

Q. Middletown and Royalton are the same?

A. No; entirely different plant. They start at ten cents with ten per cent. They pay two and a quarter cents for the same that we pay one cent for, but we got our contract under more favorable conditions. At that time the company had some surplus electricity to sell, and that is the explanation of our contract. When Royalton purchased, the companies were in a better position, and naturally they would demand more for electricity, and they made the rate higher.

BY FATHER COX:

Q. Then you think the big companies could take an example from you?

A. I wouldn't say. I am not an accountant. I have not figured it.

Q. But from the figures, you think that they double the charges without any reason?

A. I think they do.

FATHER COX: Yes; that is the point.

BY MR. RICHARDS:

Q. Do you think the company makes any money on you?

A. They have made no effort to break the contract.

Q. Perhaps they could not break it, but I was just wondering whether they did make money.

MR. COOKE—

BY MR. RICHARDS:

Q. What was your figure on the cost of the current: .8?

MR. COOKE: It runs us all the way from .3 of a cent.

BY MR. RICHARDS:

Q. You don't know what their cost is down there, do you?

A. I understand if a contract is oppressive, they have the right to go before the Public Service Commission to break it. They have made no effort to do that. They have never complained to the Public Service Commission that they were not getting a fair deal on the contract. We have been operating under it for twenty-five years, and they have not made the slightest suggestion that they would like to break the contract.

BY MR. TURNER:

Q. Maybe they are like a lot of other people that don't think they would get any place with the Public Service Commission?

A. Maybe they have that idea.

BY MR. EVANS:

Q. The current you use is generated at the Metropolitan Edison station at Middletown, and the hydro electric station at York Haven?

A. They have a chain of plants, and I think they shift from one to another. They furnish current from all of them irrespective of the locality.

Q. But those are the nearest stations to Middletown?

A. Yes; the Metropolitan Edison has a plant within the borough limits. However when we made this contract, they didn't.

Q. But the York Haven is a hydro electric company?

A. Yes; when we made the contract with them.

BY MR. RHODES:

Q. You do not carry any capital set up on your books at all, do you?

A. None whatsoever, because there is no indebtedness to pay on, and this plant has paid for itself. Whatever the plant is valued at has been made from light profits. So, we don't charge any thing to capital.

#### IN RE MOUNT PLEASANT WATER SITUATION

MR. EVANS: If the Committee please, there are certain residents of the borough of Mount Pleasant who ask an opportunity to be heard in regard to their water situation. They

were notified to be here this afternoon and we are ready to hear whatever they have to say. I think they ought to be given an opportunity to put on any witness they desire.

MR. TURNER: Where is that located; what county: Westmoreland?

MR. EVANS: Westmoreland; yes.

FRANK L. OVERLY sworn

BY MR. EVANS:

Q. You are secretary of the council of the borough of Mount Pleasant, are you not?

A. I am.

Q. I show you a certificate copy of a resolution, adopted by the council of the borough of Mount Pleasant on January 5, 1931, and ask you whether that is a correct copy?

A. That is.

Q. Will you read that to the Committee, please?

"To the Honorable Gifford Pinchot, Governor-elect, and to the Members of the Senate and House of Representatives of the Commonwealth of Pennsylvania:

WHEREAS, the service charge to consumers, of public service corporation in this Commonwealth, as approved by the Public Service Commission, has become, in many cases, excessive, unjust and burdensome:

NOW THEREFORE, BE IT RESOLVED, by the Borough Council of the Borough of Mount Pleasant in Council assembled, that we petition you to take such proper legislative and executive action as soon as possible to relieve the consumers of all unfair and excessive service charges and especially where there are unnecessary duplications of service charges to a single consumer imposed without justification.

Paper in question marked Exhibit Number 121.

BY MR. EVANS:

Q. You are aware of the fact that there have been complaints against the water situation in the Borough of Mount Pleasant?

A. The citizens have repeatedly met with council meeting in regular session and special sessions, asking council to try and get them relief in the situation which they claim the charges are excessive, and they have appealed to council.

Q. You are a resident of the borough?

A. I am.

Q. Can you tell the Committee, what water company serves the borough?

A. The Citizens Water Company of Scottdale.

Q. How long has that company been serving the borough?

A. I can't give you that definitely. I don't know whether it is—I would say approximately a year. I don't believe it has been a year.

Q. And prior to the time the borough was served by the Mt. Pleasant Water Company?

A. The Mt. Pleasant Water Company.

Q. Do you happen to know who owned or controlled the Mt. Pleasant Water Company?

A. A subsidiary of the United States Steel, H. C. Frick Coke Company.

Q. And it was sold out a year or so ago to the Citizens Water Company?

A. That is correct.

Q. Was any change made in the rates of the Citizens Water Company?

A. Yes, sir.

Q. What changes, so far as you can remember them?

A. Well, unfortunately I didn't know I was going to be asked to give any rates, and I am not prepared, but I—

Q. Well, were they increased?

A. They were increased. I cannot give you anything definitely, I am sorry.

Q. Is there a service charge made by the company?

A. There is.

Q. Do you know what that amounts to?

A. As I said, I have to give those just as I remember them. I think it is \$2.25 a quarter.

BY THE CHAIRMAN:

Q. Can you supply those figures, the old rate and the new rate?

A. Yes; I could.

BY MR. EVANS:

Q. Will you send us a statement of the rates of the Mt. Pleasant Water Company and the present rates of the Citizens Water Company?

A. Yes.

MR. EVANS: And those will be inserted in the record as Exhibit No. 122.

BY MR. EVANS:

Q. Do you happen to know the rates charged for fire protection in the borough?

A. We have 68 plugs in the borough, if my recollection serves me correctly, and we pay \$455.22 per month. I think that would run \$80 per plug, I think. Those figures may not be accurate, but it is the best I can give you.

BY MR. RICHARDS:

Q. What is your source of supply of water for Mt. Pleasant; where do they get it from?

A. The mountains.

Q. How far from Mt. Pleasant is the source?

A. If you will pardon the suggestion, Mr. Buck, the superintendent of the company is here, and I am sure he can give you more reliable information than I can.

Q. In this letter from the council, they are complaining about rates, and Mr. Hagmaier and myself were wondering whether the source of supply was far away. The rates for fire protection seem to be high, and we were trying to get some information as to whether the carrying charges and all that sort of thing would necessarily be high?

A. The dams, the reservoirs of the Mt. Pleasant Water Company are situated, I will say, approximately a mile from Mt. Pleasant, and the water streams—how far they go up in the mountains, I am not able to give you that.

BY MR. RHODES:

Q. You say the superintendent of the water company is here?

A. Yes.

Q. He can give us better information on that?

A. I think so.

BY MR. RICHARDS:

Q. Is it a gravity system or pumped?

A. I am hardly able to give you that. I am sorry.

MR. TURNER: It seems to me we are wasting a lot of time.

THE WITNESS: It is not that I am trying to withhold anything. I would gladly give you anything I have.

MR. TURNER: I am sure you would. We know that.

JAMES S. MACK sworn

BY MR. EVANS:

Q. You were superintendent of the Mt. Pleasant Water Company, were you not?

A. That was my title, yes.

Q. Can you tell the Committee what the rates of that company were to the domestic consumers?

A. No.

Q. You don't know as superintendent?

A. No. You see, I was superintendent of the Frick Coke Company, and I just was superintendent of the water company as a side issue, and I had an assistant who took care of all the details, and you may know that I know very little about it, because I did not even have a desk in the water company's office.

Q. So you don't know anything about their rates. Do you know anything about their property?

A. No, I don't, not to talk about it.

Q. Can you tell the Committee approximately what the investment in the plant of the company was?

A. No. You see, those records were all kept either in Pittsburgh or New York.

Q. What did the plant of the company consist of? Was it a gravity system?

A. No, it was a pumping system.

Q. Where did the company get their water from?

A. From Jacobs Creek.

Q. How far is that from the borough?

A. Well, the dam is about a mile and a half.

Q. How much pumping was required?

A. Well, they had a capacity of 3,000,000 gallons there a day, but it only pumped about a million and a half.

Q. To the borough?

A. Yes.

Q. Was it pumped to a standpipe?

A. Yes.

Q. When did the Citizens Water Company take over the Mt. Pleasant plant?

A. I think it was in November of last year. I am not sure. You see, I haven't been with the company for a number of years, and it was not a matter of much interest to me.

BY FATHER COX:

Q. Do you know the rates you are charging now for water?

A. I haven't anything to do with it now. I haven't had for almost two years.

FORREST W. BUCK sworn

BY MR. EVANS:

Q. Where do you live?

A. Scottdale.

Q. You are superintendent of the Citizens Water Company?

A. Manager.

Q. Are you familiar with the property of the company and its rates, and so forth?

A. Why, fairly so.

Q. What are your duties as manager?

A. Looking after the operation of the plant.

Q. Do you have anything to do with the billing of the customers?

A. It comes under my office.

Q. What are the present rates of the company to domestic consumers?

A. We have no special domestic rates, the same rate applies to all classes of consumers.

Q. Well, what are the rates charged to domestic consumers?

A. The rates are for the 5" meter, there is a fixed service charge of \$2.25 per quarter, and the first step is 40 cents a thousand gallons; the second step is 20 cents, and the third step is 10 cents, which is the lowest step.

Q. Where more than one family occupies a house but there is more than one meter, do you make more than one meter charge?

A. That depends on the way the house is divided. If the house is capable of sub-division, such as a duplex or a double house, or where there is one story above the other, and separated by separate entrances, there is separate charges. Where it is all accessible by one entrance, such as an apartment house, there is only one charge made.

Q. I show you an affidavit of D. P. Lowe, in which he states, "I am the owner of a property consisting of one double frame house, located on Main Street, Mt. Pleasant Borough, which is rented to two families; both families are supplied water by a single meter, and I am charged two meter charges, \$2.25 per meter, or \$4.50 per quarter by the Citizens Water Company of Scottdale, Pa." That would be correct, so far as you know?

A. How did he describe that house? That is correct, so far as I know. I don't know the particular case, but he states it was a double house. It is just the same as if it were two separate buildings, only there are two buildings pushed together. That is the only difference.

Q. Here is an affidavit from the same man, who says he owns one dwelling house and two small single houses in which four families are living. "I am being charged four service charges, or \$9 per quarter, for the single meters." Can that be correct?

A. That would be correct in that particular case.

Q. So, no matter how many meters are in, you charge by the family and not by the meter, do you?

A. No, we charge not by the family, we charge by the consumption of the building. We might cite the apartment house owned by the bank and trust company there. There are six apartments in that building, three floors, and it is all accessible from one entrance, and that has one meter.

Q. What is the meter charge supposed to cover?

A. That is the ready to serve charge, the minimum charge per consumer.

Q. And it has nothing to do then with the cost of the meter?

A. No sir.

Q. Here is a consumer who states, "I own a property on the corner of Diamond and Washington streets, containing a store with no water connections and a barber shop and kitchen with water; three tenants on the second floor, all under one roof, and served from one meter. For this I am assessed by the Citizens Water Company of Scottsdale, Pa., 40 cents per thousand gallons for all water consumed, and in addition I am charged six service charges."

A. I don't know that case. That doesn't sound just right to me. I would say that is not correct.

Q. Will you investigate it and find out in regard to it?

A. I would be glad to. Will you give me a memorandum of it, and I will investigate it. I would like to have a copy of the affidavit.

Q. You do know the case now, do you?

A. I know it in a general way. It was discussed by the President of Council and the Chairman of the Fire and Water Committee, and the Chairman of the Finance Committee, and they explained to me that the property was tenanted by a very poor man; just he and his wife; and it was hardly tenanted at all; that is, a great deal of time the property stood vacant. So, I went up to the Mount Pleasant office and I asked about the case and they said there were six service charges on the property. I then asked how much water they used for three months on the property which was not tenanted; practically not tenanted; and it used 78,000 gallons of water, or about 13,000 gallons of water per consumer. I brought that to the attention of council, and, of course, that was very unreasonable; that all that water should be used. We then advised Mr. Lombardi to have his plumbing repaired, and he didn't think it needed repairing. So, after he got that big bill, he had repairs made, and his last water bill, which went out on April 1, showed that the same property only consumed thirty-six thousand gallons of water, or about six thousand gallons per consumer. That is about two thousand gallons per consumer too high for that class of property. They paid not only the service charge, but they also paid forty cents a thousand gallons for the water consumed and forty cents a thousand gallons for the first seventy-five thousand gallons, and twenty cents for the next two hundred and twenty-five thousand gallons.

Q. I show you a bill of the Citizens Water Company, Scottsdale, addressed to Frank Berdyk, Shupe and Vine streets, Mount Pleasant, Pa. marked "paid," which shows a consumption of 4600 gallons between September 15, 1930 and December 16, 1930, for which the consumer is charged forty cents per thousand or \$1.84, and a ready to service of \$9. Will you explain that to the Committee?

A. I can't explain that particular case, no sir. It shows on the bill here that it is correct on the bill, but I don't know the circumstances of it.

Q. I see. Do you think that that is a reasonable service charge for a consumption of 4600 gallons?

A. I wouldn't like to say whether it is or not.

Q. Will you investigate that case and advise the Committee?

A. Yes sir.

Q. What is the practice of the company in regard to shutting off water for customers, who have regularly paid their bills, but who, on account of unemployment, are now unable to pay their bills promptly?

A. We don't have any cases of that kind in Mount Pleasant, I don't believe. We had heard that there was a case of that kind, and we investigated it, and I think that our figures show that out of seven hundred and forty-two consumers of the domestic class that we shut off four, three of which were out of the borough, one was an industrial; two at the request of the owners and the fourth was a questionable case; whether the person deserved charity or not.

Q. Are you acquainted with Mrs. Rose Schachte?

A. No sir.

Q. I show you an affidavit of Mrs. Rose Schachte in which she states that she is a customer of the water furnished by the Citizens Water Company of Scottsdale; have lived in my present address for eight years; have never missed paying water bills promptly during that time; owing to the scarcity of employment I was not able to meet water bills for quarter ending September 30, 1930; water was promptly shut off, and is still at this date; March 30, 1931.

A. I believe that is the one case since you mentioned the name that we shut off. It was not shut off promptly at the

time. It was delayed considerable, and we endeavored to get the money. Our investigations disclosed that they were not really entitled to charity. It is our policy to donate to associated charities, and let them pay the water bills of people that need it. We are not allowed to give away water free.

Q. Are you familiar with one of your customers Mrs. Ruth Slate?

A. Not by name. I may know the case.

Q. I show you an affidavit, in which she states: that I am a consumer of water furnished by the Citizens Water Company of Scottsdale, Pa.; have lived in this house for twenty years; had never missed any payment of water bills during that time. Owing to the industrial depression last year, my boys having no work, I was unable to meet one quarterly payment; the water was completely shut off for ten weeks. Before water was turned on again, I was charged as follows: To repair of frozen meter, \$1.70; extra charge for restoring meter, \$2; in addition to two service charges, and water bill.

A. I don't know that particular case.

BY FATHER COX:

Q. That is a strange charity, by paying into a charity fund and the charity pays it back to someone who ought to have assistance in times of stress like this. I think that you could hold the bills just as well as the charitable associations could. If you have only one or two places, as you said, you would not be giving them charity if you were giving them an extension of time.

A. Is that a question?

Q. Do you call it an act of charity to extend their time of payment, when they have been paying their bills for years and years without default?

A. I would, and I would say that this bill was sixty days owed before any action was taken on it. And now, our time for payment is the 20th of the month. The discontinuance is forty-five days from the date of the bill as rendered and if we were to stick strictly to the rules, we would have discontinued it in that time, but in these cases we have been taking one dollar and one dollar and a quarter.

Q. Why couldn't you, instead of asking a charitable association to pay you, give them an extension of time; when you know that they have been good for so many years before?

A. I have no way of knowing whether they were good?

Q. You have the records there?

A. I don't have the records.

Q. There is no charity—

A. Well, understand we operate in both towns, Scottsdale and Mount Pleasant. In Scottsdale the charities are associated into one organization, and that charity work is done through that organization. In Mount Pleasant, as I understand it, it is more or less of an individual effort rather than a concerted effort, and we can't tell whether they should have charity or not, and we don't have time to investigate because there are lots of people who ask to have water time extended, and we do it if it is at all possible.

Q. But in an unusual time like this—I don't want to take the time of the Committee—but don't you think you could have a little consideration for these poor creatures?

A. We do.

Q. You don't show it.

A. I think sixty days is sufficient.

Q. Oh, no we are not talking about sixty days. If it was six years, if this period of depression went on and you were collecting from all your other people and making good returns on your money?

A. I believe we would be liable for discrimination.

Q. You are not afraid of other things? You raised your rates after you took the company over, I believe.

A. That is correct.

Q. Yes, you were not afraid of that, and the company that had it before made money during all the years, they operated it. Now, if they made money, and you took it over and immediately raised your rates, what about discrimination there? (No answer).

FATHER COX: I knew of one case in Pittsburgh—while the Committee is waiting—one of our large companies that hired seventeen new men; that is one good thing to shut off gas of the people who couldn't pay. They gave employment to seventeen extra men. That is quite a boom but think of the purpose for which they were used, in the dead of winter,

people having their gas shut off; people who had paid honestly and decently for years.

BY MR. EVANS:

Q. Are you familiar with Mr. Reinacker in connection with the Citizens Water Company?

A. Yes.

Q. Where does he live?

A. Reading.

Q. Do you happen to know his address in Reading?

A. 524 Washington Street.

Q. What are his initials?

A. L. T.

Q. What position does he hold with the Citizens Water Company?

A. Vice-President.

BY MR. MEMOLO:

Q. Is it customary in your neighborhood to charge a service charge for people who haven't got a meter; that is if there are five families and living in a house, do you have five service charges?

A. No sir.

Q. That is not customary?

A. No sir; that is not customary; only in cases where the building is sub-divided; but not for families.

Q. If there were an apartment for four families and there was only one meter, you only charge for one meter?

A. If the apartments were all accessible through one or more common entrances, yes sir; but if—

Q. You have cases where you have only one meter charge and several service charges, have you not?

A. Yes, sir.

BY MR. WALKER:

Q. Does the Frick Coal and Coke Company own any houses that are serviced by your company?

A. They supply some in their plant.

Q. They have houses occupied by their employes that are serviced by your company?

A. We don't contract with them at all. It is sold to their plant. Their own houses, which are a part of their property are supplied by their own lines.

Q. They have one motor don't they?

A. They are supplied from the Frick Coke Company's reservoir.

Q. Who supplies the water to the Frick Company's reservoir?

AA. We sell the water into their reservoir, and they have have their own distribution system.

Q. On the meter?

A. On one meter; yes sir.

Q. And they supply a large number of families, don't they?

A. I presume so. The people get the water in some way.

Q. As a matter of fact, they do; don't they?

A. Yes, sir.

Q. And you do not charge for the extra families on one meter?

A. I would like to.

Q. Why don't you?

A. We can't.

BY FATHER COX:

Q. What about discrimination there?

A. I would like to have your assistance to do it.

MR. WALKER: Thanks for your offer, but I am busy now.

BY MR. EVANS:

Q. What is the service charge to the Frick Company?

A. I don't know what that totals up.

Q. I mean for this service?

A. For this service, I think that is about \$75, a month, I think.

Q. Does that cover water used—

A. That covers one four inch meter; whatever the service charge is or our rate for one four inch meter, that is what is covered.

Q. And that is the same charge that would be paid by any other consumer having a four inch meter.

A. The same thing; no discrimination whatever.

Q. And yet you allow them to serve any number of houses, they want through that one meter?

A. If I had a copy of the rules here; if you read what constitutes a consumer, as approved by the Public Service Commission, you would see how they get away with it.

Q. You mean how your company get away with it?

A. We don't get away with it. We don't like them to get away with it, but we can't help ourselves.

BY FATHER COX:

Q. Why is that? Tell us honestly.

A. In accordance with the rules.

Q. What rules?

A. The rules of the company approved by the Public Service Commission.

FATHER COX: That is all we want; the Public Service Commission again.

BY MR. EVANS:

Q. Will you furnish us with a complete copy of the tariffs of the Water Company; of the Citizens Water Company?

A. How many would you want? We have them in little booklets.

Q. Send down a dozen, if you will, of the Citizens Water Company.

A. That has the rules and rates, and it shows what constitutes a consumer.

BY MR. WALKER:

Q. Who construes the rule that way?

A. That is principally up to me.

Q. Were you ever connected in anyway with the Frick Company?

A. No sir.

Q. With what other companies is the Citizens Water Company affiliated?

A. It is a subsidiary of the National Works Corporation.

Q. Do you happen to know where its headquarters are?

A. 11 Broadway, New York.

Q. 11 Broadway, New York?

A. The operating office, however, is at 524 Washington Street. Mr. Reinacker is the operating manager.

W. M. DIETRICK recalled

BY MR. EVANS:

Q. You have already been sworn in this proceeding?

A. I have.

Q. Have you made any studies of the reports of the Mt. Pleasant Water Company and the Citizens Water Company of Scottdale to the Public Service Commission?

A. Yes sir.

Q. Will you briefly explain to the Committee what these reports show in regard to the write-up of the company's property on its books?

A. I will start with the Citizens of Scottdale first.

Q. All right, sir.

A. On December 31, 1927, the company wrote up their fixed assets, \$241,779.81, or a write-up of 24.4%.

Q. What had the fixed capital been carried at before that time?

A. Before the write-up of December 31, 1927 the fixed capital was \$704,099.87.

Q. How had that value been arrived at?

A. That apparently is the book value of the fixed assets of the company, not of depreciation of December 31, 1927.

Q. When you say fair value, do you mean the amount invested in the property?

A. I said book value.

Q. I thought you said fair value. Excuse me. Had the Commission ever fixed the value of this company?

A. May 4, 1920, the Public Service Commission fixed a value on the property of this company at \$600,000.

A. And in the first report made by the company after that date, what was the book value of this fixed capital?

A. The first write-up on file with the Public Service Commission gives as of December 31, 1921, \$690,975.40.

Q. Were you able to ascertain how the difference of approximately \$91,000 was made up?

A. No sir.

Q. During the next five years there were certain additions to the property. were there not?

A. There were additions amounting to \$40,417.

Q. And that, added to the \$690,975.40, gave a total of \$731,392.40, did it not?

A. That is right.

Q. Then from that was deducted depreciation in what amount?

A. \$27,292.53.

Q. Giving the amount you have already testified of \$704,099.87. By whom was this appraisal made on December 31, 1927?

A. This appraisal was made by Francis L. Weller, Inc., Washington, D. C.

Q. Did the company have any relation with the Citizens Water Company?

A. Mr. M. X. Wilmerding, Washington, D. C., a director and officer of the Citizens was president of Francis R. Weller, Inc., which company has the management contract of the Citizens, and which company made the appraisal.

Q. Then what was the next step?

A. February 1, 1928, the Citizens Water Company was sold by the Pennsylvania Railroad to Boenning and Company, subject to two dividends.

Q. What did those dividends consist of?

A. The first dividend was \$89,700 in bonds of the Pittsburgh and Lake Erie Railroad Company, and the second dividend of \$35,051.31, was set out as the excess of current assets over current liabilities at the time of sale.

Q. How were these dividends charged in the appraisal?

A. Both of these dividends were charged to surplus by appraisal.

Q. Do you know the price paid by Boenning and Company for the Citizens Water Company?

A. No; I was unable to ascertain that.

Q. At this time what did the Citizens Water Company have outstanding in the way of bonds?

A. They had outstanding \$8,000 worth of bonds at the time of the transfer of the property.

Q. And what new issue of bonds was placed on the property?

A. A new issue of bonds replacing the old issue in the amount of \$590,000 was issued by the company.

Q. How were the proceeds of these bonds used?

A. Retirement of old bonds \$390,000. Deposited with trustee for old issue \$10,000. They apparently could not buy them all in so they had to deposit \$10,000 with a trustee. Retirement of 1,205 shares of preferred stock, that was \$120,500. Discount suffered on the new issue, \$59,000. Expense, retirement of old bonds, \$10,500. Or a total of \$590,000.

Q. Who handled this new bond issue?

A. Boenning and Company, Investment Bankers of Philadelphia.

Q. Were any of the members of this firm officers of the water company?

A. Mr. H. D. Boenning was an officer and director of the Citizens Water Company, according to the 1928 report.

Q. At what price did Boenning and Company purchase the bonds?

A. Boenning and Company purchased these bonds from the Citizens at 90.

Q. And at what price were they sold to the public?

A. At 97.

Q. That is a spread of 7 a bond?

A. Yes.

Q. What percentage of the total book value of the fixed capital did this bond issue represent?

A. December 31, 1927 the book value of the fixed property was \$704,099.87. That is not of any write-up. Bonds were issued up to 83.8% of this book value.

Q. Now, after the acquisition of the property of Boenning and Company, what entries were put on the records of the company?

A. Debit to capital stock, old stock, \$391,000. A credit to preferred stock of \$325,000, and a credit to common stock, no par, \$66,000. The second entry, a debit to reacquired preferred stock, \$120,500, and a credit to cash of \$120,500. The third entry, reacquired preferred stock, \$204,500, and a credit to donated surplus of \$204,500.

Q. Now, will you explain what those entries indicate?

A. The effect of the above entries was to pay out in cash \$120,500 to the new owners of the company.

BY MR. COOKE:

Q. Is that all those entries mean? Is that what it all boils down to?

A. Yes, sir.

BY MR. EVANS:

Q. As of December 31, 1929, what does the 1929 report of the Citizens Water Company show in regard to its fixed capital?

A. December 31, 1929, the fixed capital of the Citizens, including all write-ups, and including the property of the Mt. Pleasant Company with its write-ups, is \$1,855,212.70.

Q. And how much of this represents write-ups?

A. The write-ups above additional book value in this figure are \$1,039,824.33.

Q. What would be the book values of the properties without the write-ups?

A. \$815,388.37.

Q. What further financing did the company do in 1929?

A. The Citizens issued additional bonds in the amount of \$320,000.

Q. What book entries were made to cover this?

A. There was a debit to Boenning and Company of \$285,155.55; to unamortized bond discount on this issue of \$11,600; a credit to first mortgage bonds of \$320; a credit to interest accrued on funded debt, \$6,755.55.

Q. What is the net effect of these entries?

A. The cash which the Citizens received for these securities was used, supposedly, to purchase the assets of the Mt. Pleasant Water Company.

Q. Was there some other company also taken over as well as the Mt. Pleasant?

A. There was a part of the Trotter Water Company, known as the Trotter B property, was acquired at this time.

Q. Have you any information as to the extent of the Trotter "B" property?

A. There was very little information as to that.

Q. Who formerly owned or controlled the Trotter "B" Company?

A. The Trotter Water Company.

Q. And who owned or controlled that company do you know?

A. The United States Steel Corporation.

Q. At what price were these bonds sold to Boenning and Company?

A. These bonds were sold to Boenning and Company at 87.

Q. Do you know at what price they were issued to the public?

A. No. I don't.

Q. Then at this time what was the book value of the Citizens and Mt. Pleasant properties, excluding write-ups?

A. \$815,388.39.

Q. How much did they have outstanding in the way of bonds?

A. \$920,000, or over 100% of book value.

Q. If you take the book value of the Citizens Company without a write-up and add to that the actual cost of the Mt. Pleasant and Trotter "B" properties, what do you get as the total of these items?

A. \$1,101,507.89, and a bond issue of \$920,000, which is 83.52% on the value of these properties.

Q. In the records of the Public Service Commission was there any reference to an appraisal of the Mt. Pleasant Company in 1929?

A. Yes, there was.

Q. Will you explain that to the Committee?

A. N. B. Jacobs, vice-president of Morris Knowles, Inc., testified that the reproduction new of April 1st, 1929, for Mt. Pleasant, exclusive of property owned and used exclusively by H. C. Frick Coke Company, was \$929,000, and, less depreciation of \$804,600.

Q. You mean less depreciation was \$804,600?

A. Yes. These assets having a book value not less depreciation of that date of approximately \$201,000, or the appraisal was 400% of the book value of the property.

Q. Were any dividends declared by the Mt. Pleasant Company prior to the transfer of its assets to the Citizens Company?

A. Yes. There was a dividend of \$93,501.36 declared to the United States Steel Corporation prior to the transfer of the assets of the Mt. Pleasant Company to the Citizens Company.

Q. Do you know what this was paid from?

A. It was paid from the cash of the company apparently.

Q. Then were there any further issues of securities by the Citizens?

A. In 1930 the Citizens sold \$150,000 of their 6% preferred stock, receiving \$135,000 in cash, \$15,000 being discount. This issue was also handled through Boenning and Company.

Q. Mr. Dietrick, if you take all of the issues handled through Boenning and Company, what was the discount from par on each of these issues?

A. The total discount on the different issues of securities by the Citizens Water Company was \$115,600.

Q. Now, as I understand it, in the case of the first issue in 1928 of \$590,000 in bonds, those bonds were sold to the public at 97 and to Boenning and Company at 90?

A. That is right.

Q. So that Boenning and Company actually received \$7 a bond on that issue?

A. Yes sir.

Q. Now, in figuring these discounts, you have taken, as I understand, the par of the securities and not the price at which they were sold to the public?

A. No. The discount suffered by the Citizens Water Company under different issues.

Q. In other words, as a result of these issues, the Citizens Water Company received \$115,600 less than the par value of its securities outstanding?

A. That's right.

Q. How much common stock did the Citizen Water Company have outstanding at the end of 1930?

A. \$66,000.

Q. And during that year what dividends were paid on the common stock?

A. \$43,075.23, or a dividend of approximately 65% on the book value of the common stock.

Q. Now, if you take the earnings of the companies as is shown in their reports to the Public Service Commission for the years 1929 and 1930, what percentage of earnings do they show, first, on the book values without write-ups, and second, on the book values with write-ups?

A. For 1929 without write-ups, it was 7.87%. For 1930, without write-ups, it was 10.3%. Now, the assets of the Mt. Pleasant were combined in 1930. It has the same rate as the Scottsdale Company. With write-ups for 1929 it was 3.46%, and for 1930, 4.48%.

Q. When you speak of the Scottsdale Company you mean the Citizens Water Company of Scottsdale?

A. Citizens Water Company of Scottsdale, yes.

Q. Which took over the Mt. Pleasant Company?

A. Yes.

Q. What holding company controlled the Citizens?

A. The National Water Works, Inc.

Q. Where does that holding company operate, or where does its subsidiaries operate?

A. The Standard Corporation Records, issued by Standard Statistics Company on the National Water Works Corporation gives the following data. The corporation now owns, controls and operates, or has in process of acquisition, 31 companies furnishing water at wholesale or retail, for domestic, industrial and municipal purposes, to 61 communities in Pennsylvania, New York, West Virginia and Tennessee, also one company furnishing gas to Pennsylvania communities, and two small companies supplying ice to two districts in West Virginia.

BY MR. COOKE:

Q. Have you identified the Pennsylvania Gas Company?

A. I think that is the Gettysburg Company, I am not certain.

MR. HAGMAIER: I would like to build up a picture of that, Mr. Evans. What was the real actual investment in the first place in this proposition?

BY MR. EVANS:

Q. What was the investment in the total properties, taking all the companies?

A. Mr. Hagmaier, this is according to the books of the company.

MR. HAGMAIER: Yes, all right.

THE WITNESS: It was \$815,388.37.

MR. HAGMAIER: How much in bonds are issued against that same proposition?

THE WITNESS: \$920,000.

MR. HAGMAIER: And beside that there is how much common stock issued in that proposition?

THE WITNESS: \$66,000.

BY MR. HAGMAIER:

Q. Any preferred?

A. In 1930 there was \$150,000 worth of preferred. Of course, you understand those figures I gave you had all the write-ups out of them. There were no write-ups in those figures at all.

MR. COOKE: You cannot say that positively, that there are no write-ups.

THE WITNESS: No, but from the reports that I gathered, there were no write-ups. I had taken all the write-ups out.

BY MR. COOKE:

Q. But there might easily have been write-ups in previous years?

A. Yes.

Q. In other words, you cannot bite into that necessarily?

A. No.

BY MR. EVANS:

Q. You have eliminated all the write ups which were visible on the face of the report to the Public Service Commission?

A. That is right.

Q. But any hidden write-ups, you had no way of checking?

A. No.

BY MR. COOKE:

Q. May I ask what was the last action that you know about before the Public Service Commission in the companies affected here. Have there been any rate cases?

A. The last was the one I cited, in 1920, against the Citizens Water Company.

BY MR. EVANS:

Q. It is true, however, isn't it, that any time any of these securities was issued, a certification had to be filed with the Commission?

A. Yes. But you spoke of rate cases, did you not, Mr. Cooke?

MR. COOKE: Yes, that is what I had in mind. There is nothing that the Commission—the details of this valuation by Morris Knowles and Company of Pittsburgh, you do not find those in the records of the Public Service Commission?

THE WITNESS: That was sent out in testimony which was given in front of the Public Service Commission.

MR. COOKE: In what manner? In one of these certificates of public convenience?

THE WITNESS: At the time of the hearing for the acquisition of the Mt. Pleasant Company.

FATHER COX: What I have been trying to find out all along is this: Whenever these companies are taken over by these combinations, is there any way of ever finding out what is actually paid over, how much money changes hands, or is it just you and the Public Service Commission and everybody takes it for granted what they put down in the book?

THE WITNESS: There is no accurate record.

FATHER COX: No way of finding out?

THE WITNESS: Not in the Public Service Commission.

BY FATHER COX:

Q. You don't know it from any source?

A. Not unless I would see the books of the company.

Q. But can you find out from whoever finances these deals?

A. We are always talking about what is paid for these companies, and the valuations, and to my amateurish mind it don't have any meaning at all, because I never hear of the actual amount of money paid. It just seems like somebody has a dream, and they put down an amount and it goes. I can't buy anything that way. I have to pay so much, and it is on the check there, or it is in actual cash. I am asking this seriously.

THE WITNESS: Sure, I understand.

FATHER COX: Is there any way to find out? Is there any way of checking it, checking up on the bankers and financiers? They say that the financing is done from New York.

THE WITNESS: The only way I could tell would be from the books of the company.

FATHER COX: Can you get into the books of the company? Is there any way of compelling them to open their books?

MR. HAGMAIER: It is outside of the State. They have no jurisdiction over them.

FATHER COX: Well, would it do any good to ask them, confuse them, make them feel funny for a while, trying to explain about the amounts involved? I think it is so foolish, just to be figuring on these supposed values.

WILBUR F. MENKE sworn

BY MR. EVANS:

Q. Mr. Menke, where do you live?

A. Philadelphia, 7328 Claridge Street.

Q. What is your occupation?

A. Bus operator.

Q. What lines of buses have you operated in or around Philadelphia?

A. I operated a bus line from the Frankford Elevated terminus to Fox Chase by the way of Burholme, and I operated one line from Fox Chase by the way of Cheltenham to the Frankford Elevated Terminal, and I operated a bus line from Fox Chase to Fifth and Olney Avenue, by the way of Cheltenham, Montgomery County.

Q. At what times did you operate these lines?

A. During the years of 1922, 1924, up till 1926.

Q. You had certificates for them from the Public Service Commission?

A. Yes.

Q. Were there complaints in regard to your service on these lines?

A. Not that I know of.

Q. When you came to renew your certificates for certain of these lines, what conditions were placed in your certificate?

A. In 1924 I came up for renewal before the Public Service Commission, and the P. R. T. and the Philadelphia and Reading were protesting the case, and Mr. Joyce, after the hearing was come to a close, Mr. Joyce told Commissioner Benn, providing they could put a clause in the Public Service certificate which I held then, they would let me operate and withdraw the protest. The clause was if and when the Philadelphia Rapid Transit Company, the Philadelphia Rural Traction Company, operates trolleys, trackless trolleys or buses, I was to get off; and at that time the P. R. T. didn't have buses to put on these lines, or the bus lines at that time that I was operating, was not taking enough revenue in for the P. R. T. to take. I operated this during the year of 1924 until 1926, and I was notified to go before the Commission for renewal again. I went to the hearing in 1926 for renewal, and the Public Service Commission refused my renewal and granted the P. R. T. a new certificate over the same route that I was operating in.

Q. Did they renew your certificate at that time?

A. No sir.

Q. What approximately was your investment in these lines?

A. I had an indebtedness to the Mack Company of \$148,255.48 in 1924. During the years of 1924 and 1925, up until I came up for renewal in 1926, I paid to the Mack Company \$61,946.45, which I was not reimbursed for at all when the P. R. T. took my line over; yet I could not meet the obligations, the notes to the Mack Company of \$5,600 a month, which I was to meet every month, by paying every two weeks \$2,800 to the Mack Company, and I had no line to run the buses on and therefore I had to send the equipment back with a loss of \$61,946.45 to the Mack Company.

Q. And they were perfectly satisfied to continue with you as far as your past relations had been concerned?

A. Yes, sir.

BY MR. HAGMAIER:

Q. What reason did the Public Service Commission give in refusing you that certificate?

A. Well, Mr. Joyce got up and stated before the Commission, if he could put this clause in this certificate of mine, why they would grant it to me from 1924 to 1926. Then when I came up in 1926 for renewal, the P. R. T. made application for a new certificate for the same routes that I already established, and P. R. T. said that the clause that was put in there, I had to get off, and because that clause was put in there I agreed to it. I started this bus line in 1924, I bought 10 buses

—in the year 1925 I bought 4 more new buses; in 1926 I bought 4 buses. I had a total of 18 buses. I was then carrying anything from 4500 to 5000 people daily. My total receipts there, gross receipts, was on an average of \$16,000 per month, and I had the public all there with me at the Public Service hearing, demanding that they were well satisfied with the service that I was rendering.

BY MR. COOKE:

Q. Why did you acquiesce to the inclusion of that clause in the first instance in 1924?

A. Well, my attorney told me to say yes, that they were never going to put trolleys or buses up there, that the P. R. T. said they were taking the lines over for an extension of some of their other lines, which there was no extension of any line I was operating over—these lines that I was running over were brand new lines, no extension of any bus lines, of their lines at all. I run buses to the Frankford Elevated Terminal when the Frankford Elevated first opened, and my first day's receipts was \$7.60, and I spent \$7.20 for gas and oil, and then I built up a business to \$16,000 per month, and then it was good enough for the P. R. T. to take over, and the roads were in good condition when they took them over. When I operated over them, the roads were in very bad condition; but I battled along and built a business up to that.

Q. When did you first get any intimation that the P. R. T. was going to cover this field?

A. 1926—in 1924 between 1924 and 1926, they didn't want the line, because—in fact they didn't have the busses to put on, and they figured I wasn't taking in enough money at that time for them.

Q. Then, you put on for additional busses in 1926?

A. Yes.

Q. You still had no thought that they were getting into the field?

A. No sir. I was operating a buss line from Fox Chase to Glenside, Montgomery County, and that clause was not put in there, because it was in Montgomery County. I was before the City Council of Philadelphia, when Mr. Hall was President of Council, and I had a lot of witnesses down there to testify that they wanted my bus line there, and I was willing to go along and have a bill passed by council to pay \$50 for to just operate on the streets and Councilman Hall said he wouldn't let the City of Philadelphia or the P. R. T. reimburse me one nickel for my loss.

BY FATHER COX:

Q. Did you ever insist on the insertion of that clause? Did you then foresee the P. R. T. taking over that route?

A. They had no intention of operating over that line. I was there until the Frankford elevated started, until the lines started to pay.

Q. Do you remember what was the reason for the insertion of that clause?

A. Why the P. R. T. made an application for these lines as soon as they were paying.

Q. They were protecting the P. R. T. from it's early days.

A. They are; and always were.

Q. That is it. That is the point we want to bring out. There is always a reason. We wanted it very definitely stated, so that we can pin it on some body.

A. I made an application for a bus line from Fox Chase by way of Jenkintown. Commissioner Benn was suspended at that time and Mr. Evans and Mr. Scattergood were the Commissioners at that time. Mr. Scattergood heard this case, and granted me the right to operate a bus line from Fox Chase to North Glenside, in Montgomery County. Commission Benn made the remark, when he got on the bench again—stated that I would have never received that line running from Fox Chase to Glenside if he had been the sitting Commissioner.

Q. Whom did he say that to?

A. To me.

BY MR. RICHARDS:

Q. They never made any attempt to reimburse you for any of your losses at all?

A. No sir. I lost my home and everything.

BY MR. EVANS:

Q. Mr. Menke, at one time you applied to the Commission to operate a route over Cottman Street, which application was

refused on the ground that there was no necessity for that service?

A. Yes, sir.

Q. When was that?

A. In 1929, if I recall right.

Q. Was that applied for in your name or in your wife's name?

A. No; in my wife's name, and I was going to manage it for her.

BY FATHER COX:

Q. You continued to fight the thing, didn't you?

A. I fought it from 1924 to 1926, trying to get all the influence that I could get to help out; which I had twenty-two hundred signatures from passengers that I was hauling that they were well satisfied with my bus service, and whenever there was bus service needed, special buses, I put them in. During snowy weather I had as high as seven extra busses at the Frankford elevated terminal at one time to carry the people home.

Q. But you received no satisfaction whatever?

A. No sir.

Q. You were just treated as if you were out of the picture? (No answer).

BY THE CHAIRMAN:

Q. There was no complaint regarding your service, was there?

A. None that I know of, and I think my record shows that.

THE CHAIRMAN: You would have heard it, if there was?

BY MR. EVANS:

Q. I show you an order of the Commission dated November 19, 1929, Application Docket No. 21166, and ask you whether that is the order refusing your application for a route over Cottman Street?

A. Yes sir; it is.

Q. And under that order the Commission states, "The Commission being of the opinion that under the evidence adduced, the applicant has failed to establish that the proposed transportation service over the entire route applied for, and as amended at hearing, is necessary for the service, accommodation and convenience of the public; now to wit: November 19, 1929, it is ordered that the prayer of the petitioner in this proceeding for a certificate of public convenience be and the same is hereby refused and the application dismissed."

A. Yes sir.

Q. Did the Commission, on or about that time grant a certificate to the Philadelphia Rural Transit Company for substantially the same route?

A. Right after that.

Q. Immediately following this refusal, they granted a certificate to the Philadelphia Rural Transit?

A. Yes sir.

Q. Perhaps you have already stated it, but how many drivers did you have in your employ in 1926?

A. I had two mechanics, two supervisors and thirty-nine chauffeurs.

Q. And do you know, approximately, what your weekly payroll was at that time?

A. It run about \$1,100.

Q. And that was the time when you were making sufficient to make these payments to the Mack Truck Company?

A. Yes sir.

MR. RHODES: Mr. Evans, who was the Commissioner who refused the application and then granted practically the same thing to somebody else? I couldn't hear it.

THE WITNESS: Examiner Wolfe sat at this hearing

Q. That was a hearing in Philadelphia, was it?

A. Yes.

BY FATHER COX:

Q. How long a time elapsed between the time of this refusal before the new company started to operate?

A. They were granted that right over that route, that we made application for, I will say a month or two months at the latest, and they didn't start to run—

BY MR. EVANS:

Q. It was a month or two months after your refusal?

A. Yes. Then they didn't start to operate until the schools opened on Cottman street sometime in September of that year.

Q. That would have been some nine months after the certificate was granted?

A. Yes sir.

MR. MEMOLO: Mr. Evans, when Mr. Wolfe heard the case he would not have the authority to grant; that would go before the Commission, would it not?

MR. EVANS: He merely takes the evidence, and then it goes to the Commission for their action.

MR. MEMOLO: Was that signed by anybody on the Commission, when he got it?

MR. EVANS: The orders are all signed by the Chairman of Commission, and attested by the Secretary under the seal of the Commission.

MR. RICHARDS: But the examiner, however, makes his recommendation, doesn't he?

MR. EVANS: Mr. Richards, I can't state definitely. My impression is that in the Philadelphia cases the examiner consults with Commissioner Benn and Commissioner Benn makes the recommendation, and whether or not that is always the—well I know it is not always the examiner's recommendation.

MR. RICHARDS: Could we get the records of the Commission in this particular case?

MR. EVANS: I think we could, sir.

MR. RICHARDS: I would like to have that.

BY THE CHAIRMAN:

Q. Just put you flat financially when you got through with it?

A. Yes sir. I wanted to have a taxicab line at Frankford station; at which there is no taxicab service—there is a man running a taxicab, making about one hundred and twenty-five gross receipts with a taxicab, and I haven't just got the finances to start the business. I have just lost everything; my home and all.

H. L. MURPHY sworn

BY MR. EVANS:

Q. Where do you live?

A. I live in New Jersey.

Q. What is your occupation?

A. I am assistant collecting manager for O'Brien and Hoover.

Q. They are dealers in automobile and truck tires, are they not?

A. They are dealers in Goodyear tires?

Q. And did you have any dealings with Mr. Menke, who has just testified?

A. Not personally; in the sale of the tires, and the collection of the accounts.

Q. Did O'Brein and Hoover sell the tires for his buses?

A. On April 16, 1926, we sold him \$11,603.60, and during May, June and the first part of July, there was a little over three hundred additional.

Q. And, now, so far as your company was concerned would you have been entirely willing to continue with Mr. Menke if he had kept his certificates?

A. Absolutely, but because at the time these tires were sold on the big order he had agreed to pay a thousand dollars a month which was acceptable to us and we checked it up with the Mack Company from whom he bought his buses, and they gave him a very good recommendation in the manner in which he paid his bills; and to substantiate that, four days after we got this order of \$11,000 he paid us \$2,000 which was to take care of the April and May accounts. On May 17 he paid us another one thousand, which was for June; on June 17, he paid us \$500, and on the 23th of the same month he paid us another \$500, which was to apply on the July account.

Q. So that your relations were always entirely satisfactory from a financial standpoint.

A. Up to that time. Of course, at that time I believe he lost franchise, and he is indebted to us now \$7,996.10.

BY THE CHAIRMAN:

Q. It is not his fault that he is indebted to you now?

A. No he kept agreement right up until the time when he lost his franchise.

BY MR. MEMOLO:

Q. As a matter of fact, he paid a month ahead?

A. Yes; he was a month ahead.

MR. RICHARDS: I did not hear much of this testimony, but from what I have been told by my colleagues, I think we ought to subpoena Mr. Benn to explain his actions in this transaction.

MR. MEMOLO: I second that; and Wolfe, also, and we would like to have this man here also; the statement that if he had been there he wouldn't have got it.

WILBUR F. MENKE recalled

BY MR. EVANS:

Q. Did you have any conversation with any employes of the Philadelphia Rural Transit Company or the Philadelphia Rapid Transit with regard to reimbursement for your loss in this matter?

A. I did. Me and Mrs. Menke went to the Philadelphia Rapid Transit Company office, before Mr. Queeney and Mr. Joyce, and we were talking in the office—

Q. About when was this?

A. Well, I would say three months afterwards; and I stated to them that they might reimburse me; by giving me a position of some kind; of forty or forty-five dollars a week, which would carry me along; so I could get along and pay some of my indebtedness, and Mr. Joyce stepped out of the office as though he was going to see someone with reference to giving me a position, and when he did Mr. Queeney made the remark that he thought it was one of the coldest blooded deals that was ever pulled off, but he was only one of the employes of the company and he didn't know where he could place me in a position.

Q. What was Mr. Joyce's position in that company at that time?

A. An attorney; and Mr. Queeney was the head of the busses at that time. That is the reason I went to Mr. Queeney, to ask him if he would give me a position of some kind.

Q. You went because you were up against it and wanted a job?

A. I have been up against it ever since that time. I have my stuff in storage, now, and living in rooms. I lost my home and everything else.

BY MR. RICHARDS:

Q. What became of your busses?

A. I had to turn them back to the Mack Company. I couldn't meet the \$5,600. I paid the Mack Company every two weeks, which the Mack Company would testify to that; I paid the Mack Company over \$1900 on repair bills, and I met the obligations of the Mack Company of \$5,600 every month, which was a payment of \$2,800 every two weeks.

Q. You made the payments every two weeks?

A. I made the payments every two weeks, \$2,800 to the total amount of \$60,000 and some odd dollars.

Q. This man Joyce is the man they paid so much income tax for?

A. Somebody paid, and some of my own because I didn't get anything, and I don't thing the Commission gave my bus lines to anybody for nothing. They had no right to do it, the way I was operating.

Q. How many years did you operate all together?

A. I operated on the Frankford elevated from 1921 up until 1926, and into Fifth and Olney Avenue, and I run a bus line which was a truck, with a truck body on it across the Roosevelt Boulevard to Sears and Roebuck. My first application cost me \$25, and after that they cost anywhere from five hundred to a thousand dollars to get them.

Q. How many certificates of public convenience did you have?

A. I had one to operate a line over the Roosevelt Boulevard and one running from Fox Chase to Glenside and I had one running from the Frankford elevated to Burr home, and I had one from Fox Chase to Fifth and Olney Avenue by way of Cheltenham, Montgomery County.

Q. To whom were these moneys paid that you paid for getting those rights?

A. By attorneys.

BY FATHER COX:

Q. Who were your attorneys?

A. Well I had four or five attorneys.

BY MR. RHODES:

Q. You say the attorney's fees went from five hundred to a thousand dollars?

A. Yes.

Q. In other words, the attorneys raised their rates, did they?

A. I guess that was because I was making such a lot, I guess that's the reason for the P. R. T. taking my line. We were getting along nice, and in six months time I would have paid my equipment off, and I could have junked off, at least, a thousand dollars a bus. I couldn't pay for them. I had to send them back.

Q. I understand that you were not operating in a competitive way with the P. R. T.?

A. No sir, I established these lines.

BY MR. EVANS:

Q. In other words, you established the lines and built them up, and as soon as they were a going concern they were taken away from you?

A. Yes, sir.

BY FATHER COX:

Q. You were not in competition with their lines?

A. No sir.

BY MR. COOKE:

Q. You didn't mean to say that it cost you a thousand dollars in expense for getting a certificate of public convenience on one line?

A. Yes sir; for the one reason I can tell you, that the Public Service kept putting me off; we will hold a hearing in Harrisburg, and I would have to have my attorney come to Harrisburg to fight the case in Harrisburg. I was in Harrisburg on two occasions. I came to Harrisburg before the Senate, when the P. R. T. was trying to get the monopoly of operating buses and taxicabs in the City of Philadelphia. I came up here and fought that case. They didn't get the monopoly of the city streets in the City of Philadelphia to operate buses and taxicabs, and then they turned around and took my line away from me, claiming they had the monopoly of operating buses in the City of Philadelphia.

BY FATHER COX:

Q. You say it was Coleman Joyce who insisted on your putting that clause in your certificate?

A. He said to Commissioner Benn that if and when the Philadelphia Rapid Transit and the Philadelphia Rural Transit operated trackless trolleys or buses over such routes, I would get off.

Q. What right did they have to insist on it?

A. That is what I am trying to find out.

THE CHAIRMAN: Well, Mr. Menke, that is just what this Committee is trying to find out.

Q. At this particular time, when this clause was inserted in your certificate, did the P. R. T. or Philadelphia Rural Transit Company have a certificate pending?

A. No sir, I operated two years.

Q. In other words you were in there ex parte, without any proceeding in which they were interested; they merely objected to this application and had this clause inserted?

A. Yes, sir.

BY FATHER COX:

Q. And they told you what you must do, so that the Commission would allow you to operate for a longer term?

A. My attorney told me to say, "Yes."

Q. If it was Coleman Joyce, the attorney for the P. R. T., I think it is the most flagrant case we have heard of during this investigation?

A. If you will go to Philadelphia, they will tell you about my case and how I was treated.

Q. I believe you, but I want these newspaper men to tell about it?

MR. EVANS: If the Committee cares to, we have here a record of Mr. Menke's applications, which we are ready to put in, and the action of the Commission in regard to them, so as to have the complete picture, but I don't know how long the Committee wishes to sit. I expect it will take fifteen or twenty minutes.

MR. RHODES: I think, even if it takes fifteen or twenty minutes, we had better have the record complete, especially if we are going to call Mr. Benn and Mr. Wolfe.

MR. CRAWFORD: It seems to me that this is a case that needs attention, and the quicker we go into it the better.

JAMES E. CROWL sworn

BY MR. EVANS:

Q. You are employed in the research department of this Committee in investigating certain matters, are you not?

A. I am.

Q. And among other matters have you investigated the bus applications of W. F. Menke and the action of the Public Service Commission in regard to them?

A. I have, to a certain extent. Due to a lack of time, I was not able to go into all the applications that I wanted to, but I have considerable information in connection with them.

Q. Will you state, briefly, to the Committee the history of Mr. Menke's applications to the Commission, and the certificates that were granted to him and the later refusal of the certificates?

A. Mr. Menke began operating motor buses in the northern section of Philadelphia county on December 5th, 1922. The certificates granted to him was issued on November 20th, 1922, and he began operating practically two weeks after he received his first certificate. The route that he began operating over was between Rising Sun and Cheltenham Road and the Frankford Elevated and Bustleton Avenue. That was the first route that he obtained from the Commission.

Q. What was the docket number of that case?

A. The docket number of that case was Application Docket 7443-1922.

Now, Mr. Menke did have a certificate prior to this time for a taxicab service on the Roosevelt Boulevard, which he mentioned. That was Certificate No. 4724, issued April 19th, 1921.

Under date of September 11th, 1922, at Application Docket 7042, he was refused call and demand service in Philadelphia; that is, taxicab service.

At Application Docket 10064, approved February 4th, 1924, the route from Fifth and Olney Avenue and Cottman Street and Central Street, Cheltenham.

At Application Docket 10082, approved on April 10th, 1924, for the same route.

By the way, that first order was a temporary order of the Commission, and it was later sustained on April 10th, 1924.

Application Docket 10902, approved June 9th, 1924: Now, this was the first application that contained the stipulation. Now, that statement reads that if and when the Philadelphia Rural Transit Company or its subsidiary companies extend its street railway service or other transportation service by means of motor vehicles or trackless trolley over the route and into the territory covered by this application, the rights, powers and privileges hereby granted shall immediately cease and terminate.

THE CHAIRMAN: May I interrupt you there just a minute?

BY THE CHAIRMAN:

Q. Are there any buses now operating in which that clause is still in effect?

A. There is.

MR. EVANS: We have asked the Commission for a complete list of those, and that is one of the items with which they have not yet furnished us.

MR. MEMOLO: That does not imply exclusive privileges the same as a township electric charter, does it?

MR. EVANS: It does not.

THE WITNESS: In connection with this stipulation, while it is mentioned in the Commission's report and order in the case of Menke: In the case of Albert Niebauer, at Application Docket 16970-16971-16972, the Commission states that the form of this stipulation was originally submitted to the Commission by the law officers of the City of Philadelphia for insertion in certificates as a protection to the legal rights of the City under the contract of 1907 with the Philadelphia Rapid Transit Company and, furthermore, to conserve the rights of the city in the use of its highways by automotive common carriers.

Q. That is put in there in explanation of this—

A. By the Commission. Now, that explanation was not shown in connection with Menke's order, but this is a

similar case in which Niebauer is still operating under that stipulation.

MR. COOKE: What is the term of the certificate?

MR. EVANS: The term at the time these certificates were issued was two years, and in some cases extended to five years.

MR. COOKE: So that has very little bearing in the argument.

MR. EVANS: I think it has no significance at all.

BY MR. EVANS:

Q. This application of Niebauer's from which you have just read an extract, was handed down by the Commission on October 31st, 1927, was it not?

A. Yes.

Q. And when was this condition first placed in Menke's certificates?

A. It was first placed in Menke's certificates on June 9th, 1924.

Q. And, so far as you are aware, there is no similar application or explanation made by the Commission until October, 1927, in any case?

A. No; but the wording of the stipulation is exactly the same in both cases.

Q. Go ahead and give us the rest of them.

A. At Application Docket 11020 was a renewal of the first application for bus service granted to Menke. He had operated this service for a period of two years and applied for a renewal when this stipulation was inserted in his certificate.

In Application Docket 11917 a new route was applied for between Central Avenue and Cottman Street and Huntington Pike and Fillmore Street. That was approved on December 8th, 1924, and likewise contained this stipulation.

At Application Docket No. 13445, approved October 20th, 1925, approved for an additional route between Fillmore Street, Huntington Pike and Jenkintown Road in Montgomery County.

Q. Did they contain the same provision?

A. All his following certificates contained the stipulation. At Application Docket 13961, the route was applied for between Jenkintown Road, in Montgomery County, to York Road and Olney Avenue. That certificate was refused, and I have been unable to get a hold of the record in that case to determine the reason for the refusal.

On May 12th, 1926, at Application Dockets 14892, 14893, 14894, 14895, 14896, Mr. Menke applied for a renewal of his existing certificates. That renewal was refused under date of June 15th, 1926, but a temporary order of the Commission was issued extending the time limit of his existing certificates, which would have expired on June 1st, 1926, to August 1st, 1926.

On July 15th, the Commission determined, through some source, that Mr. Menke had ceased operating.

BY MR. MEMOLO:

Q. Had ceased or was about to cease?

A. Had ceased. The order, refusing his certificate on June 15, 1926, granted him an order to August 1, that he should cease operating as of August 1, and of course as soon as he learned that, naturally he apparently got out of the business, and then the Commission issued their formal cease and desist order as of July 15.

MR. COOKE: Is there anything on the record about that refusal dated in February of the same year?

MR. MEMOLO: The one we were asking about; the one that Wolfe made the report on?

THE WITNESS: The certificate in that particular case was granted, but I think Mr. Menke made the statement that Commissioner Benn stated that if he had been sitting it would not have been granted.

BY MR. EVANS:

Q. You mentioned the one in February that was refused. Now, what is the story about that?

A. That is the one in which I have not been able to get the record. I attempted to get the record on these cases yesterday. (Discussion off the record.)

THE CHAIRMAN: Mr. Evans, in reference to the records that you wish to be furnished,—

MR. EVANS: We have asked the Commission for records of all the cases where certificates were granted under similar conditions, and so far we haven't received them.

THE CHAIRMAN: Mr. Crawford suggested that you subpoena the records in these two cases, which the witness said he could not find yesterday or today.

THE WITNESS: I could get them from the Commission, I suppose.

THE CHAIRMAN: In those cases there is no reason why they should be out of the files.

MR. EVANS: I suppose Mr. Crowl can get them without the necessity of a subpoena.

THE WITNESS: I can get them without the necessity of a subpoena; yes.

BY MR. EVANS:

Q. Have you examined any of the reports made by Mr. Menke to the Commission showing the volume of his business and receipts and so on?

A. I have.

Q. Will you just give them, briefly, to the Committee?

A. There were no annual reports filed by the various bus companies until 1924, due to the fact that there was no regulation, I don't believe, up until that time, compelling them to file.

Mr. Menke's report for the year 1924, shows a net worth of \$10,000 and gross receipts of \$70,000. At the close of this year he was operating ten buses, and carried public liability insurance of \$10,000 to \$20,000 and property damage of \$1000.

His report for 1925 shows a net worth of \$100,000, with gross receipts of \$175,000, and at the close of the year he was operating 18 buses, or an increase of eight over the previous year. His liability insurance remained the same, but he increased his property damage to \$5,000.

Now, in 1926 Mr. Menke filed no report to the Commission, which of course was a year in which he did not operate; only a small portion of his routes.

The report for 1927 is rather incomplete, but it shows a net operating revenue of \$19,208, with a net income of \$111.09, and that he had made payments on equipment in the amount of \$3,102.20.

The 1928 report shows a capital at the close of the year of \$12,477.60, with an operating revenue of \$20,657.70; that he had three buses in operation and carried a total of 206,577 passengers.

No report was filed for 1929, but on or about November 1, 1929, the Reading Transportation Company, a subsidiary of the Reading Company filed an application for a certificate over certain routes which would result in competition with Mr. Menke. On November 22, 1929, Mr. J. Rush, on behalf of the Fox Chase and Richboro Bus Line, a subsidiary of the Reading Transportation Co., filed an application to take over the existing routes of Menke, who desired to discontinue his service. A temporary certificate was granted to the Fox Chase and Richboro to terminate at such time as a decision was reached in connection with the case of the Reading Transportation Company.

Under date of October 20, 1925, Mr. Menke was granted permission by the Commission to put on his additional buses, which completed his Mack equipment. Now, when he lost his equipment, he was granted permission by the Commission on January 19, 1927, to operate the three Federal buses, which were in operation till the time that he ceased.

WILBUR F. MENKE recalled

BY MR. EVANS:

Q. Mr. Menke, reference has been made to the refusal of a certificate to you in February, 1926. Can you briefly state to the Committee the facts in regard to that case?

A. That was a bus line running from Norristown, to take people in Montgomery County over to Norristown courts and to transact real estate and other business, over a line which there was no lines whatsoever running over, and it was refused because of not enough necessity, which we showed plenty of necessity at the hearing, that there was a necessity for that line to be in operation.

Q. From where did it go to Norristown?

A. From North Glenside to Norristown, by the way of Montgomery County.

BY MR. MEMOLO:

Q. Have they established a bus line there since?

A. No, sir. If you want to go to Norristown, you have to go all the ways in to the city and up from 69th and Market up into Norristown and pay the additional fare, of about 69 cents.

(At 5.50 P. M., adjourned until Thursday, April 9, 1931, at 10 o'clock A. M.)

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room, on Thursday, April 9th, 1931, at 10.00 o'clock A. M.

There were present:

Messrs. D. Glenn Moore, Chairman  
Bart Richards  
Louis J. Hagmaier  
Martin Memolo  
Elwood J. Turner  
Chester H. Rhodes  
Rev. James R. Cox  
Morris L. Cooke  
Harold Evans, Esq.  
John M. Walker, Esq.

JAMES E. CROWL recalled

BY MR. EVANS:

Q. Mr. Crowl, you have made some study of the bus situation in Pennsylvania, have you not, for the Committee?

A. I have.

Q. Will you tell the Committee briefly what your experience in the matter of regulation and particularly in regard to buses has been?

A. I was employed first by the Pennsylvania Railroad Company for a period of five years in various capacities. I was traffic manager for the Worth Steel Company for five years. I was employed as tariff examiner and rate expert with the Public Service Commission for three years. During that time I conducted an investigation of the bus situation.

BY MR. TURNER:

Q. What three year period was that?

A. 1926 to 1929, conducted an investigation of the bus situation over a period of eight months, in 1928.

BY MR. EVANS:

Q. Now, will you briefly describe that investigation of the bus situation?

A. The investigation was in connection with the various departments of the Commission, as a check to be used for the through operators who were rendering service without filing tariffs, without filing their accident reports, or without filing their annual reports with the Bureau of Accounts. At that time the bus situation was at its full height, it was an attempt made to try to stabilize the situation.

BY MR. TURNER:

Q. Was that made by the Commission?

A. Yes.

BY MR. EVANS:

Q. In the course of that investigation did you prepare a map of bus routes in Pennsylvania?

A. I did.

Q. And those maps were used by the Commission in their investigation?

A. Those maps showed all the bus routes in the State as of November, 1928, and they were used by the various Commissioners in conducting their investigation for applications of certificates of public convenience, to determine if there were existing operators over the particular route.

Q. Have you made for the Committee a study of the passenger traffic of the various bus companies throughout Pennsylvania during the years 1928 and 1929?

A. I have made a comparison of the revenue passengers carried over routes which were later granted to the Pennsylvania General Transit Company.

Q. What is the Pennsylvania General Transit Company?

A. The Pennsylvania General Transit Company is a subsidiary of the Pennsylvania Railroad Company.

Q. Is it a directly owned subsidiary, or is there some intermediary company?

A. The Pennsylvania General Transit Company is owned by the American Contract and Trust Company, whose stock is in turn owned by the Pennsylvania Railroad Company.

Q. Does the American Contract and Trust Company own or control any other bus companies than the Pennsylvania General Transit Company?

A. It does.

Q. What is its relation to the Greyhound Lines?

A. That it owns and controls the stock in the Greyhound Lines.

Q. Does the Greyhound Line in turn own and control stock in any other company?

A. The Greyhound Lines owns the controlling interest in the Great Lakes Stages.

Q. Now, where do the Greyhound Lines operate?

A. The Greyhound Lines operate from New York City to California and Florida.

Q. In other words, a general operation throughout the United States?

A. Throughout the United States.

Q. Now, take the statistics of the independent operators, have you prepared a paper showing the revenue passengers of the individual operators or lines competing with the Pennsylvania General Transit Lines for the years 1928 and 1929?

A. I have.

Q. Have you also prepared a table showing similar statistics for the bus companies which are subsidiaries of street railway companies?

A. I have.

Q. And for the Reading Transit Company?

A. I have.

Q. And the Pennsylvania General Transit subsidiaries?

A. Yes.

Q. Also for the Pennsylvania General Transit Company itself?

A. Yes.

Q. I show you a paper consisting of three sheets, headed, "Bus transportation, 1928 and 1929," and ask you whether that was prepared by you or under your direction?

A. It was.

Q. And that exhibit embodies the studies to which you have referred?

A. Yes.

(Bus Transportation, 1928 and 1929—Comparison of revenue passengers carried by Pennsylvania General Transit Company, Reading Transportation Company and subsidiaries, with independent operators in competition, produced and marked Exhibit No. 122.)

MR. EVANS: I offer this paper in evidence as Exhibit No. 122.

Q. When did the Pennsylvania General Transit first apply for a charter?

A. The Pennsylvania General Transit Company first applied for a charter in 1926.

Q. And did it then obtain a charter?

A. A charter was refused at that time.

Q. That is, it was refused by the Commonwealth of Pennsylvania.

A. By the Commonwealth of Pennsylvania.

Q. Did it subsequently obtain a charter?

A. It subsequently obtained a charter on July 3, 1928. It was chartered in fifty-five counties in Pennsylvania.

Q. That is, to operate buses throughout fifty-five counties?

A. Fifty-five counties in Pennsylvania.

Q. Has that extent of its territory since been extended?

A. It has.

Q. Now, turning to the exhibit number 122, table number 1, on page 1, shows a comparison for the independent operators in the years 1928 and 1929, does it not?

A. That is right.

Q. And that shows what in regard to their revenue passengers?

A. That shows a decrease of 127,451 revenue passengers, or 43% decrease in 1929 under 1928.

Q. And those were lines that were competitive with the Pennsylvania General Transit Company Lines?

A. That is correct.

Q. During the same period—

BY MR. TURNER:

Q. Does the list of names at the left represent these different corporations under the Pennsylvania or are they the independents?

A. These are independent operators who were placed in competition with the Pennsylvania General Transit Company by reason of the granting of certificates.

BY MR. EVANS:

Q. On table number two on page two of the exhibit what has been the corresponding situation with the bus companies owned by street railways?

A. Taking the four bus companies shown in the table who were also operating lines which paralleled the lines of the Pennsylvania General Transit, in which the Commission placed restrictions prohibiting the carriage of local passengers over the routes of these lines, they show an increase of 1,049,425 passengers or 27.6%.

Q. And during the same period the Reading Transportation has shown an increase in bus passengers of how many?

A. An increase of 511,133 passengers, or a 128.2% of an increase.

Q. On page 4 you show the subsidiaries of the Pennsylvania General Transit Company, what is the situation in regard to that?

A. They show an increase of 71,058 passengers, or 5.8%.

Q. In giving these figures for the subsidiaries of the Pennsylvania General Transit Company, some of the subsidiaries, as I understand were taken over in 1930, and, therefore, their figures only show for a part of a year?

A. That is correct.

Q. Table 5, on page 7, shows the revenue passengers carried by the Pennsylvania General Transit Company during 1929?

A. That is correct.

Q. Did the Pennsylvania General Transit Company operate as such during 1928?

A. They did not.

Q. How were the operations, later taken over by the Pennsylvania General Transit Company, conducted in 1928?

A. The certificates were obtained under the name of Robert E. Stackhouse as an individual in 1928, and then operated as such, but no annual reports were filed showing the number of passengers, carried during that year.

Q. Now, then, in table 6 you have summarized the previous tables, and will you comment, briefly on that summary?

A. This summary shows us the total revenue passengers, carried over routes now covered by the Pennsylvania General Transit Company, showing that in that year, 1928, there were 8,385,710 passengers carried over these routes.

In 1929 there were 10,098,887 passengers, that the independent operators, shown on table 1 carried 35.4% of the total passengers in 1928 and 28% in 1929.

On table number 2,—

BY MR. TURNER:

Q. As I understand it, in 1928 there was no Pennsylvania Transit Company?

A. In 1928?

Q. Yes.

A. No; only through the companies that were held by the American Contract and Trust Company as subsidiaries of the Pennsylvania General Transit Company.

BY MR. EVANS:

Q. Now, wait a minute, let us get that clear, Mr. Crowl. The subsidiaries of the Pennsylvania General Transit Company shown on table number 4, were not controlled, were they in 1928, by the Pennsylvania Railroad interests, were they?

A. No; they were not. Table number 2, the street car subsidiaries, carried 45.4% of the total traffic in 1928, and 48.1% in 1929. Table number 3 of the Reading Transportation Company carried 4.8% of the total passengers in 1928 and 9% in 1929.

Now, taking table 4 and table number 5 combined, representing all companies owned or controlled by the American Contract and Trust Company, represented 14.4% of the total passengers carried in 1928 and 14.7% in 1929.

The Pennsylvania General Transit Company did not begin operations until the middle of the year 1929.

BY MR. COOKE:

Q. Is that an error in the mimeograph sheet where it says 12.4? You have testified 14.7.

A. In that I have added on the 2% of the Pennsylvania General Transit Company to show the total.

Q. When was the first certificate granted to the Pennsylvania General Transit Company?

A. The application for certificate to operate buses was filed with the Commission on October 2nd, 1928, and finally granted on April 29th, 1929, between Philadelphia and the Ohio State line enroute to East Liverpool, Ohio, over the Lincoln and William Penn Highways.

Q. Have you prepared a map showing the route of the independent companies as of January 1st, 1929, competitive with the Pennsylvania General Transit lines as they now exist?

A. I have.

BY MR. HAGMAIER:

Q. Mr. Evans, get this matter clear; that is, the independent companies had their certificates first?

A. Yes, sir, they had been operating.

Q. And then the other people got their certificate to operate in competition with them?

A. Yes, sir. In connection with that competition, in every case they were not permitted to operate locally between the points of existing operators but these operators had built up service in connection with each other for transportation of persons for greater distances than their particular certificates covered, with the result that indirectly they were placed in competition with them.

Q. When was the first certificate granted to the Pennsylvania General Transit Company?

A. The application for certificate to operate buses was filed with the Commission on October 2nd, 1928, and finally granted on April 29th, 1929, between Philadelphia and the Ohio State line enroute to East Liverpool, Ohio, over the Lincoln and William Penn Highways.

Q. Have you prepared a map showing the route of the independent companies as of January 1st, 1929, competitive with the Pennsylvania General Transit lines as they now exist?

A. I have.

BY MR. RHODES:

Q. May I refer to Table 2. I would like to know with reference particularly to the East Stroudsburg Bus Company and the Stroudsburg Traction Company, what do you mean?

A. According to the annual report filed, the East Stroudsburg Bus Company is owned by the Stroudsburg Transportation Company.

Q. Do you assume that the Stroudsburg Traction Company is operating a trolley line?

A. I could not say that.

Q. I happen to live in Stroudsburg. The only thing we have in East Stroudsburg and Stroudsburg is a bus line?

A. I had no check on the street railways companies. This tabulation was made more to show that the rights of street railway subsidiary companies had been considered to a greater extent by the Commission than have the rights of individual operators.

Q. That is perhaps true. The Stroudsburg Traction Company went bankrupt in operating the trolley line, and the bus line was substituted and it is of course owned by the same individuals. In other words, the trolley company had only to salvage the franchise for this bus line. I wondered if it was assumed that the traction company was still operating a traction line and a subsidiary line of buses was operated in competition or in conjunction therewith?

A. No, I think that is explained in this way: The former officers of the traction company are probably the officers of the bus company.

MR. RHODES: I think that is true in this particular case.

BY MR. EVANS:

Q. Is it generally true, is it not, in many of these cases of trolley subsidiaries, that the bus lines have taken the place of the street railway lines?

A. That is true.

BY MR. TURNER:

Q. In many instances that was the only way which these traction and trolley companies had of salvaging anything?

A. That is true.

BY FATHER COX:

Q. Does the Commission make any effort to regulate the rates of the bus companies?

A. No more than they do in connection with other utilities.

Q. It is a very important matter in organizing new companies to get them started right.

MR. TURNER: The Commission regulates the rates on buses the same as anything else.

MR. EVANS: Certainly.

MR. TURNER: They have to file tariffs the same as railroad companies and any other utility companies?

MR. EVANS: Yes, sir.

FATHER COX: If they are the same as others, we are in a bad way.

BY MR. EVANS:

Q. Mr. Crowl, you have prepared a map showing the routes in Pennsylvania of the independent bus operators as of January 1st, 1929?

A. I have.

Q. Does this map cover practically all of the important routes of the independent bus operators?

A. It does.

Q. The routes as I understand it are indicated in red on this map.

A. That is correct.

#### MAP SHOWING INDEPENDENT BUS OPERATION IN PENNSYLVANIA, JANUARY 1, 1929, PRODUCED AND MARKED EXHIBIT No. 123

MR. EVANS: I offer this in evidence as Exhibit No. 123.

We will try to have photostatic copies made for the members of the Committee.

BY MR. EVANS:

Q. Mr. Crowl, what does this map indicate as to the extent to which Pennsylvania was covered by the routes of independent bus operators.

A. It shows it was pretty well covered, most of the principal highways of the state were covered, where there was very much population.

Q. Now, have you prepared a similar map showing the routes, subsequently granted, with the Pennsylvania General Transit Company.

A. I have.

#### MAP SHOWING ROUTE SCRANTON PENNSYLVANIA GENERAL TRANSIT COMPANY, PRODUCED AND MARKED EXHIBIT No. 124

MR. EVANS: I offer this map in evidence as Exhibit No. 124.

BY MR. EVANS:

Q. On this map you have indicated the routes of the Pennsylvania General Transit Company in what way?

A. The routes that have been granted by the Commission to the Pennsylvania General Transit Company are shown in a solid red or green line. There is one proposed route that is shown in a dotted line.

Q. What is the significance of the red and green portions of the line.

A. It shows that a greater—

Q. Now, tell us what those mean first.

A. The red lines show that part of the route on which there were existing operators at the time certificates were granted, and the green lines represent that portion of the route on which there were no bus operators at the time certificates were granted.

Q. Now, what does the dotted line indicate; is that a pending application before the Commission?

A. That is a pending application before the Commission.

Q. For what route?

A. For a route from Pittsburgh to Scranton, which represents an addition of approximately one hundred miles of route.

Q. And when you say and addition, you mean that much of the route is now already covered by Pennsylvania General Transit Company franchises.

A. That is correct.

Q. What portion of this new route is not covered by independent bus service.

A. A very small portion.

Q. From what points to what points?

A. From Potter Mills to Mifflinburg, and from Wilkes-Barre to Pittston.

Q. Have there been any applications before the Commission for routes from Wilkes-Barre to Pittston.

A. I don't know.

Q. What service is there between Wilkes-Barre and Pittston already existing?

A. I understand there is high speed service between Wilkes-Barre and Pittston.

Q. An interurban electric.

A. Yes.

BY MR. RHODES:

Q. Is there any high speed service between Wilkes-Barre and Pittston?

A. I don't know.

MR. MEMOLO: No.

MR. RHODES: The Laurel Line.

MR. MEMOLO: Yes.

MR. RHODES: Is that not what they refer to between Wilkes-Barre and Pittston?

MR. MEMOLO: They have a high speed line on the west side; a street car electric service.

BY MR. EVANS:

Q. Mr. Crowl, taking this map as a whole what does it indicate as to the proportion of the routes granted to the Pennsylvania General Transit Company, which were already covered by independent operators?

A. It shows that a greater portion of the routes were already covered by existing operators.

Q. What has been the practice of the Commission in regards to granting to applicants routes which are already covered by the operators. In other words, what has the Commission required an applicant to show before a certificate was granted to him in the usual run of cases?

A. In the usual run of cases the Commission required that the applicant established the need for the service before the certificate is granted.

Q. And where existing—

A. Is sufficient to meet the public needs the application has been refused.

Q. Has that been the case with regard to the applications of the Pennsylvania General Transit Company?

A. It has not.

BY MR. RHODES:

Q. Speaking of the Pennsylvania General Transit Company you mean that this is the bus company that is owned by the Pennsylvania Railroad.

A. Yes.

MR. EVANS: And when you speak of the Pennsylvania General Transit lines you mean the lines operated by them either directly or through a subsidiary, do you not?

A. That is right.

Q. The map of the routes of the Pennsylvania General Transit Company is brought approximately up to date; is it not?

A. It is; sir.

Q. In granting certificates to the Pennsylvania General Transit Company or its subsidiaries, has the Commission ever granted certificates for service, which was not asked by the applicant?

A. They have.

Q. In what cases, do you refer to that?

A. In the application for a route, at Application Docket 19425, folder number 21, application was made for a route between Philadelphia, Scranton and Wilkes-Barre. At the time of the hearing the Pennsylvania General Transit Company offered a stipulation to be placed in their certificate, and also incorporated that stipulation in their brief which read as follows:

"The Pennsylvania General Transit Company, at the beginning of the hearing announced that it would voluntarily accept a general stipulation to the effect that it shall not pick up and deliver passengers or do a local business between the termini of any existing bus operator, duly certified by your Honorable Commission, or any existing street railway lines, but that your applicant does desire to reserve the right to pick up passengers between such termini for carriage beyond and to deliver passengers from points beyond such termini."

Q. What existing carriers were there on that route at that time?

A. That particular route was completely covered with individual operators at that time.

Q. What stipulation did the Commission place in its certificate?

A. The stipulation placed in the certificate issued on July 23, 1929, states that no right, power or privilege is granted to transport local passengers on any trip or trips in either direction between the cities of Philadelphia and Easton and intermediate points between said places, the city of Easton and the borough of Stroudsburg and intermediate points between said places, the village of Bostonville and the borough of East Stroudsburg and intermediate points between said places, the village of Pocono Summit and the city of Wilkes-Barre and locally between the cities of Wilkes-Barre, Easton and Philadelphia the intent and purpose of this condition being to make effective the stipulation of the applicant not to transport local passengers in the territory of a certified operator furnishing transportation service over any portion of the route.

Q. Was there an existing operator between Pocono Summit and Wilkes-Barre?

A. There was.

Q. And the stipulation inserted by the Commission does not prevent the Pennsylvania General Transit Company from picking passengers and delivering at intermediate points on that route?

A. It does not.

Q. But it does with other routes held by independent operators?

A. Yes sir.

BY MR. RHODES:

Q. Who had the certificate between Pocono Summit and Wilkes-Barre?

A. Now, the Wilkes-Barre Transit Company, certificate 10895-1929, Folder No. 4, permits us to operate between Water Gap and Wilkes-Barre, and the Wilkes-Barre and Pocono Transit Company provide a through rate of \$1.90. The Pennsylvania General Transit Company's tariff provides a through rate for the same service for \$1.75. The only restriction that is contained in the tariff of the Pennsylvania General Transit Company is with reference to this certificate holder that it will not transport passengers between the village of Pocono Summit and Wilkes-Barre.

Q. Supposing someone got on at Pocono Summit and wanted to get off at Wilkes-Barre, is that permissible?

A. Not under the Pennsylvania General Transit Company's tariff, unless they are destined to some point beyond, and were sold a through ticket in connection with the bus line and the Pennsylvania Railroad.

BY MR. EVANS:

Q. But under the Pennsylvania General Transit Company's certificate, they can pick up a passenger at any point between Pocono Summit and Wilkes-Barre and carry them to Wilkes-Barre?

A. They can.

Q. And have they tariffs covering those points?

A. They have.

Q. How do those tariffs compare with the tariffs of the existing operator?

A. In all cases the fares are less, usually from 5 to 10 cents.

Q. So insofar as the route between Pocono Summit and Wilkes-Barre is concerned, the Commission granted the rights to the Pennsylvania General Transit Company that it had not asked for in its application?

A. That is correct.

Q. Then the Pennsylvania General Transit Company has exercised those rights?

A. They have.

Q. And they are in direct competition with the existing carrier in that portion of the territory?

A. They are.

Q. Have you any other similar case?

A. Frank Rodgers, Certificate 20784, of 1929, between Pocono Summit and Pocono Lake; his fare is 75 cents, and the Pennsylvania General Transit fare between the same points is 25 cents.

Q. And that falls within the same portion of the territory that you have just been discussing?

A. That is right.

Q. Have you anything further to say in regard to the practice of the Commission in regard to proof of public necessity?

A. On April 14th, 1930, a certificate was granted to the Pennsylvania General Transit Company for operating between Beaver Falls and Erie. This application was strenuously opposed by the West Ridge Transportation Company, which is a very large operator in the Western part of the State, but nevertheless a certificate was granted. On May 5th the West Ridge Transportation Company petitioned the Commission for a re-hearing, stating among other things that "there have been repeated applications filed for certificate in territory adjacent to this for which the Commission found no necessity; that the petitioner believes that there has been injustice done in this case and that inadvertently or through a misconstruction of the testimony the certificate was granted without a sufficient record to support it." Under date of May 27th the Commission refused the petition for a rehearing.

Q. And the result of that was that a certificate was granted to the Pennsylvania General Transit Company for this route?

A. That is correct.

Q. And there had been a number of prior applications for the same route, had there not?

A. There had.

Q. What then happened?

A. On November 16th, 1930, the same year, the Pennsylvania General Transit Company filed a petition with the Commission for a withdrawal of service between Erie and Beaver Falls, claiming a lack of patronage and that the service was burdensome to the petitioner. This petition was granted on December 15th.

Q. In other words, as I understand the situation, the existing carriers in that territory had from time to time asked for this right and had been refused on the ground that there was no necessity?

A. Yes, sir.

Q. And the Pennsylvania General Transit Company petitioned for the same right, and in spite of the protest of the carriers in the territory, was granted a certificate, the Commission finding that there was a necessity for the service?

A. That is right. And within six months after the certificate was granted the Pennsylvania General Transit Company itself admitted there was no necessity for the service and asked for leave to have the service discontinued.

MR. TURNER: We all make mistakes in judgment.

FATHER COX: They never make a mistake in refusing a company.

BY MR. MEMOLO:

Q. Is the route there now operated by independents?

A. Yes, there is an independent operator over that route at the present time.

BY MR. EVANS:

Q. What other similar cases do you know of?

A. Another route between Pittsburgh and the West Virginia State line near Florence, a certificate was granted on November 19, 1929. On December 2nd, 1930, the Pennsylvania General Transit Company was granted a supplementary order to suspend their service for six months on account of lack of patronage.

Q. Now, Mr. Crowl, in this case of the application of the Pennsylvania General Transit Company, have there been protests from independent operators?

A. There have, strenuous protests.

Q. And these protests have been overruled in the cases where the certificates have been granted?

A. Yes, sir. The application for the first route of the Pennsylvania General Transit Company over the William Penn and the Lincoln Highways was formally protested against by twenty-seven bus operators, six street railway companies, and three railroad companies.

Q. These protests were to the effect that the territory was adequately served by existing service and that there was no need for additional service?

A. These protests were disregarded and the certificate was granted.

BY MR. RICHARDS:

Q. Is that route parallel to the Pennsylvania Railroad?

A. To some extent, not altogether.

Q. What railroad protested, then, if you know?

A. The Pittsburgh and Lake Erie, the Baltimore and Ohio, and the Huntingdon and Broad Top Mountain Railroad.

BY MR. EVANS:

Q. Now, going back to the route from Philadelphia to Wilkes-Barre and Scranton; had an application been made for that route in any year prior to the application of the Pennsylvania General Transit Company?

A. Yes, sir, the Great Lakes Stages applied for the right from the New York State line to Philadelphia via Scranton, Stroudsburg and Easton, on July 10th, 1928.

Q. Was that for intra-state business only?

A. No, sir, that was for both inter-state and intra-state.

Q. Who protested the granting of that certificate?

A. The Pennsylvania Railroad. They stated in their protest that the service rendered by the petitioner and other common carriers mentioned in this application provided ample and adequate service to the travelling public in the territory over which the proposed motor bus line will operate; that there is no necessity for any additional service of the nature proposed to be rendered by the applicant.

Q. When did the Pennsylvania General Transit Company apply for the right from Scranton to Philadelphia?

A. On May 1st, 1929.

Q. How much later was that than the previous one?

A. Practically one year later. This application was protested by the Great Lakes Stages to the effect that the application was not made in good faith inasmuch as it has directly, positively and without qualification opposed bus service over this same route on the ground of lack of necessity.

BY MR. RHODES:

Q. What happened to the Great Lakes application?

A. I will come to that in just one minute. That was finally granted for inter-state service between Trenton and Portland.

BY MR. EVANS:

Q. But was refused for intra-state service?

A. Was refused for intra-state service.

Q. And the following year the Pennsylvania General Transit Company application was granted for intra-state service?

A. Yes.

BY MR. HAGMAIER:

Q. In the same territory?

A. Yes.

BY MR. EVANS:

Q. What happened in the meantime, Mr. Crowl?

A. After the Great Lakes Stages obtained their certificate for inter-state rights, a tariff was filed for this company by the Greyhound Lines. After the Pennsylvania General Transit Company obtained their certificate for intra-state service, the Greyhound Lines withdrew the tariff of the Great Lakes Stages and filed a tariff of their own, incorporating the rates of the Pennsylvania General Transit Company.

Q. Have you any knowledge as to when the Pennsylvania Railroad obtained control, either directly or indirectly of the Great Lakes Stages?

A. I don't.

BY MR. RHODES:

Q. Do you know that they have?

A. Only that they have an interest in the Greyhound Lines, and inasmuch as the Greyhound Lines filed the tariff of the Great Lakes Stages, they must indirectly have an interest in the Great Lakes Stages.

Q. What is the distinction between the Greyhound Lines and the Great Lakes Stages, two separate corporations?

A. Supposedly, from the record, yes.

Q. They operate two sets of buses?

A. I cannot answer that.

Q. You say the Pennsylvania Railroad, however, is interested in the Greyhound Lines?

A. Yes.

Q. And the Greyhound Lines filed the schedules for the Great Lakes Stages?

A. Yes.

BY MR. EVANS:

Q. Where did the Great Lakes Stages primarily operate?

A. In New York State, around the Great Lakes. They were attempting to get a route that would link with their service from Buffalo through to Philadelphia.

Q. Who heard the application of the Pennsylvania General Transit Company for the route from Philadelphia to Scranton?

A. Commissioner Benn.

Q. What was said in the course of that hearing by Commissioner Benn in regard to these statements against competitive service that you have referred to?

A. Commissioner Benn said among other things, that this applicant has filed a stipulation which is binding only upon the applicant and not upon the Commission, the only thing that binds the Commission in matters of this kind is public necessity. If in the judgment of the Commission public necessity and convenience would be best served by the local service between any points by such an applicant as this, or any other applicant, besides the existence of a pending application, or even of a certificate for local service, it would be the Commission's duty then to believe that public necessity and convenience exists, although a stipulation was entered of record.

Q. And it was apparently on that principle that the Commission allowed competition with the existing carrier between Pocono Summit and Wilkes-Barre?

A. It was, inasmuch as the stipulation of the Pennsylvania General Transit Company would have prohibited that service.

BY MR. RHODES:

Q. You can go by bus from Harrisburg clear through to Wilkes-Barre, can you not?

A. On the Pennsylvania General Transit Company?

Q. Yes.

A. Yes, that is permissible.

Q. What lines operate between Scranton and Stroudsburg?

A. Pennsylvania General Transit.

Q. Between Stroudsburg and Scranton?

A. Yes, they branch at Swift Water.

Q. You cannot get on the bus at Stroudsburg and go to Scranton?

A. They probably have an arrangement for that transfer at Swift Water.

Q. But you cannot go on the bus from Stroudsburg, you cannot buy a ticket?

A. They provide in their rates—

Q. Because they won't allow you to travel that way?

A. They provide for that in their rates, in their tariff before the Commission.

Q. But you cannot get on the bus at Stroudsburg and go to Scranton, but you can get on the bus at Stroudsburg and go to Wilkes-Barre?

A. Well, their tariff rates are filed, and they have no restriction.

Q. For the Pennsylvania General Transit Company.

A. Yes.

Q. Which operates the Greyhound Lines.

A. I can give you the rates between the two points.

Q. I would just like to know as a matter of information, because we have tried it.

A. The rate is \$1.50.

Q. From Stroudsburg to Scranton.

A. Yes, and Stroudsburg to Wilkes-Barre is \$1.60.

BY MR. EVANS:

Q. Now Mr. Crowl, when these certificates have been granted to the Pennsylvania General Transit Company does the Pennsylvania General Transit Company in all cases operate those lines for which they get certificates.

A. They operate a very small portion of their routes granted by the Commission.

Q. How do they operate the lines?

A. They are operating under operating agreements with various other companies.

Q. Subsidiaries of the Pennsylvania Railroad?

A. In some cases.

Q. Can you give us a typical example of that.

A. The Commission granted the Pennsylvania General Transit Company their first application to operate buses in April, 1929, over the Lincoln Highway and the William Penn Highway. Under date of May 23, 1929, the Pennsylvania General Transit Company filed for the Commission's approval an operating agreement in connection with the Greyhound Lines whereby the Greyhound Lines would furnish all equipment, personnel and facilities and assume all costs and expenses connected with such operation and shall pay to the Pennsylvania General Transit Company one-half of the revenue in

excess of 48 cents per mile revenue; the intrastate operation of the Greyhound Lines in Pennsylvania being included in the forty-eight cents per mile revenue.

BY MR. EVANS:

Q. What service does the Pennsylvania General Transit Company render to the actual operator for this revenue which it receives?

A. None whatever, except to hold the certificates; obtain the certificates and hold them.

Q. In other words, the Pennsylvania General Transit Company gets the certificates and then, in most cases, makes an operating agreement with some other carrier to perform the service?

A. They do.

Q. Early in your testimony you mentioned the indirect competition that existed by reason of the Pennsylvania General Transit Company being allowed to perform service already being performed by two connecting independent operators. Have you anything more to say on that?

A. Yes. There are several cases that I have picked out at random—I didn't have time to go through all of the operators, as there are about four hundred and fifty in the state—but there are a few typical examples in this competition. The Adams Transit Company have a certificate to operate service between York and Gettysburg. They also have a certificate between Gettysburg and Chambersburg. They are not permitted however, to carry a passenger through from York to Chambersburg. A passenger must change at Gettysburg. The Pennsylvania General Transit Company can pick up passengers at York on through tickets issued to Bedford, with a stop over privilege at Chambersburg, and in that way the Adams Transit Company is placed in competition with the Pennsylvania General Transit Company.

Another case is that of the operators, Shank and Roomig, operating between Elizabethtown and Middletown. They have testified at a number of hearings before the Commission that the greatest portion of their revenue is derived from passengers originating at Harrisburg or between Harrisburg and Middletown on the line of the traction company. They have so arranged their schedules as to meet the street cars of this traction company at Middletown. Under the tariffs of the Pennsylvania General Transit Company, they can pick passengers up at any point between Middletown and carry them to points between Middletown and Harrisburg, or in the reverse direction, but they are not permitted, under their tariff or certificate to transport passengers locally between Elizabethtown and Middletown.

Q. In other words, the stipulations in these cases, or the conditions in the certificates do not eliminate competition with the existing carriers?

A. They do not. The Gettysburg and Harrisburg Transportation Company, who operate buses between Gettysburg and Harrisburg, testified through their attorneys that a study was made in 1927, which disclosed that approximately 5000 passengers were transported between the Pennsylvania Railroad station at Harrisburg and Gettysburg, and that inasmuch as the Gettysburg and Harrisburg Transportation also provided another stop in Harrisburg, in the center of the town that a great majority of these passengers traveled either east or west via the Pennsylvania Railroad. While the Gettysburg and Harrisburg Transportation Company is not placed in direct competition with the Pennsylvania General Transit Company, they feel that by permitting the General Transit Company to pick up passengers at Gettysburg, going in either direction will naturally affect their revenue.

Q. How many miles of bus routes in Pennsylvania, does the Pennsylvania General Transit Company now hold?

A. Approximately 1150 miles.

Q. How does that compare with other bus operators?

A. It is by far greater than any other bus operator.

Q. And when did the Pennsylvania General Transit Company enter the field?

A. They obtained their first certificate in April, 1929.

Q. So that within less than two years, they have received certificates for 1150 miles which is by far greater than any other operator in the state?

A. Yes sir; and they have never had an application refused by the Commission. They have withdrawn three applications, but they never had one refused.

MR. EVANS: Does the Committee have any questions to ask Mr. Crowl?  
(No response).

H. V. McNAIR (Recalled)

BY MR. EVANS:

Mr. McNair, in connection with the matter of rural electrification, has put in an estimate from their experiences in Middletown, of the cost of the erection of electric lines, and we will just put that on exhibit.

Q. Have you had any experience in connection with your electric plant in Middletown in the construction of electric lines?

A. I have.

Q. To what extent have you had such experience?

A. As chairman of the finance committee of the borough council, I supervised the bills and accounts and am familiar with the fixed prices of all material purchased.

Q. And you are familiar with the cost to the borough for the construction of such lines?

A. I am familiar with the labor costs, and the time of setting up poles, and wires, and all similar cases.

Q. Have you prepared an exhibit showing the cost of the construction of a mile of line?

A. I have.

BY MR. TURNER:

Q. You mean a mile of rural line or a mile of any kind?

A. This will be a mile of the better grade than the average rural line. It is standard in our borough and is constructed of red cedar poles and standard heavy equipment including transformers.

BY MR. EVANS:

Q. What is the total cost of construction of a mile of such line?

A. The total cost including materials and labor in erection of a mile complete with five kilowatt transformer, fuse boxes and all equipment including double wire for the mile, with 36 first grade red cedar poles, is \$947.41.

Q. Have you prepared or had prepared under your direction an exhibit setting forth the details of this estimate?

A. I have.

Q. Is this the paper before you?

A. This is the paper, and this has been approved by the superintendent of our light lines who is also familiar with the cost of material and the cost of construction and the list price of these articles.

BY MR. RICHARDS:

Q. And what size poles did you use?

A. This is figures on thirty foot poles, which have a list price of \$12.95. We figure it at \$13.00. A thirty-five foot pole would make a difference and—a forty-foot pole is \$17.55, but in rural electrification you would not use that size pole.

Q. What is the distance between the poles?

A. We figure thirty-six poles to a mile, which is standard in our community.

Q. What kind of wire did you use?

A. We used No. 6 wire which has a retail cost of 18 cents a pound and 82 pounds to the thousand feet. That is standard wire for all purposes.

Q. That is not aluminum?

A. No, sir, copper.

Q. You say it costs \$947.00 a mile?

A. Yes, sir.

Q. That is some price?

A. We have everything itemized here with the list price and everything, including the number of men per day and the pay per man.

MR. RICHARDS: I would like to have a copy of that too.

BY MR. RHODES:

Q. Do you have any overhead in there?

A. No, sir, this is the actual cost of labor and construction. The private company's overhead would be \$900 a mile.

BY MR. RICHARDS:

Q. You have no right of way cost?

A. No, sir.

BY MR. EVANS:

Q. This is labor and material cost?

A. Yes, sir.

BY MR. RHODES:

Q. I understand they have no right of way cost?

MR. RICHARDS: This is rural electrification. Get what the man says.

MR. COOKE: Mr. Richards is interested in having this. I gave him several estimates immediately above and below that figure. This figure is only remarkable in the sense you are comparing it with private company cost. I think we can establish if necessary that that bookkeeping is pretty correct.

THE WITNESS: We include in that a five kilowatt transformer which would take care of eight consumers.

EXHIBIT NO. 125, being "Construction Cost of One Mile of Poles and Wire Complete in Middletown, Pa," is offered in evidence, and for the information of the Committee to be copied direct into the record.

(Exhibit No. 125 follows:)

"Middletown, Penna., April 8, 1931.

HARPER D. SHEPPARD sworn

BY MR. EVANS:

Q. Mr. Sheppard, where do you live?

A. At Hanover, Pennsylvania.

Q. What is your occupation?

A. Shoe manufacturer.

Q. You are president of the—

A. Sheppard-Myers, Incorporated.

Q. And you also, I understand, are connected with one of the banks in Hanover?

A. Two of them.

Q. In what capacity?

A. President of one, and director in another.

Q. You have been familiar, Mr. Sheppard, with the water situation in Hanover for some time?

A. I have lived in Hanover for thirty-two years, yes, and I have been familiar with it for that length of time.

Q. What company is serving Hanover with water?

A. During my time—the Hanover Water Company which was taken over by the Consumers Water Company and in 1905, the Hanover-McSherrystown Water Company took over the Hanover Water Company and the McSherrystown Water Company; it is now the Hanover-McSherrystown Water Company.

Q. Have you any knowledge at all of the financial history of that company?

MR. TURNER: Mr. Evans, is some of that not already in the record on the first day?

MR. EVANS: Not in regard to this matter, I don't think, Mr. Turner.

Q. Will you give us some of its history, Mr. Sheppard?

A. The Hanover Company, the original company, had a capital of \$30,000. That was taken over by the Consumers Water Company, and they paid \$30,000 in bonds for their capital.

Q. Approximately when was that?

A. That was in 1894, and they sold to the Hanover-McSherrystown Water Company in 1905, and there was a

SE. . . . . from time to time until they had \$350,000 worth of bonds authorized, and \$250,000 of capital stock.

Q. As of what date now are you speaking, roughly?

A. This was about 1910 or 1911.

Q. Did you at any time consider the purchase of the water company?

A. We did in 1917. Mr. Myers and myself. At that time Mr. John H. Brough, who is now dead, came into our office one morning in March of 1917 and said, "I want to sell you fellows the water company." And our reply was he could not give it to us under ordinary conditions, but after some conversation, we told him that if he could show us that he could set the small householder's rate back to the 1912 rate, we would consider it. It took him a week or two to go over his figures, and he brought them down showing us that he could do it but would not have over \$1000 left, and would not have anything to take off for depreciation or add on for betterments. Our idea in that was to induce the small householder to put in all the conveniences. Hanover is a great home-owning community where a very great many of the workingmen own their own homes. I think a few dollars difference, and that we would offer it to the borough when we got it, or a little while thereafter, as soon as it was in our ownership, at exactly the price that we paid for it. He offered to sell us \$220,000 worth of common stock, which did not represent any capital whatever, it is the only constant supply of water we have in the city, for \$5 a share, \$50 par. In other words, we were to pay him \$25,000 for the \$250,000 of capital stock—

BY MR. TURNER:

Q. Sort of a drought then?

A. No, this was in March, when the reservoirs had—

Q. You didn't catch what I was saying?

A. Yes, the water was running out of the system then. I didn't understand, sir. We were to assume a bonded indebtedness they had of \$45,000, and he was to procure \$250,000 worth of the bonds at 80, or in other words, \$250 par for \$200,000, that is, 50 would take up the \$45,000 of indebtedness, considering the bonds would be worth par if the borough owned them, and pay \$5,000 on the \$25,000, or an approximate cost of \$420,000.

BY MR. EVANS:

Q. For the whole?

A. For the entire works, assuming the bonds that were out.

Q. What were the 1912 rates to which you refer, the household rates?

A. The whole household would pay about \$2.50.

Q. And what had those rates become by 1915?

A. \$16.50.

Q. How far did you go with this negotiation, Mr. Sheppard?

A. Why, he was corraling the bonds which were all up in the various banks, most of them around Harrisburg, as collateral security for the owners of the bonds. He had procured all of them but a very few of them, or rather had the option on them, and he came into the office one morning, we expected to get it through that week, and he came into the office one morning and said, "Did you see what council did last night?" I told him I didn't know anything about it, and he said they were considering putting engineers on and having a valuation made of the plant, and if they would do that; he said that he would drop the matter, "as I am afraid the valuation will not be as much as this price." About two weeks later council did pass a resolution to do such a thing, but I don't think it was ever put into effect. They passed a resolution to do so on April 15th, 1917, and there they dropped it. The war broke out soon after, and Mr. Brough died after that, about a year and a half after that. Two years later, in 1919, a Mr. Alvin R. Nissley, a real estate operator submitted to Mr. Myers, a proposition to sell the water company, which was somewhat different from Mr. Brough's. I think I have his original—I never had any conversation with Mr. Nissley about it, but I think I have his original proposition here, or memorandum of the Hanover-McSherrystown Water Company—I will read this just as he presented it, because that is all the evidence I can give on it.

Q. During the past two years the company has shown increased earnings of \$6,000; has spent for betterments, including mains on High street, and so forth, about two miles, \$20,000; has paid deferred interest of \$4,500, total \$30,500; they charged off for depreciation \$10,000 Gring and his associates, they were the owners of the water company, Mr. Brough was

the local manager, and one of the stockholders paid \$82.50 for the bonds, and held the coupons for several years because the company was not in shape to pay them. Capital stock, \$250,000 stock, \$30,000 Consumers Water Company's 6% bonds. That was the original \$50,000 that they had paid on the shares and was still out, to assume them when they purchased them \$220,000 and they were McSherrystown First Mortgage Five's, \$75,000; Second Mortgage Five's \$225,000 First Refunding Five's. \$225,000 of those bonds are still held by the trustees to retire the preceding bonds. All except the \$30,000 was callable at any interest period at par. Now comes his proposal of 1919, and this is what he wants to sell us: \$65,000 worth of bonds at \$80, \$52,000; 5,000 shares capital stock, that is the entire capital stock, that is approximately—Gring can deliver about 4,487, \$80,000, that would be equivalent to about \$3.00 a share. \$15,000 in coupons floating or outstanding bonds unpaid \$15,000; outstanding bonds \$485,000, at total of \$332,000 cash outlay \$147,000. This is summarizing it. Mr. Gring will carry \$12,000 coupons for one year if desirable, reducing the cash outlay to \$135,000, and that would have made \$80,000 for the stock instead of \$25,000, and would have added \$15,000 indebtedness against it as coupons instead of \$45,000 of bonded indebtedness when we were negotiating with Mr. Brough.

Q. Mr. Sheppard, what roughly would the total price at that time have been on this proposition?

A. \$80,000 for the stock, \$15,000 for the unpaid coupons would have been \$95,000, and he was willing to accept \$65,000 worth of bonds at \$80, that would have been a difference of \$13,000, considering the bonds worth par, that would be the capital stock, and then there would be \$485,000 of other bonds outstanding.

Q. So in round figures with the price of the whole property including the outstanding bonds have been somewhere in the neighborhood of \$600,000.

A. \$550,000 plus \$80,000—about \$630,000.

Q. \$630,000?

A. Yes.

Q. This proposition also as I understand it was not carried through however.

A. This was not considered at all. This was not considered at all, and I only found this memorandum in our desk by accident.

Q. But it represents what the owners of the company were willing to do at that time?

A. You see, we have had no communication with the owners at all; only with this real estate agent. We didn't enter into it at all. That was his proposal.

Q. Were there any subsequent negotiations with you with regard to the water company?

A. No; not with us—with the town council.

BY MR. RHODES:

Q. What was the difference in the two offers?

A. The difference in the two offers, was practically two hundred thousand; maybe slightly more.

Q. In other words, there was about \$200,000 increase in two years time?

A. Yes. He starts off, you notice, that they had increase in their earnings in the two years. He starts out with this two years period; and during the past two years the company shows earnings. He was trying to show a justification for it. He shows for each main on High street which had rusted off and had to be replaced.

BY MR. EVANS:

Q. What was the matter that you just spoke of in regard to the borough council considering taking over the property?

A. It was offered to the borough council in 1925 for \$800,000. And that included everything.

Q. Who were the owners then?

A. Mr. Brunner was the president at that time; Edward Brunner.

Q. What, was then done in regard to that offer?

A. They considered it, but considered that it was entirely too high, and they employed a firm of engineers in Baltimore; Major Whitman's firm; I don't recall the other two names connected with it. You know them.

Q. Major Ezra Whitman you are referring to?

A. Yes; Major Whitman's firm. They made an estimate on it, and as I recall it, the estimate was \$787,300.

Q. And that was the estimate of the reproduction cost less the depreciation?

A. Reproduction cost new, less depreciation.

Q. And were all the overhead charges added into it?

A. Yes; and a great many obsolete properties and charges.

BY MR. TURNER:

Q. And that price was for \$787,300?

A. Yes; just \$13,000 under the price that the other concern was offering it for. Their engineers put a price of about \$185,000 or \$190,000 more than that although he was willing to sell it for nearly \$200,000 less than his own engineers appraised it.

Q. Who were the company's engineers at that time?

A. Gannett, Seelye and Fleming.

Q. Did the borough take over the property?

A. No sir; it rejected it; wouldn't consider it. It was too high.

Q. What then happened in regard to the company?

A. Then they sold it to the North American Water and Power Company, and they sold it very soon afterwards to the Keystone.

Q. Do you know what that price was?

A. No; I have no knowledge. They got into high finance. The figures were too high for our conception.

Q. Aren't you a banker?

A. Yes; but only a country banker; a small town banker. sir.

BY MR. EVANS:

Q. Then, the North American Company, that you referred to, was the holding company?

A. They were the holding company, and they turned it over to the Keystone Electric and Power Company—The Keystone Water and Electric Company, which is also a holding company.

BY MR. RHODES:

Q. You do not know what the increased selling price was each time the new holding company took it over, do you?

A. No; we have no figures on that question.

Q. Who owns it now?

A. Well, it is pretty hard to say, sir. The pedigree of it now resembles very much the pedigree of a registered hound dog. It is pretty hard to tell just who owns it. If you wish to glance over this—this is one of our setups. The Keystone owns 19 companies and the Main State Water and Power Company owns the 19; the Central Electric Water Works and Electric Company owns five and they are all owned by the North American Water Works and Water Corporation; and the Atlantic Public Service Corporation has 18; the Indiana Light and Power Company, three; the Freeland Southwestern Company two; the Union Water Works, 11 and they in conjunction with the North American Water Works, that owns the Keystone and these others are owned by the Atlantic Public Utilities.

BY MR. EVANS:

Q. And at the present time is the Atlantic Public Utilities company, the owners?

A. Oh, no; we are not near the top. It is pretty hard to get at the top. They have gone one step further up to the holding corporation. So, it is really pretty hard to tell who owns it. The Keystone, the first holding company that owned it, is in the hands of a receiver for the past eight or nine months.

Q. Have you obtained any figures from the Keystone Water Works or Electric company?

A. From the Protective Bond Holders Committee since they have gone into the hands of a receiver. We have had a setup of their sheets, and these setups show the amount of bonds that they have issued on one side and on the other the collateral pledges, funded debt of subsidiaries amounting to \$4,915,000, that is collateral pledge to justify the bonds and the preferred stock they issued.

MR. TURNER: Mr. Evans, where are we getting to?

MR. RHODES: Does not the whole thing mean this; that the water companies are a football of high finance?

THE WITNESS: They have now collateral pledges against the Hanover and McSherrystown Water Company of \$914,770.43, and a mortgage—notes receivable that the Hanover-McSherrystown have given to the Keystone, to the holding com-

pany, \$514,777, in notes, and also a mortgage of \$900,000 pledged.

BY MR. TURNER:

Q. On this company?

A. On this little company that we are discussing.

Q. That means about one million eight hundred?

A. A little over one million eight hundred.

MR. TURNER: Mr. Evans, the rate increase, is that what you were coming to?

MR. EVANS: Yes.

BY MR. EVANS:

Q. And what was done in regard to the rates of the company?

A. The new holders took it over after the rates were boosted ahead of the new holders; before the new holders took it over.

Q. When were the rates increased?

A. If my memory serves me correctly, it was '21.

Q. What were the rates then to the ordinary household consumer?

A. A small householder; that is the man who has a bath, a washstand, a commode and a sink, and pavement wash was nineteen and half.

Q. Nineteen and a half dollars a year?

A. Nineteen and a half dollars a year.

Q. In your own case, what are your rates today, compared with what they were in 1912?

A. Ten fifty to nineteen and a half for the small householder.

Q. Yes, but I say in the case of your own residence?

A. My personal rate was advanced on my house in 1921 from \$65 a year to \$173.

BY MR. TURNER:

Q. Was that on a meter?

A. No, sir. They refused to give you a meter. I have demanded it a number of times, but they refused to give it to me.

BY MR. COOKE:

Q. Can you describe your house, the size of it?

A. You mean the house proper?

Q. Yes. I mean, do you live in a castle or—

A. Oh, no, Pennsylvania Dutchmen don't live in castles ordinarily, sir. No, it is rather a large house.

Q. I pay \$32 a year myself, and I am wondering whether—what kind of a house you have?

A. They run up the rates in charging you for the frontage. I have 115 feet front, and the lot is 230 feet to the alley. Then behind the alley I have a similar sized lot. So, I pay sprinkling frontage of 115 to 230, and the same again by being on the corner. I have four bathrooms in the house, so that would govern the water charge.

Q. A normal sized family?

A. There is three in the family, sir, and one of the three is off at school. My wife and myself.

BY MR. HAGMAIER:

Q. That is a new system of water taxing, isn't it?

A. My partner, Mr. Myers, has a similar house and pays the same rate.

BY MR. RHODES:

Q. What is your rate?

A. \$173 a year.

BY MR. TURNER:

Q. How much do you have to pay a foot front?

A. I couldn't answer that question, even I think, by looking up the rates. It is pretty hard for you to get it. It will take a Philadelphia lawyer to take their rate book, but I have it here.

BY MR. RHODES:

Q. Isn't it rather difficult for a small home owner to pay water rent in that borough?

A. Well, on the back of this lot that I was describing—I didn't deduct that, I have a small frame house that my chauffeur lives in, and that rate is \$19.50 in addition to mine.

Q. If a small home owner has a large frontage on a small house—

A. If it is a corner house and has a sprinkler that he uses to sprinkle or wash his pavement, or if he wants to wash his car, that is in addition, that is another charge.

BY MR. RICHARDS:

Q. What would you say was probably the average cost for a small lot, take, say 40 by 150, something like that?

A. That would be \$19.50, if he didn't exceed 40 feet.

Q. Does it make any difference how many rooms are in the house?

A. How many connections, it does. It is made on a connection basis.

BY MR. RHODES:

Q. Then if you had a 40 foot lot, in addition, if you were not occupying, next to your house, you would have to pay additional water rent?

A. And if it happened to be a corner, you have to go down the other street, and that makes it extra.

Q. They count that as extra too?

A. Yes.

BY MR. TURNER:

Q. That is, you pay both a spigot rate and a frontage basis?

A. On a frontage basis for sprinkling.

Q. Oh, for sprinkling?

A. Yes. If you want to wash your pavement, and in addition to that you have to pay if you want to sprinkle your grass or wash your car, that is another charge.

BY MR. RICHARDS:

Q. That is in addition to this \$19 that you spoke of?

A. Yes.

BY MR. TURNER:

Q. That is, you mean there is a lawn connection?

A. Yes.

Q. You pay so much for the lawn connection?

A. You have to pay so much for the lawn connection in addition to each one. In other words, one at the front, and then each one is so much more.

Q. We have a municipal plant and I have to pay that too.

A. Yes, that is how it gets up.

BY MR. RHODES:

Q. I understand you say you have to pay for washing your pavement and also an additional charge for sprinkling the lawn, that is two separate charges.

A. Separate charges, yes.

BY MR. COOKE:

Q. You testified, as I understand it, that there is approximately \$1,800,000 standing against this property now in one form or another, is that right?

A. Yes.

Q. You have done a lot of figuring and thinking about this, how many actual dollars that you can bite into, have gone into the creation of this?

A. \$550,000 worth of bonds.

Q. I am not thinking about bonds. I mean what is the actual dollars that you can bite, the kind that you use in buying food?

A. I should say between 5 and 600,000. The water rent they collected in 1929,—I haven't 1930 figures,—1929 was a little over \$116,000.

BY MR. COOKE:

Q. From how many people? What is the population of the town?

A. They serve the two communities and part of the outlying townships in between, though I should judge they serve about 14,000 people. They serve Hanover, McSherrystown, Midway, and Conewago Townships and Penn Township in addition, outlying, you know.

BY MR. RICHARDS:

Q. You would not know how many consumers there were there, that that 14,000 represents.

A. I couldn't tell you how many consumers there are.

BY MR. EVANS:

Q. Mr. Sheppard, in paying \$173.00 a year, as you do, do you receive adequate water service for that charge?

A. Oh, no. No, we are not permitted to sprinkle the front nor water the lawn usually. Now in the spring if we are having frequent rains, we can do that very well. More than half the year we have water restrictions and you are forbidden.

BY MR. RHODES:

Q. But still you pay that?

A. Oh, yes, sure. We are forbidden to do it, in some instances only by the water company, and also cautioned by the borough council frequently, in the papers.

BY MR. RICHARDS:

Q. What is the source of supply, Mr. Sheppard, down there?

A. We have two sources of supply, one is in the nearby hills, called Pigeon Hills, about three or four miles out, and then we have some little springs up in the hills, and it has a water shed less than a mile square, in addition to these little springs that also run into their reservoirs. That comes in by gravity, into the mains without being filtrated at all. They use that ordinarily only in the spring. It takes up all the balance of the year to fill their reservoirs up there. They have reservoirs there that hold 15,100,000 gallons for the three, but their main source of supply is on the other side of town, little Conewago Creek, a very small creek, and they have a little impounding dam, thirty inches and about thirty feet long, running diagonally across the creek, and that is all the water that they have to depend on.

Q. You wouldn't know the gallonage of that little creek, I expect?

A. When it rains it is very wide, and in the summer it gets very very low. It will only probably be this wide over the gravel part, and two or three inches deep. We have records here of how much it flowed all of last summer at various times. We have the borough manager here who kept the records for quite a while.

BY MR. RHODES:

Q. Did you tell us what your rate was for 1917? You might have told us that.

A. \$65.00. And more than half the years, I don't mean every other year, because we may have two wet seasons and we may have three then dry continuously; but more than half the year, I looked over the newspaper files a few days ago, and I find that since 1920 we have had six years of restrictions. That is fixed at eleven, I don't know if I missed any or not, but they were the published restrictions.

BY MR. COOKE:

Q. Then the Chairman is incorrect in characterizing your rate as a ready to serve charge, a service charge?

A. Well, we are still hauling drinking water, for all of the public schools, eight public schools in Hanover, two in Conewago Township, two parochial schools, one in Hanover, one midway, and one in McSherrystown, still hauling their drinking water.

BY MR. RHODES:

Q. Do you get any rebates on your bills?

A. Last fall we did for the first time in history.

Q. What were your individual rates before the raise?

A. \$65.000.

Q. And now you pay \$173.00?

A. Yes sir.

BY MR. RICHARDS:

Q. Does that carry out to the small consumer?

A. Not the small consumer. He was raised from \$16.50 to \$19.50, I mean for the five and six-room house.

BY MR. EVANS:

Q. Mr. Sheppard, in addition to the lack of adequate supply, what has the quality of the water been at times?

A. From about the first of August until the latter part of September the State Health Department through their field officer, Mr. A. F. Glace, advised the people not to drink it unless it was very thoroughly boiled, but there was hardly any necessity for that because the odor was so great that you could hardly get near enough to it. About the latter part of

September he declared it fit for use. That was when they discontinued their temporary supply, they put the water in from Little Codorus Creek, that was going in, raw water, and to use the words of Governor Pinchot, he said he would not fish in it, nor would he eat a fish that were caught out of it. He visited it himself last August. In ten days or two weeks after they discontinued putting that raw water in, Mr. Glace declared that it was fit to use. That was just previous to getting out the October 1st bills.

Q. Who is Mr. Glace?

A. He is a division engineer of the Health Department. In a few days it was not fit to use and many analyses were made during the fall, and in November on the 10th it was too bad to use; on his analysis of water taken on the 18th it was too bad to use.

Q. Have you any information as to the bacteria content?

A. Yes sir, I can give you all of them.

Q. Just in brief, Mr. Sheppard?

A. I would not like to try to do it from memory, it is too hard to keep track of the bugs. Here is a letter written on the 18th of November concerning the water taken on November 10th by J. C. Bell, the letter written by Mr. I. M. Glace to the Water Committee manager: "On November 10th Mr. J. C. Bell collected a number of samples of water from various points in the distribution system of the Hanover-McSherrystown Water Company, reported upon as follows, Sample No. 1 total bacteria 1000, colli none.

Sample No. 2, total bacteria 6000, colli aerogens 100, colli bacteria 100.

BY MR. RHODES:

Q. Is that a dangerous quantity?

A. Absolutely, very.

Sample No. 3, total bacteria 40, colli aerogens .1, colli bacteria .1.

Sample No. 4, total bacteria 600, no colli.

Sample No. 5, total bacteria 3000, no colli.

Sample No. 6, total bacteria 5000, no colli.

Sample No. 7, total bacteria 3600, colli aerogens, .1, colli bacteria .1.

Sample No. 8, total bacteria 48000, aerogens, .1, colli bacteria .1.

BY MR. EVANS:

Q. Mr. Sheppard, what steps were taken during the past summer to get some additional water supply for the borough of Hanover?

A. Mr. Cramer, Chairman of the Fire and Water Committee of the Borough Council, and Mr. Eckbert, who is borough manager, were going night and day trying to find supplies and did locate three artesian wells in the borough that would give them approximately 300,000 gallons a day by pumping it direct into the main, which they did, and the Public Service Commission sent down an engineer and he permitted them to put back the raw water out of the Codorus Creek, which had been discontinued in 1925 by the State Health Department. They were forbidden to put in any of this water. That now went direct into the reservoir without being filtered.

BY MR. HAGMAIER:

Q. Mr. Evans, I would like to ask the witness, when you were furnishing this water to these schools, who is paying for that?

A. No one. The school board have the cost to get these drinking stands and furnishing the cups but nobody pays for hauling the water; the school board spent possibly a thousand dollars. We haul it for them from our own artesian wells.

Q. The expense it put on you?

A. No, our firm hauls it with our own trucks and our own men.

Q. You give that service gratuitous to the community?

A. To the citizens. We feel that one little child's life is worth more than the cost of hauling all the water. We haul it also for our own employees.

BY MR. MOORE:

Q. During the time they were pyramiding the capital, were there any major improvements to the plant?

A. The only improvements made were in 1926. In 1925 the same Mr. Glace, the chief engineer of the district, said, "Han-

over is sitting on a volcano. It is only by the grace of God that the residents have so far escaped an epidemic." That statement was credited to Mr. Glace of the State Department of Health. He ordered them to put in filtration plant. Up to that time we never had any filtered water, just always the raw water out of the creek. He ordered them to put in a filtration plant which they did the latter part of 1926 which they claim cost them \$70,000 and which is added to their setup, and there has been no other improvements whatever made beyond extending a few blocks out to a new street, and the taking up of the old rusted-out 4-inch mains and replacing them.

Q. That is necessary replacement and not improvements?

A. That is true except the extending out of the lines on the little street which is a natural growth in a small town.

BY MR. COX:

Q. When did they give you a rebate, the last one?

A. We had an emergency water committee formed, there was a mass meeting in the Opera House under the auspices of the borough council, inviting the public, and they formed what they called an Emergency Water Committee to see what they could do, and try to do something. They made out bills and destroyed them, they were to make a small reduction, and finally made a 33 1/3% reduction for the quarter beginning July 1, and ending October 1, payable October 1st. This consumer's emergency water committee thought that reduction not sufficient, and demanded a much larger reduction, and advised the people not to pay the bills. Some paid, some had paid, and some did not pay. When the January 1st bills, for the first quarter were coming out, or just previously, early in December we compromised with them, and when I say we, I mean the Emergency Water Committee, advised the people to pay their bills if they would give 27 1/2% on that quarter, which they were not going to do, they were not going to do anything, as we understood—which gave us 60%, or the equivalent of 60% on one quarter, and in consideration they were to allow our engineers, if we wanted them to, to figure out an estimate of the physical valuation of the plant. We had been three months trying to get it, and we have not gotten anything yet, and we had compromised in order to get our investigation through.

Q. Don't you think Governor Pinchot's going into office had something to do with their generosity?

A. Their generosity was forced—

Q. Was forced largely, but Governor Pinchot's going into office had a lot to do with it?

A. Now, the past quarter there was no allowance made.

BY MR. COOKE:

Q. Have you gone ahead with that valuation?

A. They said that the figures—the engineers had measured it all up, and they have gone through with it and are now pricing it, and we expect to have it within the next ten days of two weeks.

BY MR. EVANS:

Q. Did you say who made that appraisalment?

A. Albright and Mebus, of Philadelphia.

Q. Mr. Sheppard, do you have some photographs taken of that water company?

A. Mr. Kramer here, a member of council, had these taken. (Indicating photographs on counsel table.)

Q. Were some photographs taken last summer showing the condition at the various reservoirs, and so on?

A. Yes, and one of the water that we are drinking, going in raw.

MR. EVANS: I will just pass these photographs to the Committee so they can see the situation as it is pictured there.

BY MR. EVANS:

Q. Mr. Sheppard, have you taken this matter up—

A. There is our water supply, (Indicating on photograph.) and 50 yards from there is hog pens were twelve as fine hogs as you ever saw—going right down into it—that is Codorus Creek that was abandoned.

Q. Mr. Sheppard, had you taken this matter up with the Public Service Commission?

A. Why, Mr. Cramer, the chairman of the water and fire committee of council made an engagement to see Mr. Ainey about the 9th of August, and I accompanied him to Mr. Ainey's

office, and we laid our pitiable case before him to see if he would recommend—would permit the borough to put in its own water supply, and when I asked him whether he would under those conditions—if he didn't think it justified the borough for the protection of the lives, health and happiness of its citizens, and the safety of its property to put in its own water supply, as they could not get redress here, he said, "That I will not allow. I will however order them to put in an impounding basin," which, of course, is an additional capital expenditure which means more water rent, and I explained that we were pretty high on water rents then. I cannot say whether the order has gone through or not, but there has been nothing done toward putting in an impounding basin.

BY MR. COOKE:

Q. Did he explain what he meant by saying that he would not allow the city to put in its own system?

A. Oh, no, "That I will not allow."

BY MR. EVANS:

Q. That was Chairman Ainey that said that to you in his office?

A. We saw only him, no other member of the Public Service Commission, and my testimony can be corroborated through Mr. Cramer, sitting there.

Q. Would you just repeat that, I think some of the members of the Committee were looking at the photographs, just your conversation with Mr. Ainey?

A. We made complaint about the terrible condition that we were in, we had that much water, (indicating above two feet) in the reservoir, not two hours' supply, and if the town had caught fire, we would have burned up. We explained to Mr. Ainey the terrible condition we were in—

Q. When was this?

A. August 9th of last year.

Q. Who was with you?

A. Mr. Cramer, who is sitting right there, as a member of council, chairman of the Water and Fire Committee, he made the arrangements, and I accompanied him, and we asked him if under the conditions, if the borough would apply for a permit to put in its own water system, whether he would grant it, and he said, "That I will not allow." And he hit the desk rather forcibly. He said, "I will, however, order them to put in an impounding basin," which you know, will add to their capital structure, which also means more water rent, and that was all the satisfaction we got.

BY MR. RHODES:

Q. He would give no other reason why he would not allow this municipality to put in its own system?

A. Why, it would be in competition with the other.

BY THE CHAIRMAN:

Q. You would not consider that satisfactory, would you?

A. I was satisfied to go home and never come back to Harrisburg.

BY MR. RHODES:

Q. One of these photographs represents your dam, a pond of water; do you mean to say you get your drinking supply out of a place like that?

A. I think I could astound you. (Discussion of photographs with the members of the Committee off the record.)

THE CHAIRMAN: A recess will be taken until 2.15 o'clock P. M.

#### HANOVER AND McSHERRYSTOWN WATER SUPPLY SITUATION

FRANK E. CREMER sworn

BY MR. EVANS:

Q. Where do you live?

A. Hanover, Pa.

Q. What position do you hold in the borough government?

A. I am a member of the town council, chairman of the fire and water committee.

Q. How long have you been chairman of the fire and water committee?

A. This is entering the fourth year.

Q. You heard Mr. Sheppard's testimony this morning in regard to the water condition in Hanover. Is Mr. Hanover's testimony correct, so far as you know?

A. It is.

Q. Were you present at the interview that Mr. Sheppard testified to in Mr. Ainey's office.

A. I was. It was through me that we got the interview.

Q. When was this?

A. As near as I can remember, I think around the 9th of August.

Q. In 1930?

A. Yes, sir. It was in the forepart of August, right when we were at the height of our water crisis over there.

Q. Will you state the substance of the conversation that you and Mr. Sheppard had with Chairman Ainey?

A. Our idea was to see Mr. Ainey, to see if we couldn't have something done to remedy the conditions that we have been going through year after year, because we were not getting any more water and neither were we getting any service. We went over to see Mr. Ainey; I wired him for an interview; and the testimony of Mr. Sheppard is substantially what had taken place. We asked him whether it would be possible for us to put in our water system. He said, "That will not be allowed." He said, "Of course I can't make it rain, but—" he says, "I can order the water company to build an impounding dam," he says, "which will add to their capital structure, which will revert back to you people in increased water rates," and that was all that we had from him, and we said good morning.

Q. So far as you know has anything further been done by the Commission to remedy the situation?

A. No, sir. We do know that if proper conservation is taken of the water, when we have it, we would have an ample supply of water for that community for the next forty years, but you can't have water if you don't take care of it when it is coming down the stream.

MR. EVANS: If the Committee has any questions? I think that is all I have.

BY MR. HAGMAIER:

Q. He has verified everything—

A. Yes, sir.

MR. EVANS: We had intended to take Dr. Snow at this time, and Mr. Walker is now hunting up the records in regard to his testimony before the Senate Committee on or about the 16th, in which Dr. Snow is reported to have stated, that Hanover had an abundant water supply until the summer of 1930. Mr. Walker has not been able to accomplish that check, and in order to save time I am going to ask the Committee if they would be willing to turn temporarily from this situation, in order that Mr. Lee, the borough manager of Aspinwall, may testify in regard to the municipal plant there.

H. C. LEA sworn

(The witness withdrawn.)

A. C. BUCH sworn

BY MR. EVANS:

Q. Your own property at Hanover, do you?

A. Yes, sir.

Q. How long have you owned that property?

A. Why, I suppose for forty years.

Q. Do you pay water rents in connection with it?

A. Yes, sir.

Q. What does that property consist of?

A. I have four stores facing on center square and two stores on Carlisle Street.

Q. What water rents did you pay on that property prior to the time it was metered?

A. \$200 a year.

Q. For what years was that?

A. 1927 and 1928.

Q. Did you make any complaint about the amount of water rents.

A. Yes, I went to the Hanover and McSherrystown Water Company, and I complained about my rate being extremely high; I asked if they would install a meter and they said that they would not. I don't know what the reason was, but they claimed they would not install a meter. I applied to the Public Service Commission at Harrisburg and laid my complaint there, and in two or three weeks later from that I had a letter from

the Hanover Water Company stating that if I would pay for the meter, they would install it, and I at once sent them a check, I think the amount was \$12. I sent them a check for the meter, we installed it. My store, as you understand, doesn't use much water at night. They are closed as a rule. My last water bill was—I have just got the bill—I paid it the other day.—McSherrystown Water Company, for the month of March, 1931, \$8.39. That totals me up on an average of about \$10.00 a month, \$120.00 a year. It used to be \$200, \$212, and so forth.

Q. At what rate are you charged for water consumption on the meter.

A. I just don't know that on this bill unless it is on there, maybe it gives it to you.

Q. This bill shows 34,990 gallons, \$8.39?

A. Yes, sir.

#### BOROUGH OF ASPINWALL, ALLEGHENY COUNTY.

H. C. LEA recalled

BY MR. EVANS:

Q. Mr. Lea, you are borough manager of the borough of Aspinwall?

A. Yes.

Q. How long have you held that position?

A. Since March, 1925.

Q. Does the borough have its own electric light plant?

A. Yes.

Q. And its own water plant?

A. Yes, sir.

Q. Taking up first its electric light plant do you have a generating station as well as a distribution system?

A. Yes.

Q. What is your total investment in the electric light plant?

A. Present value \$112,940.63.

Q. And that is after the deduction of depreciation?

A. Yes.

Q. What bonds have you outstanding against that?

A. \$77,000.

Q. What is the population of the borough?

A. 4,250.

Q. What is its approximate area?

A. About 225 acres.

Q. What is its assessed valuation?

A. \$4,550,000.

Q. What is the tax rate?

A. Ten mills for borough purposes.

Q. Does that include the millage for sinking fund purposes?

A. Yes.

Q. What is the millage for sinking fund?

A. 5½.

Q. Leaving 4½ mills for other borough purposes?

A. General borough purposes.

Q. How much does this produce for general borough purposes exclusive of sinking fund?

A. About \$18,000.

Q. What is the approximate budget of the borough?

A. \$140,000.

Q. How do you make up the difference between the amount raised by taxes and the amount of the budget?

A. Well, now, the \$140,000 includes our operating and maintenance expense in both the water and light stations and the distribution lines.

Q. Suppose you exclude those. What would your borough budget be annually? I just want to have an idea of how much of your general expenses are raised from taxation and how much from the water and light revenues.

A. It would be in the neighborhood of 95 to \$100,000.

Q. So that of that budget you raised perhaps \$80,000 from the revenues of the water and light departments?

A. Yes, about \$88,000.

Q. How many lighting customers do you have in the borough?

A. 1,135; that is the first of January, 1931.

Q. What is the total number of kilowatt hours sold to them during the year 1930?

A. 1,185,492.

Q. How many kilowatt hours were used during the year for borough purposes such as the street lighting and so forth?

A. Street lighting, pumping and general use, \$392,566.

Q. So that the total kilowatt hours delivered to either the borough or customers amounted to how many?

A. 1,578,058.

Q. How many kilowatt hours were generated by your plant?

A. 1,708,916 according to our meters.

Q. What type of generating equipment have you?

A. Steam driven turbo generators.

Q. Of what capacity?

A. 500 kw each, two of them.

Q. What was your revenue from customers to whom electricity was sold? I mean by that to exclude the borough.

A. Revenue \$68,822.47.

Q. And if you had to charge the borough for the electricity furnished to it, how much additional revenue would that have amounted to approximately?

A. That would have brought us in the neighborhood of \$8,000. No, a little more than that, I am wrong there. We would only charge that at the productive cost. It would run about \$8,000.

Q. At production cost?

A. At production cost, yes.

Q. But if you charged it at the prevailing rates at which you sell to your other customers, it would have amounted to more than that.

A. Oh, yes; it would have amounted to \$20,000.

Q. What are your rates for electricity in the borough.

A. 8c gross, with 25% discount if paid within ten days for all those using up to eight hundred kilowatts a month. Over eight hundred kilowatts—well, that is two cents of a discount and over eight hundred kilowatts there is 2½ cents discount bringing it down to 5½ cents per kilowatt net; and for special purposes council will make contracts with certain companies to supply current at different rates such as we have one contract that we supply in the neighborhood of 8,000 kilowatts per month at 3 cents per kilowatt.

Q. When you speak of kilowatts, you mean kilowatt hours, do you not?

A. Kilowatt hours, yes, sir.

Q. What is the nature of the load on the borough light plant? That is, is it mostly industrial or mostly residential lighting?

A. Residential.

Q. How many kilowatt hours approximately were sold during the year for industrial purposes?

A. For industrial power purposes, 88,420.

Q. Now, what were the operating expenses of the borough lighting plant during the year 1930?

A. \$33,000, close to \$33,000—\$30,686.02 plus the force of administration, \$2,232.85, which would bring us up to about \$32,900.

Q. In your bookkeeping system you also included an expense of the lighting plant for sinking fund and interest charges on the lighting bonds of the borough, do you not?

A. Yes, sir.

Q. What did that amount to in the year 1930?

A. \$8,085.

Q. How much of this was sinking fund and how much was interest, approximately?

A. I guess close to \$5,000 goes on the bond payment.

Q. So that your total operating expense, including administration and sinking fund and interest on the bonds, amounted to how much?

A. \$41,009.87. Did you say including extensions?

Q. No. And after you deducted that from your operating revenue, what was the income of the light plant of the borough?

A. \$27,755.

Q. Now in your bookkeeping system you also charged against the operating revenue the lighting plant any extensions that are made, do you not?

A. Yes, sir. We make all extensions out of revenue derived.

Q. And what did that amount to in the year 1930?

A. \$8,471.88, plus the share of the overhead, \$746.29, making a total of \$9,228.17.

Q. So that after deducting that amount also, what is the net amount left as profit from the operation of the lighting plant?

A. \$18,436.11.

Q. Now, turning to the water system, how much is your investment in it?

A. \$66,443.85 is the present value.

Q. That is, depreciated?

A. Yes, sir.

Q. What is the source of water supply of the borough?

A. We have a driven well about 250 feet from the bank of the Allegheny River. That well is driven to the rock and the casing is set on the rock, and it has a hole pushed on through the rock and the water comes under the rock.

Q. Does this furnish an adequate supply?

A. We can at the present time take out three or four times as much water as we now use in our water supply.

Q. Was there any shortage last summer in the water?

A. None whatever.

Q. Is the water of good quality?

A. We are one of the very few that do not have to use chemicals of any kind in our water. We do aerate it but we do not use chemicals of any kind. I have here some analyses of water taken over different periods of the year.

Q. What do they show?

A. The bacteria count ran all the way from zero to I guess about fourteen is the highest count we have, and we have no b-coli whatever.

Q. Who made this analysis?

A. Mr. Edward C. Trax, city chemist of McKeesport.

Q. Does he also make tests for the Community Water Service Corporation, do you know?

A. Really I don't know. I know he has several boroughs. He is employed by the City of McKeesport primarily and takes this work on the side.

Q. He is, as I understand, one of the outstanding water chemists of the western part of the State?

A. Yes sir, he is.

Q. What are your rates for water in the borough to residential consumers?

A. Fifty cents a thousand gallons, with a 20% discount, making a net total of 40 cents.

Q. Is there any service charge?

A. There is a minimum charge of a dollar, but we give you water for that dollar. It is one dollar every three months—no, a dollar and a half every three months, it is, fifty cents a month.

Q. Does the ordinary consumer use more than the amount of the minimum bill?

A. Yes. The residents of our town use on an average of \$18 worth a year, or about \$1.50 a month.

Q. What is the number of water customers in the borough?

A. 954.

Q. You also furnish water for borough purposes, I assume?

A. Yes, sir.

Q. Do you make any charge, for instance, for fire service, on your books or is that just furnished free?

A. It is furnished free other than that we take a credit in our bookkeeping for the fire hydrants on the water system. It is not a money transaction.

Q. And what rate do you charge for fire hydrants?

A. We make a flat charge or take a flat credit of \$50 a hydrant.

Q. How many hydrants do you have in the borough?

A. We have 54 hydrants.

Q. What were your total receipts from the sale of water during 1930?

A. \$18,779.10.

Q. That is after deducting such accounts as were delinquent on December 31st?

A. Yes sir, we supplied water to the amount of \$19,180.30, but there was \$401.20 that was delinquent accounts on the first of January.

Q. What were the operating expenses of the water plant in the year 1930?

A. \$10,205.28.

Q. Did you in the case of the water plant also charge against operating expenses the sinking fund and interest?

A. Yes sir, \$1260.

Q. What is the amount of water bonds outstanding?

A. \$12,000.

Q. So, including this sinking fund and interest on these bonds, what is the total expense of the water plants operation?

A. \$11,465.28.

Q. And that leaves you an income from the plant of how much?

A. \$7,947.07.

Q. In the case of the water plant also, did you pay for extensions and improvements out of current revenue?

A. Yes sir.

Q. How much was expended for this purpose in the year 1930?

A. \$633.63, plus administration or overhead charge of \$746.28, making a total of \$7,584.36.

Q. So that was your cash profit from the operation of the water plant during the year?

A. \$366.11, with \$401 outstanding.

Q. In depreciating your electric light plant on your books, approximately what rate of depreciation do you charge a year?

A. 10%.

Q. Was the amount charged against operating expenses for sinking fund on the bonds and for extensions and betterments equal or exceeding that amount?

A. It exceeds it.

Q. So that in fact you are charging to operating expenses not only depreciation but something in addition to it?

A. Yes.

Q. And that is also true of the water plant, is it?

A. Yes.

Q. Have you prepared a tabulation showing the costs of generation and distribution of electric current in the borough?

A. Yes.

Q. Is that the table to which you refer, the one I show you, headed, "Electric cost to generate."

A. Yes.

Statement of Electric Cost to Generate, produced and marked Exhibit No. 126.

MR. EVANS: I offer this paper in evidence as Exhibit No. 126.

BY MR. EVANS:

Q. What was your cost per kilowatt hour to generate electricity in the borough?

A. 2.257 cents, or 2 cents 2<sup>1</sup>/<sub>2</sub> mills approximately—do you wish me to state it that way?

Q. I think you are stating it properly as you stated it at first.

A. 2.257 cents.

Q. As I understand it, this is calculated on the basis of kilowatt hours furnished to either to the borough or consumers?

A. Yes.

Q. What is your distribution cost per kilowatt hour furnished to the borough or the cash consumers?

A. .565 cents.

Q. That is?

A. 5 and .65 mills.

Q. What then was your total for generating and distributing electric current in the borough per kilowatt hour?

A. 2.822 cents.

Q. Do you know approximately what your revenue per kilowatt hour is, Mr. Lea?

A. 5.7, that is the average.

A. Of what I sold, what I received in revenue was 5.7.

Q. Now, in these figures have you made any allowance for depreciation?

A. Yes, I have taken 10% of the value, that is, depreciated value.

Q. And you have included all operating expenses?

A. All operating expenses and administration or overhead.

Q. So that these figures include all of the expenses which are properly chargeable to the operation of the electric light plant?

A. Yes, to the best of our ability, that is where we place them.

Q. Now, on the same tabulation you have shown costs for water, what do they amount to?

A. Water pumping costs us 14.7 cents per thousand gallons; to distribute our water costs us 13.15 cents per thousand gallons, making a total cost of 28.02 cents per thousand gallons of water. Our costs are a little high, on account that we pump our water three times to our consumers.

Q. And the entire supply has to be pumped?

A. Oh, yes, every drop of water that we use is pumped. We pump it from the well into an aeration tank, and from the aeration tank it is pumped to the town proper. The surplus

that is not used by our consumers going into the reservoir, and we have a booster pump there that lifts it to a higher point. to take care of about 100 or 125 residents in the hill district. So there our cost is a little high because we run three pumps.

Q. Mr. Lea, you testified that the tax rate in the borough is 10 mills, including 5½ mills for sinking funds?

A. Yes.

Q. Can you state approximately what your tax rate would have to be if you didn't have your municipal water and electric plant?

A. According to my figures, I cannot see anything else except 10 mills.

Q. So that the revenue from these plants amounts to approximately the equivalent of 10 mills taxation?

A. Yes.

MR. EVANS: Any questions the members of the Committee want to ask?

BY MR. COOKE:

Q. Have you had any tenders to sell this electric plant and take service from an outside plant?

A. We did in 1919, that was the last.

Q. What was the company?

A. The Duquesne Light Company.

Q. What was the argument?

A. We wanted to rehabilitate the plant at the time, that is issue bonds to rehabilitate, right after the war, and they came in and tried to convince our citizens that they could sell us power cheaper than we could produce it.

Q. Did they work through council, or go to the citizens direct?

A. They went to the citizens direct.

Q. How did they do that?

A. By possibly a dozen company men coming into town, making an house to house canvass in the evening, visiting with the people and trying to convince them it was wrong for us to put the bond issue through.

Q. What was the vote?

A. The ultimate result was about 5 to 1 vote in favor of issuing the bonds, and rehabilitating the plant.

Q. Was there any idea given you at that time as to what your electric service would cost if you went with the private company?

A. About 3 cents, as I recollect; they never did come right down and make us a bonafide offer.

Q. You mean that is for the current, 3 cents?

A. Yes.

Q. They would furnish the current, and you were to keep on with the distribution?

A. We were to distribute it.

Q. Three cents compared with this figure of 2¼ that it cost you to generate yourself?

A. Yes.

Q. This seems to be a marvelous showing, I never heard of it, is it on the record anywhere before; have you ever told this story of Aspinwall before?

A. No sir.

Q. Why did you not?

A. We were always under the impression in our town that we were not allowed to make any money, and we kept our mouths shut. While we were making it, we used it for borough purposes, and kept quiet.

Q. Who was supposed to issue this license to you to tell your story?

A. Well, no person. When I received a subpoena to come here, we had a council meeting on Monday night, and I told them—I told them I would have to come down here, and they told me, "All right, if they want you down there, go down and tell all you know."

Q. But this is the first time this has ever become known to the public?

A. Yes.

FATHER COX: After listening to Mr. Lea, I think you have learned some of the reasons why we look upon Aspinwall as the model borough in our county, and why we think so highly of the member of our Committee, Mr. Burgess Hagmaier.

THE CHAIRMAN: It is in that classification on his account, isn't it?

FATHER COX: I would say he had seventy-five per cent as much as with it

MR. HAGMAIER: I would like to say in answer to Mr. Cooke, to the question he asked Mr. Lea, that from my fifteen years experience with the League of Boroughs in this state; I think Mr. Lea will bear me out; he has attended these conventions from year to year; that there always has been a feeling there that we were not supposed to tell anybody the money we were making. The understanding was that we would come under the hands of the Public Service Commission, and, therefore, at every convention we were told not to say anything, and we never did, and I think Mr. Lea will bear that out.

MR. EVANS: Are there any other questions by the members of the Committee, which they want to ask Mr. Lea?

FATHER COX: Why did you figure that would come in to the Public Service Commission, Mr. Hagmaier?

MR. HAGMAIER: I don't know. We were just given to understand that, and we played safely for the benefit of our citizens.

FATHER COX: Nobody told you that?

MR. HAGMAIER: I don't know how I got it, but every borough owning its own electric or water plant, when we got to these conventions, that is one subject that never came up in the fifteen years. We attended to our own knitting.

BY FATHER COX:

Q. What do you think would happen if you came out to the Public Service Commission?

MR. EVANS: Father Cox, you are getting into the realm of prophecy now.

FATHER COX: They are pretty wise. They have had a lot of experience.

THE WITNESS: It is pretty hard to tell, Father.

BY FATHER COX:

Q. You would not take a chance to answer?

A. No, sir.

FATHER COX: That is the idea.

MR. HAGMAIER: I would like to say, for the benefit of Mr. Lea, that besides the work he has mentioned, he operates a play ground for the people of Aspinwall, and trims every tree in the town and anything that has to be done for the people of Aspinwall. He gathers up all their clippings of grass in the summer without any charge to the people in the town. That is not of record, but, after all, that work is done by him, and he is practically a father to the borough. He does all that stuff and there is nothing shown in the record that it is done.

FATHER COX: All the motorists in Pittsburgh I have met have a healthy respect for the police force of Aspinwall. There is no fooling in that little borough, because their regulations are enforced.

THE WITNESS: We enforce our regulations, and we don't take any money from them.

MR. WALKER: I understand that in 11 years they have collected \$11.95 in fines. Is that right, Burgess?

(No response.)

THE WITNESS: We like the people to come to our town, and we treat them right. We don't want their money. If they come a second time and do not behave themselves, I don't know what the Burgess would do then.

THE CHAIRMAN: Mr. Lea, on behalf of the Committee, I want to extend our thanks for your coming, because it is very informative testimony that you have given.

FATHER COX: You notice the simplicity of a good and honest report. There is no juggling or manipulation of the figures. It is all straight to the point.

THE WITNESS: Awfully glad to have been of service to you men. I will come back any time if you want me.

MR. EVANS: Thanks very much. If the Committee, please, I am informed that Mr. Krug, the Superintendent of the Hanover and McSherrytown Water Company, is in the room. I don't know whether the Committee cares to hear from him, as to anything he may have to say as to the water situation there, but I think it would be very well to give him the opportunity to be heard if he wishes to.

THE CHAIRMAN: We would be very glad to hear him.

In Re: HANOVER MCSHERRYSTOWN WATER SITUATION,

EDGAR A. KRUG sworn

BY MR. EVANS:

Q. I understand you are the superintendent manager of the Hanover McSherrytown Water Company?

A. Yes sir.  
 Q. How long have you held that position?  
 A. Since 1918.  
 Q. Since 1918?  
 A. Since 1917 or 18, I am not positive.  
 Q. You held the position then, prior to the time that the National Water Works took charge of the property; The North American Company, I mean?

A. Yes sir.  
 Q. Did you hear Mr. Sheppard's testimony this morning in regard to the water situation in Hanover?

A. No sir.  
 Q. You did not?  
 A. No sir.  
 Q. Do you consider that there is an adequate water supply furnished to the borough of Hanover?

A. An adequate supply; I do not consider that last year it was adequate; no.

Q. What is your schedule of rates to the ordinary residence consumer, how do you charge?

A. What do you mean; on the flat rate?  
 Q. Yes.  
 A. We make a flat rate charge of \$8 for the first faucet and seventy cents for each additional faucet for the same purpose.

Q. And what is your charge for sprinkler service?  
 A. Lawn sprinkling, we charge \$8 for not exceeding forty feet frontage.

Q. And how much over that?  
 A. Twelve cents, I believe, for each additional foot.  
 Q. Twelve cents a front foot, and is there, also a charge for pavement washing and things of that sort?

A. Yes, sir.  
 Q. What does that amount to?  
 A. The charge for pavement wash is \$5, for not exceeding forty foot frontage.

Q. And how much additional?  
 A. That, I believe is twelve cents. I believe I am mistaken on lawn sprinkling. I believe that is eighteen cents additional for each additional foot and the pavement wash, I believe is twelve cents. I believe that is the way.

Q. What are the sources of supply of the system?  
 A. We have three reservoirs located northeast of the town in what is known as Pigeon Hills, then we have another known as the Powell Hill, located about a mile southeast of the town, and the balance is pumped out of the Little Conemaw creek; in other words we pump from the Little Conemaw creek into this Powell Hill reservoir.

Q. What is the reservoir's capacity on Pigeon Hill?  
 A. The upper reservoir, to the best of my knowledge is 13,000,000; the middle one three and one-half and the other one one and one half millions.

Q. And what other reservoirs have you?  
 A. Powell Hill reservoir with a capacity of eight and a half million.

Q. So what is the total reservoir capacity?  
 A. Twenty-six and a half million I think it makes.  
 Q. How many times during the last ten years has there been a restriction in the use of water during the summer months?

A. I don't know.  
 Q. Mr. Sheppard testified that he had looked up the records and I think six times since 1920, as far as you know that would be substantially correct.

A. I don't remember how many, I know there has been restrictions on it.

Q. You put advertisements restricting it in the local newspapers, do you?

A. Yes, sir.  
 Q. What steps has the company taken during the last ten years to get a more adequate water supply.

A. Well, the only thing I recall in the last ten years is the laying of two and a half miles of main this past summer along the Little Conewago Creek.

Q. What was the purpose of the laying of the main?  
 A. That was laid during the last summer, during this dry season.

Q. In other words that was an emergency measure?  
 A. Yes.  
 Q. What other steps did you take during this past summer to meet the situation?

A. Well, we have a number of industrial wells hooked up. We had a well at the Western Maryland Dairy. We had a well at the Hanover Ice Company and a well at the D. E. Weinbenner Company, and one at the J. S. Young Company. Barton Extract Works.

Q. These were all privately owned wells that the owners allowed you to use in the emergency?

A. Yes.  
 Q. You also pump water from the Codorus Creek into the system?

A. Yes.  
 Q. Was that a pure water supply?  
 A. Well, I can't tell you that.

Q. You haven't seen analyses of that water?  
 A. No, I haven't seen an analyses.

Q. And the company so far as you know, hasn't yet had any test made of the purity of the water during the past year?

A. Oh yes. The tests have been made under the jurisdiction of the State. They were taking the tests.

Q. You have never seen the results of those tests?  
 A. Oh yes, I have seen the results of the tests, but I don't know of just the Codorus, I can't recall just what that was.

Q. As a matter of fact, isn't it true that the Codorus Creek hasn't yet been condemned as a source of water supply?

A. I believe it has. I understood so.

BY THE CHAIRMAN:

Q. Superintendent, don't you know the quality of the water you are serving down there?

A. Yes.  
 Q. Then don't you know the analysis of the water?

A. I don't recall the analysis of the Codorus Creek water. No sir.

BY MR. EVANS:

Q. Did you ever have any analyses made of the Codorus Creek water?

A. Yes.  
 Q. And you have seen these analyses?  
 A. Yes.  
 Q. You saw them during the summer?

A. I don't recall seeing one this past summer just off hand.  
 Q. In other words, you didn't make any analyses of the creek during the time you were using that water for the citizens of Hanover.

A. Yes, I recall drawing one sample.  
 Q. What does that test show?

A. I don't recall.  
 Q. Well, did it show that the water was pure, or impure, speaking generally?

A. I don't recall anything about it.  
 Q. You don't recall anything about it?

A. No sir.

FATHER COX: Mr. Evans, I would suggest that this gentleman go back home and learn something about his company before he tries to testify. I don't say that in an insulting fashion either, I say that for the benefit of this Committee. There is no need of wasting time having somebody saying I don't know. They are certainly things that he should know, and if he doesn't know them, they are questions that he ought to go back home and learn about them, and then come back and tell the Committee what are on the files of the company.

BY MR. HAGMAIER:

Q. I would like to ask,—when you stated here in your second question, that you have an adequate supply of water,—did you make that statement?

A. I said up until this last year.

Q. All right, and you admit that the last five years in back of that you sent out notices not to use water at certain times. Does that show that you have had an adequate supply of water?

A. Well, those restrictions were put on sprinkling. That is, there were times when the water dropped down and we would become a little alarmed, and we would ask them to save water.

Q. That would indicate you would not have a supply of water, wouldn't it?

A. Well, it depends how large a supply.

Q. Well, you know the supply, how large, as large as the people use you supply with water. You charge then for it, and you ought to have a supply of water.

BY MR. RHODES:

Q. Doesn't your company require you to make periodic tests of your water to determine whether it is pure or polluted?

A. Yes.

Q. How often do you have those tests made a year?

A. Every week.

Q. You have them made every week?

A. Yes.

Q. Do you see those tests? Are they reported?

A. Yes.

Q. What chemist makes those analyses?

A. M. B. Litch of Steelton, Pa.

BY MR. MEMOLO:

Q. You have those records at your office, haven't you?

A. Yes.

BY MR. HAGMAIER:

Q. He stated a minutes ago he had not seen a report of the water for six months or so.

A. I beg to differ. I said I had not seen a report of the Codorus supply.

Q. Should you not have seen it when that was being used?

A. I judge I should; but the State was drawing the samples. they had a laboratory.

MR. HAGMAIER: But the people are not paying the State. they are paying your company.

BY MR. COOKE:

Q. Where are these samples taken from?

A. The samples that I draw are always from the filter plant right from our intake. We draw one sample of raw water at the faucet at the filter plant.

Q. You never take them from the spigots?

A. Well, every once in a while, yes.

BY MR. WALKER:

Q. Where do you take your samples of filtered water from—

A. No; right in the filter plant.

Q. How long is your impounding reservoir? What is the capacity?

A. We don't have any impounding reservoir.

Q. You don't have any impounding reservoir?

A. No sir.

Q. What do you call that (counsel showing photograph to witness).

BY MR. EVANS:

Q. What is the Cell Station?

A. That is a diversion dam.

Q. A diversion dam?

A. Yes.

Q. What do you mean by that term?

A. That dam is put into the creek merely to divert the water into a sedimentation basin.

Q. Is that one of the reservoirs you referred to?

A. No; I didn't mention that.

BY MR. WALKER:

Q. Do you chlorinate with water.

A. Yes.

Q. What is your normal chlorination?

A. It runs between two and three pounds, per twenty-four hours.

Q. What was your chlorination this summer?

A. It was considerably higher, I can't tell you just off hand.

Q. About how much higher?

A. Oh, I think we had it up to about six pounds.

Q. To what?

A. Six pounds.

Q. Your operation records would show how much your chlorination was during this summer, wouldn't they?

A. Yes.

Q. As a matter of fact, didn't you get your chlorination nearly up to somewhere around forty pounds, this summer?

A. Not to my knowledge, no sir.

BY MR. RHODES:

Q. Very few people in Hanover drink your water, is that right?

A. I think there is some few that don't drink it now. I think the majority of them are drinking it.

Q. You think a majority of them do drink your water?

A. Yes.

Q. Do they use your water in the schools, for drinking purposes?

A. I believe not, I understand the youngsters drink other water at the schools, but they go home and drink our water out of the faucets.

Q. As I understood you to say a moment ago, you didn't see these reports from the chemist each week. Well, if you don't analyze and look at those reports carefully each week, how do you know if your water is fit for anybody to drink?

A. I do look at the reports from the Conewago supply, but this Codorus was only hooked up for a short while.

Q. I thought you said a while ago that you didn't see those reports from the chemist as they came to you each week by week?

A. I didn't say so.

Q. That is what I understood you to say, that you didn't see these reports.

A. I didn't say that.

Q. Do you look at them very carefully each week?

A. Yes.

Q. To determine in your own mind whether your water is fit to supply to the public?

A. Yes.

BY MR. WALKER:

Q. Do I understand you to say, Mr. Krugh, that there is a sample taken of your water every week?

A. Yes sir.

Q. And a report furnished by the chemist on the water?

A. Yes sir.

Q. And these reports are kept on file in your office?

A. Yes sir.

BY MR. EVANS:

Q. Will you furnish the Committee with a copy of these reports during the past four years so we can see what they show?

MR. RHODES: I think we should have the original reports.

BY MR. EVANS:

Q. Mr. Rhodes suggests that we should have the original reports. If you will submit them for our inspection, we will then permit you to furnish copies later?

BY FATHER COX:

Q. When you receive adverse reports, do you do anything to make that water better?

A. I don't understand you.

Q. If you get a bad report of the condition of the water, do you do anything to improve the water after receiving the report?

A. Sure.

Q. Did the reports each week show an improvement, or was it going back or getting better, or getting worse or how?

A. You know how reports come through, sometimes one way and sometimes another.

Q. And you don't know whether they showed improvement or not?

A. The proof of the pudding is in the eating of it. I don't know of a single case of typhoid fever in Hummelstown or McSherrystown that has been traced to water supply.

BY MR. WALKER:

Q. As a matter of fact there has been numerous complaints about the water?

A. Yes sir.

Q. And these complaints have been about the potability of the water?

A. Yes sir, there have been numerous complaints.

Q. And these complaints have extended over a number of years?

A. I don't know about that.

Q. In 1929 you had complaints regarding the potability of your water?

A. Not to my knowledge.

Q. In 1928 did you have complaints? As to the potability of your water?

A. I don't say that.

Q. You never had any complaints before 1930?  
 A. Before our filter plant was installed we had.  
 Q. When was the filter plant installed?  
 A. About five years ago.  
 Q. Do you have a chemist at the filter plant?  
 A. No sir.  
 Q. Do you analyze your water, your raw water?  
 A. I draw a sample and send it to the chemist.  
 Q. Do you operate twenty-four or just twelve hours a day?  
 A. Sometimes we operate twenty-four and sometimes just half of that.  
 Q. When you operate twenty-four hours a day do you test the raw water during that twenty-four hour period?  
 A. Yes sir.  
 Q. How often?  
 A. It depends on the turpidity of the water.  
 Q. During the treatment how often do you analyze your treated water? Do you take an analysis at the weigher?  
 A. No sir.  
 Q. How often during the twenty-four hour run do you analyze your filtered water?  
 A. We don't analyze it at all except what I send to the chemist once a week. And the operator makes a test.  
 Q. What do these tests include?  
 A. He tests the alkalinity and the T. H.  
 Q. And soap hardness?  
 A. Yes, he has to make his tests so as to find out the amount of chemicals to use.  
 Q. That operator is not a chemist?  
 A. No sir.  
 Q. What did your P. H. run during 1930?  
 A. That varies generally about seven I think.  
 Q. Do you hold it at seven?  
 A. We try to we didn't when we had the hard water coming in.  
 Q. What does your soap hardness run?  
 A. I don't recall that I don't know.  
 Q. Did you ever get it under 150?  
 A. It is not that high I don't recall what that is just now.

BY MR. COOKE:

Q. Who owns this company? Who is the real owner who is the stockholder company?  
 A. The Atlantic Public Utilities I believe.

BY MR. RHODES:

Q. You believe; don't you know?

BY MR. WALKER:

Q. Do you believe you can control flashy raw water in your plant by taking sample of filtrated water once a week?  
 A. I think so.  
 Q. Don't you think that is remote control of the water?  
 A. I don't think so.  
 Q. When these reports come back to you do you study them?  
 A. I look them over.  
 Q. And file them?  
 A. Yes sir.  
 Q. Do you ever make any suggestions as to treatment based on these analyses?  
 A. No sir.

BY MR. COOKE:

Q. Who are the individuals back of this company you just mentioned?  
 A. I really don't know.  
 Q. You don't know of any concern that controls this Atlantic Public Utilities never heard of the individuals that control it?  
 A. I think there is a man by the name of Fitkin who is interested. I never met him.  
 Q. What have you imagined are Mr. Fitkin's relations to this company you work for?  
 A. I understood Mr. Fitkin was the controller of that and controlled the Atlantic Public Utilities.  
 Q. It was testified here this morning that a family of five or six persons or less occupying a normal sized house on a lot of forty feet frontage paid \$173.00 for their water a year. How is that rate determined?  
 A. By the number of faucets and fixtures.

Q. Is there any relation or supposed relation to that price and the cost of service or is it simply something pulled out of the blue?

A. I don't know.  
 Q. How would you justify or do you justify \$173.00 a year charge for service of that kind?  
 A. They charge according to the fixtures on the property.  
 Q. Did you fix these rates?  
 A. No sir.  
 Q. Who fixed them?  
 A. I cannot tell you that. The rates have been approved, that is all I know.  
 Q. You are superintendent of the plant, and yet you never have taken any action in regard to this water and the rates, whether it justifies them or not?  
 A. No sir.  
 Q. How many years have you been in charge of the plant?  
 A. Since 1917 or 1918.  
 Q. You have been there between twelve and thirteen years and have never taken any interest either in justifying the present rates or changing them?  
 A. No sir.

BY FATHER COX:

Q. You file complaints probably just like you file your chemical reports, just put them in the file?  
 MR. TURNER: The testimony this morning was that you had a charge according to the frontage you had.  
 MR. EVANS: He has testified to that.  
 MR. RHODES: Who do you get your orders from?  
 A. Mr. C. H. Bishop.  
 Q. Where does he live?  
 A. Lemoyne.  
 Q. What company is he employed by?  
 A. He is the district manager for the Atlantic Public Utilities.  
 Q. Can you tell this Committee any reason why your company has such an undesirable reputation not only throughout York County but throughout the State?  
 A. No sir. I don't know.  
 Q. You heard what Governor Pinchot said about your water supply when he was down there?  
 A. Yes, sir.  
 Q. Was he right or was he wrong?  
 A. He was right on some things, and on some things I guess he is wrong.  
 MR. MEMOLO: If this man cannot enlighten the Committee about his own company, I think we should get Mr. Bishop here.

BY MR. COOKE:

Q. Who does Mr. Bishop work for?  
 A. I don't know.  
 Q. Who does he report to?  
 A. I cannot tell you that. I report to Mr. Bishop, I don't know who he reports to, that is out of my line.  
 Q. Who do you suggest, connected with this organization, that might enlighten this Committee?  
 MR. C. J. DELONE: May I make the suggestion, because I have had some connection with the emergency water committee of Lancaster. This water company is operated by a concern known as the United Engineers, whose office address is 39 Broadway, New York City. I understand that they are the ones who have taken charge of the interest of Pitcairn, and representing other water interests throughout the country. I know that, because I have been in connection with them a number of times, growing out of this situation in Hanover. I am volunteering that information for what it may be worth.

BY MR. MEMOLO:

Q. The complaints concerning this Hanover Company are so serious that we would like to have something definite. Do you know whom we could call upon to get some information?  
 MR. DELONE: I think I do.  
 MR. MEMOLO: It seems to me that these gentlemen here representing the consumers in Hanover, have repeatedly made complaints to this gentleman, who don't seem to know anything about his own company. Now, if you can suggest—  
 MR. DELONE: I think Mr. Bishop surely can tell you, and do so with authority.

BY MR. WALKER:

Q. Do you know anything about this original contract, or the offer that was made to Mr. Sheppard in 1917, when Mr. Brough made an offer to sell the company to Mr. Sheppard?

A. Yes.

Q. Do you have that original proposition in your possession?

A. No sir.

Q. Did you have it in your office files?

A. No sir.

Q. Do you know where it is?

A. No sir.

BY MR. EVANS:

Q. Did you never have it in your office files since January 1, 1931?

A. Yes.

Q. What did you do with it?

A. Destroyed it.

Q. Why did you destroy it?

A. Because Mr. Frank Cramer asked for a copy, and I didn't think it was his business to have it.

Q. Do you know of any existing copy of that agreement?

A. No sir.

Q. So you destroyed the only evidence there was of it?

A. Yes.

Q. Mr. Krugh, in addition to the chemical and bacteriological tests of the water, will you please furnish also to this Committee by Wednesday of next week the original chlorination records of the company for the year from April 1, 1930 to April 1, 1931.

BY MR. WALKER:

Q. You have daily work sheets?

A. Yes.

Q. Those will have your chlorination on there in addition to all your other reports?

A. Yes.

Q. Will you submit those, please, under the dates given you by Mr. Evans?

BY FATHER COX:

Q. From whom do you receive your check for your service?

A. The divisional office.

Q. What company is that; is that an official check of the utility corporation that you speak of?

A. You see, they have, I think, 14 companies that I think they take care of.

Q. The check is signed by whom?

A. The check is signed by the divisional manager, and somebody else, and then it is forwarded to New York, and another signature added there.

Q. Forwarded to New York?

A. Yes, the check contains three or four signatures.

THE CHAIRMAN: It is the opinion of this Committee that this testimony is not very enlightening or very helpful. The indication in our minds is that the people of Hanover community are justified in making complaints, and we feel further that this company is open to criticism because of the lax way in which these matters are handled. If Mr. Bishop can be obtained, I understand that he lives at Lemoyne, we would like to have him subpoenaed. Possibly we can get him by telephone.

(Remarks by Mr. Evans at his request off the record.)

THE CHAIRMAN. I want to say that apparently the operation at this time is not in conformity with the rules, not only of health, but the operation of a public utility.

BY MR. EVANS:

Q. Mr. Krugh, last summer the water that was pumped into the system from the Codorus Creek was not filtered. Was it?

A. No sir.

Q. And was not treated in any way?

A. Yes, it was chlorinated with a chlorinating machine.

Q. Where was it chlorinated?

A. Right at the creek.

Q. This is a photograph of the chlorinating (showing witness photographs).

A. In that little building (indicating on photograph) there was the chlorinator.

BY MR. WALKER:

Q. You also chlorinated your reservoirs?

A. Yes, we put a chlorinator in the valve chamber for a short time.

Q. Do you have any algae up there?

A. Well, I don't think they term it algae. We had trouble in the reservoir about three years ago. Some sort of a vegetable growth. I don't think it was algae. I think it had another name.

Q. And that is what they call, "algae," is it not?

A. Spirogoa, I believe they call it.

BY MR. EVANS:

Q. Did you testify that there was no reservoir on the Little Conemaugh Creek?

A. No reservoir.

Q. No reservoir?

A. It is a sedimentation basin.

Q. So that from your main source of supply you have no reservoir at all?

A. We pump you see. We take the water from the Little Conemaugh Creek into the sedimentation basin, and from there it flows by gravity into the filter plant, and then there is two pumps that lift it up into the filter plant, into what we term the flock basin, and from there that flows by gravity over into the filters, and from there we pump it four and one-half miles to Power Hill reservoir, and from there the water flows into the town by gravity; that is about ninety per cent. of our water that is used.

Q. And how much water during the summer months, do you maintain in that reservoir?

A. We aim to keep that reservoir as full as possible.

Q. You have not answered my question. How many million of gallons of water do you maintain in that reservoir during the summer?

A. Well, the capacity of that reservoir is eight and one-half million, and we aim to keep it full, but this last summer it was not full. At one time there was only about eighteen inches of water over the screen.

Q. And you had an emergency pump on during this past summer, did you not? And burst the pipes of the system?

A. No sir.

Q. You did not have an emergency pump on at all during this past summer?

A. We had four emergency wells hooked up.

Q. And no pumping water up to reservoirs?

A. No; I didn't have any emergency pump on.

Q. What did you do?

A. With the pressure we had a by-pass line at the Power Hill reservoir. I can pump directly into the system instead of pumping it into the reservoir.

Q. Did you, as a result of that pumping that you did burst any pipes in the system?

A. We tried to force water up into our Pigeon Hill reservoir, that is when we bursted the pipe at McSherrytown.

Q. That bursted the pipe?

A. Yes, sir.

Q. How many consumers do you have?

A. About 4,500.

Q. 4500?

A. About forty-five hundred.

Q. Do you know actually what the effective capacity of this Power Hill reservoir is?

A. Power Hill was always estimated to contain eight and one-half million, but when I made measurements according to my measurements—Now, I am not absolutely sure that my calculation is correct—but according to my calculation I think it held something like five million and a quarter.

Q. Would you not be surprised to learn that Allbright and Mebus made a measurement of it and found it to contain four million seven hundred and eight thousand gallons?

A. That come pretty close to what I judge.

#### GENERAL CONDITIONS IN PHILADELPHIA— PUBLIC UTILITIES.

MR. EVANS: Is Mr. Wilson here?

THE CHAIRMAN: Before Mr. Wilson is called I want to say, Mr. Evans, and to the other members of the Committee that Mr. Turner and I on account of a previous engagement will have to leave in fifteen or twenty minutes and that during my absence, I have asked Mr. Rhodes to act as Chairman.

MR. S. DAVIS WILSON sworn

BY MR. EVANS:

Q. Where do you live?

A. Philadelphia.

Q. You are Deputy Controller of the City of Philadelphia?

A. Deputy Controller Philadelphia County and of the city; deputy controller of the board of education, and secretary of the sinking fund commission in Philadelphia. I don't draw salaries for all of those positions, though.

Q. In the course of your official duties, you have had occasion to have audits made of some of the utilities operating in Philadelphia, have you not?

A. Yes; we have general supervision and control of the expenditures of the public moneys and the auditing of the utility accounts; the U. G. I., the P. R. T. and other companies.

Q. As a result of these audits and other information which you have obtained, you have a statement to make to the Committee in regard to certain utility matters in Philadelphia?

A. I would like to make two or three suggestions that might be helpful to this Committee and to the Legislature in relieving Philadelphia from some of the intolerable conditions existing there.

For a number of years the government in Philadelphia has been controlled by a group of political contractor bosses and utility companies. As a result of that control, the City of Philadelphia has increased its pay roll from \$10,700,000 to \$44,830,000.

BY MR. TURNER:

Q. What bearing will this have upon the work of this Committee; the pay roll of the City of Philadelphia?

A. Because the utilities control the government and I have evidence to prove that the utilities are responsible for the condition of the finances of the city government in Philadelphia, and it is necessary that we should have legislation amending the city charter and making other changes, if we are to be protected because the City of Philadelphia is governed by a charter given by the Legislature of the State of Pennsylvania.

Q. Yes; but this Committee, while a legislative committee has nothing to do with that end of legislation. They are taking evidence on Public Service Law relating to the Public Service Commission's operation of these utilities.

A. These utilities have taken and used millions of dollars of this outstanding debt, which the people are paying, and if you are going to properly legislate to control those utilities, it will most certainly affect the financial condition of the city.

I just wanted to say that there is abundance of evidence to show that these utilities have unloaded on the City of Philadelphia land for which the taxpayers have had to borrow money and issue fifty year bonds, that the land was unnecessary, that the prices paid were excessive; and a result thereof that the tax rate has jumped from a \$1.50 to \$2.77½ that 42¢ were required in 1910, or twenty-eight per cent. of the taxes to pay interest and sinking fund on that borrowed money, and it has now jumped to \$1.12 or 40% of the entire tax rate required to pay the interest and sinking fund charges on this borrowed money. And a great deal of this money was borrowed as a result of the activities of the utility companies.

MR. TURNER: In what respect?

THE WITNESS: First of all by requiring the cities to pay for improvements, utility improvements. We are committed to the extent of between 80 and \$100,000,000 in connection with a new railroad station now being built by the Pennsylvania Railroad.

MR. TURNER: Well, that is a matter of council action, isn't it?

THE WITNESS: I think it is very much a matter of legislative action.

MR. TURNER: Well, it is legislative in the sense of council.

THE WITNESS: Well, Mr. Turner, I am only here to be helpful, and if you feel you do not want this material, why I will come down to something—I will take—

MR. TURNER: I want all the material that is helpful, but I just wanted you to feel that the record is long and that time is short, and perhaps I am delaying it by asking questions, but we don't want to get a lot of material in there which this poor Committee has got to try to read, which may not be germane to the subject.

THE WITNESS: I know, but 2,000,000 people in Philadelphia are suffering. They must have relief. We depend upon the Legislature to give us that relief, and I assure you, however, I won't waste any time, your time or mine, because I know that our time is valuable. Through this control of the government by the utilities—

MR. RHODES: Now, when you say control of the government by the utilities, are you going to follow that up with sufficient proof?

THE WITNESS: Absolutely.

BY MR. RHODES:

Q. You have the evidence, have you?

A. I have. I have never made a statement in my life that I could not prove.

MR. MEMOLO: Let the gentleman proceed.

MR. RHODES: I think that is the gist of the whole proposition. If you have the proof that the utilities are controlling the government of Pennsylvania or the government of Philadelphia, you have hit the crux of the whole situation.

THE WITNESS: Well, we stand ready to prove it.

MR. RHODES: Then the Committee stands willing to listen as long as you can offer us the facts and the evidence.

THE WITNESS: And I haven't any malice in this matter at all. My purpose is to be constructive, so anything I say is in the nature of constructive criticism. I haven't any enemies to punish or any friends to serve or protect improperly.

MR. RHODES: We are interested, Mr. Wilson, in getting all the facts, and if you have the evidence, we are vitally interested in those things.

THE WITNESS: Thank you. The City of Philadelphia had a gas plant which cost approximately \$85,000,000. This plant was leased to the U. G. I. The company agreed to pay for the use of that plant to the City of Philadelphia 25% of the gross income. In addition to that the company agreed to furnish the City of Philadelphia free lights, free gas in the streets and public buildings, and also to give the city 300 new lights each year free.

During the last city administration in Philadelphia, between 1924 and 1927, when these utility companies, as I will prove, reached the very height of their power, a new lease was entered into between the U. G. I. Company and the city of Philadelphia. Under the terms of the new low lease the city was to pay for all street gas. We were not to get free lights, new lights, in view of the 25% of the gross income we were to receive \$4,200,000 a year in cash each year.

Under the first year of this new lease from January 1 to December 31, 1929, the U. G. I. received from the sale of gas \$18,293,240.53. If the old lease had been in effect and force, we would have received 25% of that sum, or \$4,576,310.13. But we didn't. We received \$4,200,000. The loss resulting therefrom was \$376,310.13 in 12 months. The cost of gas furnished to the city during 1929, prior to the new lease was \$940,333.27. The cost to the city during 1929 for removing lamp posts and cutting of service—prior to the new lease this service was furnished free to the city—was \$14,991.45. So, the total loss resulting in the first year under this new lease to the city of Philadelphia was \$1,342,637.85.

I understand that the attorney who represented the gas company and put this through, was the former candidate for governor, Republican candidate.

BY MR. RHODES:

Q. Just a minute. Let me interrupt you. Can you tell us right there the circumstances relative to the change from the old lease to the new lease?

A. The only circumstance that I know of was that these utilities got everything they wanted from city council, and they thought it was a good time to better their conditions.

BY MR. COOKE:

Q. Does the U. G. I. come under the regulation of the Public Service Commission?

A. It should.

Q. But does it?

A. It does not in Philadelphia.

Q. Why doesn't it?

A. Because under this contract—

Q. Which contract, the old contract?

A. The second contract. The Commission was created, one member to be selected by the company, the second by city council,—and as a practical matter, he was also a company man—and the two selected a third, who was Mr. Vulcaulin, who does not live in Philadelphia. That was the Committee charged with fixing the gas rate in Philadelphia.

Q. The Public Service Commission had no jurisdiction over the U. G. I. before this contract, did it?

A. No sir.

Q. Why was that?

A. It should have been done, but it wasn't. I think the company preferred to have its own people fix the price of gas.

MR. EVANS: Well, Mr. Cooke, I think I can perhaps explain that. Under the Public Service Company Law the Commission has no jurisdiction over municipally owned utilities. The Philadelphia Gas Works are municipally owned, and the Superior Court held in the case of Ferguson and McDowell against the Public Service Commission that where municipally owned property was leased to an operating utility, so far as that company was concerned, it was not subject to the jurisdiction of the Public Service Commission. I was just going to say, the Commission however has jurisdiction over the approval of contracts between municipalities and utilities, or did have jurisdiction or did approve of the gas lease of 1917 to which Mr. Wilson has referred.

BY MR. COOKE:

Q. Is it not a travesty that boroughs like Aspinwall has been living in fear of the Public Service Commission rule, being afraid to let anybody know what they are making, at the same time the U. G. I. Company was glad to escape that same supervision?

THE WITNESS: Under this new arrangement the U. G. I. Company formed another company called the Philadelphia Gas Works Company and assigned the lease to them. The United Gas Improvement Company collected \$800,000 a year as a management fee. And the U. G. I. Company also has a subsidiary called the United Gas Improvement Construction Company and another one called the Ugit Company. The U. G. I. Company fixed the price to be paid by the Ugit Company, a subsidiary, to the gas works, for by-products. There is no competition. That by-product is very valuable and our recent audit would indicate that the Philadelphia Gas Works Company had sustained a substantial loss because of the insufficient amount paid for the by-products by the Ugit Company, a subsidiary of the United Gas Improvement Company. The Ugit Company is engaged in laying roads and this by-product is used for that purpose. They also have a realty company and they rent a portion of the buildings owned by the U. G. I. Company to the Philadelphia Gas Works Company. When we started our audit we found the gas works company was paying a charge of \$10 a foot for floor space on the first floor. I called their attention to it and they immediately reduced the price to \$5 a foot, cutting it in half.

BY MR. COOKE:

Q. How does that compare with the floor space in contiguous buildings?

A. \$5 is about fair. It is about as much as the Philadelphia Rapid Transit Company is paying the Mitten Management. They pay \$7.10 a foot for the whole building.

BY MR. TURNER:

Q. Is this the building at Broad and Arch Streets?

A. Yes sir.

MR. COOKE: I pay less than \$3 a foot a block away from the Philadelphia Rapid Transit Company.

BY MR. TURNER:

Q. It depends upon whether it is on the first floor?

MR. COOKE: I am about the average floor. The rate you refer to, that applies to the ground floor.

THE WITNESS: The Philadelphia Rapid Transit Company rate is \$7.10 for the whole building. They sublet one floor to Mitten Management for less than they pay for it.

Now that is the U. G. I. situation very briefly. I think it might pay to go into it more fully at some later time. There are a number of other matters in connection with it that I think might be interesting.

MR. RHODES: Council really was responsible for making this new lease which was not advantageous?

A. I would say, Council and the U. G. I. Company.

BY MR. TURNER:

Q. If the City of Philadelphia is getting the short end of this deal it is due to its Council?

A. It is approved by the Public Service Commission.

Q. Council made the contract in the first place?

A. That means nothing unless the Public Service Commission approves it.

BY MR. COOKE:

Q. Is it not the whole theory that the local communities cannot act wisely in these matters? Formerly, we got along without the Public Service Commission, but they said we could not do it and they established the Public Service Commission?

MR. TURNER: Council is a legislative body, and unless there is fraud in it you cannot enter into their acts.

MR. EVANS: There is no such provision for the approval of contracts by the Public Service Commission.

BY MR. COOKE:

Q. Am I in error about my understanding? Didn't we formerly, before we had this Public Service Commission, these matters were handled locally, but the theory was that they were badly done and we needed a State agency to supervise the acts of these communities?

BY FATHER COX:

Q. Was not the Public Service Commission originally to protect the people's interests?

BY MR. EVANS:

A. Presumably.

FATHER COX: If it didn't look good then, it doesn't look good now, and something ought to be done to make it right.

MR. EVANS: I might say that in the contract which was made by the City of Philadelphia for the lease of the Chestnut Street Subway, the contract was illegally passed by council, and an amendment was put in at the last moment changing the purpose of the original act. Representing the Northeast Chamber of Commerce, we protested before the Public Service Commission against the approval of that contract on the ground, among others, that it was not a legal ordinance. The Public Service Commission approved the contract and I argued before the Supreme Court that the Public Commission had no jurisdiction to pass upon the method of the passage of an ordinance before city council, and as Mr. Turner, suggests, to go back of city council, but the Superior Court indicated so strongly from the bench that they had no sympathy with that point of view that the subject was not pressed further and the ordinance was declared invalid by the Superior Court.

MR. COOKE: Was any reason given why it was necessary to change the contract at that time?

A. No sir except that they required more money.

Q. Did they give any reasons?

A. No sir. They stated that as an argument to get the thing through and satisfy the public that if they were granted this consideration, that it would be reflected in reduced prices to the consumer. They didn't reduce the price to the consumer until after the controller had made his audit and then after vigorous protests and threatened suits by the controller the gas commission made a reduction of five cents which is the equivalent of \$800,000. Our audit shows that they ought to make a further reduction of seven cents which would be considerably over \$1,600,000.

BY FATHER COX:

Q. You don't believe the reason given at the time was a valid reason?

A. I believe it was done because the United Gas Improvement Company was in power and they controlled the situation and could get anything they wanted almost.

BY MR. RHODES:

Q. Do you mean they control council?

A. Yes sir. I think there is a community of interest between the Pennsylvania Railroad Company, the United Gas Improvement Company, and the Philadelphia Rapid Transit Company that has existed for years, and if you look over the records you will find that council has never voted down any proposition made by any utility. I do not say that they control all the councilmen. There are some good men on council, but the majority of them have gone along with the utilities and the utilities can do just what they want.

BY MR. RHODES:

We don't want to interrupt your discussion, Mr. Wilson, so you proceed and we will ask just as few questions as possible.

MR. WILSON: Now, as a result of these tremendous expenditures made in behalf of utility companies, or as a result of the things that were required to be done, to be paid for out of public funds, our funded debt has jumped from 102 million in 1910 to 676 million at present, the highest per capita of any city in the United States. Our sinking fund assets are 132 million. The result is that the people have not been able to pay their taxes, so terrific has grown their burden, from 2 million in 1910 to 26 million dollars this year. Our water rent delinquency from 63 thousand dollars in 1910 to over \$2,588,000 at present. Personal property delinquents amounted to \$990,000, and there is a total delinquency of \$29,666,000 as against \$3,041,000 in 1919. Now, if the Committee would make an analysis of these major expenditures of the Pennsylvania Railroad made in the acquisition of property for the railroad, the acquisition of property from the railroad, for which the city paid, you will find that the people of Philadelphia are losing 1,400 houses per month on sheriff's sale, because they cannot meet the taxes. These are deplorable conditions, and the Legislature must give us relief.

BY MR. TURNER:

Q. Of course, I don't know how far that may go in your case, I know that while you have terrific sheriff sales in your county, we have sheriff sales in our county, very heavy ones, and we have not given any property away.

THE WITNESS: In the case of the P. R. T. you have heard a lot about this \$1,300,000 Quaker Cab deal. That is just a mere drop in the bucket. It is just one drop in the bucket. Mr. Stotesbury, Morgan and Drexel brought a strike breaker here from Chicago to take over the transit system in Philadelphia. They turned the whole city over to him and his associates, and they demanded and took over control at that time up until today.

MR. RHODES: I just wish you would be a little more explicit, because you know, I am not familiar with the conditions there.

THE WITNESS: I don't like to mention his name, because he has disappeared; because he is no longer in the picture.

BY MR. EVANS:

Q. You mean Thomas E. Mitten?

A. Yes. And during the time that he was in absolute control, he handled \$808,348.192, so that that is up toward a billion dollars, and this \$1,300,000 cab deal, while it is very serious, as was testified to in my equity suit a year ago in the Court of Common Pleas, there is nothing new in it. There are many other transactions that are far more serious, and involve in one case \$16,000,000.

BY MR. TURNER:

Q. What was that?

A. That was when the P. R. T. had to ask city council for permission to sell 7% preferred stock to be used for construction purposes, and for the cost of taxicabs, they had no—

Q. That was \$16,000,000 they had to pay back?

A. Yes, so they had no immediate use for this money, so they advanced it to Mitten Management, and Mitten Management was a \$10,000 Delaware corporation, the stock was owned originally, all of it, by Thomas E. Mitten, and later 30% of it, of the stock, was turned over to Dr. Mitten, the son of Thomas Mitten.

BY MR. TURNER:

Q. Did they take any security for that?

A. No, oh, no. They just turned \$16,000,000 over to Mitten, and Mitten Management paid 3% for it, and the company was paying 7% for it, so the company took a loss of 4%, and while they had that money the company required some other capital, some capital for corporate purposes, and they paid Dillon, Read and Company \$385,000 to sell 6% gold bonds to get money to carry on the business of the company, while this other money was being held at a loss to the company by Mitten Management. The first day of the equity case I demanded, or I gave them 24 hours to return the \$16,000,000, and they returned it the next day, but they returned it in the form of stock. Now—

BY MR. RHODES:

Q. Stock of what company?

A. P. R. T., preferred stock of the company.

BY MR. EVANS:

Q. And they returned it on the basis of par for the stock, did they not, Mr. Wilson?

A. Yes, they returned it on the basis of par, but the market value that day was 42, the par value was 50, so we are still suing for the loss, the difference, and I think we are surcharging in the suit Mitten Management \$15,500,000, and we are surcharging the P. R. T. \$17,000,000, and we expect a decision within a few days in that case. I think that the record in that case might be very helpful to your committee.

BY MR. RHODES:

Q. What is the case?

A. The case is the control of the city of Philadelphia versus P. R. T., Mitten Management, and certain other defendants. There are about 8,000 pages of testimony, it is quite a job to read it, it has taken me three years to prepare it, but it is very interesting.

If you have anything as I go along, Mr. Evans, I will be glad to have you call my attention to it.

BY MR. EVANS:

Q. That is a suit in the Court of Common Pleas No. 1, in Philadelphia?

A. Yes. Now, another thing, before going on with the P. R. T., in response to a question as to the utilities in Philadelphia, during this same period of 1924 to 1927, the underliers, the underlying transit companies in Philadelphia, the bankers who held the stock, representing the estates holding stock, the Pennsylvania Railroad, Mr. Atterbury and Mr. Mitten, decided that they would sell the underliers to the city of Philadelphia for \$149,000,000. Fortunately the transaction could not be consummated without the certificate of the controller, that the property to be acquired had an operating income at that time, operating expenses sufficient to pay the interest and sinking fund on the bonds necessary to be issued for the purchase of the property, and that the income would be sufficient during the life of the proposed loan, so it would not become a charge against the borrowing capacity, because the borrowing capacity in Philadelphia was very low at that time. They could not have used any such sum for the acquisition of any property, so it was necessary to have it certified, and the controller refused to certify it, and therefore the city solicitor and the mayor mandamused the controller, and the controller has no attorney in Philadelphia, and I was obliged to try the case. The Court held that while they could, the Court might compel the controller to act, the Court could not substitute its discretion for that of the controller. The result was that in spite of this tremendous pressure to unload this, the underliers on the city of Philadelphia, on the taxpayers by this utility group, we are able to save the people of Philadelphia \$7,100,000 a year for 50 years, that would have been the interest on the sinking fund just during that period.

Q. Mr. Wilson, the Public Service Commission fixed that price of \$149,000,000, did they not?

A. Yes.

Q. Who heard the case on behalf of the Public Service Commission?

A. Why, I am not clear, but I think it was Mr. Benn,—I think you know better about that than I do, Mr. Evans.

Q. Was any demand made on behalf of any public agencies, civic agencies to intervene in the condemnation proceedings before the Commission?

A. Yes, but they were kept out.

Q. The Commission did not allow anybody to intervene?

A. They said it was a matter between the company and the city solicitor, the legal officer of the city of Philadelphia, and they would not allow anyone else to intervene in the case, all the time the case was going on.

BY MR. COOKE:

Q. What is the general practice of the Commission in regard to interveners by civic organizations and such like?

A. I don't know.

MR. EVANS: My experience has always been in any case involving municipal contracts, anything of that sort, or in rate cases, that anyone is allowed to intervene.

BY MR. COOKE:

Q. Was there anything in this case that was different; that would afford justification for that action?

MR. EVANS: Not in my opinion.

MR. COOKE: Just an arbitrary decision.

MR. EVANS: I think there was no adequate reason for refusing intervention.

THE WITNESS: There underlier franchises were granted by the Legislature originally, and then were pyramided, and finally reached the point where an agreement was made under which we would pay \$8,700,000 a year in rental to them. Most of these underliers have disappeared, many of the streets covered by their franchises are without transit facilities; in many cases the tracks have been removed; but we understand that we must go on for nine hundred and ninety-nine years paying \$8,700,000 a year, and I figured up that in the first one hundred years; I know I wouldn't be here after that—

MR. TURNER: You are optimistic.

THE WITNESS: Yes; I hope to live that long. But the rental compounded at 6% amounts to four billions for one hundred years.

Now, there is only one way to remedy that situation: the Legislature, undoubtedly has the power to do it, and it is the only way. I think there is no other, Mr. Evans, do you agree with me, or not? I think the Supreme Court or one of the courts of Appeal did indicate in a case that the Legislature had not given to the Public Service Commission the power to adjudge leases; is that it, Mr. Evans?

MR. EVANS: That is correct.

THE WITNESS: So, that is a police power that the Legislature may exercise at any time.

I prepared a bill; I introduced in the last session but it died in the committee, giving the Commission the power to conduct hearings upon its own initiative, and compelling them to conduct a hearing upon the petition of any citizen, a taxpayer, to investigate all the underlying leases in Philadelphia where the service has been discontinued and readjust the amount to be paid on an equitable basis.

We do not want to be unfair, we do not want to deprive innocent people of stock that they bought or inherited and depend upon that income, but there ought to be an equitable adjustment of the underlying leases, and it would greatly relieve the situation if the Legislature would pass that law, which is to be introduced again by the way, and we would cut that \$8,700,000 down to at least \$4,000,000, I think, say \$4,700,000 a year, and give them a fair return because the Supreme Court has said that all they own—that they have a right to receive; they have no property right; they merely have a right to receive this rental for nine hundred and ninety-nine years.

BY MR. EVANS:

Q. Some of these rentals of the underliers run as high as seventy per cent. of the paid in value of the stock, don't they?

A. Yes sir, that is true. The returns are ridiculous. They capitalize upon their income; isn't that right, Mr. Evans: some of those companies are capitalized on their income?

MR. EVANS: I can't tell you how the rentals were fixed.

THE WITNESS: Some of them were I know. I know the Ridge Avenue line the rental was just capitalized, and they claim that value, because they were receiving so much rental, and, therefore, it was worth so much, but the value isn't there.

Now, some time ago the city of Philadelphia constructed a sub-way under Broad Street. The taxpayers have paid \$100,000,000 for it. We are obliged to levy a tax of \$6,000,000 to pay the interest and sinking fund charges in that investment. When the subway was completed and equipped with public moneys, it was turned over to P. R. R. for operation, and they were to pay \$200,000 a month rental for three months, and then under the terms of the agreement cancelled it in twenty-four hours. It then became city property; the Public Service Commission certainly had no jurisdiction over it. Councils passed an ordinance called a gentleman's agreement. The city charter provides that an ordinance of that character, involving city or city funds, may not be finally passed on the day it was introduced, and it must have the signature of the mayor. This ordinance was introduced and passed on the same day, and didn't have the signature of the mayor, and the P. R. T. was permitted to continue to operate the subway and they collected \$3,000,00 in fares, and they took that

\$3,000,000 and put it into operating receipts, consolidated it without setting up any liability against it.

BY MR. RHODES:

Q. Do you have anything to show that the action of city council was due to the influence of P. R. T. over city council?

A. I think, when all the evidence is in, that that would be the only conclusion that any reasonable mind could reach. I didn't see any money pass.

Q. In other words, your position is that from a narration of these facts, we will be warranted in concluding that such an influence existed?

A. Yes sir. I believe some very radical legislation is required to remedy the situation and to prevent a recurrence of many of these cases that have resulted in a big loss to the public.

BY MR. COOKE:

Q. Let me get that transaction. They took three and one-half million in fares and put it into their receipts, without any set up for liability?

A. Yes, sir.

Q. They covered it into the P. R. T. receipts?

A. As a part of the general income. Now, the right to build a subway was originally vested in an underlying company and the Legislature in 1907 authorized the city to enter into an agreement for the management of its Broad street subway, and city councils, pursuant to that legislation entered into the 1907 agreement with an underlying company giving it the right to go under Broadway, relinquishing all the right, title and interest to build the subway and the city in exchange, made certain valuable considerations; and this is where the Public Service Commission comes in. Some time after that an equity was brought. I brought a taxpayers suit to compel the payment of \$3,000,000 into the treasury, and then I brought a second taxpayers' suit because councils and the company attempted to change the status quo by drawing a new agreement. I finally went to Judge McDevitt and got an injunction and served it just as they were about to sign the agreement; they had the pen in hand; under which they were going to settle the \$3,000,000 claim for \$400,000 in lieu of the \$3,000,000. I got an injunction in my taxpayers' suit and stopped that. Later on an agreement was drawn, and submitted to the Public Service Commission. I filed a protest with the Public Service Commission as to the lease, proposed lease between the company and the city covering the operation of the subway.

Now that lease, in the first place provides auditing of the books and accounts shall be done by the director of transit, which is a violation of the law, because no one but the comptroller may audit such books and accounts. Secondly the Commission, by approving that lease would settle a claim between debtor and creditor, because they had no jurisdiction over the subway, a municipality owned enterprise, while it was not being operated by a utility company. In other words, the money collected during that period following the expiration of the temporary lease and to the present time, is just the same as other income from any other city property and not subject to the jurisdiction of the Public Service Commission.

But they attempt to, i. this lease, to settle on that contract \$50,000 a month, and to enter into a lease for \$65,000 a month for a two-year period. Now, the Commission, to get around this thing gave its temporary approval, and issued an order of temporary approval, but they were careful to say that we do not pass upon the terms of this. But subsequently they issued a hearing to pass upon their permanent approval and I went in there again and protested and I don't know what they propose to do. But that lease should never be approved by the Public Service Commission. It is unfair, inequitable to the city, and it closes up city property without due process of law.

BY MR. MEMOLO:

Q. This action is still pending, is it?

A. It is still pending before the Commission at the present time.

MR. COOKE: Mr. Walker, can you straighten me out? The other members of the Committee may understand it. What does the Public Service Commission Law say about the relation of the Public Service Commission to municipally owned and operated enterprises? Now apparently they all have to keep their books in a certain way. Is that provided in the act?

MR. WALKER: Yes; they are required to file a similar account to other privately owned utilities.

MR. COOKE: Do they have to file rates?

MR. WALKER: No, they are not required to do anything else. They have no jurisdiction over their rates, or over their management.

MR. COOKE: Nothing except that they must keep their books the same way as the others?

MR. WALKER: Yes sir.

MR. COOKE: They don't do that, do they?

MR. WALKER: Very few of them do. They consider it is none of the Commission's business.

THE WITNESS: Nevertheless and notwithstanding that Mr. Cooke, the 1907 agreement, which was drawn before the Public Service Commission was created, under which the terms and facilities in Philadelphia are being operated, provided that the rate of fare should never be increased above five cents without the consent of the city. The city hasn't yet given its consent by ordinance of council or otherwise, and yet the Public Service Commission, has granted two increases in the rate of fare, the last one in 1924, the first one in 1920, upon a purely fictitious valuation.

MR. COOKE: Mr. Walker why isn't that inconsistent with what you just told me? You say the only way in which the Public Service Commission can exercise its authority over a municipally owned enterprise is by insisting upon bookkeeping and accounting of a certain type?

MR. WALKER: You must understand, Mr. Cooke, so far as I can find out, they have never insisted on it.

MR. COOKE: You say they have the right to do it?

MR. WALKER: Yes sir.

MR. COOKE: Here we find they have the right to fix a rate. Where do you draw the line?

MR. WALKER: I don't know where they draw the line.

BY MR. RHODES:

Q. Mr. Wilson, the courts have held that the Public Service Commission has the right to abrogate any contract such as you mention.

A. You mean the 1907 agreement between the city and—?

Q. Any contract between a municipality and a public service company can be abrogated by the Public Service Commission, can it not?

A. No sir, not if it was entered into before the Public Service Commission was created. Anyone subsequent to that yes, but not anyone before. That is why I contend that these increases in the rate of fare were illegal and improper.

Q. This one you speak about was entered into when, 1907?

A. 1907.

MR. COOKE: I know the U. G. I. under the old contract always held that it was not regulatable by the Public Service Commission.

MR. RHODES: That was prior to the Act of 1913?

A. Yes.

Q. That is what you refer to, that this was prior to the 1913 Act?

A. Yes, and we have recently had a city expert value the system, two independent groups working in conjunction with the company's representatives; and the valuation as reported today by Maltbie's group is \$116,000,000 for the whole system, including the underliers; and the other group valued at, I think, \$159,000,000 for the whole system including the underliers. But the other group—not the Maltbie group—the other group included in their valuation the reproduction cost of capital, which certainly should not enter into a valuation of this character.

BY MR. COOKE:

Q. Well, what was the equivalent when the Public Service Commission—and

A. \$200,000,000 and upwards.

Q. That is more than \$200,000,000.

A. Yes, sir; that is what the fare is based on.

Q. And the average of the other two was perhaps \$130,000,000 averaging these two which you have just given us.

A. Yes, about \$130,000,000. The Public Service Commission is granting their increase in the rate of fare, fixed a value of \$200,000,000 and upwards.

Q. And these valuation matters, are they of public record anywhere?

A. Yes.

Q. Where?

A. The Conference Board of which Judge McDevitt was the moderator, and I was a member of it, by way,—council and the Mayor and all other officials and representatives of the company are members of this board.

Q. Have they as a matter of fact been made accessible?

A. Yes.

Q. Where?

A. We could send copies to you. I would be very glad to. They have been sent officially to city council.

Q. I have been informed by Mr. Cox that he has not as yet seen them.

A. And Judge McDevitt is preparing his whole report to send it to Council; but he has not yet seen them, they are matters of record in the Controller's Office, and I will be very glad to send you a copy of both valuations made by both groups. That shows depreciation and original cost, and reproduction cost.

MR. COOKE: Mr. Evans, Mr. Wilson volunteers to let us have copies of these two. I think it would be very desirable. A copy of the Maltbie valuation and of the Ford, Bacon and Davis. I think it would be very valuable to have that as a part of our records, because they are both competently made valuations on two different bases. I think it will be a splendid model to have on this record.

MR. EVANS: I think it will be valuable.

THE WITNESS: Now there is our subway situation. The company has the subway, still collecting the fares, and they are paying out \$375,000 under this lease, if it is permanently approved by the Commission, in settlement of a \$3,000,000 claim. In other words, they have collected \$3,000,000 of our money, used it, and now they attempt to enter an agreement between council and the company to settle for \$375,000,—a three million dollar claim. We are fighting it. I have a taxpayers' bill against it now. I mean my own suits.

BY MR. COOKE:

Q. Your theory is the Public Service Commission has nothing to do with that, that your relief would come through the courts rather than the Commission?

A. I hope the relief will come through the courts, in this whole matter.

Q. Your hope there is not entirely that you think you will get a better deal, from the courts than from the Public Service Commission, because you do not think the Commission has the legal authority?

A. In that particular matter. But I must say the Commission has treated me very fairly in the matters that I have had before them. You take the Steffen case. I think you would be interested in that. A man who had been in the taxicab business, in a limited business for years, had \$100,000 invested and the P. R. T. filed a complaint against him a year ago last May and they tried to put him out of business, and I represented him before the Commission, and he has as yet not been put out of business, and the P. R. T. complaint was thrown out and the man is still doing business, he was fully protected.

MR. COOKE: We had a man named Menke here yesterday. It is pity you were not his counsel.

THE WITNESS: I wish I had known about it, I would have liked very much to have represented him. He came to me just recently and I promised to do what I could for him.

BY MR. RHODES:

Q. What was this \$3,000,000 used for in connection with the subway deal?

A. General expenses of the P. R. T. company.

Q. It was the city's money, was it?

A. Oh, yes.

Q. Now the P. R. T. is to pay back \$375,000 in place of it?

A. Yes.

Q. Who is the business gentleman that got you into that kind of a jam? Council?

A. It seems to be council all the way through, because they are the legislative body.

Q. If the people running your city down there would use a little better business judgment, you would not have to borrow on your delinquent taxes.

A. If the Legislature will give us an election law down there so that we can have free and fair elections, I think we might correct the situation. I opened 550 ballot boxes after

the last election and found 322 coun's of errors, and gained 5,250 votes for one candidate.

Q. Aren't the people of Philadelphia public spirited enough to realize that they cannot go on that way without going bankrupt?

A. The people are all right, but this group have gotten a strangle hold on it, have gotten hold of the minor judiciary and the registration boards, I think there are thousands of names there that should not be there.

Q. What do you mean when you say this group?

A. I mean by that the dominate bipartisan political machine, because we have no single party in Philadelphia.

Q. You mean the utilities are affiliated with that element.

A. Always have been.

Q. That is P. R. T. and U. G. I.?

A. Yes sir. Now, in the Pennsylvania Rapid Transit, as I said, Mr. Mitten took over the company to manage it, and he was to receive \$157,000 a year for his services, and he was to furnish such experts as he required and pay them out of that.

BY MR. COOKE:

Q. What authority did you have for that?

A. A letter from Mr. Stotesbury which is on the court record, and engaging him, and the reply and the admission in Senator Pepper's paper book.

Q. And Mr. Mitten was supposed to make these disbursements out of his salary?

A. Yes sir, he was to pay everything except office rent and incidental expenses of his office. He was to pay all the experts, but nevertheless the Philadelphia Rapid Transit paid experts out of their general fund. Later on Mr. Mitten formed this Mitten Management, a \$10,000 Delaware corporation. The Mitten Management proceeded to carry on for the same compensation of \$157,000, but after the first year of the new management, they jumped to 4% of the gross income, which amounted to \$4,200,000.

BY MR. EVANS:

Q. There was an intermittent stop, was there not?

A. Yes sir, but for a brief interval. As soon as they got their increase to 8 cents, they jumped the fee to some \$350,000 a year.

Q. And when that increase was made permanent in 1924, the new arrangement of 4% of the gross earnings was entered into?

A. Yes, sir.

Q. Is it not true that the contract made in 1925 which resulted in the Mitten Management fee of \$350,000, it was a written contract running for three years, and in spite of that fact at the end of a little over one year it was terminated and the fee increased to a million dollars?

A. That is true. The alleged contract as it stands consists of minutes on the minute book of the company. There is no other contract, and this provides that this 4% shall be paid to Mitten Management for services and patents.

BY MR. COOKE:

Q. You mean men and management?

A. Yes sir, they are supposed to give 2% to the men and keep 2% for themselves.

BY MR. RHODES:

Q. This was paid by whom?

A. The Philadelphia Rapid Transit pays it out of gross income.

BY MR. EVANS:

Q. What does the gross revenue of the Philadelphia Rapid Transit amount to?

A. Approximately \$50,000,000; it was \$52,000,000 this year and \$57,000,000 last year, and the 4% you refer to would amount to over two million dollars, of which one-half goes to Mitten Management and one-half is turned over by the Mitten Management to the men. And what happens is this: Mitten Management without consulting city council or anybody else started to give the men a bonus besides their wages. He didn't pay the money to the men but put it into an account and they required the men to use that money for the purchase of common stock of Philadelphia Rapid Transit. When the men had accumulated 231,000 shares of stock, or nearly a majority of the controlling interest of the company,

then Mr. Mitten went down to Delaware and formed the Philadelphia Rapid Transit Securities Corporation capitalized at \$10,000, with \$1,000, and called the men together and had them pass a resolution exchanging their 231,000 shares of voting stock at a price of 31 when the market price was 55 on that day. Mr. Mitten now controls the stock of the Philadelphia Rapid Transit Company and this he transferred to another company owned by Mitten, organized originally at \$10,000 and which was jumped to \$60,000,000 over night, so that in fifteen minutes Mr. Mitten got control of all the voting stock bought by the men with the bonus which he himself paid without consulting the city council or anyone else. And that is the way he acquired control of the company.

BY MR. RHODES:

Q. How much did that cost him?

A. I figure he made two or three million dollars besides getting control of the voting stock. The accusation is not denied that before the time of Mr. Mitten's death a meeting was held every morning at six o'clock in his room where all the plans were made. The city was not represented there. The same men who made these plans then adjourned and went over constituting the executive committee of the Philadelphia Rapid Transit Company and carried out the plans. Then they passed a by-law providing that the executive committee have all the power of a board of directors. The city had three directors and a board of directors, but without representation on this executive committee the city was without knowledge of what was going on. Then the Mitten Management published a pamphlet and in there they interpreted to the public what they were doing or attempting to do and an account of what they had done stood for twelve months when they had a meeting of the stockholders and what had been done in the twelve months previous was approved by the meeting of the stockholders. But a reply to my question as to who voted the stock in approval of what had been done for twelve months, the testimony was that it was the same three men who made up the executive committee, who made the plans in the morning, and who voted the majority of the stock in approval of what they themselves had done during the preceding twelve months.

Q. Who were these men?

A. Well, the whole thing was in the hands of the Mitten crowd; there was Queney, Myers, Joyce and Dr. Mitten. You will find now that the four men who controlled Mitten Management, three of them received \$40,000 a year, and Dr. Mitten received \$50,000. I asked them what became of the difference between the \$300,000 paid to these four men for service—and by the way, that compensation includes the services they render to the National at Buffalo and the Mitten bank and other Mitten interests not chargeable to the Philadelphia Rapid Transit—when I asked what became of the difference between that \$300,000 and \$1,200,000, Mr. Queney said it was paid to the stockholders. Then I asked who the stockholders were and I was informed that the Mitten heirs held 70% of it. When I asked what the service was that they rendered now, whether they had any of the patents, I was informed that they had nothing of value. So that we are actually paying for today, and have been right up to the present time, 70% of the profits and 30% goes to Dr. Mitten, in addition of his \$50,000.

BY MR. COOKE:

Q. Is this \$1,100,000 that you are talking about now—

A. 2% of the gross.

Q. The same item that was testified to here a few days ago included the operating expense of the company?

MR. EVANS: Yes.

MR. RHODES: Contrary to the instruction of the Public Service Commission?

MR. COOKE: Contrary to the statement of the company.

BY FATHER COX:

Q. Does P. R. T. have any control of Parmalee?

A. I don't know whether they do or not, I have no knowledge of it. One other transaction which I think will rank with the Quaker Cab Company deal, perhaps a little higher, because it involves 18 or 19 million dollars; under the agreement it was provided that no commitment of any kind shall be made without the approval of council. It prescribed a method by which approval should be obtained. In other words, there must be an application, and thereupon an ordinance

must be passed by the city approving it. The company leased a part of a building on Locust Street, Broad and Locust, and made a ten year lease with Greenfield for office space at \$23,700 a year. The landlord to pay all the costs, the usual costs paid by a landlord, and that lease was signed by the president of the P. R. T. Company, Mr. Myers, who was vice-president of the Mitten Management. The building was sold to Mitten Management, and then by Mitten Management to M. B. S. C., which is another Mitten organization.

BY MR. EVANS:

Q. What does that stand for?

A. Mitten Bank Securities Corporation. Mr. Myers retired as president of the P. R. T. and became president of the M. B. S. C., he was vice-president of the Mitten Management. This lease had run two years, and Mr. Myers sent a letter to Mr. Senter, and the letter is of record, directing him to cancel the ten year lease, and enter into a new lease for 30 years. Thereupon a lease was drawn between M. B. S. C., of which Mr. Myers was president, and signed by him as president of M. B. S. C., the new landlord which was Mitten Management, and signed by the company by Mr. Senter, Mr. Myers' successor, so that Mr. Myers entered into a ten year lease for \$286,000, then withdrew from P. R. T., used his office as president of Mitten Management to direct a cancellation of the lease, and then as president of Mitten Management, he directed the P. R. T. to enter a new lease for 30 years, with his own company, in which he had become president. The new landlord, M. B. S. C., for a period of 30 years at \$400,000 for the first ten years and \$500,000 for the next 20 years, P. R. T. to pay all the taxes, water rents, gas, on the whole building, including a theater in the building, which was rented for \$90,000 a year directly from M. B. S. C., and also Childs Restaurant occupied a part of the building, and then P. R. T. was required to give on the part of Mitten Management \$25,000 to someone who had a cigar stand in the building canceling the lease that they had in the beginning, so that the company is saddled with this great building and they are paying \$7.10 a square foot for it, for the whole building, subletting one floor to Mitten Management for less than what it costs for the floor, taking a loss of \$5,000 a year on one floor, making alterations and repairs, for the tenants, for Mitten tenants too as well, the Mitten Bank and all others that occupy space, one floor, and all this under the direction of Mitten Management. The Public Service Commission has never passed upon that lease, never approved it, but there is an obligation involved there from 16 to 19 million dollars, and a burden for 30 years against the car riders in Philadelphia.

BY MR. RHODES:

Q. Does P. R. T. have to pay all the deficiency?

A. They pay everything, carrying charges, except interest on the mortgages.

Q. Are all those charges charged to operating expense of P. R. T.?

A. I don't know. Do you know, Mr. Evans?

MR. EVANS: I cannot say.

THE WITNESS: I cannot say, because there is so much of it, to this situation, as to the Mitten Building.

MR. EVANS: Mr. Rhodes, I don't think there would be any question but that the rentals paid by the operating company, which is P. R. T., would be charged to operating expenses.

MR. RHODES: When they are adding rentals, they are enlarging the deficit of this entire building, are they not, by virtue of the excessive rental?

MR. EVANS: I have no direct knowledge, but I have no doubt that is true.

THE WITNESS: Now, under this 1907 agreement, which the Legislature authorized, the city of Philadelphia entered into an agreement with the P. R. T. for the management, and under that agreement—

MR. RHODES: You have too many companies down there?

THE WITNESS: Oh, absolutely.

MR. RHODES: You ought to have an index to keep track of them.
